moon to stand still while Israel smote the Canaanites (Josh. x. 12), and Sorek (now Wady Surâr), the scene of some of the chief events in the life of Samson, and the valley up which the Philistines brought the ark to the fields of Bethshemesh (1 Sam. vi. 13). The soil of the valleys and of the whole neighbouring plain, is deep and fertile, admirably fitted for the production of grain; while the declivities above them, and the sides of all the glens, were carefully terraced, and though bare and stony now, were once clothed with the vine and the olive. In fact, the whole territory was rich and pleasant; but it was 'too little' for the numerous tribe (Josh. xix. 40-48). On the east they were hemmed in by Judah and Benjamin, and on the north by Ephraim. It appears that along the whole eastern frontier the boundaries of the tribe were not very definitely settled, as we find the same towns, in different places, assigned to both Judah and Dan. Perhaps they were at first given to Judah, but afterwards transferred to the Danites on account of their narrow limits and great numbers (Josh. xix. 41-44; xv. 33, 45). On the west the warlike Philistines rendered a permanent occupation or regular cultivation of the plain impossible. The Danites were not able to keep them in check, much less to conquer and colonize their territory (Judg. i. 34). Some of the towns allotted to Dan we find afterwards in possession of the Philistines, and indeed they seem never to have been conquered—such as Ekron (1 Sam. v. 10), and Gibbethon (1 Kings xv. 27). Josephus's account of the boundaries of Dan differs materially from that given in the Bible. He says, 'The lot of the Danites included all that part of the valley which lies toward the sun-setting, and is bounded by Azotus (Ashdod) and Dora; they had likewise all Jamnia and Gath.' (*Antiq.* xv. 1. 22). This embraces, in addition to the northern section of the plain of Philistia, the whole plain of Sharon as far north as Carmel, at whose base Dora is situated. The discrepancy may be accounted for by supposing that the Danites at some period may have overrun the country so far, when the Philistines were humbled by the powerful Ephraimites, and the still more powerful David.

The limited territory of the Danites, their position as borderers, having strongholds in the mountains, and their being constantly compelled to defend their corn-fields and pasture-lands against powerful and bitter foes, sufficiently account for their warlike habits, and their freebooting exploits. Inured themselves to constant danger, and exposed to the unceasing depredations and oppressions of their neighbours, we need not wonder that they became somewhat loose in their morals and unscrupulous in their acts. It was probably in prophetic allusion to these marked characteristics that Jacob said on his death-bed, 'Dan shall be a serpent by the way, an adder in the path, that biteth the horse heels, so that his rider shall fall backward' (Gen. xlix. 17).

Samson was the most celebrated man of the tribe of Dan, and one of the most distinguished of Israelitish warriors. His brilliant exploits, his enthusiastic patriotism, his strange and almost unaccountable moral weakness, his mournful fate, and terrible revenge, make up a tale unsurpassed for romantic interest in the regions of fact or fiction. In his days the principal stronghold of the Danites was on the rugged heights of Zorah, not far distant from the town of Kir-

jath-jearim; and from this the predatory bands were wont to descend through the mountain defiles to the plain of Philistia (Judg. xiii. 25). But even the prowess and military skill of Samson were unable to expel the Philistines from the allotted territory of the tribe. After his death they resolved to seek other possessions of easier conquest. Their spies went to the northern border of Palestine. They saw there the rich plain of the upper Jordan round the city of Laish. It was then the granary of the merchant princes of Sidon, whose power was chiefly concentrated in their fleets, and who could therefore make but a feeble defence of their possessions beyond the ridge of Lebanon. An expedition was fitted out at the gathering-place near Zorah, and six hundred armed men marched northward. The incidents of their march shew what a degenerating effect their unsettled mode of life, and their intercourse with Philistia, had both upon their faith and their morals. They carried off by force the images and the priest of Micah; and having captured Laish they set up the gods and established an idolatrous worship there. Moses' prophetic blessing was fulfilled to them when the tribe settled down in their new possessions—'Dan is a lion's whelp; he shall leap from Bashan' (Deut. xxxiii. 22).

It is a remarkable fact that the tribe of Dan is scarcely ever alluded to in the after history of Israel. There is no mention of it either in the genealogies of 1st Chronicles, or in the list of tribes given in the Apocalypse. It seems probable that the portion of the tribe which remained in the south was in time amalgamated with Judah and Benjamin; the northern section united with the northern confederacy, and obtained somewhat more celebrity in connection with their frontier city.

DAN. A border town of northern Palestine, well known from the phrase so often used to express the whole extent of the country—'All Israel, from Dan even to Beer-sheba' (Judg. xx. 1; 1 Sam. iii. 20; 2 Sam. iii. 10). It is occasionally employed alone in a somewhat similar meaning; thus in Jer. viii. 16—'The snorting of his horses was heard from Dan; the whole land trembled at the sound of the neighing of his strong ones' (also iv. 15). The site of this ancient town has been satisfactorily identified, though scarcely a vestige of it remains. Josephus says that it stood at the 'lesser' fountain of the Jordan . . . in the plain of Sidon a day's journey from that city, and that the plain around it was of extraordinary fertility. (*Antiq.* i. 10. 1; v. 3. 1; viii. 8. 4; *Bel. Jud.* iv. 1. 1). Eusebius and Jerome are still more explicit—'A village, four miles distant from Paneas, on the road leading to Tyre; it was the boundary of Judæa (*ὄριον τῆς Ἰουδαίας*), and at it the Jordan took its rise.' Jerome adds—'De quo et Jordanis flumen erumpens à loco sortitus est nomen. For quippe *πεῖθρον*, id est, fluvium sive rivum Hebræi vocant' (*Onomast.* s. v. *Dan*). Four miles west of Baneas, on the road to Tyre, in the midst of a wide and rich plain, is one of the two great fountains of the Jordan. It rises at the base of a little truncated hill or mound, called *Tell el-Kady*, that is, 'the hill of the Judges,' or 'the hill of Dan.'" Thus we see the old name is preserved in an Arabic translation. The name of the fountain also suggests the identity, and corroborates in part the statement of Jerome. It is *Leddán*, a

word manifestly formed from 'Dan,' by prefixing a double article (Robinson, *B. R.* iii. 392). Some writers, both ancient and modern, have confounded Dan with Paneas or Cæsarea Philippi (Philostorgius, *Hist.* vii. 3; Theodoret in *Genes.*; Sanson, *Geog. Sac.* s. v.; Alford on *Matt.* xvi. 13). This error appears to have arisen chiefly from indefinite remarks of Jerome in his commentary on Ezek. xlviii. 18: 'Dan . . . ubi hodie Paneas, quæ quondam Cæsarea Philippi vocabatur;' and on Amos viii., 'Dan in terminis terræ Judaicæ, ubi nunc Paneas est.' It is plain from Jerome's words in the *Onomasticon* that he knew the true site of Dan; and therefore these notices must be understood as meaning that Cæsarea Philippi was in his days the principal town in the locality where Dan was situated, and that both were upon the border of Palestine. The Jerusalem Targum calls it 'Dan of Cæsarea,' intimating its vicinity to the latter (*on Gen.* xiv. 14; see *Reland Pal.* 919-21).

There is a more serious difficulty connected with Dan's early history. We read in Gen. xiv. 14 that Abraham pursued the kings 'unto Dan,' and in Deut. xxxiv. 1, that the Lord shewed Moses 'all the land of Gilead unto Dan;' yet we learn from Judg. xviii. that the six hundred Danites, when, as is stated in the previous article, they captured Laish, 'called the name of the city Dan, after the name of Dan their father; howbeit the name of the city was Laish at the first.' This occurred about fifty years after the death of Moses. Some endeavour to remove the difficulty by affirming that the name 'Dan' was interpolated in both Genesis and Deuteronomy at a later date; but we can meet it without having recourse to such a dangerous expedient as correcting the sacred text from mere conjecture. Such a conjecture, too, is highly improbable. Why should the name Dan be interpolated when the whole story of the capture of Laish was made familiar to the Jews by the book of Judges? It has also been suggested that there was another city of the same name in that locality, and that it is to it and not to Laish that reference is made in the book of Genesis. The mention of Dan-jaan in 2 Sam. xxiv. 6, appears to give some sanction to this view. But may it not be that this city (like Hebron and Jerusalem) had itself two ancient names, *Laish* and *Dan*, the former of which had come into general use at the time of the Danite conquest, but the latter had been better known in the days of Abraham, and the Danites revived it in honour of their progenitor?

The capture of Laish, its occupation by the Danites, and the establishment of an idolatrous worship there, have already been detailed. It appears that Jeroboam took advantage of the confirmed idolatry of the Danites (Judg. xviii. 30), erected a temple in their city, and set up there one of his golden calves for the benefit of those to whom a pilgrimage to Jerusalem would not have been politic, and a pilgrimage to Bethel might have been irksome (1 Kings xii. 28). A few years afterwards Dan was plundered by Benhadad, king of Damascus, along with some other border towns (xv. 20). From this period Dan appears to have gradually declined. It was still a small village in the time of Eusebius. It is now utterly desolate.

Tell el-Kady is cup-shaped, resembling an extinct crater, and is covered with a dense jungle of thorns, thistles, and rank weeds. Its circumference is about half a mile, and its greatest elevation above

the plain eighty feet. There are some traces of old foundations, and heaps of large stones on the top and sides of the southern part of the rim, where perhaps the citadel or a temple may have stood. There are also ruins in the plain a short distance north of the tell. There are doubtless other remains, but they are now covered with grass and jungle. At the western base of the tell is the great fountain, and there is a smaller one within the cup, shaded by noble oak trees. The whole region round the site of Dan was faithfully described by the Danite spies who were sent to seek out new possessions for their tribe—'We have seen the land, and, behold, it is very good . . . a spacious land . . . a place where there is no want of anything that is in the earth.' (Robinson, *B. R.* iii. 390, sq.; *Bibliotheca Sacra*, Feb. 1846; Thomson, *The Land and the Book*).—J. L. P.

DAN-JAAN (דַּן־יָאָן; Sept. *Davidán*), a place mentioned in 2 Sam. xxiv. 6. The officers appointed by king David to take the census, having passed through the country east of the Jordan from south to north, 'came to Dan-jaan, and about to Zidon.' Dan-jaan was, consequently, on the northern border of Palestine, and the position indicated corresponds exactly with that of Dan or Laish. There is no other reference to this place either in the Bible or elsewhere. There can be little doubt that it is identical with the well-known city of Dan. Jerome renders the word *Dan Silvestria*, and the Alexandrine text of the Septuagint has *Δαναράν*, from which it would appear that the reading דַּן־יָאָן was found in some ancient copies of the Scriptures. Gesenius says this is probably the true reading.—J. L. P.

DANCE. The words in the original, rendered in our translation by this term, denote, properly, to leap for joy; and this radical signification, suggesting the idea of abrupt and boisterous gesticulations rather than a series of regular and tasteful movements, seems well to comport with what we may suppose to have been the primitive character of the dance. On the other hand, some writers of great erudition have maintained that no allusions whatever are to be found in the O. T. history to this kind of bodily exercise; and that in most, if not in all the passages, where, in our version, dancing is mentioned, the etymology of the Hebrew, supported in some places by the strain of the context, seems to point to some kind of musical instrument as being intended by the inspired penmen. Thus, in Exod. xv. 20, where the first notice is taken of dancing, מְחַלְלָה, coming, as it does from חָלַל, 'to pierce' or 'perforate,' and applied naturally enough as the name of any tube that may be blown by the breath, is, according to them, used to describe some instrument of the pipe or flute class, as conjoined with timbrels; and in this interpretation they are supported by the Arabic and Persian versions. But this word, or some derivative from the same root, occurs in Exod. xxxii. 19; Judg. xxi. 21, 23; 1 Sam. xviii. 6; Jer. xxxi. 4, 13; where dancing alone can be intended. Moreover, in the Septuagint, χορός, a dance, is employed in all the passages of the O. T. just referred to, and in several others; and it is no small collateral proof that this is the right interpretation, that people in eastern countries are accus-

tomed to mingle the dance with tabrets to this day. [MUSICAL INSTRUMENTS.]

The character of the ancient dance was very different from that of ours, as appears from the conduct of Miriam, 'who took a timbrel in her hand, and all the women went out after her with timbrels and with dances.' Precisely similar is the Oriental dance of the present day, which, accompanied of course with music, is led by the principal person of the company, the rest imitating the steps. The evolutions, as well as the songs, are extemporaneous—not confined to a fixed rule, but varied at the pleasure of the leading dancer; and yet they are generally executed with so much grace, and the time so well kept with the simple notes of the music, that the group of attendants shew wonderful address and propriety in following the variations of the leader's feet. The missionary Wolf describes a festival of some Eastern Christians, where one eminent individual, who led the song as well as the dance, conducted through the streets of the city a numerous band of people, who leaped and danced in imitation of the gestures used by him. When the late deputation of the Church of Scotland were on their way through Palestine, their young Arab guides, to relieve the tedium of the journey, sometimes 'commenced a native song and dance; one of them, advancing a little before the rest, began the song, dancing forward as he repeated the words; when the rest, following him in regular order, joined in the chorus, keeping time by a simultaneous clapping of hands. They sang several Arabian songs, responding to one another, dancing and clapping their hands.'

At a very early period, dancing was enlisted into the service of religion among the heathen; the dance, enlivened by vocal and instrumental music, was a usual accompaniment in all the processions and festivals of the gods (Strabo, x.); and, indeed, so indispensable was this species of violent merriment, that no ceremonial was considered duly accomplished—no triumph rightly celebrated—without the aid of dancing. The Hebrews, in common with other nations, had their sacred dances, which were performed on their solemn anniversaries, and other occasions of commemorating some special token of the divine goodness and favour, as means of drawing forth, in the liveliest manner, their expressions of joy and thanksgiving. The performers were usually a band of females, who, in cases of public rejoicing, volunteered their services (Exod. xv. 20; Sam. xviii. 6), and who, in the case of religious observances, composed the regular chorus of the temple (Ps. cxlix. 3; cl. 4), although there are not wanting instances of men also joining in the dance on these seasons of religious festivity. Thus David deemed it no way derogatory to his royal dignity to dance on the auspicious occasion of the ark being brought up to Jerusalem. The word used to describe his attitude is כָּרַךְ, in the duplicate form, intimating violent efforts of leaping; and from the apparent impropriety and indecency of a man advanced in life, above all a king, exhibiting such freaks, with no other covering than a linen ephod, many learned men have declared themselves at a loss to account for so strange a spectacle. It was, unquestionably, done as an act of religious homage; and when it is remembered that the ancient Asiatics were accustomed, in many of their religious festivals, to throw off their garments even to perfect nudity, as a symbol some-

times of penitence, sometimes of joy, and that this, together with many other observances that bear the stamp of a remote antiquity, was adopted by Mohamet, who has enjoined the pilgrims of Mecca to encompass the Kaaba, clothed only with the *ihram*, we may perhaps consider the linen *ephod*, which David put on when he threw off his garments and danced before the ark, to be symbolic of the same objects as the *ihram* of the Mohammedans (see Forster's *Mohammedanism Unveiled*). The conduct of David was imitated by the later Jews, and the dance incorporated among their favourite usages as an appropriate close of the joyous occasion of the feast of Tabernacles. 'The members of the Sanhedrim, the rulers of the synagogues, doctors of schools, and all who were eminent for rank or piety, accompanied the sacred music with their voices: and leaped and danced with torches in their hands, for a great part of the night; while the women and common people looked on. This strange and riotous kind of festivity was kept up till exhaustion and sleep dismissed them to their homes (Buxtorf, *De Synag. Jud.* cap. 21).

From being exclusively, or at least principally, reserved for occasions of religious worship and festivity, dancing came gradually to be practised in common life on any remarkable seasons of mirth and rejoicing (Jer. xxxi. 4; Ps. xxx. 11). It has been thought that those who perverted the exercise from a sacred use to purposes of amusement were considered profane and infamous; and that Job introduces it as a distinguishing feature in the character of the ungodly rich, that they encouraged a taste for dancing in their families (Job xxi. 11). During the classic ages of Greece and Rome society underwent a complete revolution of sentiment on this subject; inasmuch that the Grecian poets represent the gods themselves as passionately fond of the diversion (Potter's *Grec. Antiq.* ii. 400), and that not only at Rome, but through all the provinces of the empire, it was a favourite pastime, resorted to not only to enliven feasts, but in the celebration of domestic joy (Matt. xiv. 6; Luke xv. 25). Notwithstanding, however, the strong partiality cherished for this inspiring amusement, it was considered beneath the dignity of persons of rank and character to practise it. The well-known words of Cicero, that 'no one dances unless he is either drunk or mad,' express the prevailing sense as to the impropriety of respectable individuals taking part in it; and hence the gay circles of Rome and its provinces derived all their entertainment, as is done in the East to this day, from the exhibitions of professional dancers. Under the patronage of the emperors, and of their luxurious tributaries, like Herod, the art was carried to the utmost perfection, the favourite mode being pantomime, which, like that of the modern Almehs, was often of the most licentious description. A story of love was chosen—generally an adventure of the gods—as the plan of the dance, and the address of the performer consisted in representing, by the waving of his hands, the agility of his limbs, and the innumerable attitudes into which he threw himself, all the various passions of love, jealousy, disgust, that sway the human breast (see at large Lucian's *Treatise on Dancing*).

Amateur dancing in high life was, as that writer informs us, by no means uncommon in the voluptuous times of the later emperors. But in the age of Herod it was exceedingly rare and almost un-

heard of; and therefore the condescension of Salome, who volunteered, in honour of the anniversary of that monarch's birthday, to exhibit her handsome person as she led the mazy dance in the saloons of Machærus—for though she was a child at this time, as some suppose (Michaelis, *Introd.*), she was still a princess—was felt to be a compliment that merited the highest reward. The folly and rashness of Herod in giving her an unlimited promise, great as they were, have been equalled and even surpassed by the munificence which many other Eastern monarchs have lavished upon favourite dancers. Shah Abbas (to mention only one anecdote of the kind), having been on a particular occasion extremely gratified with a woman who danced before him, and being at the time much intoxicated, made her a present of a magnificent khan that yielded him a considerable revenue. Next morning his minister reminded him of his extravagant liberality, whereupon, being now cool and ashamed of his folly, he sent for the dancer, and obliged her to be contented with a sum of money (Thevenot's *Trav. in Persia*, p. 100). It is by no means improbable that Herod, too, was flushed with wine; and that it was from fear he should retract his promise, if she delayed till the morning, that Herodias sent *immediately* for the head of the Baptist.

It remains to notice further that the Jewish dance was performed by the sexes separately. There is no evidence from sacred history that the diversion was promiscuously enjoyed, except it might be at the erection of the deified calf, when, in imitation of the Egyptian festival of Apis, all classes of the Hebrews intermingled in the frantic revelry. In the sacred dances, although both sexes seem to have frequently borne a part in the procession or chorus, they remained in distinct and separate companies (Ps. lxxviii. 25; Jer. xxxi. 13).—R. J.

DANIEL (דָּאֲנִיֵּאל, *i. e.*, *God is my Judge*), a celebrated prophet in the Chaldean and Persian period. There are in the Bible two other persons of the same name: a son of David (1 Chron. iii. 1), and a Levite of the race of Ithamar (Ezra viii. 2; Neh. x. 6). The latter has been confounded with the prophet in the apocryphal Addenda to the Septuagint (Dan. xiv. 1, Sept.), where he is called *λεπείν's* *ὄνομα* *Δανιήλ υἱὸς Ἀβδᾶ* (Hieronym, *Præfat. in Daniel*).

Daniel was descended from one of the highest families in Judah, if not even of royal blood (Dan. i. 3; comp. Joseph. *Antiq.* x. 10. 1). Jerusalem was thus probably his birthplace, though the passage (Dan. ix. 24) quoted in favour of that opinion, is considered by many commentators as not at all conclusive.

We find the lad Daniel, at the age of twelve or sixteen years, already in Babylon, whither he had been carried, together with three other Hebrew youths of rank, Ananiah, Mishael, and Azariah, at the first deportation of the people of Judah in the fourth year of Jehoiakim. He and his companions were obliged to enter the service of the royal court of Babylon, on which occasion he received the Chaldean name of *Belshatazar* (*i. e.*, *Beli princeps, princeps cui Belus faveat*), according to eastern custom when a change takes place in one's condition of life, and more especially if his personal liberty is thereby affected (comp. 2 Kings xxiii. 34; xxiv. 17; Esth. ii. 7; Ezra v. 14).

In this his new career, Daniel received that thorough polish of education which Oriental etiquette renders indispensable in a courtier (comp. iii. 6; Plat. *Alcib.*, sec. 37), and was more especially instructed 'in the writing and speaking Chaldean' (Dan. i. 4), that is, in the dialect peculiar to the Chaldeans [CHALDEE LANGUAGE]. In this dialect were composed all the writings of the ecclesiastical order, containing the substance of all the wisdom and learning of the time, and in the knowledge of which certainly but few favoured laymen were initiated. That Daniel had distinguished himself, and already at an early period acquired renown for high wisdom, piety, and strict observance of the Mosaic law (comp. Ezek. xiv. 14-20; xxviii. 3; Dan. i. 8-16), is too evident from passages in the truly authentic Scriptures to require any additional support from the ill-warranted Apocryphal stories concerning the delivery of Susannah by the wisdom of the lad Daniel, etc. A proper opportunity of evincing both the acuteness of his mind, and his religious notions, soon presented itself in the custom of the Eastern courts to entertain the officers attached to them from the royal table (Atheneus, iv. 10, p. 145, ed. Casaub.) Daniel was thus exposed to the temptation of partaking of unclean food, and of participating in the idolatrous ceremonies attendant on heathen banquets. His prudent proceedings, wise bearing, and absolute refusal to comply with such customs, were crowned with the Divine blessing, and had the most splendid results.

After the lapse of the three years fixed for his education, Daniel was attached to the court of Nebuchadnezzar, where, by the Divine aid, he succeeded in interpreting a dream of that prince to his satisfaction, by which means—as Joseph of old in Egypt—he rose into high favour with the king, and was entrusted with two important offices—the governorship of the province of Babylon, and the head-inspectorship of the sacerdotal caste (Dan. ii.)

Considerably later in the reign of Nebuchadnezzar, we find Daniel interpreting another dream of the king's, to the effect that, in punishment of his pride, he was to lose, for a time, his throne, but to be again restored to it after his humiliation had been completed (Dan. iv.) Here he displays not only the most touching anxiety, love, loyalty, and concern for his princely benefactor, but also the energy and solemnity becoming his position, pointing out with vigour and power the only course left for the monarch to pursue for his peace and welfare.

Under the unworthy successors of Nebuchadnezzar, Daniel and his deservings seem to have been forgotten, and he was removed from his high posts. His situation at court appears to have been confined to a very inferior office (comp. Dan. viii. 27); neither is it likely that he should have retained his rank as head inspector of the *order of the magians* in a country where these were the principal actors in effecting changes in the administration whenever a new succession to the throne took place.

We thus lose sight of Daniel until the first and third year of King Belshazzar (Dan. v. 7, 8), generally understood to have been the last king of Babylon (called by profane writers Nabonnedus), but who—to judge from Dan. v. 11, 13, 18, 22—was, more probably, the son and successor of Nebu-

chadnezzar, usually called Evil-Merodach, though passing in Daniel by his Chaldean title and rank. After a reign of two years, this monarch was assassinated by his brother-in-law Neriglissar (Berosus in Joseph. *contra Apion.* i. 20). Shortly before this event Daniel was again restored to the royal favour, and became moral preacher to the king, who overwhelmed him with honours and titles in consequence of his being able to read and solve the meaning of a sentence miraculously displayed, which tended to rouse the conscience of the wicked prince.

Under the same king we see Daniel both alarmed and comforted by two remarkable visions (Dan. vii., viii.), which disclosed to him the future course of events, and the ultimate fate of the most powerful empires of the world, but in particular their relations to the kingdom of God, and its development to the great consummation.

After the conquest of Babylon by the united powers of Media and Persia, Daniel seriously busied himself under the short reign (two years) of Darius the Mede or Cyaxares II. with the affairs of his people and their possible return from exile, the term of which was fast approaching, according to the prophecies of Jeremiah. In deep humility and prostration of spirit, he then prayed to the Almighty, in the name of his people, for forgiveness of their sins, and for the Divine mercy in their behalf: and the answering promises he received far exceeded the tenor of his prayer, for the visions of the Seer were extended to the end of time (Dan. ix.)

In a practical point of view, also, Daniel appeared at that time a highly-favoured instrument of Jehovah. Occupying, as he did, one of the highest posts of honour in the state, the strictness and scrupulousness with which he fulfilled his official duties could not fail to rouse envy and jealousy in the breasts of his colleagues, who well knew how to win the weak monarch, whom they at last induced to issue a decree imposing certain acts, the performance of which, they well knew, was altogether at variance with the creed of which Daniel was a zealous professor. For his disobedience the prophet suffered the penalty specified in the decree: he was thrown into a den of lions, but was miraculously saved by the mercy of God—a circumstance which enhanced his reputation, and again raised him to the highest posts of honour under Darius and Cyrus (Dan. vi.)

He had, at last, the happiness to see his most ardent wishes accomplished—to behold his people restored to their own land. Though his advanced age would not allow him to be among those who returned to Palestine, yet did he never for a moment cease to occupy his mind and heart with his people and their concerns (Dan. x. 12.)

In the third year of Cyrus, he had a series of visions, in which he was informed of the minutest details respecting the future history and sufferings of his nation, to the period of their true redemption through Christ, as also a consolatory notice to himself to proceed calmly and peaceably to the end of his days, and then await patiently the resurrection of the dead at the end of time.

From that period the accounts respecting him are vague, sometimes confused, and even strange; and we hardly need mention the various fables which report his death to have taken place in Palestine, Babylon, or Susa.—H. A. C. H.

DANIEL, BOOK OF. This important and in many respects remarkable book, takes its name not only from the principal person in it, but also and chiefly from him as its real author; there being no doubt whatever that, as the book itself testifies, it was composed by Daniel (comp. vii. 1, 28; viii. 2; ix. 2). It occupies, however, but a third rank in the Hebrew canon; not among the *Prophets*, but in the *Hagiographa*, owing, as we think, to the correct view of the composers of the canon, that Daniel did not exercise his prophetic office in the more restricted and proper sense of the term 'prophecy;' but stood to the theocracy in a different relation from those real prophets whose calling and profession consisted exclusively in declaring the messages they received, and in the communion which they held with God. These latter are termed, in the ancient Hebrew idiom, נְבִיאִים, *prophets*, in contradistinction to שֵׁרִפִּים, *seers*, who, though they were equally favoured with divine revelations, were nevertheless not prophets by profession, a calling that claimed the entire service of a man's whole life. [CANON.]

The book of Daniel divides itself into two parts, *historical* (ch. i.-vi.) and *prophetic* (ch. vii.-xii.), arranged respectively in chronological order. Its object is by no means to give a summary historical account of the period of the exile or of the life of Daniel himself, since it contains only a few isolated points both as to historical facts and prophetic revelations. But the plan or tendency which so consistently runs through the whole book, is of a far different character; it is to shew the extraordinary and wonderful means which the Lord made use of, in a period of the deepest misery, when the theocracy seemed dissolved and fast approaching its extinction, to afford assistance to his people, proving to them that he had not entirely forsaken them, and making them sensible of the fact, that His merciful presence still continued to dwell with them, even without the Temple and beyond the Land of Promise. In this way alone was it possible to render the time of punishment also a period of rich blessing. The manifestations of the Lord to that effect consisted, among others, of the wonders recorded in this book, and the glorious prophecies of the seer. The book thus sets forth a series of miraculous tokens, by which God proclaimed amidst the heathen world, and in a period of abject degradation, that Israel was still his people, the nation of his covenant, still marching steadily onward to the goal marked out for them by the Lord.

The wonders related in Daniel (ch. i.-vi.) are thus mostly of a peculiar, prominent, and striking character, and resemble in many respects those performed of old time in Egypt. Their divine tendency was, on the one hand, to lead the heathen power, which proudly fancied itself to be the conqueror of the theocracy, to the acknowledgment that there was an essential difference between the *world* and the *kingdom of God*; and, on the other, to impress degenerate and callous Israel with the full conviction, that the power of God was still the same as it was of old in Egypt.

Neither do the prophecies contained in the book (ch. vii.-xii.) bear a less peculiar and striking character. We cannot, indeed, fail to discover in the writer, to a very great extent, a person of vast information, and well-versed in the management of political affairs, these prophecies having for their

object—more than any other in the O. T.—the political vicissitudes of the empires of the world. Nor are we less reminded of Daniel's domicile in Chaldæa, by the colouring imparted to his visions, by their symbols, and more especially by those drawn from beasts (Dan. vii. 8), the grotesque manner in which the figures are put together, and the colossal majesty imprinted on those sketches. All these peculiarities belong to the *individuality* of the prophet himself, which is conspicuous even in the accounts he gives of the revelations imparted to him, though that individuality is then greatly modified by the sanctified, exalted, and glorified state of his mind.

The language of the book is partly Chaldæan (ii. 4; vii. 28) and partly Hebrew. The latter is not unlike that of Ezekiel, though less impure and corrupt, and not so replete with anomalous grammatical forms. The Chaldæan is nowise that of the Chaldæans *proper*, but a corrupt vernacular dialect, a mixture of Hebrew and Aramaic, formed during the period of the exile. It resembles mostly the Chaldæan pieces in Ezra, but differs greatly from the dialect of the latter Targums.

The style is, even in the prophetic parts, more prosaic than poetical, as Lowth has already observed: 'Totum Danielis Librum e Poeticorum censu excludo.' The historical descriptions are usually very broad and prolix in details; but the prophecies have a more rhetorical character, and their delivery is frequently somewhat abrupt; their style is descriptive, painting with the most lively colours the still fresh impression which the vision has made on the mental eye.

The following are the essential features of the prophetic tenor of the book of Daniel, while the visions in ch. ii. and vii., together with their different symbols, may be considered as embodying the leading notion of the whole. The development of the whole of the heathen power, until the completion and glorification of the kingdom of God, appeared to the prophet in the shape of four powers of the world, each successive power always surpassing the preceding in might and strength, namely, the Babylonian, Medo-Persian, Greek, and Roman. The kingdom of God proves itself conqueror of them all; a power which alone is everlasting, and showing itself in its utmost glorification in the appearance of the Messiah, as Judge and Lord of the world. Until the coming of the Messiah, the people of God have yet to go through a period of heavy trials. That period is particularly described, ch. viii. and xi., in the struggles of the Maccabæan time, illustrative of the last and heaviest combats which the kingdom of God would have to endure. The period until the appearance of the Messiah is a fixed and sacred number: seventy weeks of years (ch. ix.) After the lapse of that period ensues the death of the Messiah; the expiation of the people is realised; true justice is revealed, but Jerusalem and the Temple are in punishment given up to destruction. The true rise from this fall and corruption ensues only at the end of time, in the general resurrection (ch. xii.)

The *unity* of the book has been disputed by several critics, and more especially by Eichhorn and Bertholdt, who conceived it to have been written by more than one author, on account of some contradictions which they thought they had discovered in it, such as in i. 21, compared with

x. 1; and in i. 5-18, compared with ii. 1. With regard to the first supposed contradiction, we consider the meaning of i. 21 to be, that Daniel had lived to see the first year of the reign of Cyrus, as a particularly memorable, and, for the exiled people, a very important year. This does by no means exclude the possibility of his having lived still longer than up to that period.

Respecting the second presumed contradiction, the matter in ch. i. 5-18 belongs properly to the co-regency of Nebuchadnezzar, which term is there added to his period of government, while in ch. ii. 1 his reign is counted only from the year of his actual accession to the throne. These attempts to disturb the harmony of the work are also discountenanced by the connecting thread which evidently runs through the whole of the book, setting the single parts continually in mutual relation to each other. Indeed, most critics have now given up that hypothesis, and look at the book as a closely connected and complete work in itself.

Much greater is the difference of opinion respecting the *authenticity* of the book. The oldest known opponent of it is the heathen philosopher Porphyry, in the third century of the Christian era. The greater the authority in which the book of Daniel was held at that time by both Jews and Christians in their various controversies, the more was he anxious to dispute that authority, and he did not disdain to devote one whole book (the twelfth)—out of the fifteen which he had composed against the Christians—to that subject alone. He there maintains that the author of the book of Daniel was a Palestine Jew of the time of Antiochus Epiphanes, that he wrote it in Greek, and fraudulently gave to *past* events the form of prophecies. Porphyry has been answered by Eusebius of Cæsarea, Methodius of Tyre, and Apollinaris of Laodicea. But their works, as well as that of Porphyry himself, are lost; and we know the latter only from the numerous quotations and refutations in the Commentary of Jerome.

Porphyry found no successor in his views until the time of the English deists, when Collins attempted to attack the authenticity of Daniel, as was done by Semler in Germany. After this a few critics, such as J. D. Michaelis, and Eichhorn, disputed the authenticity of the six first chapters. The learned Swiss, Corrodi, went still farther, and, reviving the views of Porphyry, questioned the genuineness of the *whole* book. The strongest, most elaborate, and erudite attacks against the book, came from the pens of Bertholdt, Bleek, De Wette, Lengerke, and others. But there have also not been wanting voices in its defence, such as those of Lüderwald, Staudlin, Jahn, Lack, Steudel, Hengstenberg, Hävernick, and others.

The arguments advanced against the genuine character of Daniel are more directed against the *internal* than *external* evidence of the work.

The wonders and prophecies recorded in it are always the foremost stumbling-block, and much objection is made to them. The contents of the historical part is declared to be fictitious, and replete with improbabilities—nay, even with historical inaccuracies, such as the sketches regarding the relations of the sacerdotal order, the sages and astrologers (ii. 2; iv. 7; v. 7-15), the mention of Darius the Mede (vi. 1; ix. 1; xi. 1), and the regulations concerning the satraps (iii. 3; vi. 2, etc.)

In the prophetic part particular objection is taken to the apocalyptic character of the book, by which it differs from all the other books of the Prophets. Not less suspicious, in their eyes, is the circumstance that all the accounts in it relating to very remote future events, and the fate of empires which had not then yet risen into existence, are described in so positive and exact a manner, and with so much circumstantial detail, even to the very *date* of their occurrence. Yet, as this does not extend farther than the time of Antiochus Epiphanes, it will naturally lead to the conclusion of 'vaticinia post eventum.' Other objections against the genuineness of the book are, that Daniel is frequently spoken of in it in high terms of respect and honour (i. 17, 19, *sq.*; v. 11, *sq.*; vi. 4; ix. 23; x. 11, etc.); that the language, both Hebrew and Chaldean, is very corrupt, and that the Greek words occurring in them (iii. 5, 7, 10) naturally betray the book to have been written in a later age, at least the Alexandrian, when Greek words began to be introduced into Asia; that the doctrines in the book, the Angelology (iv. 14; ix. 21; x. 13, 21), Christology (vii. 13, *sq.*; xii. 1, *sq.*), the ascetic discipline (i. 8, *sq.*), also betray a later age; that the book stands in the canon in the Hagiographa, a proof that it had become known only *after* the collection of the Prophets had been completed; a suspicion which is still more strengthened by the circumstance that the name of Daniel is wanting in the book of Sirach, ch. xlix., probably because the book of Daniel did not then exist.

These few objections have been variously met and confuted. They rest, to a great extent, partly on historical errors, partly on the want of a sound exegesis, and lastly, on the perversion of a few passages in the text. Thus it has turned out that several of the arguments have led to a far different and even opposite result from what was originally meant, namely, to the *defence* of the authenticity of the book. The existence, *ex. gr.*, of a King Darius of the Medians, mentioned in ch. vi., is a thorough historical fact, and the very circumstance that such an insignificant prince, eclipsed as his name was by the splendour of Cyrus, and therefore unnoticed in the fabulous and historical chronicles of Persia, should be known and mentioned in this book, is in itself a proof of the high historical authority of Daniel. Nor does the whole dogmatic tenor of the book speak less in favour of its genuineness, since the dogmatic spirit of the Maccabean period is essentially different from that which it exhibits, as, *ex. gr.*, in the Christology, which forms the substance and basis of Daniel.

The following are the more important of the arguments which evidence the genuineness of the book—

1. The existence and authority of the book are most decidedly testified by the N. T. Christ himself refers to it (Matt. xxiv. 15), and gives himself (in virtue of the expression in Dan. vii. 13) the name of *Son of Man*; while the Apostles repeatedly appeal to it as an authority (*ex. gr.*, I Cor. vi. 2; 2 Thess. ii. 3; Heb. xi. 33, *sq.*) To the objection that Christ and the writers of the N. T. are here no *real* authority, inasmuch as they accommodate themselves to the Jewish notions and views, we reply that the genuineness of the book of Daniel is so closely connected with the truth of its contents—in other words, that the *authenticity* of the book is so immediately connected with its

authority—that it is impossible to doubt the *genuineness*, without suspecting at the same time a wilful fraud and cheat in its contents; so that the *accommodation* in this case to national views would be tantamount to wilfully confirming and sanctioning an unpardonable fraud.

2. The period of the exile would be altogether incomprehensible without the existence of a man like Daniel, exercising great influence upon his own people, and whose return to Palestine was effected by means of his high station in the state, as well as through the peculiar assistance of God with which he was favoured. Without this assumption, it is impossible to explain the continued state of independence of the people of God during that period, or to account for the interest which Cyrus took in their affairs. The exile and its termination are indicative of uncommon acts of God towards highly gifted and favoured men, and the appearance of such a man as Daniel is described in that book to have been, is an indispensable requisite for the right understanding of this portion of the Jewish history.

3. An important hint of the existence of the book in the time of Alexander is found in Josephus, *Antiq.* xi. 8, 5, according to which the prophecies of Daniel had been pointed out to that king on his entrance into Jerusalem. It is true that the fact may have been somewhat embellished in its details by Josephus, yet it is historically undeniable that Alexander did bestow great favours on the Jews, a circumstance which is not easily explained without granting the fact recorded by Josephus to be true in the main.

4. The first book of the Maccabees, which is almost contemporary with the events related in it, not only pre-supposes the existence of the book of Daniel, but actually betrays acquaintance with the Alexandrian version of the same (1 Maccab. i. 54; comp. Dan. ix. 27; ii. 59; comp. Dan. iii.)—a proof that the book must have been written long before that period.

5. If the book had been written in the Maccabean period, there would probably have been produced in that period some similar prophetic and apocalyptic productions, composed by Palestine Jews. Of such, however, not the slightest notice can anywhere be found, so that our book—if of the Maccabean time—thus forms an isolated enigmatic phenomenon in the later Jewish literature.

6. The reception of the book into the canon is also an evidence of its authenticity. In the Maccabean age the canon had long been completed and closed, but even doubting that point, it is not likely that, at a time when so much scrupulous adherence was shewn towards all that was hallowed by time and *old* usage, and when Scriptural literature was already flourishing—it is not probable, we say, that a production then recent should have been raised to the rank of a canonical book.

7. We have an important testimony for the authenticity of the book in Ezek. xiv. 14-20; xxviii. 3. Daniel is there represented as an unusual character, as a model of justice and wisdom, to whom had been allotted superior divine insight and revelation. This sketch perfectly agrees with that contained in our book.

8. The book betrays such an intimate acquaintance with Chaldean manners, customs, history, and religion, as none but a contemporary writer

could fairly be supposed to possess. Thus, *ex. gr.*, the description of the Chaldean magians, and their regulations, perfectly agrees with the accounts of the classics respecting them. The account of the illness and insanity of Nebuchadnezzar is confirmed by Berosus (in Joseph. *c. Apion.* i. 20). The edict of Darius the Mede (Dan. vi.) may be satisfactorily explained from the notions peculiar to the Medo-Persian religion, and the importance attached in it to the king, who was considered as a sort of incarnate deity.

9. The religious views, the ardent belief in the Messiah, the purity of that belief, the absence of all the notions and ceremonial practices of later Judæism, etc., the agreement of the book in these respects with the genuine prophetic books, and more especially with the prophets in and after the exile—all this testifies to the genuineness of Daniel.

10. The linguistic character of the book is most decisive for its authenticity. In the first instance, the language in it, by turns Hebrew and Aramaean, is particularly remarkable. In that respect the book bears a close analogy to that of Ezra. The author must certainly have been equally conversant with both languages—an attainment exactly suited to a Hebrew living in the exile, but not in the least so to an author in the Maccabean age, when the Hebrew had long since ceased to be a living language, and had been supplanted by the Aramaean vernacular dialect. The Hebrew in Daniel bears, moreover, a very great affinity to that in the other later books of the O. T.; and has, in particular, idioms in common with Ezekiel. The Aramaic also in the book differs materially from the prevailing dialect of the later Chaldean paraphrastic versions of the O. T., and has much more relation to the idiom of the book of Ezra.

With regard to the OLD VERSIONS of the book of Daniel, we must in the first place observe that there is not extant, or even known ever to have existed, any Chaldean paraphrase (Targum) of Daniel, any more than of Ezra. The reason of this lies, no doubt, in the scrupulosity of the later Jews, who believed that the Chaldean version of the two books might afterwards easily be confounded with the original texts, and thus prove injurious to the pure preservation of the latter. There is something peculiar and remarkable in the Alexandrian version of the canonical book of Daniel. Not only has it taken liberties with regard to single expressions and sentences, but has actually dared to remodel the text altogether in ch. iii.-vi., either by numerous additions (as iii. 24, 27., the prayer of Azariah; iii. 51, 52., the song of the Three Children), or by omissions and deviations. There are, besides, two great supplements to that version—the story of Susannah (xiii.), and of Bel and the Dragon in Babel (xiv.) Both apocryphal stories were originally written in Greek, a conclusion drawn already by Porphyry from the quibbles in xiii. 54, 55, 58, 59, who at the same time derided the Christians for considering those stories as genuine writings of Daniel. The authenticity of the two stories was, however, already before him questioned by the fathers of the church, and a very interesting discussion took place between Origen and Julius Africanus regarding the authenticity of the story of Susannah. Jerome condemns the two stories in plain terms as fables, and as additions not belonging to the Hebrew text. Some erroneously assume that, besides our

canonical text, there also existed a sort of critical revision of the former in the Chaldean language, which the Seventy had consulted in their translation. But the mistakes in the translation, which are brought forward in favour of that view, cannot stand a strict criticism, while the above-named peculiarities may be satisfactorily explained from the character of that translation itself. It plainly shews that the writers had endeavoured themselves to furnish a collection of legends, and a peculiar recast of the book, in accordance with the spirit of the age, and the taste of Judæism then prevailing at Alexandria. The wonderful character of the book, and the many obscure and enigmatic accounts in it were the rocks on which the fanciful, speculative, and refining minds of the Alexandrians ran foul. No book was ever more favourable to the intermixture of legends, disfigurements, and misconceptions of all sorts than Daniel, while the period of the exile was generally a favourite topic for the fantastical embellishments of the Alexandrian Jews. In like manner may also be explained the mutilations which the books of Esther and Jeremiah have received at the hands of the Alexandrians, to whom hermeneutic scruples were of but little moment. The more important the book of Daniel was to the Christian church, and the more arbitrary the remodelled Sept. version of it was, the more conceivable is it why, in the old church, the version of Theodotion became more general than that of the Sept. It is true that some of the fathers still made use of the Alexandrian version; but, in the time of Jerome, Theodotion was already read in nearly all the churches, and that this custom had been introduced long before him, is evident from the circumstance that Jerome was ignorant of the historical principles by which the church was guided in adopting that version. For a long time it was believed that the version of the Seventy had been lost, until it was discovered at Rome in the latter half of the last century, in the codex Chisianus. It was published at Rome, 1772, in folio, from the MS. copy of Blanchini, with a translation by P. de Magistris, which edition is, however, very defective and incorrect, though it was afterwards repeatedly republished. The version of Theodotion, generally published together with that of the Septuagint, of which it is a revision, is upon the whole literal and correct. In the present copies of Theodotion, however, are already found the apocryphal interpolations and additions of the Sept. This is owing to the fact that Theodotion's version has in later times been remodelled, interpolated, and falsified after that of the Seventy, so that it would now be altogether an idle task to attempt to restore the original text of Theodotion. A very useful guide for the criticism of the Greek versions is the Syriac Hexaplarian version, published by Buggati, at Milan, in 1788. The Arabic Polyglott version is an offspring of Theodotion's, which it follows with literal exactness.

The Syriac version in the Peshito does some good service in explaining the words in Daniel, but is, nevertheless, not free from gross mistakes. The apocryphal parts it has copied from the later interpolated Theodotion. The Vulgate also has these additions translated after Theodotion.

The most important commentators on Daniel are, among the fathers, Ephrem Syrus, Jerome, Theodoret; among the rabbins, Jarchi, Kimchi,

Abenezra, Joseph Jacchiades; among the Protestant theologians, Melancthon, Calvin, Martin Geier, de Dieu, Venema, Chr. Bened. Michaelis, J. D. Michaelis. [Auberlen refers to the work of Magnus Fr. Roos (1771, translated by Henderson, Edin. 1811), as constituting an epoch in the interpretation of Daniel. In more recent times critical works on Daniel have appeared by Bertholdt (1806), Rosenmüller (1832), Hävernick (1832), Lengerke (1835), Maurer (1836), Hitzig (1850), Auberlen (1854, translated into English 1856). On the literary history and claims of the book, see, besides the introductions, Hengstenberg, *Die authentic des D. etc.* (1851), translated by Ryland (1847), Hävernick, *Neue. Krit. Untersuchungen, üb d. buch. D.* (1838). In English may be mentioned the commentaries of Willet (1610), Broughton (1611), Wintle (1807), and Stuart (1850), and the explanations of the prophetic parts by Irving (1826), Birks (1844, 1846), Tregelles (1852)].—H. A. C. H.

DANIEL, APOCRYPHAL ADDITIONS TO. Besides the many minor deviations from the Hebrew, there are three principal additions in the ancient versions of the Book of Daniel, given in the Apocrypha of the A. V. as three distinct pieces, under the respective titles of—1. *The Song of the Three Holy Children*; 2. *The History of Susanna*; and 3. *The History of the Destruction of Bel and the Dragon*, which we shall discuss seriatim.

I. THE SONG OF THE THREE HOLY CHILDREN.

1. *Title and Position.*—This piece is generally called *The Song* or *Hymn of the Three Holy Children*, because ver. 28 says, that 'the three, as out of one mouth, praised, glorified, and blessed God,' though it ought more properly to be denominated *The Prayer of Azarias and the Song of the Three Holy Children*, inasmuch as nearly half of it is occupied with the prayer of Azarias. Originally it was inserted in the 3d chapter of Daniel, between the 23d and 24th ver.; but, being used liturgically in connection with similar fragments, it was afterwards transposed to the end of the Psalms in the Codex Alexandrinus as Hymn ix. and x., under the titles of 'The Prayer of Azarias,' and 'The Hymn of our Fathers.' It occupies a similar position in many of the Greek and Latin Psalters, and was most probably so placed already in the old Latin version.

2. *Design.*—The design of this piece is evidently *liturgical*, being suggested by the apparent abruptness of the narrative in Daniel (iii. 23), as well as by the supposition that these confessors, who so readily submitted to be thrown into a fiery furnace, in which they remained for some time, would employ their leisure in prayer to the God whom they so fearlessly confessed. Accordingly, Azarias is represented as praying in the furnace (2-22), and, in answer to this prayer, we are told the angel of the Lord appeared, who, notwithstanding the furnace being increasingly heated, cooled the air like 'a moist whistling wind' (26, 27), whereupon all the three martyrs burst into a song of praise (28-68), thus affording an example of prayer and praise to the afflicted and delivered church, which she has duly appreciated, by having used it as a part of her service ever since the 4th century, and by its being used in the Anglican church to the present day.

3. *Unity, author, date, and original language.*—

There is hardly any connection between the prayer of Azarias and the song of the three holy children. The former does not even allude to the condition of the martyrs, and is more like what we should expect from an assembly of exiled Jews on a solemn fast day than from confessors in a furnace. This want of harmony between the two parts, coupled with the fact that ver. 14, which tells that the temple and its worship no longer exist, contradicts ver. 30, 31, 61, 62, where both are said to exist; and that the same author would not have put the prayer into the mouth of *Azarias alone*, shew that the two parts proceed from different sources. Those who are acquainted with the multifarious stories wherewith Jewish tradition has embalmed the memory of Scriptural characters, well know that it is almost impossible to trace the authors or dates of these sacred legends. Neither can the language in which they were originally written be always ascertained. These legends grew with the nation, they accompanied the Jews into their wanderings, assumed the complexions, and were repeated in the languages of the different localities in which the Jews colonized. An apocryphal piece may, therefore, have a Palestine or Babylonian origin, and yet have all the drapery of the Alexandrian school.

II. THE HISTORY OF SUSANNA.

1. *Title and position.*—This apocryphal piece has different titles. Sometimes it is called (*Σουδάννα*) *Susanna*, sometimes (*Δανιήλ*) *Daniel*, and sometimes (*δικαίωμα Δανιήλ*) *The Judgment of Daniel*. Equally uncertain is its position. The Vat. and Alex. MSS., and the Vet. Lat., place it before the first chapter of Daniel, whilst the Sept., after the Cod. Chisianus and Theodotion ed Complu., put it after chap. xii.

2. *Design.*—The design of this attractive story is to celebrate the triumph of womanly virtue over temptations and dangers, and to exalt the wisdom of Daniel in saving the life of the pious heroine. St. Chrysostom rightly sets forth the beautiful lesson of chastity which this story affords, when he says, 'God permitted this trial, that he might publish Susanna's virtue, and the others' incontinence; and, at the same time, by her exemplary conduct, give a pattern to the sex of the like resolution and constancy in case of temptation' (*Serm. de Susanna*). The story of Susanna is therefore read in the Roman church on the vigil of the 4th Sunday in Lent, and in the Anglican church on the 22d of November.

3. *Character, author, date, and original language.*—Though the form of this story, as we now have it, shews that it is greatly embellished, yet there is every reason to believe that it is not wholly fictitious, but based upon fact. The paranomasias in Daniel's examination of the elders, when he is represented as saying to the one who affirmed he saw the crime committed, *ὑπὸ σχίνου, under a mastich-tree*, 'the angel of God hath received sentence of God, *σχίσαι σε μέσον, to cut thee in two*?' and to the other, who asserted he saw it committed, *ὑπὸ πίνου, under a holm tree*, 'the angel of the Lord waiteth with the sword, *πρίσαι, σε μέσον, to cut thee in two*,' only prove that the Greek is an elaboration of an old Hebrew story, but not that it originated with the Alexandrine translator of Daniel. The Song of Solomon may have suggested material to the author. The opinion of Eusebius, Apollinarius, and St. Jerome, that the prophet *Habakkuk* is the author of the History of

Susanna, is evidently derived from the Greek inscription of the History of Bel and the Dragon.

III. THE HISTORY OF BEL AND THE DRAGON.

1. *Title and position.*—This apocryphal piece, which is called by Theodotion, or in our editions of the Septuagint, *Βήλ και Δράκων, Bel and the Dragon*, and in the Vulgate, *The History of Bel and the Great Serpent*, has in the Septuagint the inscription, *ἐκ προφητείας Ἀμβακού υἱοῦ Ἰησοῦ ἐκ τῆς φυλῆς Λευὶ, a part of the prophecy of Habakkuk, the son of Jesus, of the tribe of Levi*, and is placed at the end of Daniel, forming in the Vulgate the 14th chapter of that prophet.

2. *Design and method.*—The design of this piece is to shew the folly and absurdity of idolatry, and to extol the God of Israel. The method adopted to effect this is both ingenious and attractive. Cyrus, who was a devout worshipper of Bel, urged Daniel to serve this idol, and referred to the marvellous fact, that it devoured daily the enormous sacrifice of twelve great measures of fine flour, forty sheep, and six vessels of wine (1-6); but Daniel, knowing the deception connected therewith, smiled at it (7); thereupon the king summoned the priests of Bel, and demanded an explanation from them (8-10); they, to satisfy him that the idol does consume the sacrifice, told the monarch, that he should place it before Bel himself (11-13). Daniel, however, had ashes strewn on the pavement of the temple, and convinced Cyrus, by the impress of the footsteps upon the ashes, that the sumptuous feast prepared for Bel was consumed in the night by the priests, their wives, and their children, who came into the temple through secret doors, and the king slew the crafty priests (14-22). As for the Dragon, who, unlike the dumb Bel, was, as Cyrus urged, a living being (23, 24), Daniel poisoned it, and then exclaimed—'These are the gods you worship!' (25-27). The Babylonians, however, greatly enraged at the destroyer of their god, demanded of Cyrus to surrender Daniel, whom they cast into a den wherein were seven lions (28-32). But the angel of the Lord commanded the prophet Habakkuk, in Judea, to go to Babylon to furnish Daniel with food, and when he pleaded ignorance of the locality, the angel carried him by the hair of his head through the air to the lion's den, where he fed and comforted Daniel (36-39). After seven days Cyrus went to the den to bewail Daniel, 'and behold Daniel was sitting!' The king then commanded that he should be taken out and all his persecutors be thrown in to be instantly devoured, and the great Cyrus openly acknowledged the greatness of the God of Israel (40-42). This story is read in the Roman Church on Ash Wednesday, and in the Anglican Church on the 23d of November.

3. Historical character and original language.

—The basis of this story is evidently derived from Dan. vi. and Ezek. viii. 3, ingeniously elaborated and embellished to effect the desired end. It is not in the nature of such sacred legends to submit to the trammels of fact, or to endeavour to avoid anachronisms. That Daniel, who was of the tribe of Judah, should here be represented as a priest of the tribe of Levi; that he should here be said to have destroyed the temple of Belus which was pulled down by Xerxes, and that the Babylonians should be described as worshippers of living animals, which they never were, are therefore quite in harmony with the character of these legends.

Their object is effect and not fact. The Greek of our editions of the Septuagint is the language in which this national story has been worked out by the Alexandrine embellisher to exalt the God of Abraham before the idolatrous Greeks. Various fragments of it in Aramæan and Hebrew are given in the Midrash (Bereshith Rabba, c. 68), Josippon (p. 34-37, ed. Breithaupt), and in Delitzsch's work *De Habacuci vitâ et atate*, which will shew the Babylonian and Palestinian shape of these popular traditions.

THE CANONICITY OF THESE ADDITIONS.—All these additions are regarded as canonical by the Roman Church. Both the Greek and Latin Fathers commonly quote them as parts of Daniel's prophecy (comp. Irenæus, *Cont. Her.*, iv. 11, 44; St. Clement of Alexandria, *Stromata*, iv.; Tertullian *de Idol.* xviii.; *De Juven.* vii. ix.; St. Cyprian, etc., quoted at length by Du Pin, *History of the Canon*). Against this, however, is to be urged: That these Fathers regarded the Septuagint and the Latin version as containing the canonical books; 2. That these stories were among the many popular Jewish legends which never existed in a definite form, but were shaped by the Jews into different forms and used as parables as circumstances required, without their believing them to be true. This may be seen, not only from the different embellishments which these stories received in the Septuagint by Theodotion, in the Midrash, and by Josippon, but also from the fact that the Jewish teacher, as St. Jerome tells us, ridiculed the idea of the three youths leisurely composing metrical hymns in the fiery furnace; that this Rabbi maintained that Daniel neither required a miracle nor inspiration to detect the frauds of the crafty priests of Bel, and to kill the Dragon with a cake of pitch, but ordinary sagacity; that he regarded the idea of an angel carrying Habakkuk by the hair of his head through the air from Judæa to Babylon as most preposterous, and having no parallel in the Hebrew Scriptures, and that he therefore maintained the apocryphal character of these portions of Daniel (Præf. ad Daniele); 3. That in consequence of their legendary character these portions have never been admitted into the Hebrew Bible, nor are they mentioned in the Jewish catalogues of their Canon (Baba Bathra 15); 4. That those Fathers who knew most of Hebrew, and had most intercourse with the Jews, and hence had the best means of ascertaining which books were in the Jewish Canon, rejected these additions as uncanonical. Thus St. Jerome distinctly says, 'Apud Hebræos nec Susannæ habet historiam, nec hymnum trium puerorum, nec Belis draconisque fabulas: quas nos, quia in toto orbe dispersæ sunt, veru → anteposito, eoque jugulante, subjectimus, ne videremur apud imperitos magnam partem voluminis detruncasse' (Proem ad Dan). Again, he says that Origen, Eusebius, Apollinarius, and other ecclesiastics and doctors of Greece have declared these portions as having no authority of sacred Scripture, 'Et miror quasdam μεμψιμοίρους indignari mihi, quasi ego decurtaverim librum: quum et Origenes, et Eusebius, et Apollinarius, alique ecclesiastici viri et doctores Græciæ has, ut dixi visiones non haberi apud Hebræos fateantur, nec se debere respondere Porphyrio pro his quæ nullam scripturæ sanctæ auctoritatem præbeant.' St. Jerome therefore wrote no commentary upon these apocryphal additions, but simply collected

some observations from the tenth book of Origen's *Stromata*; and in despair of being able to answer the objections against their contents, the Father concludes—'Quod facile solvet qui hanc historiam in libro Danielis apud Hebræos dixerit non haberi. Si quis autem potuerit eam approbare esse de Canone, tunc querendum est quid ei respondere debeamus.'

The literature on these apocryphal additions.—Josippon *ben Gorion*, ed. DANNAH (דַּנְנָה; Sept. 'Πεννά), a town in the mountains of Judah (Josh. xv. 49), the site of which is unknown.

DANNHAUER, JOHANN CONRAD (born 1603, died 1666), a Lutheran clergyman, professor of theology in the university of Strasburg. He was also preacher at the Cathedral Church, and excited considerable attention by his popular expositions of Scripture. He strongly opposed the projected union of the Lutheran and Reformed churches, and took an active part in the controversy which arose respecting it. His writings are numerous, including various works on dogmatic and controversial theology, and others belonging to the department of church history. The following are those on biblical subjects:—*Idea boni interpretis, et maliotiosi calumniatoris*, Argentorati, 1630, 1642, 8vo. *Hermeneutica Sacra, sive methodus exponendarum sacrarum litterarum*, Argent. 1654, 8vo. This is an expansion of the former work, a brief account of which is given by Davidson, *Hermeneutics*, p. 683. *De Politia Hebræa per varias alates succincte descripta*, edited by J. A. Schmidt, Helmsstadt, 1700, 4to. *Collegium disputatorium in epistolam ad Romanos*, published by J. F. Mayer, Greiphswald, 1708, 4to. The following exegetical dissertations, written at various periods, were, with some others, collected by C. Misler, and published under the title *Disputationes Theologicae*, Lipsiæ, 1707, 4to:—*De opere Dei hexæmero*; *De Melchisedeco*; *De Sceptro Jehuda*; *De voto Jephthæ*; *De custodia angelica*; *De Christi Septem verbis novissimis*; *De concilio Hierosolymitano*; *De Gallionismo*; *De gemitu creaturarum* (Rom. viii. 19-23); *De apocalypsi mysterii apostolici*; *De profunditate divinitarum et sapientiæ et cognitionis*; *De Domino gloriæ crucifixo*; *De Hypopiasmo Paulino* (1 Cor. ix. 27); *De signaculo electorum*; *De probatione spirituum*; *De διαλέξει angelica inter Michaellem archangelum et antagonistam diabolum*; *De Muhammedismo in angelis Euphrateis Joanni præmonstrato*.—S. N.

DANZ, JOHANN ANDREAS, a well-known Orientalist and theologian, born February 1, 1654, at Sandhausen, near Gotha. The great capacities he shewed at an early age brought him under the notice of the then Duke of Gotha, who first sent him to the Gymnasium at Gotha, and, when he had completed his course there, to the University at Wittenberg. Here he applied himself chiefly to philosophy, philology, theology, and the Oriental languages. These latter, however, soon became his favourite study, and he proceeded to Hamburg, where he attended the lectures of Ezra Edzardi, besides having two Jewish instructors in Hebrew and Chaldee (Zohar). He afterwards returned to Wittenberg, and there delivered his first lectures, but soon left it for Jena (1680), where he read the Talmud with Zarnossi, a learned convert. A subsequent three years' journey, undertaken at the Duke's expense, brought D. to Amsterdam, where he applied himself chiefly to Persian, under the guidance of La Brosse, who had been for seventeen years a missionary in Persia; and to the study of the Talmud under Jos. Athia and Dav. de Riva. In 1684 we find him in London, and somewhat later at Oxford. At this latter place he read Arabic with the elder Pococke, and Hebrew with E. Bernard and Abendana, two learned Jews. In Cambridge he became acquainted with Cudworth, H. More, Spencer, Newton, Castelli, and others equally famous. Hearing of the arrival of a native of Arabia in London, he repaired thither again. At Leyden he became the disciple of Trigland, and after a short time the Professorship of Oriental languages was offered to him at that place. He preferred, however, returning to Jena, where the degrees of Dr. and Professor of Theology were conferred upon him (1710). He died at that place in 1727.

Although looked upon in his own day as one of the most eminent Orientalists, we could not well, in the present state of linguistic and antiquarian studies, pass anything like the same eulogium upon him. Creditable as some of his very copious productions — on almost every subject connected with the Bible, especially the O. T. — may be to his zeal and industry, still there is very little of lasting value in them. One of his chief merits lies in his having been the first in recent times who, in Germany at least, endeavoured to introduce something like method and accuracy into Hebrew grammar. Unfortunately, however, so far from facilitating its study, he, by introducing a prodigious number of subtle rules, and a terminology far-fetched and almost unintelligible, made it rather more inaccessible than it had been before.

Of the prodigious number of his writings (mostly dissertations, disputations, 'programmata,' etc.), we will mention *Nucifrangibulum Scripturæ S. Ebrææ*, Jenæ, 1686, 8vo, called in a later edition *Literator Ebræo-Chaldaicus, etc.*, Jenæ, 1696, 8vo; *Interpres Ebræo-Chaldaicus*, Ib. 1696, 8vo, re-edited 1755 and 1773; *Aditus Syriæ reclusus, etc.*, Jenæ, 1689, 7th ed. 1735; *Francf.* 1765, 8vo; *De cura Judæorum in conquiendis proselytis, De Ebræorum re militari; Baptismus proselytorum Judæicus; Dissertatio pro Luthero; Oratio de Tryphone . . . habita de בת קול; de Jesu Christi coeterna cum patri existentia; de Krischma Ebræorum, de κρηφοφυλα antediluvianorum licita, de significatione nominis divini ארני*, etc. Most of his aca-

demical writings are to be found in G. H. Meuschen's *Nov. Test. ex Talmude illustr.*, Lips. 1736, and in the *Thes. diss. ad V. Test.* — E. D.

DAPHNE (Δάφνη). 1. A grove in the neighbourhood of Antioch in Syria celebrated for its fountains, its temple in honour of Apollo and Diana, its oracle (Soz. v. 19), and its right of asylum. The name was also extended to the suburb which arose around this attractive place. According to Strabo (xvi. 1066, Oxf. ed.), it was distant from Antioch 40 stadia, or about 5 miles, the distance given in the Jerusalem Itinerary. The writer of the second book of Maccabees refers to it (iv. 33), under the designation Δ. ἡ πρὸς Ἀντιόχειαν κειμένη. Josephus commonly distinguishes it by some similar epithet (*Antiq.* xiv. 15, sec. 11; xvii. 2, sec. 1; *Bell. Jud.* i. 12, sec. 5). A full description of this far-famed spot may be read in Gibbon (*Decline and Fall*, c. xxiii.), where also the authorities are given. Its site has been identified with the modern Beit-el-Maa, or the House of the Waters.

2. A town or village (χώριον) near to the fountains of the little Jordan (Josephus, *Bell. Jud.* iv. 1, sec. 1). Reland (*Palestina*, p. 263) and others have considered this as identical with Dan, proposing to read Δάνης for Δάφνης, and referring in support to Josephus, *Antiq.* viii. 8, sec. 4. Recent explorers have shewn this to be an error, and have discovered the site of the Daphne of Josephus in the present Dufneh, two miles to the south of Tell-el-Kady, the site of Dan. (Van de Velde, *Memoir*, p. 306; *Syria and Palestine*, ii. 419; Robinson, *Later Researches*, 393; Thomson, i. 388).

3. In Num. xxxiv. 11, the clause rendered in the A. V. 'on the east side of Ain' [AIN], and by the LXX. 'on the east to (of) the fountain,' is given in the Vulgate 'contra fontem Daphnim.' The word Daphnim is most probably a marginal gloss, and may perhaps refer to No. 2. Jerome in his commentary on Ezekiel (c. 47), refers to the passage in Numbers, and gives reasons for concluding that 'the fountain' is Daphne No. 1. The targums of Jonathan and of Jerusalem give Daphne or Dophne as the equivalent of Riblah in Num. xxxiv. 11. [RIBLAH]. The error into which Jerome and the Targums have fallen, appears to have arisen either from a confusion between Daphne on the Jordan with Daphne on the Orontes, or from mistaking the fountains near to the mouth of the Orontes for those at its source.

4. A fortified town on the Pelusiac branch of the Nile (Δάφναι, Herod. ii. 30, 107), the Tahpenes of Scripture (TAHPENES); distant from Pelusium 16 Roman miles (Itin. Ant. Iter a Pelusio Memphim). — S. N.

DAR (דר). This word occurs in Esth. i. 6, as the name of one of the stones in the pavement of the magnificent hall in which Ahasuerus feasted the princes of his empire. This would suggest that it must have denoted a kind of marble. Some take it to signify Parian marble, others white marble, but nothing certain is known about it. In Arabic the word *dar* signifies a large pearl. Now pearls were certainly employed by the ancients in decorating the walls of apartments in royal palaces, but that pearls were also used in the pavements of even regal dining-rooms is improbable in itself, and unsupported by any known example. The Septua-

ging refers the Hebrew word to a stone resembling pearls (*πυρρινοῦ λίθου*); by which, as J. D. Michaelis conjectures, it intends to denote the *Alabastrites* of Pliny (*Hist. Nat.* xxxvi. 7, 8), which is a kind of alabaster with the gloss of mother-of-pearl. [ALABASTER.]

DARA. [DARDA.]

DARCMONIM. [ADARCONIM.]

DARDA (דַּרְדָּא; LXX. Δαρδα), mentioned as an example of conspicuous wisdom in 1 Kings iv. 31, where we are told that Solomon 'was wiser than all men; than Ethan the Ezrahite, and Heman, and Chalcol, and Darda, the sons of Mahol.' This incidental notice is very interesting, because it gives a momentary glimpse of a literature or a tradition which has completely vanished. Of an Ethan indeed, and a Heman, we hear elsewhere (1 Chron. vi. 42, 44; xv. 17-19; Ps. lxxxviii. lxxxix.; 1 Chron. xvi. 41; xxv. 1-4); but of Chalcol and Darda we receive no further information. We cannot even conjecture at what period these men, so pre-eminent for wisdom, lived or wrote—for there is nothing to support the Jewish tradition (in Seder Olam Rabba) that they prophesied during the Egyptian bondage.

The phrase בְּנֵי מַחֹל may mean not 'sons of Mahol,' but 'sons of the dance' (*Sacras choreas ducendi periti*. Hiller. *Onom.*), in which case they may have been 'poets,' as indeed Luther calls them (cf. 'daughters of song,' Eccles. xii. 4). That the four are identical with the four of the same name (*cum var. lect.*, דַּרְע, *Dara*) mentioned as 'sons (or descendants) of Zerah' (*i. e.*, Ezrahites) in 1 Chron. ii. 6, there can be no reasonable doubt (Mövers, *Krit. Unters.* s. 237), although Keil argues that nothing can be proved from the mere identity of the names (*Versuch üb. d. Chron.*, s. 164.) This and other points connected with the name will be discussed under EZRAHITE.—F. W. F.

DARDAR (דַּרְדָּר). This word occurs in Gen. iii. 18, and Hos. x. 8, in both of which passages it is translated *thistle*, in the A. V., LXX., τριβόλος. In both passages it is joined with קִין, which is either a generic name for thorns, or the name of some species of thorn. [QOTS.] The dardar is commonly regarded as the *tribulus terrestris* (Celsus, *Hierob.* ii. 128), a prickly or thorny plant [TRIBULUS]. Bochart derives the name from the Arab. دَار circumire, which, in the 10th conj.,

means to *round*; alleging the roundness of the seed shut up in a round capsule as the point of analogy in the case of the *tribulus*. Gesenius traces it to דָּרַר, to *spread out like rays*, from the appearance of the flower; and Furst to דָּרַר, in the sense of *to tear*, from its effects.—W. L. A.

DARICS. [ADARCONIM.]

DARIUS (דַּרְיוֹשׁ, Δαρείος, *Darayavush*, Persian cuneiform inscriptions) appears to be originally an appellative, meaning 'king,' 'ruler' (Herbelot, *Biblioth. Orient.*, s. v. *Dara*; Herodot. vi. 98, renders it by ἐπέτης, 'coercer'). It was assumed as throne-name by Ochus (= D. Notus), son and successor of Artaxerxes Longimanus (Ctesias *de Reb. Pers.* 48. 57, Müller), in like manner as Arsaces, successor of this Darius (*ibid.* 53, 57) and Bessus

(Curt. vi. 6) both took the royal name 'Artaxerxes.' The biblical persons so named are—

I. 'Darius, son of Ahasuerus' (*Ethashawerosh* Heb. = Ἐπέτης, *Khshyarsha* cuneif., not as some suppose = Κουζάρης, which is *Uwakhshatra*, cuneif. See M. v. Niebuhr, *Gesch. Assurs u. Babels*, p. 36, 44), 'of the seed of the Medes who reigned over the kingdom of the Chaldeans,' Dan. ix. 1. This 'Darius the Mede took the kingdom, being 62 years old,' *ib.* v. 31; the first year (only) of his reign is mentioned, ix. 1, xi. 1, and the statement, vi. 28, that 'Daniel prospered in the reign of Darius, and in the reign of Cyrus the Persian,' seems to represent him as immediate predecessor of Cyrus. No Darius occupying this place, nor indeed any Darius anterior to the son of Hystaspes, is found either in profane history, or (hitherto) on monuments. Only, the Scholiast on Aristoph. *Ecol.* 602, followed by Suidas, s. v. Δαρείος, and Herodotus, says that the daric took its name from 'another Darius, earlier than the father of Xerxes (D. Hystaspis).'* Herodotus and Ctesias, differing widely in other respects, agree in making Astyages last king of the Median dynasty, with no male heir, conquered and deposed by Cyrus, first king of the Medo-Persian dynasty at Babylon. Xenophon, however, in the *Cyropædia* (ii. 5, 2) introduces, as son and successor of Astyages, and uncle (mother's brother) of Cyrus, a second Cyaxares, acting under whose orders Cyrus takes Babylon, and receives in marriage his daughter, unnamed, with Media as her portion. Josephus *Antiq. x. 11. 1*, clearly means the Cyaxares II. of Xenophon, when he says that 'Darius was the son of Astyages, but known to the Greeks by a different name;' and the statement of Aben Esra, who reports from 'a book of the kings of Persia' that this Darius was Cyrus's father-in-law, probably rests at last on the supposed authority of Xenophon. But the *Cyropædia*, a pædagogic romance, is at best a precarious source of history, where unsupported or plainly contradicted by Herodotus, Ctesias, and Berosus.

The question, who was 'Darius the Mede?' is inseparable from that which relates to Belshazzar, who seems to be represented in the narrative (ch. v.) as son of Nebuchadnezzar, and last Chaldean king in Babylon, but does not appear under that name in the accounts of the Greeks and native historians. [BELSHAZZAR.] The recent discovery of the name Bel-sar-assur, as son and supposed coregent of Nabunita (Rawlinson and Oppert), seems to explain the name Bel-shazzar, till then known only from the narrative of Daniel. But supposing all other difficulties solved, still 'Darius the Mede' as king in Babylon remains to be accounted for, and, except in the romance of Xenophon, we know of no Median king later than Astyages, and his reign ended 20 or 21 years before the taking of Babylon by Cyrus. On the other hand, a taking of Babylon by a Darius is known to history, but he is Darius Hystaspes, a Persian not a Mede (*Herodot.* i. 209, vii. 11), and a division of the kingdom into satrapies is also on record as the act of the same king (*Herodot.* iii. 89, ff., where the number is 20, not 120 as in Dan. vi. 2). As was mentioned in the art. CHRONOLOGY,

* Perhaps the scholiast mistook a statement purporting that the coin was older than the time of Darius H., and took its name, not from him, but from *dara* 'king.'

17, there are writers who identify 'Darius the Mede son of Ahasuerus' with Darius son of Hystaspes the Persian, and make this a cardinal point in schemes involving sweeping reforms of the chronology. Others briefly dispose of all difficulties by rejecting the book of Daniel from the category of authentic history, alleging that it is the product of a later age (the times of the Maccabees): viz., that though intended as a narrative of facts, it is based only on vague traditions, and the confused accounts of Babylonian and Persian history which were current in those times; or, that put forth with no deceptive purpose, and not claiming to be history, it freely uses historic names and popular traditions only as a vehicle of the higher religious truths by which the author wished to encourage the men of his generation (Duncker *Gesch. des Alterthums*, ii. 609; Hitzig, *kgf. ex. Hdbuch, das B. Daniel*; Bunsen, in his *Bibel-werk*; Rüetschi, *art. Nebuchadnezzar* in Herzog's *Real-Encyclopädie*. Those who are not prepared either to revolutionize our received chronology, or to deny the historical character of the book of Daniel, will have recourse to other combinations framed for the purpose of meeting the difficulties. Two such schemes may be noticed.

C. K. v. Hofmann (*die 70 Jahre*, etc., p. 44, ff.) identifies Belshazzar with the boy *Labosordach*. His father Neriglissar, who, according to Berosus had married a daughter of Nebuchadnezzar, occupied the throne four years as viceroy and guardian of his son, whose years Daniel dates from the death of Evil-merodach (hence the 'third year,' Dan. viii. 1). With Belshazzar the house of Nebuchadnezzar ceased to reign. Then Astyages regarded himself as heir, and Nabonned, elected by the slayers of Belshazzar, reigned as his vassal, but after a while sought to effect his independence by a league with Lydia. So began the war first with Croesus, and, that finished, against Nabonned. When Cyrus had taken Babylon (B.C. 538), Astyages assigned it to his own younger brother, the Cyaxares II. of Xenophon = Darius. So, in Dan. v. 30, vi. 1, we have an abbreviated account of what really took place. With Belshazzar, grandson of Nebuchadnezzar, that dynasty came to an end, as foretold, Jer. xxvii. 7; for Nabonned was only *ῥῆς τῶν ἐκ Βαβυλῶνος* (Berosus). The Chaldean kingdom, it is true, still continued for a while, but only as a dependence of Media.

Here it is assumed that the announcement, v. 28, 'Thy kingdom is divided to the Medes and Persians,' was fulfilled in the person of Astyages immediately on the death of Belshazzar, but that the fulfilment is not noted. Yet surely it ought to have been; and so it is, if the copula in vi. 1 looks back to that prediction. 'In that same night, Belshazzar, the Chaldean king, was slain, and—as Daniel had interpreted the writing on the wall—Darius the Mede took the kingdom.' M. v. Niebuhr *Gesch. Assurs u. Babels*, 91, ff., perceives this necessary connection, and determines that Belshazzar is Evil-merodach, son and successor of Nebuchadnezzar; that, on his death (slain by Neriglissar, his sister's husband), Astyages, who is Daniel's Darius the Mede, reigned one year at Babylon, which year in the Canon is 1 Neriglissar; in the following year he was conquered by Cyrus. After the fall of this Darius-Astyages, Babylon recovered its independence under Nabonned, to fall under the arms of Cyrus, B.C. 538. Daniel himself passed from the service of Darius to that of

Cyrus, and did not again return to Babylon: so vi. 28 is explained. The mention, Dan. viii. 1, of the *third* year of Belshazzar makes a difficulty—not as v. Niebuhr puts it, because Evil-merodach has but two years in the Canon, for the actual reign may very well have reached its third year, but from the mention of Susa as the scene of the vision; for Susa being Median was not subject to any Chaldean king. The explanation gravely proposed by v. Niebuhr is, that Daniel while at Susa in the service of Darius the Mede continued to date by years of Belshazzar's reign; and this, though he is related to have been present in Babylon the night in which Belshazzar was slain. The difficulty is not confined to M. v. Niebuhr's scheme: Belshazzar, whoever he was, was a Chaldean; and the explanation may be, that the prophet is at Susa, not in bodily presence, but transported in spirit to the city which was to be the metropolis of the Persian monarchy, the fate of which, under the emblem of the ram, is portrayed in the ensuing vision.

2. 'Darius, king of Persia,' in whose second year the building of the Temple was resumed, and completed in his sixth (Ezra iv. 5, 24; vi. 15), under the prophesying of Haggai and Zechariah, is understood by most writers, ancient and modern, to be Darius son of Hystaspes, whose reign in the Canon extends from 521 to 485 B.C. Scaliger, however, makes him Darius Nothus (424-405 B.C.), and this view has been recently advocated by the late Dr. Mill, *The Evangelical Accounts of the Birth and Parentage of our Saviour*, etc., 1842, p. 153-165, who refers for further arguments to Hottinger, *Pentateuch Dissertationum*, p. 107-114. Before we examine the grounds on which this conclusion rests, it will be convenient to consider the difficulties with which it is attended.

Zerubbabel son of Shealtiel, as prince of the house of David, and Jeshua son of Jozadak, as high-priest, headed the first colony of exiles from Babylon in the first year of Cyrus (Ezra iii. 2), at which time neither can have been less than twenty years old. By these same two persons the work of rebuilding the temple was resumed and completed after its suspension. Now from the first year of Cyrus, in the biblical reckoning (536 B.C.) to the second of Darius Nothus (423 B.C.) are 113 years: so that, if he be the Darius of this history, both Zerubbabel and Jeshua must then have reached the age of 130 years at least. This is incredible, if not in itself, certainly under the entire silence of the history and the contemporary prophets as to a fact so extraordinary. Moreover, that the work of rebuilding the temple should have been abandoned for a century and more is scarcely conceivable. Its suspension during fifteen or sixteen years is sufficiently accounted for by the history and the representations of the prophets. The adversaries 'weakened the hands of the people of Judah, and troubled them in building, and hired counsellors against them to frustrate their purpose all the days of Cyrus, even until the reign of Darius' (Ezra iv. 4, 5). Besides molesting the builders in their work, they prevailed by their machinations at the court of Cyrus, or of his viceroy, to bring it to a stand-still, by interposing official obstacles, stopping the grants from the royal treasury (vi. 4), and the supply of materials from the forest and the quarry (iii. 7). So the people were discouraged: they said, 'The time is not come for the house of the Lord to be

built,' and turned to the completion of their own houses and the tilling of their lands (Hagg. i. 3). This is intelligible on the supposition of an interval of fifteen or sixteen years, during which, there having been no decree issued to stop it, the work was nominally in progress, only deferred, as the builders could allege at the time of its resumption, 'Since that time (2d of Cyrus), even until now, hath it been in building, and yet it is not finished' (Ezra v. 16). But in no sense could the temple be said to have 'been in building' through the entire reigns of Cambyses, Darius, Xerxes, and Artaxerxes I.: there is no testimony to the fact, nor any means of accounting for it. Again, the persons addressed by Haggai are 'the residue of the people' who came from Babylon with Zerubbabel and Jeshua, some of whom had seen the first house in its glory (ii. 2. 3), *i.e.*, who might be some 80 years old on the usual view, but on the other must have been 170 at the least. The prophet further admonishes his countrymen that the blights, droughts, and mildews which year by year disappointed their labours in the fields were the chastisement of their want of faith in letting the House of God lie waste, while they dwelt in their 'ceiled houses' (I. 4-17); so long as they had been guilty of this neglect, so long had they been visited with this punishment. On the one supposition, this state of things had lasted from twelve to fifteen years at most; on the other, we are required to imagine that the curse had been on the land for three successive generations, an entire century. Lastly, in the same second year of Darius, Zechariah distinctly intimates what length of time had elapsed from the destruction of the first temple—'threescore and ten years' (i. 12). So in vii. 5 mention is made of a period of 70 years, during which the people had 'fasted and mourned in the fifth and seventh month.' The events commemorated by those fasts were the destruction of the temple in the fifth, and the murder of Gedaliah in the seventh month of the same year. From that year to the 2d of Darius I. are almost, if not exactly, 70 years. To the corresponding year of Darius II. the interval is more than 160 years, and the mention of 'those 70 years' is quite unintelligible, if that be the epoch of Zechariah's prophesying. Certainly, if the prophecies of Haggai and Zechariah, and the first five chapters of Ezra, are worth anything as testimony, 'the second year of Darius' must lie within one generation from the decree of Cyrus, and not more than 70 years from the destruction of the first temple. The conclusion is inevitable, unless we are prepared to deny that the Koresh of Scripture is the Cyrus of the Greeks, and to affirm that Nebuchadnezzar was contemporary with Darius, son of Hystaspes.

The reasons alleged on the other side may be thus stated. I. In Ezra iv., between the edict of Cyrus for the return of the exiles and rebuilding of the temple, and that of Darius for the completion of the work after its discontinuance, two Persian kings are named, 'Hhashwerosh and Artahshashta': 'which the names on the Zendic monuments will not permit us to apply to other kings than Xerxes and his son' (Dr. Mill, *u. s.* 153, *note*). The Persian history, as related by the Greeks, and the Astronomical Canon, give three names in succession, Xerxes, Artaxerxes I., Darius II.; Ezra, in like manner, three, 'Hhashwerosh,

Artahshashta, and Daryawesh. By those who hold this last to be Darius, son of Hystaspes, the two first are commonly supposed to be Cambyses and the impostor Smerdis, whom Justin (i. 9) calls Oropasta, Ctesias (*de reb. Pers.* 10) Sphendadates, who reigned under the name of Cambyses's younger brother Tany-oxarces. See Ewald, *Gesch. des V. I.* iv. 81 and 118. But nowhere on monuments is Cambyses called Khsh-yarsha, or Smerdis Artakashasha: the former is constantly Kabujiya (Pers.), Kambudsiya (Bab.), Kembath (hierogl.); the latter Bart'iyā (Pers.), Bardsija (Bab.) Moreover, as Artahshashta (or — shasht) elsewhere in Ezra and Neh. is constantly Artaxerxes, and it scarcely admits of a doubt that 'Hhashwerosh in Esther is Xerxes, it would be strange if these two names were here applied to other quite different kings.

The true explanation of this difficulty, proposed long ago by a writer of our own (Mr. Howes), and adopted by Dr. Hales, has been recently put forward by Bertheau in the *kgf. exeget. Hdb.* on Ezra, Neh., and Esth., 1862, p. 69-73. This writer had formerly upheld the more usual view, *Beiträge zu der Gesch. der Isr.* p. 396; so had Vaihinger in *Studien u. Kritiken* 1854, p. 124, who *ibid.* 1857, p. 87, abandons it for the other. See also Schultz, *Cyrus der Grosse in the Stud. u. Krit.* 1853, p. 624, and Bunsen, *Bibelwerk.* It is clear that, as in iv. 24, the narrative returns to the point at which it stood in verse 5, in the interposed portion it either *goes back* to times before Darius, for the purpose of supplying omitted matter, or *goes forward* to record the successful machinations of the people of the land under subsequent kings, Xerxes and Artaxerxes I. But nothing in the contents of v. 6-23 intimates a reverting to an earlier time. After reading of Darius we naturally take for granted that Ahasuerus and Artaxerxes are later than he. It appears that the adversaries had succeeded in hindering the building of the Temple till the second year of Darius. In the beginning of the next reign (Xerxes) they 'wrote an accusation,' the purport and issue of which are not recorded. In the following reign mention is made of another letter addressed to Artaxerxes, its contents not specified; but a second letter to the same king is given *in extenso*, together with the royal rescript. It is represented to the king that the Jews are building the city, and have 'set up the walls thereof, and joined (excavated) the foundations.' The rescript orders that this work be made to cease. 'Not a word is said of the Temple. It may indeed be alleged that the 'walls' are part of it, intended for its defence: but with their straitened resources the builders would hardly attempt more than was essential to the fabric itself. Besides, in the representations given by Hag. and Zech. from their own observation, nothing implies that quite recently the people had been actively engaged in the work of rebuilding either city walls or Temple, as according to these documents they had been, if Artahshashta be the impostor Smerdis with his brief reign of a few months: nor, again, is it possible to reconcile the statement in Ezra v. 16, 'Since that time even until now (2 Darius) hath it (the Temple) been in building, and yet it is not finished,' with the assumption that the work had been peremptorily stopt by command of Smerdis. But it is certain that at some time between the 7th and the 20th year of Artaxerxes some great reverse befel the

colonists, in consequence of which 'the wall of Jerusalem was broken down, and the gate thereof burned with fire,' Neh. i. 3 (for it is absurd to imagine that this can relate to the desolation effected by Nebuchadnezzar a hundred and forty years before); and the documents under consideration shew what that reverse was. It was the result of that rescript of Artaxerxes, in virtue of which 'Rehum and Shimshai and their companions went up to Jerusalem to the Jews,' and made them to cease by force and power' (Ezr. iv. 23); to cease from walling the city (ver. 21) not from building the Temple, which was finished long before. So far, all is plain and consistent. But at verse 24, with the word בְּחַרְטִין 'at that time,' prop. 'at the same time,' arises the difficulty. Were the last clause of verse 5, 'until the reign of Darius,' absent, the obvious import would be, that at the time when the order from Artaxerxes caused the building of the wall to cease, the work of rebuilding the Temple ceased also, and consequently that Darius (ver. 24) reigned after Ahasuerus and Artaxerxes. But as this view is beset with insuperable difficulties, in whichever way it is taken, *i. e.*, alike whether Darius be supposed the first or the second of that name, we are forced by the necessity of the case to conclude that ver. 24 refers not to what immediately precedes, but to the time spoken of above, vers. 4, 5, and that the whole passage from vers. 6 to 23 is digression. Having shewn how the machinations of 'the people of the land' prevailed for a time to delay the rebuilding of the Temple, the narrative breaks off at that point to notice their subsequent, also for a while successful, plottings against the building of the city and its walls. If the בְּחַרְטִין can only refer to the matter immediately preceding, we must either accept the consequences, part incredible and absurd, part directly opposed to statements of the contemporary prophets, or charge it as an error upon the redactor of this book, that he inserted vers. 6-23 in the wrong place (so Kleinert in the Dorpat *Beiträge zu den theol. Wissensch.* 1832). Considered as a prolepsis, it is, as Bertheau remarks, less striking than that which occurs in vi. 14: 'and they builded and finished (the Temple, viz. in 6 Darius) . . . according to the commandment of Cyrus and Darius, and Artaxerxes, king of Persia.*'

2. A second reason alleged by Dr. Mill (*u. s. p.* 165, note) is 'the circumstance, that in the next ascent from Babylon, that of Ezra himself, . . .

* In the amplified Ezra of the LXX. (Esdras i. of the Apocrypha, *al.* Esdras iii.) the portion vers. 8.—24 (vers. 6, 7 are omitted) is removed to another place. The author perceived, perhaps, that it disturbed the connection of the history relating to the Temple, accordingly he sets it at ii. 15-25, immediately after the narrative of ch. i. of the canonical Ezra. Placing the time of this Artaxerxes between Cyrus and Darius, he finds it necessary to supply the omission of all reference to the Temple, therefore adds to the letter of the adversaries (ver. 17) the clause *καὶ τῶν ὑποβάλλονται*, 'and are laying the foundations of a temple,' and renders the first clause of ver. 14 *בְּעַן בְּלִקְבֵּל הַיְיִמְלֵחַ הַיְיִבְלָא* *כִּלְחָנָא* which the regular LXX. version leaves untranslated, by *ἐπεὶ δὲ τὰ κατὰ τὸν ναὸν ἐνεργεῖται* 'since the affair of the Temple is actively carrying on.'

the chief of David's house was one removed from Zorobabel by at least *six* generations . . . thus proving . . . the impossibility of the descendant's ascent from Babylon being earlier than the reign next to that of Darius Nothus, viz., that of Artaxerxes II.' This argument is fetched from the Davidic genealogy, 1 Chron. iii. 19-22, compared with Ezra viii. 2. It is assumed that Hattush in both places is the same person; now, in the genealogy, it is alleged there are at least six generations between his ancestor Zerubbabel and him, yet he accompanied Ezra from Babylon; of course this is impossible, if between the ascent of Zerubbabel and that of Ezra are but 80 years (1 Cyrus to 7 Artaxerxes Longimanus). Dr. Mill (p. 152, note) mentions 'four ways of exhibiting the offspring of Hananiah, son of Zerubbabel;' the first, that of the common Hebrew text and our version, which, 'if intelligible, yet leaves the number of generations undetermined;' and three others, followed by ancient interpreters, and versions, which result, severally, in making Hattush sixth, eighth, and ninth from Zerubbabel. The present writer sees no reason for departing from the Hebrew text, which he finds both 'intelligible' and consistent with the customary chronology. The genealogy (he thinks) proceeds thus—1. Zerubbabel; 2. his children, Meshullam, *Hananiah*, Shelomith (sister), and five others; 3. the sons of this Hananiah are Pelatiah and Jeshaiah; and *there the pedigree of Zerubbabel ends, i. e.*, with the two grandsons. Then—'the sons of Rephaiah, the sons of Arnan, the sons of Obadiah, the sons of Shekariah; and the sons of Shekariah, Shemaiah; and the sons of Shemaiah, *Hattush*' and five others. That is to say, the genealogist, having deduced the Davidic line through Solomon, and the regal succession down to the grandsons of Zerubbabel, proceeds to mention four other branches of the house of David, and gives a particular account of the fourth, namely, of Shemaiah, the father of that Hattush who went up from Babylon with Ezra, and was in his generation the representative of the Davidic house of Shekariah.* And so in fact the Hattush who accompanied Ezra is described (according to the unquestionably true reading of the passage, viii. 2, 3; 'of the sons of David, *Hattush, of the sons of Shekariah*;' for the last clause is out of place as prefixed to the following enumeration 'of the sons of Parosh,' etc. So the LXX. read it, *ἀπὸ υἱῶν Δαυὶδ, Ἀττούς ἀπὸ υἱῶν Σαχαβία. Καὶ ἀπὸ υἱῶν Φόρος, κ. τ. λ.*; and the apocryphal version more plainly still (1 Esdras. viii. 29) *ἐκ τῶν υἱῶν Δαυὶδ, Λαττούς ὁ Σεχειου*.

3. The concluding argument on the same side is derived from 'the circumstance, that in the next

* So likewise Movers, *über die biblische Chronik*, p. 29. Hävernick, *Handb. der Einleit. in das A. T.* ii. 1. 266. Herzfeld, *Gesch. des V. I. von der Zerstörung des ersten Tempels an*, i. 379. Keil, *Apolog. Versuch über die Bücher der Chronik*, p. 43. On the other hand, Ewald, *Gesch. des V. I.* i. 219, note, makes Shekariah son of Hananiah and father of Shemaiah, so that Hattush is fourth from Zerubbabel; and so Bertheau in the *kfg. exeget. Hdb.* on 1 Chron. iii. 21 (which view is consistent with the usual chronology, as of course it is quite possible that a grandson of Zerubbabel's grandson may have been adult at the time of Ezra's mission, 80 years after the 1st of Cyrus).

ascent from Babylon after that of Ezra, and in the same reign, the principal opponent of Nehemiah in his work of rebuilding Jerusalem, was a man [Sanballat], who can be demonstrated to have continued an active chief of the Samaritans till the time of Alexander the Great, and to have then founded the temple on Mount Gerizim, Joseph. *Antiq.* xi. 8. 2-4' (Dr. Mill, *u. s.*) Josephus's story is that Sanballat, satrap in Samaria of Darius III., had given his daughter in marriage to a brother of the high-priest Jaddua, named Manasses, who, refusing to put her away, took refuge with his father-in-law, and became the first high-priest of the rival Temple built on Mount Gerizim by permission of Alexander, then engaged in the siege of Tyre. All which, with the marvellous romance which follows about Alexander's reception by the high-priest Jaddua, needs a better voucher than Josephus before it can be accepted as history. The story about Manasses and Sanballat, is clearly derived from the last recorded act of Nehemiah, his expulsion of a son of Joiada, and grandson of the then high-priest Eliashib, who was son-in-law to Sanballat the Horonite. It is remarkable that Josephus, in his account of Nehemiah, makes no mention of this act, and does not even name Sanballat: the reason of which may be, that after referring the mission of Nehemiah, as also of Ezra, to the reign of Xerxes, to extend the life of this active chief of the Samaritans from that time to the time of Alexander, full 130 years later, would have been too absurd. So is the assumption of Petermann, Art. 'Samaria,' in Herzog's *Real-Encyclop.* xiii. 1, p. 367, that there were two Sanballats, one contemporary with Nehemiah, the other with Alexander, and that both had daughters married into the family of the high-priest (Eliashib and Jaddua), whose husbands were therefore expelled. As to Jaddua, the fact may be, as Josephus represents it, that he was still high-priest in the time of Alexander. The six who are named in lineal succession in Neh. xii. 10, 11; Jeshua, Joiakim, Eliashib, Joiada, Johanan, and Jaddua, will fill up the interval of 200 years from Cyrus to Alexander. Of these, Eliashib was still high-priest in the thirty-second year of Nehemiah's Artahshashta, and later (xiii. 6. 28); it is scarcely possible that this could be Artaxerxes Mnemon, whose thirty-second year is removed from the 1st of Cyrus by more than 160 years, which is far too much for a succession of three high-priests. It does not follow from the mention of the successors of Eliashib down to Jaddua in xii. 10, ff., that Nehemiah lived to see any of them in the office of high-priest, but only that these genealogies and lists were brought down to his own times by the compiler or last redactor of this book.

It appears, then, that there are no sufficient reasons for calling in question the correctness of the commonly-received view, that the Darius by whom the edict of Cyrus for the rebuilding of the temple was confirmed, was Darius Hystaspes, whereas the assumption that he was Darius Nothus is attended with insuperable difficulties. The inducement to adopt this latter view is the consideration 'that the seventy hebdomads of Dan. ix., which end in the destruction of Jerusalem, A. D. 71, cannot be begun otherwise than by an edict in the second year of Darius Nothus' (Dr. Mill, *u. s.*, p. 166, *note*). It is hardly necessary to remark that the fall of Jerusalem belongs to the year 70, to which

from the second year of Darius Nothus (423-22 B. C.), are 491 years at least. That Dr. Mill does not allege this as an argument is, 'not from any doubt of its truth and cogency—but from regard to the general principle, that history should interpret prophecy, and not be determined by it.'

The son of Hystaspes, ninth in the succession of the Archæmenids, as he styles himself in the Behistun Inscription (comp. Herodot. vii. 11), was third descendant from the younger brother of Cambyses, father of Cyrus. Cambyses having died without issue, and no other son of Cyrus surviving, Darius was hereditary successor to the throne, to which, as Herodotus relates, he was elected on the death of the pretended Smerdis. In the Canon, the date of his accession is 521 B. C., and the length of his reign 36 years, both points confirmed by Herodotus (vii. 1-4), according to whom he died five years after the battle of Marathon (therefore 485 B. C.), after a reign of thirty-six years (also attested by an Egyptian inscription, Rosellini, *Mon. Storici*, ii. 164). So, his second year would begin 520 B. C. But in the biblical reckoning, followed by Haggai, Zechariah, and Ezra, the epoch must have been somewhat later. For it was not until after the suppression of the Babylonian revolt—which, with the siege of nineteen months, beginning in his first year, besides the campaign before it (see the Behistun inscription), must have occupied two years, that the sovereignty of Darius was confirmed, and the records in Babylon would be accessible for the search mentioned in Ezra vi. 1. Hence it is probable that the 'seventy years' spoken of by Zechariah were complete from the destruction of the first temple (588-518 B. C.), and that the movement for resuming the work of rebuilding the temple, was stimulated by the consideration that the predicted time of 'indignation' against Jerusalem had exactly run its course. The benefits conferred by Darius upon the Jews are not mentioned in his inscriptions. Of the satrapies, twenty in number, into which he formed the empire, Palestine would be part of the fourth, including Syria, Phœnicia, and Cyprus. The fourth king of Persia, who should 'be far richer than they all, and by his strength through his riches should stir up all against the realm of Grecia' (Dan. xi. 2), may be Darius, if the pseudo-Smerdis is reckoned, but the description better suits Xerxes. See Hitzig in the *Kgf. exeget. Hdb.* in loc.

3. 'Darius the Persian,' incidentally mentioned in Neh. xii. 22, is supposed by Gesenius, *Lex. s. v.* to be Darius II. (Nothus). The mention of Jaddua immediately preceding makes it more probable that Darius III. (Codomannus) is meant—the king who lost his empire to Alexander the Great, 336 B. C. He is named as 'king of the Persians and Medes' in 1 Maccab. i. 1.—H. B.

DARKNESS. In the gospels of Matt. (xxvii. 45), Mark (xv. 33), and Luke (xxiii. 44), we read that while Jesus hung upon the cross, 'from the sixth hour there was darkness over all the land unto the ninth hour.' Most of the ancient commentators believed that this darkness extended to the whole world. But their arguments are now seldom regarded as satisfactory, and their facts even less so. Of the latter the strongest is the mention of an eclipse of the sun, which is referred to this time by Phlegon Trallianus, and after him by Thallus, ap. Africanus. But even an eclipse

of the sun could not be visible to the whole world, and neither of these writers names the place of the eclipse. Some think it was Rome, but it is impossible that an eclipse could have happened from the sixth to the ninth hour *both* at Rome and Jerusalem. It is therefore highly probable that the statement of Phlegon, which in the course of time has come to be quoted as independent authority, was taken from the relation of the Christians or from the Scriptures. That the darkness could not have proceeded from an eclipse of the sun is further placed beyond all doubt by the fact that, it being then the time of the Passover, the moon was at the full. This darkness may therefore be ascribed to an extraordinary and preternatural obscuration of the solar light, which might precede and accompany the earthquake which took place on the same occasion; for it has been noticed that often before an earthquake such a mist arises from sulphureous vapours as to occasion a darkness almost nocturnal (see the authors cited in Kuinoel *ad Matt.* xxiv. 29, and compare Joel ii. 2; Rev. vi. 12, *sq.*) Such a darkness might extend over Judæa, or that division of Palestine in which Jerusalem stood, to which the best authorities agree that here, as in some other places, it is necessary to limit the phrase *πᾶσαν τὴν γῆν*, rendered 'all the land.' [For the darkness that spread over Egypt, see EGYPT, PLAGUES OF.]

Darkness is often used symbolically in the Scriptures as opposed to light, which is the symbol of joy and safety, to express misery and adversity (Job xviii. 6; Ps. cvii. 10; cxliii. 3; Is. viii. 22; ix. 1; lxix. 9, 10; Ezek. xxx. 18; xxxii. 7, 8; xxxiv. 12). 'He . . . that maketh the morning darkness,' in Amos iv. 13, is supposed to be an allusion to the dense black clouds and mists attending earthquakes. 'The day of darkness,' in Joel ii. 2, alludes to the obscurity occasioned by the flight of locusts in compact masses. [ARBEH.] In Ezek. viii. 12, darkness is described as the accompaniment of idolatrous rites. Darkness of the sun, moon, and stars, is used figuratively, to denote a general darkness or deficiency in the government or body politic (Is. xiii. 10; Ezek. xxxii. 7; Joel ii. 10-31). In Eph. v. 11, the expression 'works of darkness' is applied to the heathen mysteries, on account of the impure actions which the initiated performed in them. 'Outer darkness' in Matt. viii. 12, and elsewhere, refers to the darkness outside, in the streets, or open country, as contrasted with the blaze of cheerful light in the house, especially when a convivial party is held in the night-time; and it may be observed that the streets in the East are utterly dark after nightfall, there being no shops with lighted windows, nor even public or private lamps to impart to them the light and cheerfulness to which we are accustomed. This gives the more force to the contrast of the 'outer darkness' with the inner light.

Darkness is used to represent the state of the dead (Job x. 21; xvii. 13). It is also employed as the proper and significant emblem of ignorance (Is. ix. 2; lx. 2; Matt. vi. 23; John iii. 9; 2 Cor. iv. 1-6). [The 'thick darkness' in which God it is said was (Exod. xx. 21), was doubtless the 'thick cloud upon the mount' mentioned ch. xix. 16; and the 'thick darkness' in which 'the Lord said that He would dwell' (1 Kings viii. 12), has reference to the cloud upon the mercy-seat, in which he promised to 'appear' to Aaron, and which seems to have been rather a cloud of glory and light than of

darkness. When it is said (Ps. xvii. 2) 'clouds and darkness are round about Him,' the reference is apparently to the inscrutability of the divine nature and working. The darkness which is frequently (Is. xiii. 9, 10; Joel ii. 31; iii. 15; Matt. xxiv. 29, etc.) connected with the coming of the Lord, has reference to the judgments attendant on his advent.]

DAROM (דָּרוֹם; Sept. *λῖβα*, and *Δαρόμ*). This word is generally used in Scripture to denote 'the south' (Ezek. xl. 24; Job xxxvii. 17). Its meaning in Deut. xxxiii. 23 is doubtful. Moses in blessing Naphtali says, 'Possess thou the *sea* and *Darom*.' The A. V. renders it 'the west and the south'; the Septuagint, *θάλασσαν και λῖβα*; the old Latin, 'mare et Africum'; and the Vulgate, 'mare et meridiem.' The territory of Naphtali lay on the north-east of Palestine. It did not touch or go near the Mediterranean; consequently 'the sea' cannot mean the Mediterranean. The sea of Galilee is doubtless referred to, the whole western shore of which belonged to Naphtali. The Septuagint rendering of Darom in this passage (*λῖβα, i. e.*, Africa), must be wrong. Naphtali never had any connection with Africa, or with that region on its northern frontier afterwards called Darom. The word seems here to denote a district near Tiberias, and probably the sunny plain of Gennesaret, which surpassed all the rest of Palestine in fertility (Joseph. *Bell. Jud.* iii. 10. 8).

In Ezek. xx. 46 (xxi. 2), Darom appears to be a proper name. 'Son of man set thy face toward *Teman*, and drop the word toward *Darom*.' The A. V. translates both words 'south'; but the Septuagint more correctly *Θαιμᾶν* and *Δαρόμ*. Instead of *Δαρόμ* Symmachus gives *λῖβα*. We learn from Jerome and other ancient writers that the plain which lies along the southern border of Palestine and extends towards Egypt, was formerly called Darom. Thus, Jerome says, Duma 'is a large village in Darom, that is, in the *south country* in the region of Eleutheropolis, seventeen miles distant from that city' (*Onomast. s. v. Daromi*); and Eusebius describes Gerar as situated *ὑπὲρ τὸν Δαρωμᾶν* (Id., s. v. *Γεραρα*). The name appears to have been applied to the whole plain from the Mediterranean to the Arabah, and southern shore of the Dead Sea (Reland, *Pal.* 185, *sq.*) In the early ages of Christianity a Greek convent was erected near the coast, about seven miles south of Gaza, and named *Darom*. During the crusades it was converted into a fortress, and was the scene of many a hard struggle between the Christians and Saracens (Will. Tyr. in *Gesta Dei per Francos*, p. 988; Marinus Sanutus, pp. 86, 246; Bohadin *Vita Saladini*, p. 72, and *Index Geog. s. v. Darounum*; Robinson, *B. R.*, ii. 38). The site is now marked by a small village called Deir el-Balah, 'the convent of the dates' (*Hand-book for S. and P.*, 266).—J. L. P.

DATES. [TAMAR.]

DATHAN (דָּתָן, *fontanus*; Sept. *Δαθάν*), one of the chiefs of Reuben who joined Korah in the revolt against the authority of Moses and Aaron (Num. xvi. 1). [AARON.]

DATHE, JOHANN AUGUST, was born 4th July 1731 at Weissenfels, and died 17th March 1791 at

Leipsic, where he was Professor of Hebrew. His principal work is a translation of the O. T. into Latin, with philological and critical notes. This work, which appeared in sections between the year 1781 and the year 1789, enjoys considerable reputation as a felicitous rendering of the Hebrew Scriptures, neither too literal nor paraphrastic; and most of the sections have passed through two or more editions. The notes are very brief, and are exclusively critical or philological. Dathe also issued an edition of Glass's *Philologia Sacra*, 'his temporibus accommodata,' in which he has taken liberties with the original that have by no means improved it. He edited also Walton's *Prologomena in Bib. Polyglotta*, with a preface, Lips. 1777; and the *Syriac Psalter* with the Latin translation of Erpenius and notes, Halle, 1768. After his death a collection of his *Opuscula ad Crisin interpretationem Vet. Test. spectantia* was edited by the younger Rosenmüller, Leips. 1796. Dathe was an excellent scholar, and has done good service to the cause of biblical interpretation and criticism.—W. L. A.

DATHEMA (*Δάθημα*; Alex. *Δάθημα*), a fortress in Gilead where the Jews took refuge from their enemies, and the siege of which was relieved by Judas Maccabæus (1 Maccab. v. 9, 29-34; Joseph. *Antiq.* xii. 8. 1). There is a various reading, *Δαθέβα*, on which Ewald (*Gesch. Isr.* iii. 2, p. 359) fixes as the proper one, and on the ground of which he identifies the place with the Dhami mentioned by Burckhardt (*Syr.* p. 196). The Syr. makes it

ܕܠܫܘܝܐ *Romtho*, i. e., Ramoth; and with this the general opinion concurs.—W. L. A.

DAUBUZ, CHARLES, was a French Protestant, born about the year 1670. Like many other refugees of his nation, his family experienced the hospitality of England on occasion of the revocation of the edict of Nantes. In due time, Daubuz entered the ministry of the English Church, and ultimately became vicar of Brotherton, near Ferrybridge, in Yorkshire. He was a man of great learning and moderation. In the year 1706 he published in an 8vo volume a work entitled *Protestimonio Flavii Josephi de Jesu Christo contra T. Fabrum et alios*. But the work which keeps his name in remembrance is his commentary on the Apocalypse, entitled, *A perpetual commentary on the Revelation of St. John*, 'wherein is contained—1. The original sacred text and the English translation, laid down and compared together; and their true literal and mystical sense opened and explained. 2. The nature of the prophetic style, and the use of symbolical and mystic terms is shewed and illustrated from numerous instances drawn from Christian and Pagan antiquities. 3. The history of the Church of Christ in the several great periods of its militant state here upon earth is set forth; the whole series of the more extraordinary events and all its more distinguished epochas marked out and explained; with a preliminary discourse concerning the certainty of the principles upon which the Revelation of St. John is to be understood.' This work, which appeared in 1720 in a closely printed folio of more than a thousand pages, vies with the elder Vitringa's *Anacrisis Apocalypseos* as the most learned treatise which has appeared on the last book of the N. T. Canon. Mr. Home (*Introduct.*, 9th ed., vol.

v. p. 388), only states the truth when he designates it as 'an elaborate and very useful work, of which later writers have not failed to avail themselves.' Out of this large work two smaller ones have been formed, with considerable advantage in point of method and utility—1. *A Perpetual Key on the Revelation of St. John; newly modelled, abridged, and rendered plain, etc.*, by Peter Lancaster, vicar of Bowden, Cheshire, 4to, 1730. 2. *A Dictionary of Prophetic Symbols*, which was reprinted in 1842 in an 8vo volume, with a memoir of Daubuz and preface, by Mr. Matthew Habershon. Much commendation has been bestowed on the author respecting this department of his learned labours: 'There is no commentator (says the author of the *Illustrations of Prophecy*), who can be compared with Daubuz for the accuracy, the care, and the consistency with which he has explained the prophetic symbols.' From the title-page of Daubuz's exposition, as we have transcribed it, it will be at once seen that he belongs to the *Historical* or *Chronological* school of Apocalyptic interpretation. As a result of his system, Daubuz has brought together a vast amount of historical and antiquarian information from all sources which bear on the subject, so that his reader cannot fail to profit from his learning, even when he cannot accept his conclusions. A brief account of Daubuz's exposition (confessedly inadequate, however) may be read in Mr. Elliott's *Horæ Apocalypsicæ* [2d ed.], vol. iv. pp. 457-460. Daubuz, whose name bears on his title-page the English academical degree of M. A., is said to have died in the year 1740 (Rose's *Biogr. Dictionary*, vii. 26. 1).—P. H.

DAUGHTER. In the Scriptures the word for daughter (*בַּת*, *ἑνυατήρ*) has more extended applications than our word *daughter*. Besides its usual and proper sense of—1. A daughter born or adopted, we find it used to designate—2. A uterine sister, niece, or any female descendant (Gen. xx. 12; xxiv. 48; xxviii. 6; xxxvi. 2; Num. xxv. 1; Deut. xxiii. 17). 3. Women as natives, residents, or professing the religion of certain places, as 'the daughter of Zion' (Is. iii. 16); 'daughters of the Philistines' (2 Sam. i. 20); 'daughter of a strange God' (Mal. ii. 11); 'daughters of men,' i. e., carnal women (Gen. vi. 2), etc. 4. Metaphorically, small towns are called daughters of neighbouring large cities, metropolises, or mother cities, to which they belonged, or from which they were derived, as 'Heshbon, and all the daughters [A. V. *villages*] thereof' (Num. xxi. 25); so Tyre is called the daughter of Sidon (Is. xxiii. 12), as having been originally a colony from thence, and hence also the town of Abel is called 'a mother in Israel' (2 Sam. xx. 19), and Gath is in one place (comp. 2 Sam. viii. 1; 1 Chron. xviii. 1) called Ammah, or the *mother town*, to distinguish it from its own dependencies, or from another place called Gath. [See Fürst, *H. W. B.* s. *גַּת*.] See other instances in Num. xxi. 32; Judg. xi. 26; Josh. xv. 45, etc. 5. The people collectively of any place, the name of which is given, as 'the daughter (i. e., the people) of Jerusalem hath shaken her head at thee' (Is. xxxvii. 22; see also Ps. xlv. 13; cxxxvii. 8; Is. x. 30; Jer. xlvi. 19; Lam. iv. 22; Zech. ix. 9). This metaphor is illustrated by the almost universal custom of representing towns under the figure of a woman. 6. The word 'daughter,' followed by a

numeral, indicates a woman of the age indicated by the numeral, as when Sarah (in the original) is called 'the daughter of ninety years' (Gen. xvii. 17). 7. The word 'daughter' is also applied to the produce of animals, trees, or plants. Thus, 'daughter of the she-ostrich' (supposed) for 'female ostrich' (Lev. xi. 16); Joseph is called 'a fruitful bough, whose daughters (branches) run over the wall' (Gen. xlix. 22).

The significations of the word 'daughter' in its Scriptural use might be more minutely distinguished, but they may all be referred to one or other of these heads.

Respecting the condition of daughters in families, see art. WOMEN and MARRIAGE.—J. K.

DAVENANT, JOHN, Bishop of Salisbury from 1621-1641. He was educated at Queen's College, Cambridge, and held the Lady Margaret's Professorship of Divinity there, from his taking his doctor's degree in 1609 till 1621. He was taken notice of by James I., and sent by him to the Synod of Dort in 1618. He held at that time a sort of middle view between the extreme parties, not being willing to deny universal redemption; maintaining that the salvation of some was certain, and of all at least possible. In a sermon, however, which he preached before the king in 1631, he maintained the doctrines of predestination. He published the substance of his lectures as Lady Margaret's Professor in a work called *Expositio Epistolæ D. Pauli ad Colossenses*; and, besides this, 1. *Prælectiones de duobus in Theologiâ controversiis Capitibus; de Judeæ controversiarum, primo; de Justitiâ habituali et actuali, altero*; 1651, Cantab. fd. 2. *Determinationes Questionum quarundam Theologicarum*, fol. 1634. 3. *Animadversion upon a treatise by S. Hoard, entitled 'God's love to mankind manifested by disproving his absolute decree for their damnation'*, 1641, Camb. 8vo. The titles of these works sufficiently indicate the scholastic character of Davenant's mind, with which King James so sympathised.—H. W.

DAVID (דָּוִד, Chron. דָּוִד; Sept. Δαυὶδ; New Test. Δαβίδ, Δαυελδ. The word is connected with דָּוָד, a friend, a lover, and means either one who loves, or one who is beloved. The latter is the meaning commonly preferred; comp. Ar. دَاوِد).

The life of David naturally divides itself into four portions:—I. His early life. II. His life while a servant of Saul. III. His reign over Judah in Hebron. IV. His reign over all Israel.

I. *David's early life*.—The family of which David was a child, descended from Ruth, the Moabitess, to the record of whose history one of the books of the Canon is devoted. His father Jesse, who was the grandson of Boaz and Ruth, seems to have been a small proprietor in the neighbourhood of Bethlehem, where David was born. His mother's name has not been preserved, and all we know of her character is derived from two brief allusions to her in the poetry of her son, from which we may gather that she was a godly woman, whose devotion to God's service her son commemorates as at once a token of God's favour to himself and a stimulus to him to consecrate himself to God's service (Ps. lxxxvi. 16; cxvi. 16). David was the youngest of seven sons, the others being Eliab, Abinadab, Shammah, Nethaneel, Raddai,

and Ozem. The Syr. and Arab. versions give another between Ozem and David, whom they name Elihu; and in 1 Chron. xxvii. 18, mention is made of Elihu 'of the brethren of David.' If this be not another reading for Eliab, out of which the Syr. and Arab. translators devised another member of the family of Jesse, we must increase the number of David's brothers to seven, and suppose the name of Elihu omitted in 1 Chron. ii. 15 by accident. Mention is made also of two sisters, Zeruah the mother of Abishai, Joab, and Asahel, and Abigail the wife of Jether. If these were daughters of Jesse they must have been among the elder members of his family, for their sons were about the same age as David; but as Abigail the younger is called the daughter of Nahash (2 Sam. xvii. 25), it has been supposed that they were David's sisters only by the mother's side. Who this Nahash was is uncertain. Some suppose him to have been the husband of David's mother before her union with Jesse; others suggest that he is the King of the Ammonites mentioned ch. x. 2, and xvii. 27, whose concubine David's mother may have been before her marriage with Jesse, which would tend to account for the friendly relations subsisting between David and that prince, though the enemy of Saul and Israel (*loc. cit.* 1 Sam. xi. 1, ff.); whilst others suppose that Nahash is the name of a female who was probably the second wife of Jesse. This last, though adopted by Movers and Thenius, seems the least probable of all. The second hypothesis derives an air of plausibility from the circumstance mentioned; but it seems utterly improbable that a woman, who had been the concubine of a heathen prince of the hated and proscribed race of Ammon, should ever become the wife of a respectable Israelite like Jesse. The first, though purely conjectural, seems the only hypothesis left to us; unless we adopt the dubious suggestion of Le Clerc that Nahash is another name of Jesse.

The youngest child is usually either the favourite or the drudge of the family; David seems to have been both. His name, signifying *beloved*, at least indicates the feeling with which his parents regarded him; nor can we doubt that the ruddy, bright-eyed, golden-haired boy, small of form, but agile and vigorous, of loving and genial temperaments, and with the hues of genius shedding their fitful lustre over his soul, was the darling of his mother. By his elder brothers, however, he seems to have been held in small esteem; and to him was allotted the humble, almost menial, office of tending the flocks in the fields. In those 'green pastures,' however, to which he led his flocks, and amid the solitude to which his occupation often consigned him, and the dangers to which it often exposed him, he was doubtless receiving a training which fitted him for the high position he was destined to occupy both as the king and as 'the sweet singer' of Israel. Exposure to the open air and the exertion he required to put forth, knitted his joints and invigorated his muscles; his encounters with the lion and the bear which came prowling around his folds, taught him caution, promptitude, and courage; and not less did the solitariness of his position induce him to reflective meditation, while the influences of nature by night and by day came constantly down upon him, at once soothing and quickening, elevating and purifying his spirit. Whether at this early period he had given any evidence of his

poetic gifts, as he had given evidence of his strength, agility, and courage (1 Sam. xvii. 34-36; comp. Ps. xviii. 33, 34), is uncertain. Those of his psalms which have the best claim to be considered as belonging to the early part of his life, are the 1st, the 8th, the 19th, the 23d, and the 139th; in all of which the strain and tenor of thought, and the character of the allusions, are such as might naturally come from the mind of a youth constituted and circumstanced as David was. There can be no doubt, however, that at this period he cultivated music, and became a proficient, 'cunning in playing,' especially on the harp (1 Sam. xvi. 18-23). Whether there be any truth in the tradition embodied in the psalm added by the LXX. to the Psalter, that his 'hands made an organ' (*ὄργανον*, which word corresponds both to the כנור and the ננב of the Hebrews), and his 'fingers fitted a psaltery,' cannot be determined.

David is introduced into the sacred narrative for the first time in connection with his anointing by Samuel (1 Sam. xvi. 1-13). There is no small difficulty in reconciling this and what follows in this chapter with the account in the following chapter of David's appearance in the camp of Saul, and his introduction to that monarch in consequence of his victory over Goliath. Both narratives apparently give the account of David's first introduction to Saul; and yet it is not possible to combine them into one. Some would transpose the latter part of the 16th chapter so as to follow after xviii. 9 (Horsely, *Bib. Crit.* i. 332); but it is not easy to see what is gained by this; for if David was known to Saul, and accepted into Saul's service as there narrated, how could Saul send for him to his father's house, and receive him as a perfect stranger, as narrated in xvi. 14-20? On the other hand, if David came before the notice of Saul under the circumstances mentioned in this 16th chapter, and was received into his favour and service as there narrated (21-23), how could the scenes recorded in the 17th chapter, especially those in verses 31-37, and 55-58, have occurred? The Vatican MS of the LXX. rejects xvii. 12-31, 55-58, and xviii. 1-5, as spurious; and this Kennicott approves as the true solution of the difficulty. What gives some plausibility to this is, that ver. 32 naturally connects with ver. 11, and all between has very much the aspect of an interpolation. At the same time, it can hardly be permitted on such grounds to reject a portion of Scripture which has all other evidence, external and internal, in its favour. The old solution of the difficulty, that, as David after his first introduction to Saul did not abide constantly with him, but went and came between Saul and his father's house (xvii. 15), he may have been at home when the war with the Philistines broke out; and as Saul's distemper was of the nature of mania, he very probably retained no recollection of David's visits to him while under it, but at each new interview regarded and spoke of him as a stranger, is, after all, the best that has been suggested, though it still leaves unexplained the fact of Abner's ignorance of David's person, which appears to have been as complete as that of the king, and the fact of David's professing ignorance of warlike weapons, though he had been for some time Saul's armour-bearer. This last difficulty may be alleviated by the consideration, that the statement in xvi. 21 may be preloptical; or David, though Saul's armour-bearer, may have had so little prac-

tice in the use of armour, as to prefer, in such a crisis, trusting to the weapons with which he was familiar.

II. *David's life as the Servant of Saul.*—David had no sooner returned from his memorable conflict with the gigantic Philistine, than he was received into the family of Saul, and placed in a situation of trust and authority in the kingdom. The dark and uneasy mind of the king, however, speedily was filled with jealousy and dislike when he found how high David stood in popular estimation; and under a paroxysm of his insanity he made an attempt on David's life, by casting a javelin at him as he was playing the harp for his solace or pleasure. He also broke his word with David by giving his eldest daughter in marriage to another; he set spies upon him to entrap him into some ambitious utterance that might give the king a handle against him; and he sent him on perilous exploits in the hope of his life being forfeited thereby. But David behaved himself with exemplary prudence in the difficult position in which he was placed, and God providentially preserved him from the perils to which the bad passions of the king exposed him. He found a fast and true friend also in the king's son Jonathan, who 'loved him as his own soul;' and he drew to him the affections of Michal, Saul's second daughter, whom the king was at length constrained to give him to wife. Through their connivance and aid, David made his escape from the palace, after Saul had again made an attempt on his life; and as this only augmented the king's fury, who now gave orders for his assassination, David was doomed to the condition of a fugitive and exile. He first took refuge with the priest Ahimelech at Nob, by whom he was kindly received, supplied with provisions, and furnished with the sword of Goliath, which had been entrusted as a trophy to the safe keeping of the priest. For this Saul visited Ahimelech and the town of Nob with summary and terrible vengeance, causing the massacre of eighty-five priests, and giving up the town to be sacked, and its inhabitants put to the sword. After this, David fled across the Philistian frontier to Achish, king of Gath; but being detected by the servants of Achish as the conqueror of Goliath, he was obliged to feign madness in order to escape the penalty to which that discovery exposed him (1 Sam. xviii.-xxi). Tradition assigns Psalms 34th, 56th, 59th to this period of David's history; to which some add the 6th, 7th, 35th, 36th, 140th, 141st, and 143d.

Having made his escape from Gath, David returned to Judæa, there to lead the life of an outlaw and freebooter. His first retreat was to the cave Adullam; and here he was joined by some of his own relations, among whom was his nephew Abishai (1 Sam. xxvi. 6), and by a multitude of persons who were in distress or in debt, or who were discontented with their condition. Having conveyed his father and mother for security into the land of Moab, David returned and established himself in 'the forest of Hareth,' where he received some valuable reinforcements (1 Chron. xii. 16). While here he sallied forth to the defence of Keilah, on which the Philistines had made an assault; and having routed them and delivered the city, he and his band, now amounting to nearly 600 men, shut themselves up within its walls. Saul, hearing this, mustered his forces, intending

to go to Keilah, where he expected to make an easy prey of David; but the latter receiving intelligence of his intention, made his escape. His next retreat was the wilderness of Ziph, where, attended by a few friends, he sought safety in caves and woods, he having, as it would seem, been constrained to disband his troops, and let each go 'whithersoever they could go.' Now, in his own graphic words, he was 'hunted as a partridge on the mountains; Saul's hatred of him increasing in intensity as his attempts to lay hold of him were baffled. Once David was nearly caught; he was in the wilderness of Maon, occupying a hill, which Saul, guided by the information of the Ziphites, surrounded, so that David and his small band must have been taken, had not the announcement of an invasion of the Philistines suddenly withdrawn Saul from his leaguer. In memory of this occurrence the hill received the name of 'The

Rock of Divisions' (סלע המלקות), probably because by it Saul and David were parted from each other. David, after this, went and dwelt in a stronghold at Engedi (1 Sam. xxii.-xxiii.) The Philistines being dispersed, Saul returned to the pursuit of David, and shortly after ensued the first of two interviews between the pursuer and the pursued. This took place in one of the caves at Engedi, into which Saul had entered in obedience to the calls of nature, ignorant that it hid in its recesses David and his band (1 Sam. xxiv. 1-22). David, though urged by his followers to seize the opportunity of destroying his pursuer, generously forbore, contenting himself with merely cutting off the skirt of his robe, to shew how completely he had had him in his power. Having followed Saul out of the cave, he shewed him this, and appealed to the evidence it afforded of the falsity of the suspicions against him with which the mind of the monarch had been poisoned. Saul was moved by this appeal, and a touching scene of reconciliation and mutual forgiveness ensued. That Saul was sincere in the feelings he expressed on this occasion there can be no doubt; but it was the sincerity of a man who was not master of himself, but the slave of dark and savage passions, which were apt to sweep across his soul. Hence the truce he made with David was speedily broken, and he was again in full pursuit of him among the fastnesses of the wilderness. Once again he came into David's power, and was treated with the same generosity as before, and with the same results. The king, for the moment swayed by his better feelings, acknowledged his iniquity, and promised to refrain from the pursuit of David, his maligned and generous servant; and he and David parted with mutual expressions of regard, never again to meet on earth. David, knowing how little such promises were to be trusted, takes the opportunity to escape into the territory of the Philistines (1 Sam. xxiv.-xxvi.) To this period tradition assigns Pss. liv., lvii., lxiii., and cxlii.

It is not easy for us exactly to realise the condition of David whilst hiding in the wilderness for fear of Saul. He did not lead the life of a mere bandit or freebooter, as is evident from his conduct to Nabal, as attested by one of Nabal's servants, and affirmed by himself, when reproaching Nabal for his churlishness (xxv. 14-16; 34); rather did he use his power for the protection of the lives and property of the occupants of the fields. Nor

was he a mere helpless fugitive and exile, for had he been so we should hardly have heard of his marrying two wives, one of them a person of wealth and consideration like Abigail, Nabal's widow, and both of whom seem to have accompanied him in his retreats (xxv. 39-43). Perhaps, if we think of him as the chief of a force usually employed as a sort of armed police, sustained by those whose property they protected, and only occasionally scattered and pursued by the fitful wrath of Saul, we shall arrive at a somewhat just view of his position and course of life.

When David passed the second time into the territory of Achish, it was no longer as a solitary fugitive, but as a military leader, with a well-trained band of followers, and with something of the wealth and consequence of an eastern chief. Achish (whether the same who had received him formerly, or his son, as Jewish tradition asserts, is uncertain), gave him for himself and his followers the town of Ziklag, which from that time became an appanage of the Judean crown. Here David resided for a year and four months, during which time he enjoyed the full confidence of Achish, though the means which he took to secure that confidence were hardly such as strict regard to integrity can justify. He never, however, was able to overcome the prejudices of the Philistian nobles; and these prevailed, so that Achish was compelled to ask him to withdraw from the army which was mustering on the frontier to attack Saul. David, doubtless, not sorry that he had thus been delivered from the perplexing dilemma in which his ambiguous position placed him, returned to Ziklag. Here he found that during his absence the Amalekites had made an inroad and plundered the city, and carried off all the women and children; a discovery which almost overwhelmed his followers with grief and vexation, and had nearly led to their rising against him. Recovering from the first shock of the trial, however, they hastened after the invaders, overtook them unexpectedly whilst engaged in revelry, inflicted on them a terrible retaliation, and rescued all the booty and prisoners they had taken from Ziklag, as well as took from them much booty of their own. From this David sent presents to his friends in different parts, and so was enabled to repay the services rendered to him in the days of his distress. Whilst he was thus employed, the battle of Gilboa was fought, in which Saul and Jonathan lost their lives; whereby the way was opened for David's occupation of the throne of Israel. Intelligence of this event having been brought to him, his first feeling was one of poignant grief for the fall of his sovereign, and the loss of his true and unfailing friend; and he bewailed their death in a chant, the pathos and solemn beauty of which has never been surpassed (1 Sam. xxvii. xxix.-xxxii.)

III. *David's Reign in Hebron.*—Immediately upon the death of Saul the tribe of Judah invited David to become their prince. Internal probabilities lead us to believe that this was acceptable to the Philistines, who, it would seem, must have had the means of hindering it, if they had been disposed. We are not informed why they neglected to improve the decisive victory which they had gained in Mount Gilboa. They vanish from the scene, and Abner quietly hands over the kingdom of the eleven tribes to Ishbosheth, son of Saul. Among many conjectures which may be made, one is that

they despaired of keeping the whole land under subjection, since their numbers were too few to keep up all their garrisons; and their superiority must have been that of weapons and discipline only. They may, therefore, have gladly acquiesced in a partition of the monarchy, foreseeing that the fame and popularity of David would soon bring on a civil war between him and the house of Saul; and as he was on excellent terms with Achish, and had long been ostensibly an adherent of the Philistine cause, it is not wonderful that during his early reign David was able to maintain peace with his most dangerous neighbours.

‘His first step, after his election, was to fix on Hebron as the centre of his administration—an ancient city, honourable by its association with the name of Abraham, and in the middle of his own tribe. [Here David was anointed king, but apparently over the tribe of Judah only (2 Sam. ii. 4). To this period is referred Ps. xxvii. in the LXX.] He then strengthened himself by a marriage with Maacah, daughter of Talmai, king of Geshur (2 Sam. iii. 3); a petty monarch whose dominions were near the sources of the Jordan, and whose influence at the opposite end of the land must have added a great weight into David’s scale. From Abigail, widow of the churlish Nabal, David seems to have received a large private fortune. Concerning his other wives we know nothing in particular; only it is mentioned that he had six sons by six different mothers in Hebron. The chief jealousy was between the two tribes of Benjamin and Judah, as Saul had belonged to the former; and a tournament was turned by mutual ill-will into a battle, in which Abner unwillingly slew young Asahel, brother of Joab. (On the synchronism of Abner and Asahel, see SAUL.) ‘Long war,’ after this, was carried on between ‘the house of Saul and the house of David.’ We may infer that the rest of Israel took little part in the contest; and although the nominal possession of the kingdom enabled the little tribe of Benjamin to struggle for some time against Judah, the skill and age of Abner could not prevail against the vigour and popular fame of David. A quarrel between Abner and Ishbosheth decided the former to bring the kingdom over to David. The latter refused to treat unless, at a preliminary proof of Abner’s sincerity, Michal, daughter of Saul, was restored to David. The possession of such a wife was valuable to one who was aspiring to the kingdom; and although David had now other wives, there is no reason to question the remembrance of his first love was still very dear to him, and that affection no less than policy dictated this demand. He had certainly the best right to the woman whose hand he had won by toils and dangers; and the laws of man still refuse to recognise any right in a second husband while the first lives. Michal was therefore taken away from the man on whom her father had tyrannously bestowed her, and restored, we suppose not unwillingly, to her real husband. After giving her back, Abner proceeded to win the elders of Israel over to David; but Joab discerned that if this should be so brought about, Abner of necessity would displace him from his post of chief captain. He, therefore, seized the opportunity of murdering him when he was come on a peaceful embassy, and covered the atrocity by pleading the duty of revenging his brother’s blood. This deed was perhaps David’s first taste of the

miseries of royal power. He dared not proceed actively against his ruthless nephew, but he vented his abhorrence in a solemn curse on Joab and his posterity, and followed Abner to the grave with weeping. Anxious to purge himself of the guilt, he ordered a public wearing of sackcloth, and refused to touch food all the day. The obvious sincerity of his grief won the heart of all Israel. The feeble Ishbosheth, left alone, was unequal to the government, and shortly suffered the same fate of assassination. David took vengeance on the murderers, and buried Ishbosheth in Abner’s tomb at Hebron. During this period, it is not stated against what people his warlike excursions were directed; but it is distinctly alleged (2 Sam. iii. 22) that his men brought in a great spoil at the very time at which he had a truce with Abner; possibly it may have been won from his old enemies the Amalekites (1 Sam. xxx.)’

IV. *David’s Reign over all Israel.*—‘The death of Ishbosheth gave to David supremacy over all Israel. [His elevation was celebrated at Hebron with a great festival of three days (1 Chron. xii. 39).] The kingdom was not at first a despotic, but a constitutional one; for it is stated, ‘David made a league with the elders of Israel in Hebron before Jehovah; and they anointed David king over Israel’ (2 Sam. v. 3). This is marked out as the era which determined the Philistines to hostility (ver. 17), and may confirm our idea that their policy was to hinder Israel from becoming united under a single king. Two victories of David over them follow, both near the valley of Rephaim: and these were probably the first battles fought by David after becoming king of all Israel.

‘Perceiving that Hebron was no longer a suitable capital, he resolved to fix his residence farther to the north. On the very border of the tribes of Judah and Benjamin lay the town of Jebus, which with its neighbourhood was occupied by Jebusites, a remnant of the old Canaanitish nation so called. In spite of the great strength of the fort of Zion, it was captured, and the Jebusites were entirely expelled or subdued; after which David adopted the city as his new capital, greatly enlarged the fortifications, and gave or restored the name of Jerusalem [JERUSALEM]. In the account of this siege, some have imagined the Chronicles to contradict the book of Samuel, but there is no real incompatibility in the two narratives. Joab was, it is true, *already* David’s chief captain; but David was heartily disgusted with him, and may have sought a pretence for superseding him, by offering the post to the man who should first scale the wall. Joab would be animated by the desire to retain his office, at least as keenly as others by the desire to get it; and it is therefore quite credible that he may actually have been the successful hero of that siege also. This being the case, it will further explain why David, even in the fulness of power, made no further effort to expel him until he had slaughtered Absalom. After becoming master of Jerusalem, David made a league with Hiram, king of Tyre, who supplied him with skilful artificers to build a splendid palace at the new capital. That the mechanical arts should have been in a very low state among the Israelites, was to be expected; since before the reign of Saul even smith’s forges were not allowed among them by the Philistines. Nothing, however, could have been more profitable for the Phœnicians than the security of cultivation

enjoyed by the Israelites in the reigns of David and Solomon. The trade between Tyre and Israel became at once extremely lucrative to both, and the league between the two states was quickly very intimate.

* Once settled in Jerusalem, David proceeded to increase the number of his wives, perhaps in part from the same political motive that actuates other Oriental monarchs, viz., in order to take *hostages* from the chieftains round in the least offensive mode. This explanation will not apply to the concubines. We know nothing further concerning David's family relations, than the names of eleven sons born in Jerusalem (2 Sam. v. 14, 15), of whom four were children of Bathsheba (1 Chron. iii. 5), and therefore much younger than the elder sons.

Jerusalem, now become the civil metropolis of the nation, was next to be made its religious centre; and the king applied himself to restore the priestly order to its proper place in the commonwealth, to swell the ranks of attending Levites and singers, and to bring the ark to Jerusalem. The priests or Aaronites must, for a long time, have had little occupation in their sacred office; for the ark was at Kirjath-jearim, under the care of a private family. Indeed, during the reign of Saul, we find shewbread to have been set forth at Nob (1 Sam. xxi. 4-6), by Ahimelech the priest; and it is possible that many other ceremonies were performed by them, in spite of the absence of the ark. But after the dreadful massacre perpetrated on the priestly order by Saul, few Aaronites are likely to have felt at ease in their vocation. To wear an ephod—the mark of a priest who is asking counsel of Jehovah—had almost become a crime; and even after the death of Saul, it may seem that the Aaronites, like the other Israelites, remained organized as bands of soldiers. At least Jehoiada (who, according to 1 Chron. xxvii. 5, was high-priest at this time, and joined David at Hebron with 3700 Aaronites) was father of the celebrated warrior Benaiah, afterwards captain of David's body-guard; a man whose qualities were anything but priest-like: and Zadok, afterwards high-priest, who joined David 'with twenty-two captains of his father's house' at the same time as Jehoiada, is described as 'a young man mighty of valour' (1 Chron. xii. 27, 28). How long Jehoiada retained the place of high-priest is uncertain. It is probable that no definite conception then existed of the need of having *one* high-priest; and it is certain that David's affection for Abiathar, because of his father's fate, maintained him in chief place through the greater part of his reign. Not until a later time, it would seem, was Zadok elevated to a co-ordinate position. [ABIATHAR]. Any further remarks concerning the orders and courses of the PRIESTS will be better reserved for the article on that subject. It is enough here to add that the slaughter suffered from Saul by the Aaronites of the line of Ithamar, whom Abiathar now represented, naturally gave a great preponderance of numbers and power to the line of Eleazar, to which Zadok belonged. We must also refer to the article LEVITES for further information concerning them. The bringing of the ark from Kirjath-jearim to Jerusalem established the line of high-priests in direct service before it; and from this time we may presume that the ceremonies of the great day of Atonement began to be observed. Previously, it would appear, the connection between the priest-

hood and the tabernacle had been very loose. The priests fixed their abode at Nob, when the ark was at Kirjath-jearim, a very short distance; yet there is nothing to denote that they at all interfered with Abinadab in his exclusive care of the sacred deposit. [To this event Pss. xxix., xxx., are traditionally referred, and Pss. xv., xxiv., lxviii., cli., and cxxxii., inferentially referred.]

* When the ark entered Jerusalem in triumph, David put on a priest's ephod and danced before it. This proved the occasion of a rupture between him and his royal spouse, Michal. Accustomed to see in her father's court a haughty pre-eminence of the monarch over the priest, she could not sympathize with the deeper piety which led the royal Psalmist to forget his dignity in presence of the ark. The words of David to her, 'Jehovah chose me *before thy father and before all his house*' (2 Sam. vi. 21), sufficiently shew that David scorned to allow that he was in any way indebted to his connection with the family of Saul, through her, for the royalty over all Israel to which he had now attained. After this event, the king, contrasting his cedar palace with the curtains of the tabernacle, was desirous of building a temple for the ark; such a step, moreover, was likely to prevent any future change of its abode. This design, when imparted to the prophet Nathan, was received by him with warm encouragement. He had to learn, however, that the seemingly obvious fitness of a public measure, did not excuse a prophet from the obligation of consulting the Lord before he ventured to utter an authoritative opinion; for the next day he had to return to the king with an intimation that he must abandon the intention of executing this great undertaking. The design is indeed commended; yet as he had been a warrior from his youth, and had shed much human blood, he was pronounced unfit for this sacred work, which was therefore to be reserved for the peaceful reign of his successor. Encouraged by the Divine approbation, and by the high promises which were on this occasion given to him, David henceforth made it one of the great objects of his reign to gather materials and support for this important undertaking, the credit of which he is fairly entitled to divide with his son, by whom it was actually executed. [SOLOMON.]

* Great as might appear the advantage of establishing the same city as the religious and civil metropolis, the effect was, in one respect, most unfortunate: it offended the powerful and central tribe of Ephraim. They had been accustomed to regard Shiloh as the rightful abode of the ark. Against Kirjath-jearim no envy was felt, especially while the ark and its priests were in obscurity. But when so much honour attended it; when it became a peculiar glory to Judah and Benjamin—tribes already too much favoured; when a magnificent edifice was erected to receive it; the seeds were sown of that disaffection which ended in a rending of the tribes apart. Nor was the argument unreasonable, that a more central spot was needed for Israel to assemble at year by year.

* David's further victories are narrated in the following order—Philistines, Moab, Zobah, Edom, Northern League stirred up by the Ammonites, Ammon. 1. The short and dry notice concerning the Philistines just gives us to understand that this is the era of their decisive, though not final subjugation. Their towns were despoiled of their wealth (2 Sam. viii., xii.), and doubtless all their arms

and munitions of war passed over into the service of the conqueror. 2. The Moabites were a pastoral people, whose general relations with Israel appear to have been peaceful. The slight notice of Saul's hostilities with them (1 Sam. xiv. 47) is the only breach recorded since the time of Eglon and Ehud. In the book of Ruth we see them as friendly neighbours, and much more recently (1 Sam. xxii. 3, 4) David committed his parents to the care of the king of Moab. We know no cause, except David's strength, which now drew his arms upon them. A people long accustomed to peace, in conflict with a veteran army, was struck down at once, but the fierceness of his triumph may surprise us. Two-thirds of the population (if we rightly interpret the words, 2 Sam. viii. 2) were put to the sword; the rest became tributary. 3. Who are meant by the Syrians of Zobah, is still a problem [ZOBAB]. We here follow the belief that it was a power of northern Syria, then aiming at extensive empire, which had not only defeated and humbled the king of Hamath, but had obtained homage beyond the Euphrates. The trans-Jordanic tribes in the time of Saul had founded a little empire for themselves by conquering their eastern neighbours, the Hagarenes; and, perhaps, occasionally overran the district on the side of the Euphrates, which Hadadezer, king of Zobah, considered as his own. His efforts 'to recover his border at the river Euphrates' first brought him into collision with David, perhaps by an attack which he made on the roaming Eastern tribes. David defeated not merely his army but that of Damascus too, which came, too late, with succour; and put Israelite garrisons into the towns of the Damascenes. In this career of success, we see, for the first time in history, the uniform superiority over raw troops of a power which is always fighting; whose standing army is ever gaining experience and mutual confidence. 4. Another victory, gained 'in the valley of salt,' ought, perhaps, to be read, as in 1 Chron. xviii. 12, and in the superscription of Ps. lx., 'over the Edomites,' not 'over the Syrians.' The difference of the Hebrew textual letters is very slight, אַרְם אֲרָם. The verse which follows (2 Sam. viii. 14) seems to tell the result of this victory, viz., the complete subjugation and garrisoning of Edom, which, like Moab, was incorporated with David's empire. Immediately before this last conquest, as would appear, he wrote the 60th Psalm; and as that Psalm gives no hint of his achievements against the king of Zobah and the Damascenes, this is a strong ground for believing that those successes were not gained till somewhat later in time. 5. After David had become master of all Israel, of the Philistine towns, of Edom, and of Moab, while the Eastern tribes, having conquered the Hagarenes, threatened the Ammonites on the north, as did Moab on the south, the Ammonites were naturally alarmed, and called in the powers of Syria to their help against a foe who was growing dangerous even to them. The coalition against David is described as consisting of the Syrians of Bethrehab and of Maacah, of Zobah, and of Tob. The last country appears to have been in the district of Trachonitis, the two first immediately on the north of Israel. In this war, we may believe that David enjoyed the important alliance of Toi, king of Hamath, who, having suffered from Hadadezer's hostility, courted the friendship of the Israelitish mon-

arch (2 Sam. viii. 9, 10). We are barely informed that one division of the Israelites under Abishai was posted against the Ammonites; a second under Joab met the confederates from the north, 30,000 strong, and prevented their junction with the Ammonites. In both places the enemy was repelled, though, it would seem, with no decisive result. A second campaign, however, took place. The king of Zobah brought in an army of Mesopotamians, in addition to his former troops, and David found it necessary to make a levy of all Israel to meet the pressing danger. A pitched battle on a great scale was then fought at Helam—far beyond the limits of the twelve tribes—in which David was victorious. He is said to have slain, according to 2 Sam. x. 18, the men of 700 chariots, and 40,000 horsemen; or, according to 1 Chron. xix. 18, the men of 7000 chariots, and 40,000 footmen. If we had access to the court-records of Hamath, we should probably find that Toi had assembled his whole cavalry to assist David, and that to him was due the important service of disabling or destroying the enemy's horse. Such foreign aid may explain the general result, without our obtruding a miracle, for which the narrative gives us not the least warrant. The Syrians henceforth left the Ammonites to their fate, and the petty chiefs who had been in allegiance to Hadadezer hastened to do homage to David. 6. Early in the next season Joab was sent to take vengeance on the Ammonites in their own home, by attacking their chief city, or Rabbah of Ammon. The natural strength of their border could not keep out veteran troops and an experienced leader; and though the siege of the city occupied many months (if, indeed, it was not prolonged into the next year), it was at last taken. It is characteristic of Oriental despotism, that Joab, when the city was nearly reduced, sent to invite David to command the final assault in person. David gathered a large force, easily captured the royal town, and despoiled it of all its wealth. His vengeance was as much more dreadful on the unfortunate inhabitants than formerly on the Moabites, as the danger in which the Ammonites had involved Israel had been more imminent. The persons captured in the city were put to death by torture; some of them being sawed in pieces, others chopped up with axes or mangled with harrows, while some were smothered in brick-kilns (2 Sam. xii. 31; 1 Chron. xx. 3). This severity was perhaps effectual in quelling future movements of revolt or war; for, until insurrections in Israel embolden them, foreign foes after this remain quiet. [To these wars Ps. lx., lxxviii., cviii., cx., are with some certainty referred. Ps. xviii. may belong to this period of David's life, or to an earlier period, when he escaped from the power of Saul. Pss. xx. and xxi. have also, by some, been thought to belong to this period.]

During the campaign against Rabbah of Ammon the painful and never-to-be-forgotten outrage of David against Bathsheba and her husband Uriah the Hittite took place. It is principally through this narrative that we know the tediousness of that siege; since the adultery with Bathsheba and the birth of at least one child took place during the course of it. Although on his deep contrition for this great sin he was forgiven; yet seeing that this sin in one so exalted and so religious had 'given great occasion for the enemies of the Lord to blaspheme,' it behoved the Lord to vindicate his

own righteousness and his abhorrence of sin, by not leaving the heinous crimes of his servant unpunished.

The sentence that went forth against him was:— 'Behold, I will raise up evil against thee out of thine own house,' in which we are furnished with the key to the disasters which darkened the remainder of his course. [To this sad event David refers in Ps. li., and probably also in Ps. xxxii.]

'Of all David's sons, Absalom had naturally the greatest pretensions, being by his mother's side grandson of Talmi, king of Geshur; while through his personal beauty and winning manners he was high in popular favour. It is evident, moreover, that he was the darling son of his father. When his own sister Tamar had been dishonoured by her half-brother Amnon, the eldest son of David, Absalom slew him in vengeance, but, in fear of his father, then fled to his grandfather at Geshur. Joab, discerning David's longings for his son, effected his return after three years; but the conflict in the king's mind is strikingly shewn by his allowing Absalom to dwell two full years in Jerusalem before he would see his face.

'The insurrection of Absalom against the king was the next important event; in the course of which there was shewn the general tendency of men to look favourably on young and untried princes, rather than on those whom they know for better and for worse. Absalom erected his royal standard at Hebron first, and was fully prepared to slay his father outright, which might probably have been done, if the energetic advice of Ahithophel had been followed. While they delayed, David escaped beyond the Jordan, and with all his troop met a most friendly reception, not only from Barzillai and Machir, wealthy chiefs of pastoral Gilead, but from Shobi, the son of the Ammonite king Nahash, whose power he had destroyed, and whose people he had hewed in pieces. We likewise learn on this occasion that the fortunes of David had been all along attended by 600 men of Gath, who now, under the command of Ittai the Gittite, crossed the Jordan with all their households, in spite of David's generous advice that they would return to their own country. Strengthened by the warlike eastern tribes, and surrounded by his experienced captains, the king no longer hesitated to meet Absalom in the field. A decisive victory was won at the wood of Ephraim, and Absalom was slain by Joab in the retreat. The old king was heart-stricken at this result, and, ignorant of his own weakness, superseded Joab in the command of the host by Amasa, Absalom's captain. Perhaps Joab on the former occasion, when he murdered Abner, had blinded the king by pleading revenge for the blood of Asahel; but no such pretence could here avail. The king was now probably brought to his determination, partly by his disgust at Joab, partly by his desire to give the insurgents confidence in his amnesty. If Amasa is the same as Amasai, David may likewise have retained a grateful remembrance of the cordial greeting with which he had led a strong band to his assistance at the critical period of his abode in Ziklag (1 Chron. xii. 18); moreover, Amasa, equally with Joab, was David's nephew, their two mothers, Abigail and Zeruah, being sisters to David by at least one parent (2 Sam. xvii. 25; 1 Chron. ii. 13, 16). The unscrupulous Joab, however, was not so to be set aside. Before long, catching an opportunity, he assassinated his

unsuspecting cousin with his own hand; and David, who had used the instrumentality of Joab to murder Uriah, did not dare to resent the deed. [To this period tradition ascribes Ps. cxliii.; and to it also Pss. xli., lv., lxix., and cix., are commonly referred. It is less certain if we should place Ps. iii. and Ps. iv. among them.]

'A quarrel which took place between the men of Judah and those of the other tribes in bringing the king back, had encouraged a Benjamite named Sheba to raise a new insurrection, which spread with wonderful rapidity. 'Every man of Israel,' are the strong words of the text, 'went up from after David, and followed Sheba, the son of Bichri,' a man of whom nothing besides is known. This strikingly shews that the more despotic character which David's government had latterly assumed, had already gone far to exhaust the enthusiasm once kindled by his devotion and chivalry, and that his throne now too much rested on the rotten foundation of mere military superiority. Amasa was collecting troops as David's general at the time when he was treacherously assassinated by his cousin, who then, with his usual energy, pursued Sheba, and blockaded him in Beth-maachah before he could collect his partisans. Sheba's head was cut off, and thrown over the wall; and so ended the new rising. Yet this was not the end of trouble; for the intestine war seems to have inspired the Philistines with the hope of throwing off the yoke. Four successive battles are recorded (2 Sam. xxi. 15-22), in the first of which the aged David was nigh to being slain. His faithful officers kept him away from all future risks, and Philistia was once more, and finally, subdued.

'The last commotion recorded took place when David's end seemed nigh, and Adonijah, one of his elder sons, feared that the influence of Bathsheba might gain the kingdom for her own son Solomon. Adonijah's conspiracy was joined by Abiathar, one of the two chief priests, and by the redoubted Joab; upon which David took the decisive measure of raising Solomon at once to the throne. Of two young monarchs, the younger and the less known was easily preferred, when the sanction of the existing government was thrown into his scale; and the cause of Adonijah immediately fell to the ground. [Ps. xcii. is traditionally, and Ps. ii., on internal evidence, ascribed to this period.]

'Numerous indications remain to us that, however eminently David was imbued with faith in Jehovah, and however he strove to unite all Israel in common worship, he still had no sympathy with the later spirit which repelled all foreigners from co-operation with Jews. In his early years necessity made him intimate with Philistines, Moabites, and Ammonites; policy led him into league with the Tyrians. He himself took in marriage a daughter of the king of Geshur: it is the less wonderful that we find Uriah the Hittite (2 Sam. xi.), Gether the Ishmaelite (1 Chron. ii. 17), and others, married to Israelitish wives. The fidelity of Ittai the Gittite, and his six hundred men, has been already alluded to. It would appear, on the whole, that in tolerating foreigners Solomon did not go beyond the principles established by his father, though circumstances gave them a fuller development.

'It has been seen that the reign of David began, as that of a constitutional monarch, with a league

between him and his people: it ends as a pure despotism, in which the monarch gives his kingdom away to whomsoever he pleases, and his nominee steps at once into power without entering into any public engagements. The intensity of the despotism is strikingly shewn in the indirect and cautious device by which alone Joab dared to hint to the king the suitableness of recalling Absalom from banishment, though he believed the king himself to desire it (2 Sam. xiv.) All rose necessarily out of the standing army which David kept up as an instrument of conquest and of power, by the side of which constitutional liberty could not stand. The maintenance of this large force perhaps was not oppressive, since rich tributes were received from the surrounding nations, and the civil government was not yet become very expensive.

‘One more dreadful tragedy is recorded in this reign—the immolation of seven sons of Saul (2 Sam. xxi.), on the occurrence of three years’ bad harvests. A priestly response imputed the famine to Saul’s violation of the oath of Joshua with the Gibeonites. It therefore became necessary to satisfy this people; and they, when they were asked to name the satisfaction they demanded, placed the matter on a footing of blood-revenge by demanding that seven of Saul’s descendants should be put to death, and their bodies exposed on gibbets. This demand could not have been withstood by David, had he been so minded; and it is not impossible that he the more easily acquiesced, since it was desirable, for the peace of his successors, that the house of Saul should be exterminated. This suspicion receives some confirmation from the cold injustice of David towards Mephibosheth, son of Jonathan, whom he first stripped of his whole patrimony, on a false and most improbable accusation, and afterwards, instead of honourably redressing the injury, restored to him the half only of his estate (2 Sam. xvi. 3; xix. 24-30). Such conduct intimates that he was too desirous of weakening the house of Saul to feel any strong inducement to exert himself to avert the blow at that house, which the demand of the Gibeonites involved. That David did not give up Mephibosheth to be slain by the Gibeonites is imputed to the oath between him and Jonathan; but it does not appear that their covenant was or could be more binding than his most explicit oath to Saul on the very same matter (1 Sam. xxiv. 21, 22). Five of the persons thus sacrificed to the keen vengeance of the Gibeonites are stated in the common Hebrew and Greek text, and in our received version, to be children of Michal, David’s youthful spouse; and Josephus imagines that they were born of her after a second divorce from David. But it is certain, from 1 Sam. xviii. 19, that *Michal* is here a mistake for *Merab*; which name De Wette has introduced into his version. The description of the other bereaved mother, Rizpah, the daughter of Aiah, who took her station upon the rock, and watched the bodies of her sons day and night, lest they should be devoured by beasts of prey or torn by the birds of the air, is deeply affecting. It touched the heart of David when he heard of it. He would not allow public decency to be any farther offended to satisfy the resentment of the Gibeonites, but directed the bodies to be taken down and honourably deposited in the family sepulchre, to which also the bones of Saul and his three sons, which had till now re-

mained at Jabesh-Gilead, were at the same time removed. This must have been highly gratifying to a people who attached so much importance as the Jews to the honours of the grave.

‘It has been seen that, on one occasion (2 Sam. viii. 3), David fought against Hadadezer about a district on the river Euphrates. Yet it is not to be imagined that he had any fixed possession of territory so distant, which indeed could have had no value to him. A warrior from his youth, he seems to have had little perception of the advantages of commerce, and although the land of Edom was long under his power, he made no effort to use its ports of Eziongeber and Elath for maritime traffic. Much less was he likely to value the trade of the Euphrates, from which river he was separated by a tedious distance of desert land, over which, without the possession of superior cavalry, he could not maintain a permanent sovereignty. No attempt seems to have been made in David’s reign to maintain horses or chariots for military purposes. Even chieftains in battle, as Absalom on his fatal day, appear mounted only on mules. Yet horses were already used in state equipages, apparently as a symbol of royalty (2 Sam. xv. 1).

‘That in the opening of Saul’s reign the Philistines had deprived the Israelites of all the most formidable arms, is well known. It is probable that this may have led to a more careful practice of the sling and of the bow, especially among the southern tribes, who were more immediately pressed by the power of the Philistines. Such weapons cannot be kept out of the hands of rustics, and must have been essential against wild beasts. But from causes unknown, the Benjamites were peculiarly celebrated as archers and slingers (Judg. xx. 16; 1 Chron. viii. 40; xii. 2; 2 Chron. xiv. 8; xvii. 17); while the pastoral tribes beyond the Jordan were naturally able to escape all attempts of the Philistines to deprive them of shield, spear, and sword. Hence the Gadites, who came to David at Ziklag, are described as formidable and full-armed warriors, ‘with faces like lions, and swift as mountain roes’ (1 Chron. xii. 8).

‘The standing army which Saul had begun to maintain was greatly enlarged by David. An account of this is given in 1 Chron. xxvii.; from which it would seem that 24,000 men were constantly maintained on service, though there was a relieving of guard every month. Hence twelve times this number, or 288,000, were under a permanent military organization, with a general for each division in his month. Besides this host, the register proceeds to recount twelve princes over the tribes of Israel, who may perhaps be compared to the lord-lieutenants of English counties. The enumeration of these great officers is remarkable, being as follows:—1. of the Reubenites; 2. of the Simeonites; 3. of the Levites; 4. of the Aaronites; 5. of Judah; 6. of Issachar; 7. of Zebulun; 8. of Naphthali; 9. of Ephraim; 10. of Manasseh; 11. of Manasseh beyond the Jordan; 12. of Benjamin; 13. of Dan. Here the names of Gad and Asher are omitted without explanation. On the other hand, the Levites and Aaronites are recounted, as though they were tribes co-ordinate with the rest, and Zadok is named as prince of the Aaronites. It is not to be supposed that the Levites or Aaronites were wholly forbidden from civil and military duties. It has been already remarked that Zadok (here chief of the Aaronites) was described.

in the beginning of David's reign as 'a mighty man of valour' (1 Chron. xii. 28), and the same appellation is given to the sons of Shemaiah, a Levite (xxvi. 6). Benaiah, also, now captain of David's body-guard, was son of the late high-priest Jehoiada (xxvii. 5, and xii. 27).

'The body-guard of David, to which allusion has just been made, was an important appendage to his state, and a formidable exhibition of the actual despotism under which, in fulfilment of the warning of Samuel, Israel had now fallen. [CHERETHITES and PELETHITES.]

'The cabinet of David (if we may use a modern name) is thus given (1 Chron. xxvii. 32-34), with reference to a time which preceded Absalom's revolt:—1. Jonathan, David's uncle, a counsellor, wise man, and scribe; 2. Jehiel, son of Hachmoni, tutor (?) to the king's sons; 3. Ahithophel, the king's counsellor; 4. Hushai, the king's companion; 5. after Ahithophel, *Jehoiada, the son of Benaiah*; 6. Abiathar the priest. It is added, 'and the general of the king's army was Joab.' At this period Benaiah was in the early prime of his military prowess, and it is incredible that he can have had a son, Jehoiada, old enough to be the second counsellor of the king, next to the celebrated Ahithophel. If the text is here corrupt, the corruption is older than the time of the LXX. However, De Wette has introduced *Benaiah, the son of Jehoiada*. We cannot look on this as certain, for Benaiah may have been the name of the father as well as of the son of Jehoiada the high-priest. Yet as it was very rare with the Hebrews for names to recur in alternate generations, De Wette's reading is at least highly probable. If so, it is striking to observe that Benaiah, as captain of the life guards, is reckoned next to Ahithophel in rank as a counsellor, while Joab, general of the army, scarcely seems to have been a member of the cabinet. Zadok was above named as prince of the Aaronites, but was not yet so closely connected with the administration as Abiathar.

'Twelve royal bailiffs are recited as a part of David's establishment (1 Chron. xxvii. 25, 31), having the following departments under their charge:—1. The treasures of gold, silver, etc.; 2. the magazines; 3. the tillage (wheat, etc.); 4. the vineyards; 5. the wine-cellar; 6. the olive and sycamore trees; 7. the oil-cellar; 8. the herds in Sharon; 9. the herds in the valleys; 10. the camels; 11. the asses; 12. the flocks. The eminently prosperous state in which David left his kingdom to Solomon appears to prove that he was on the whole faithfully served, and that his own excellent intentions, patriotic spirit, and devout piety (measured, as it must be measured, by the standard of those ages) really made his reign beneficial to his subjects. If it reduced them under despotism, yet it freed them from a foreign yoke, and from intestine anarchy; if it involved them in severe wars, if it failed of uniting them permanently as a single people, in neither of these points did it make their state worse than it found them. We must not exact of David either to reign like a constitutional monarch, to uphold civil liberty, or by any personal piety to extract from despotism its sting. Even his most reprobate offence has no small palliation in the far worse excesses of other Oriental sovereigns, and his great superiority to his successors justifies the high esteem in which his memory was held.

'One of the most remarkable incidents in the later period of David's career was his causing a census to be taken of his people, and the rebuke and punishment which on that account he incurred. There is an apparent discrepancy in the terms in which the accounts of this transaction are introduced in 2 Sam. xxiv. 1, and 1 Chron. xxi. 1. In the former we read, 'The anger of the Lord was kindled against Israel, and he moved David against them to say, go, number Israel and Judah.' In the latter we find—'And Satan stood up against Israel, and provoked David to number Israel.' The difference is, however, more apparent than real; and without availing ourselves of the resources of verbal criticism, it suffices to observe that God is sometimes represented as doing what he permits to be done by others. So in the present case, the Lord permitted Satan to tempt David. The Lord withdrew his supporting grace from the king, and the great adversary prevailed against him.

'There have been various opinions as to the nature of the sin involved in this transaction. That in its mere outside aspect, or in its understood or avowed objects, or in both, it presented as objectionable an aspect to contemporary opinion, as it certainly did in the eyes of God, is evinced by the fact, that such a person as Joab—a man of no very apprehensive conscience—was shocked and alarmed at the proposition, and expressed a most decided opinion as to the sin and danger of the measure. The common impression seems to be, that the act of taking a census was in itself culpable, as indicating the sinful pride of the king in contemplating the number of his subjects; and this notion had for a long time great weight in rendering the people in most European countries averse to enumerations of the populations when first such operations began to be contemplated by governments. The absurdity of this opinion is shewn by a simple reference to the fact, that under Moses, two enumerations of the population were taken by the express command of the Lord himself. The truth is probably, that at this time David coveted an extension of empire, contrary to the Lord's plans for the house of Israel. Having permitted himself to cherish this evil design, he could not well look to the Lord for help, and therefore sought to know whether the thousands of Israel and Judah were equal to the conquests he meditated. His design doubtless was to force all the Israelites into military service, and engage them in the contests which his ambition had in view; and as the people might resist this census, the soldiery were employed to make it, that they might not only put down all resistance, but suppress any disturbances which the general dislike to this proceeding might occasion.

'By the results of this census, we, however, learn the interesting fact, that 'all they of Israel were a thousand thousand and a hundred thousand men that drew sword: and Judah was four hundred thousand and ten thousand.' This is the statement in 1 Chron. xxi. 5; but the parallel text in 2 Sam. xxiv. has a considerably different account. For the sake of comparison we set these accounts side by side, together with the results of the last census taken in the time of Moses—by which we may be enabled to form an idea of the increase of population since the Israelites became a settled people. As Benjamin and Levi were not numbered on this

later occasion, we render the comparison more perfect by excluding and withdrawing these tribes from the earlier account :

	Num. xxvi.	2 Sam. xxiv.	1 Chron. xxi.
Israel, exclusive of Levi and Benjamin	493,550	800,000	1,100,000
Judah	74,600	500,000	470,000
	568,150	1,300,000	1,570,000
Real Population	2,272,600	5,200,000	7,280,000

and giving also the results of the multiplication by four to arrive at the real population, as it is usually true that the men reputedly capable of bearing arms are not more than one-fourth the entire population.

The apparent discrepancy between the two estimates admits of several explanations. It seems, however, most probable that the deficiency of 300,000 in the estimate for Israel may have been produced by the earlier of the sacred writers omitting the standing army of 288,000—increased to 300,000 by the addition of a thousand men supposed to have been with each of the princes of the tribes, that is 12,000 together—the whole of which are included by the later writer. There is still a difference of 30,000 in the account for Judah ; and this may be explained in the same manner—the writer in Samuel being presumed to exclude the army of observation posted on the Philistine frontier, and which appears from 2 Sam. vi. 1, to have been composed of 30,000 men.

It appears from this that the Hebrew population had increased nearly threefold during the 576 years which had elapsed since it entered the land of Canaan. This increase is not extraordinary ; but is as great as we have any reason to expect, considering the oppressions to which the Israelites had been subjected, and the bloody wars they had waged. Indeed, it has been objected by some that it is scarcely possible that, all circumstances considered, the people could have been so numerous ; but, as we must necessarily be ignorant of many causes which may have operated to increase or lessen the population, the statement of the sacred historian may, even on ordinary grounds, be safely taken, in the absence of any reason to suspect the integrity of the text. This leads us, in conclusion, to a remark which will apply to the whole life of David, and, indeed, to the Holy Scriptures at large, that the difficulties found in the narrative are only such as arise from its remote antiquity, and the impossibility of our acquiring all the knowledge necessary for their complete solution. Scepticism is often more credulous than the faith it despises for that alleged quality, and its proposed methods of unravelling the intricacies of the Bible records, frequently make confusion still more confused. The way in which recent discoveries in archæology have confirmed statements, both in sacred and profane history, which before were thought to be erroneous, will make thoughtful persons hesitate before they doubt, and dispose them to believe, that if some fact, now withheld, were but supplied, there would be harmony where there is now the appearance of discord.

David reigned in Hebron seven years and a-half, and in Jerusalem thirty-three years (2 Sam. ii. 11 ; v. 5). Josephus says he died at the age of 70 (*Antiq.* viii. 15. 2). His 'last words' were a song in which he embodied his conception of the just

ruler—the ruler fearing God—and expressed his joyful anticipation, amid all the disappointments which had cast their shadow over his own paternal anticipations, of the fulfilment of God's promise to him in the advent of that Great King in whom the ideal of a perfectly just ruler should be fully realised (2 Sam. xxiii. 1-5 ; comp. the Targum Jonath. on the passage). Before his departure, he also charged his son Solomon, whom he had destined to be his successor, how to conduct himself in the kingdom, and especially towards certain parties to whom the king owed a debt of retaliation or of gratitude (1 Kings ii. 1-9). We cannot but notice how, in this last utterance, the circumstances in which he was placed, and the maxims of rule to which he was habituated, infused elements into his counsels which illustrate the still lingering imperfection of the man, while the former utterance is full of what belongs to the faith and hope of the saint.

This chequered character belongs to David all through his public history. That he was a man of ardent passions, and that he gratified these sometimes with the arbitrary license of an Oriental prince, lies on the surface of the record of his life. But men do ill to measure that heroic and many-stringed nature by the average standard of common-place humanity ; and it is foolish and wicked to dwell upon his obvious faults while no regard is paid to the nobler features of his soul, to the sublime piety in which his habitual life dwelt, to the intense agony with which he struggled for the mastery over these fiery passions, and the mournful remorse with which he bewailed their occasional triumph over his better nature. Some have even taken occasion from the sins into which David fell to sneer at the religion of which he appears as one of the most distinguished professors ; forgetting how unfair and disingenuous it is to impute to a man's religion what his religion had nothing to do with, except as it caused him frequently and constantly to deplore it. It behoves us, also, to consider of how much good to the church David's varied experiences, even in their least excusable forms, have been made the vehicle. 'Though we neither excuse his acts of wickedness nor impute them to the temptation of God, who cannot be tempted of evil, neither tempteth any man, we will add that by his loss the church hath gained ; and that if he had not passed through every valley of humiliation, and stumbled upon the dark mountains, we should not have had a language for the souls of the penitent, or an expression for the dark troubles which compass the soul that feareth to be deserted by its God' (Irving, *Introd. Essay on the Psalms*, p. 57). For illustrations of the history of David, see Delany, *Historical Account of the Life and Reign of David*, etc., 3 vols. Lond. 1741-42 ; Chandler, *Critical History of the Life of David*, etc., 2 vols. Lond. 1766 ; Kitto, *Daily Bible Illustrations*, vol. iii. ; Ewald, *Gesch. d. Volkes Israel*, iii. 71, ff.—W. L. A.*

DAVID, CITY OF. This name is applied in Scripture to two different places. 1. In 2 Sam. v. we read that David having taken Jerusalem, and

* The parts of this article retained from the former editions are indicated by the usual marks of quotation.

stormed the citadel on Mount Zion, 'dwelt in the fort, and called it the city of David' (1 Chron. xi. 7). After that time the castle and palace of Zion appear to have been called 'the City of David,' as contradistinguished alike from Jerusalem generally, and from Moriah and other sections of it (1 Kings viii. 1; iii. 1; 2 Chron. v. 2). In it David and most of his successors on the throne were buried (1 Kings ii. 10; 2 Chron. ix. 31, etc.) Mount Zion, or the City of David, is on the south-west side of Jerusalem, opposite Moriah, or the temple-mountain, with which it was connected by a bridge spanning the deep valley of Tyropocean. The

tomb of David on Zion is to this day one of the most honoured sanctuaries of the Mohammedans; and the square keep, called the Castle of David, on the northern end of Zion, is one of the most ancient and interesting relics in the Holy City. [JERUSALEM.]

2. In Luke ii. 4 and 11, Bethlehem is called the City of David. Joseph and Mary went from Nazareth 'unto the city of David, which is called Bethlehem.' This was David's birthplace, and the home of his youth. We know not at what time the little mountain village began to be called by his name; but there is no trace of it in the

204. Tower of David

O. T. It appears, however, to have been pretty generally used in the time of our Lord (BETHLEHEM).—J. L. P.

DAVISON, JOHN, was born at Morpeth, Northumberland, May 28, 1777. From the grammar-school of Durham he proceeded to Christ Church, Oxford, in 1794, at the age of 17; became Craven Scholar in 1798, in which year he also graduated B.A.; Fellow of Oriel in 1800; M.A. in 1801. Between the years 1810 and 1817 he became tutor of his college, public examiner, preacher at Whitehall, and occasionally served in other university offices. In 1818 he took his B.D. degree. It was at this period of his life that he preached and published his chief and much-valued work, entitled, *Discourses on Prophecy, in which are considered its structure, use, and inspiration; being the substance of twelve sermons preached in the chapel of Lincoln's Inn, in the lecture founded by the Right Rev. William Warburton, Bishop of Gloucester*. In 1826 he was made prebendary of Worcester, and soon afterwards rector of Upton-upon-Severn, for which he resigned his former preferment in the north. Between Upton and Worcester Mr. Davison divided his residence,

during the remainder of his earthly life, which was brought to its close at Cheltenham, May 6th, 1834; he was buried in the south chancel of Worcester Cathedral. This most amiable, high-minded, and learned clergyman, whose memory is still cherished by some surviving friends—divided his well-spent time in parochial duty and the pursuit of sacred learning. His treatise on *Prophecy* has been frequently republished, and will not soon be forgotten; it combines an unusual elegance of style with great perspicuity of treatment. The uninterrupted approval which has been accorded to this work for nearly forty years more than confirms the favourable reception with which it was originally welcomed. To learning and a large view of his subject the author adds the grace of eloquence and feeling. With a gentle though irresistible persuasion he carries his reader to the height of his grand argument.

Since Davison's death, his *Remains and occasional Publications*, have been published, comprising thirteen miscellaneous pieces. They are more or less all characterised by the writer's great ability in style and argument. One only belongs to the subject of our work—it is the first in the vol., containing 176 pages of it, and is entitled, *An*

inquiry into the origin and intent of primitive sacrifice, and the Scripture evidence respecting it, etc. The claims of true Natural Religion are well vindicated in this treatise. Exception has been taken to the main drift of Davison's argument (See Fairbairn's *Typology*, pp. 442, 443). Without wishing to express an opinion of it, one way or the other, it may be right to observe that the author's argument is clearly misunderstood by those who represent it as disputing altogether the Divine origin of all sacrifice. Its conclusions amount to this; that sacrifices, eucharistical and penitential, might be, and probably were, of human origin, though presently sanctioned by Divine approbation; but that the idea of *expiatory sacrifice* was clearly *supernatural*. (See *Preface to Remains*, p. 13).—P. H.

DAY, Heb. יום (חום, חמם, חמי; cf. ימים,

hot springs), a term denoting both the space of time during which the sun is above the horizon, or the *natural* day (Syr. ܕܝܢܐ); and the cycle of twenty-four hours, during which the sun apparently performs one entire circuit round the earth, or the *civil* day (Syr. ܕܝܢܐ; Pers. شبانروز). This latter, for which the Bible also uses the compounds ערב בוקר (Dan. viii. 14) and *παραήμερον* (2 Cor. xi. 25), seems to have been universally adopted from the remotest ages as a measure of time; the special point, however, at which its commencement was fixed by different nations, varied between morning, noon, evening, and midnight (Pliny, *Hist. Nat.* ii. 79; Censorin. xxiii.) With those who, like the Babylonians and Persians, counted by solar epochs, the civil or calendar day generally lay between sunrise and sunrise; while with others, to whom the moon was the standard of reckoning, the sunset was the signal for the end of one, and the beginning of another such day. This was the case, among others, with the Athenians, Gauls, Germans, and with many Eastern nations; some of whom, as the Arabs, still continue this mode of reckoning, and count their time by nights: a custom which may likewise be found in the Roman and Salic Laws, and which is traceable even in our own terms, fortnight, se'nnight. The less obvious starting points of noon and midnight, the former adopted by the Etruscans, Umbrians, etc., the latter by the Roman priests, Egyptians (see, however, Lepsius, *Chronol.* p. 130), and others, were chosen either as the culminating points, as it were, of light and darkness, or for astronomical purposes (Ideler, *Hb. d. Chron.* i. 29, 80, 100, ff.; cf. Tacit. *Germ.* ii; Cæs. *Bell. Gall.* vi. 18; Isid. *Orig.* v. 20; Macrob. *Sat.* xxxiii., etc.)

To the Hebrews, the moon had distinctly been pointed out as the regulator of time (Ps. civ. 19). The Mosaic cosmogony invariably mentions the night as the first portion of the civil day (Gen. i. 5, ff.) It was, moreover, expressly enjoined, that the celebration of certain festivals was to begin with the night (Lev. xxiii. 5, 32), a rule which, by the traditional law, was extended to all Sabbath and Feast Days. Nevertheless, it has always been a moot point whether the Hebrews, at all times, and in all respects, began their calendar or civil day with the night. It has been argued, that if this had been

the case, the lawgiver could not have designated those very evenings which he wished to belong ritually to the following (15th, 10th) day, as the evenings of the previous (14th, 9th) day (Lev. i. c.) Further, that in common biblical phraseology, the day is frequently mentioned before the night (Ps. i. 2, etc.); and that of the fast days mentioned in Zech. viii. 19, one only begins with the previous evening. Finally—not to mention other objections—it has been alleged, that even in ritual points, the Bible occasionally reckons the night as following, not as preceding, the day (Lev. vii. 15). There seems, in fact, no other way of reconciling these apparent inconsistencies, than to assume (cf. *Mishnah Chulin*, v. 6) that no general rule had ever been laid down with respect to the commencement of the civil day, and that ritually, on certain distinct occasions, the natural day followed the night, on others, the night followed the day. It might very naturally be supposed, that if the Hebrews ever had a mode of reckoning uniform for all purposes, they must have changed it from time to time (without, however, altering their holy seasons), accommodating it to the customs of the peoples among whom they happened to be thrown in various epochs; and that from these conflicting usages, ambiguities and uncertainties necessarily followed. Thus, a Hebrew letter written in the night between Saturday to Sunday, would, even in our time, be dated either מ'י"ט (conclusion of Sabbath), or אור ליום א' (eve of the first day).

The earliest biblical divisions of the natural day, which ritually commenced with the early dawn (when white can be distinguished from blue or green, a dog from a wolf, etc.—Talm. B. Berachoth, 8 b.), and which ended when three stars became visible, are morning, evening (Gen. i. 5), and noon (Gen. xliii. 16). Besides these, we find a greater variety of terms in the O. T., amounting to seven or eight, and supposed to designate certain distinct subdivisions of time—somewhat like the different 'day-seasons' of the Arabs. But on closer inspection, several of these terms, so far from expressing distinct and successive periods of time, prove to be either altogether synonymous, or to be used so indiscriminately, that the difference between them, if there be any, is barely appreciable. The following occur:—

נֹשֶׁף (נֹשֶׁף, to blow): the cool wind that precedes

the sunrise, and accompanies and follows the sunset (= רוח היום, Gen. iii. 8). Therefore used as *dawn* (Job vii. 4; 1 Sam. xxx. 17); *evening* (Job xxiv. 15, etc.); *night* (Is. v. 11, etc.)

שָׁחַר (שָׁחַר) = בֹּקֵר (בֹּקֵר), from שָׁחַר, שָׁחַר, to cleave, break forth: *aurora, morning* (Gen. xix. 15; 2 Sam. xxii. 4).

חֹם הַיּוֹם (חֹם הַיּוֹם), *heat of the day* (Gen. xviii. 1) = נֶבֶן הַיּוֹם (נֶבֶן הַיּוֹם), *standstill of the day* = צְהָרִים (צְהָרִים), *two lights* (Gen. xliii. 16): all these three are terms for *noon, mid-day*.

עָרֵב (עָרֵב), from עָרַב, to mix (colours, objects): *evening* (Judg. xix. 9). Hence מערב, west. The term בֵּין הָעֶרְבִים (Exod. xii. 6, etc.), 'between the two evenings' (cf. 'twilight,' שְׁחָרִים, צְהָרִים), has given rise to a

dispute between the Karaites and the Rabbanites, the former holding it to mean the time between sunset and midnight, while the latter place it between the 9th and 11th hours (= our 3 and 5 P.M.) A passage of Josephus (*Jew. Wars*, vi. 9. 3) favours the latter opinion. **בין השמשות**, twilight, and **אור**, eve or night, are first used in the *Mishnah*.]

הצות (הצה), to divide into two parts), *midnight*.

[In later Hebrew, also *mid-day*. Cf. *Pesach*. iv. 1. 5. 6].

Another hitherto undecided point is the number of the Hebrew night-watches (**אשמורות**) anterior to the time of Christ. We find different opinions on this subject as early as the Talmud (*Berach*, 3 b, etc.); some assuming three, others four. The O. T. mentions expressly:—

ראש אשמורה, *head*, first, of the watches (*Lam.* ii. 19).

אשמורת התיכונה, *middle watch* (*Judg.* vii. 19), which, according to those who affirm that there were always four, means the middle of those three watches which fell in the time of complete night.

א' הבוקר, *morning watch* (*Exod.* xiv. 24).

In the N. T. four night-watches (probably adopted from the Greeks and Romans) are mentioned (*Mark* xiii. 35):—

Ῥοπέ, the *late watch*, lasting from sunset to the third hour of the night, including the evening dawn; also called **ὄψια ὥρα**, *even-tide* (*Mark* xi. 11), or simply **ὄψια**, *evening* (*John* xx. 19).

Μεσονυκτιου, *midnight*, from the third hour to midnight.

Ἀλεκτοροφωνίας, *cock-crowing*, from midnight to the third hour after midnight. Ended with the second cock-crowing.

Πρωί, *early*, from the ninth hour of the night to the twelfth, including the morning dawn or twilight. Also called **πρωία**, *morning-tide* or *morning* (*John* xviii. 28).

Of the other divisions of the natural day into four quadrants (*Neh.* ix. 3), or into twelve hours, varying, according to the length of the day (in Palestine, from 9 hrs. 84 min. to 14 hrs. 12 min.), we cannot treat here. [DIAL; HOURS.] Suffice it to say, that the Chaldee word **שעתא** (**שעה**) (*Dan.* iii. 6, 15; iv. 16) which at a later period is used for hour, in the O. T. signifies merely moment—a meaning which it has retained along with the later one; and that in the N. T. the word hour is often used for a whole watch (*Matt.* xxv. 13, etc.) That, moreover, even after the division of the day into distinct hours had been fully established for general purposes, it had little influence upon the ritual times, would follow from the Talmud (*B. Berachoth*, 27. b). There the curious incident is recorded, that the Jews had, on one occasion, entered the synagogue for the purpose of reading the evening prayers for the termination of the Sabbath, some hours before sunset, and only became aware of their error when, on leaving the synagogue, they perceived the sun, which had in the meantime broken through the clouds.

The word Day is further used in the Bible in the general sense of *time* (*Gen.* xlviii. 8), of *misfortune*

(*Ps.* xxxvii. 13), of *divine judgment* (*Joel* i. 15; *Matt.* vii. 22), a *feast-day* or *birth-day* (*Hos.* vii. 5; *Job* iii. 1), and *pluraliter* in the sense of a full number of days, *f. i.*, of a month (*Gen.* xxix. 14), a year (*Is.* xxxii. 10). On some other acceptations of the word—common to most languages—it is unnecessary to enlarge.

The days of the week had no special names as they had with the Romans, and, perhaps, with the Egyptians; but were designated according to their numerical order in relation to the Sabbath.—E. D.

DAYSMAN is a word which occurs but once in the A. V. of the Scriptures, in *Job* ix. 33; it is more remarkable from its structure and derivation as an English word, than from any doubt of the meaning of the original Hebrew term, which it represents. This term is **מוכיח**, the *Hiphil* participle of the verb **יכה**, which is not found in *Kal*, and but thrice in *Niph'al*, and once in *Hoph'al* and in *Hithpa'al*, whereas it occurs more than fifty times in *Hiphil*. The primitive meaning of the word (according to Gesenius, *Theo.* 592), is 'to be clear or manifest;' and in *Hiphil* 'to make manifest,' also 'to convince, to confute, to prove, or rebuke;' by these last two words the word is rendered in nearly every passage of A. V., including the ten instances of the *Hiphil* participle **מוכיח**. It is not easy to conjecture why in *Job* ix. 33 alone the translators resorted to the not then common word *Daysman*. The marginal rendering *umpire* seems to best convey the meaning of *Job* in the passage, 'some one to compose our differences, and command silence when either of us exceeds our bounds' (Patrick, in *loc.*) Fürst's term, *Schiedsmann* (*H. wörterb.* i. 509), very well expresses this idea of authoritative arbitration. As to the old English noun *Daysman*, Johnson's definition, *surety*, is hardly borne out by his solitary quotation from Spenser, *Faerie Queene*, ii. 8:—

'To whom Cymochles said; For what art thou,
That mak'st thyself his *dayesman*, to prolong
The vengeance prest;'

arbitrator or *umpire* would better express the sense. In Holland's old translation of *Livius* (p. 137), *Daysmen* and *Umpiers* are used as synonyms. In the Bible of 1551, 1 *Sam.* ii. 25 is thus translated; 'If one man synne agaynst another, *dayseman* (A. V. 'the judge') may make hys peace; but yf a man sinne agaynst the Lord, who can be hys *dayseman* (A. V., 'who shall intreat for him')?' The Hebrew here comes from the verb **פָּלַל**; in the first instance occurs its *Piel*, which has elsewhere the signification of *executing judgment*, and in the second instance its *Hithpa'al*, which has (throughout its numerous occurrences), the sense of *praying* or *intreating*. A comparison of the use of the word in this older translation with its obvious meaning in our A. V. seems to shew that in the interval it had shifted its earlier meaning of *mediator* or *advocate*, to the stronger sense of *arbitrer*, *umpire*, or *judge*. Dr. Richardson (*Dictionary* [1st ed.], p. 488) accounts (after Minsheu) for the origin of the word *Daysman* by attributing to the first element of it the technical sense of a *set* or *appointed time* (for appearing before court, etc.), like the Latin phrases *Status dies*; *dictus dies*; *diem constituere*, etc. (See Dic-

tionary of G. and L. Antiqu., s.v. *Dies*, or White and Riddle's Latin Dictionary, p. 506, c. 3). In German, *Tag* is sometimes similarly used; and so is *Tagen*, as a legal phrase, to appoint a day for trial; *eine Tache tagen* = to institute legal proceedings (Hilpert's *Lex.* s.v.) Exactly similar is the Dutch phrase, *Dagh waerden* = diem dicere; and the verb *Daghen* citare, to summon. 'And thus,' says Richardson, '*Dayesman* means he who fixes the day, and is present, or else sits as judge, arbiter, or umpire, on the day appointed.' He adds, 'In St. Paul, 1 Cor. iv. 3, Wyclif's translation 'of many's dai' [A. V. *man's judgment*], is literal from the Latin Vulgate, 'ab humano die.' The Greek is *ὄνο ἀνθρώπων ἡμέρας*; and this Mr. Parkhurst observes [and most commentators besides] is spoken in opposition to the coming of the Lord in verse 5, and also to *ἡ ἡμέρα*, the day, i.e., the day of the Lord, in the preceding ch., ver. 15, where the Vulgate renders *ἡ ἡμέρα*, '*dies Domini*.' See Stanley and Alford, on 1 Cor. iv. 3.—P. H.

DEACON (*Διάκονος*), the designation of an office-bearer in the apostolic churches (Phil. i. 1; 1 Tim. iii. 8-13). Respecting this office certain questions require to be considered.

1. Did it correspond to that of the *חזן* *chazan* in the Jewish Synagogue, the *ὑπερέτης* of the N. T. (Luke iv. 20; John vii. 32)? That it did, is the opinion of Vitringa (*De Syn. Vel.*, p. 895, ff.; Bernard's *Condensed Tr.*, p. 87, ff.); whose principle, that the order of the Christian churches was constructed on the model of the synagogues, led him to press the analogy between the two in every possible way. But for this opinion there is no solid support. Vitringa's main principle is itself unsound; for nothing can be more evident than that the Apostles proceeded upon no pre-arranged scheme of church policy, but instituted offices and appointed usages just as circumstances required; and as respects the deacon's office, it cannot be shewn that one of the duties pertaining to the office of *chazan* in the synagogue belonged to it. As Hartmann remarks (*Engle Verbind. des A. T. mit d. N.*, p. 281), the *chazan* was a mere servant whose functions resembled those of our sexton or church officer.

2. Have we in Acts vi. 1-6 an account of the institution of the deacon's office in the Church? In that passage we read of the appointment of seven men in the church at Jerusalem to attend to the due distribution of the provision made for the sustenance of the widows belonging to the church: were these men *deacons* in the sense in which that title was used in later years? That they were is very generally assumed; but it is not easy to discover any solid ground on which the assumption may be rested. Nothing can be drawn from the meaning of the word *διακονία* as applied to their functions (ver. 1), or the word *διάκονος*, as if this title had been originally derived from such a 'serving of tables' as is here referred to; because these words are used in the N. T. with the utmost latitude of meaning, so as to include every kind of service rendered to the church or cause of God on earth—the service of presbyters (2 Cor. xi. 23; Ephes. vi. 21; Col. i. 7, etc.), of evangelists (1 Thess. iii. 2), of apostles (Acts xx. 24; xxi. 19; Rom. xi. 13; 2 Cor. vi. 4, etc.), of prophets (1 Peter i. 12), of angels (Heb. i. 14), of Christ him-

self (Rom. xv. 8); as well as service in temporal matters. Nor can much weight be attached to patristic testimony on this head; because we have no clear declaration in favour of the position assumed earlier than that of the 6th General Council (in Trullo), held A.D. 680; all the earlier witnesses speak of the diaconate in connection with spiritual services, or the rites of the Church. If, moreover, this was the institution of a permanent office in the Church, it seems somewhat strange that it should disappear entirely from the history of the Church for many years, and come up again, for the first time, in the form of an incidental notice in an epistle written in the latter half of the first century. Taking the narrative in the Acts in its connection with the history of which it forms a part, the appointment of the seven brethren has all the appearance of a temporary expedient to meet a peculiar emergency. Hitherto the Apostles had managed the expenditure of the funds collected for the aid of the poor in the church; but when the Hellenists complained to the Hebrews (*πρὸς τοὺς Ἑβραίους*, not *against* the Hebrews), i.e., the resident Jews by whom the supply was of necessity chiefly furnished, that their widows were neglected in the daily distribution, the Apostles suggested an arrangement by which what they, from the pressure of other duties, could do only imperfectly, might be done efficiently and for the satisfaction of all. The emergency, however, was itself the result of special circumstances, and consequently the arrangement by which it was to be met could not possess the character of a permanent institute. Whilst it, however, passed away with the circumstances which gave it birth, we believe there was this of permanency in it, that it established the principle that it was not fit that they who are entrusted with the ministry of the word should also be burdened with the ministry of tables or the management of the temporal affairs of the church.

3. What were the special duties of the deacon's office? On this head want of information precludes our arriving at any very satisfactory conclusion. It is easy to say that the duty of the deacon was to manage the temporal affairs of the church, whilst its spiritual affairs were in the hands of the Apostles and presbyters; but when some evidence of this is asked, none can be presented that possesses the least weight. When it is considered that the qualifications required for a deacon, according to the Apostle's specification, are almost as high as those required for a bishop (1 Tim. iii.), we can hardly believe that the duties of the former were confined to, or chiefly occupied with, mere temporal affairs; while the latter had the spiritual wholly for his sphere. It may be asked also, if the deacon's office were conversant solely with the temporal affairs of the church, how was he, in conducting it, especially to acquire 'great boldness in the faith?' Is this at all a consequence of keeping a church's accounts correctly, or dispensing a church's charity wisely?

4. But if the office of the deacon was spiritual, we must ask, In what respect did it differ from that of the presbyter? That the deacon and presbyter were different follows necessarily from the identification of the latter with the bishop [BISHOP], from whom the deacon is expressly distinguished in both the passages where his office is mentioned. It seems also clear that the office of deacon was a subordinate one, and constituted the lowest step in

the official gradation; for if it were not so, what force would there be in the Apostle's statement, that they that have used the office of a deacon well purchase for themselves a good degree (*βαθμὸν εαυτοῖς καλὸν περιποιούται*, 'gradum ab humilitate diaconiae ad majora munera in ecclesia,' Bengel)?* It is evident also that their office did not require them to be public teachers of the church; for, whilst the bishop is required to be *διδασκτικός*, all that is required of the deacon in respect of Christian doctrine is, that he should 'hold the mystery of the faith in a pure conscience.' Beyond this the N. T. does not enable us to go; but we learn from authentic sources what the duties of the deacon in the post-apostolic church were. He had to assist the presbyter or bishop in the administration of the Lord's Supper by conveying the eucharistic elements to the communicants (Justin Mart., *Apol. I.*, sec. 65, ed. Otto); to receive the offerings of the people, and announce the names of those who offered (Cyprian, *Ep.* xvi. [al. ix., x., xiv.], sec. 2; Jerome, *Comment. in Ezek.* xviii., p. 537); to take care of the utensils of the altar (Augustin, *Quest. V. et N. T.*); in some churches, though not in all, the deacons read the Gospel (Jerome, *Ep.* lvii. *ad Sabin.*); in some they were permitted to baptise (Tertull. *De Bapt.*, c. xvii.; Jerome, *Dial. cont. Lucif.* 6, 4), and in later times other functions were allotted to them (See Bingham *Antiq.* Bk. II., ch. xx.) Whether the deacon was allowed to preach in the church is a doubtful point; it is probable that bishops might and did occasionally grant permission for this, but that, as a rule, it was not permitted. If we reflect on the Apostolic age the light thus derived from the ages following it, we shall be led to regard the deacon as a spiritual officer subordinate to the presbyter, appointed to assist him in several of his duties, and having a general care of the outward conduct of the service; eligible to the dignity of presbyter, but only in case of his so commending himself in the office of deacon as to procure for himself such advancement.

5. The qualifications required for the office of deacon are specified by the Apostle in I Tim. iii. 8-12. It is enacted that deacons shall be grave, *σεμνοί*, venerable, respected in all the relations of life; not *διλογοί*, not thinking one thing and saying another, saying one thing to one man, and another to another, but sincere, truthful, and onefold; not addicted to wine; not *αισχροκερδεῖς*, which some interpret 'getting their livelihood by unlawful means,' but which rather signifies, 'using their office or influence for the sake of gain,' as did those of whom Titus writes (i. 11); holding the mystery of the faith (the truth of God revealed to and embraced by faith) in a pure conscience; men who had been proved, and whose character was established as that of men without reproach; the husbands of one wife, ruling their children and their own houses well. These qualifications evidently

* The exegesis which explains *βαθμὸν* here of an increase of piety or of spiritual knowledge, has all the appearance of being one gratuitously assumed for the sake of avoiding an unwelcome conclusion. The word *βαθμὸς* is constantly used by the Fathers in a technical sense to designate an ecclesiastical grade (See Suicer *in verb.*): can an instance be adduced from any source of its being applied to progress in piety or knowledge?

are such as fit their possessor for the highest offices in the Church.—W. L. A.

DEACONNESS (*Διακόνισσα*, ἡ *διάκονος*). That in the early Church there were females who were officially set apart for certain duties under the title of deaconesses seems beyond doubt (see Bingham, Bk. II., ch. xxii.); but whether such were found in the churches of the apostolic age is very doubtful. The grounds for the affirmative are extremely slender. Phœbe is called ἡ *διάκονος* of the church at Cenchræ; and Paul specifies certain qualifications which were to be required before a widow was taken into the number (as is alleged) of deaconesses. On such evidence nothing can be built. The former passage proves nothing as to any official status held by Phœbe in the church; for aught the word teaches she may have been the door-keeper or cleaner of the place where the church assembled. The latter passage is made to bear on the subject only by assuming the thing to be proved; not a word does Paul say in it of deaconesses; he says certain widows are not to be received 'into the number,' without saying of what. The context can alone determine that, and as he is speaking there of who are to receive pecuniary aid from the Church, the conclusion to which we are naturally led is, that 'the number' to which he refers is the number of those who were to be so aided. To assume in the face of this that 'the number' referred to is the number of office-bearers of a certain class in the Church is illegitimate; and to make this assumption for the purpose of proving that such an office existed in the Church, is to set all logic at defiance. To these arguments some add the reference in I Tim. iii. 11, etc., to *γυναῖκες*, and in Titus ii. 3 to *πρεσβυτιδες*, as intimating the existence of deaconesses in the Church; but in the former case the parties referred to are probably, as the A. V. gives it, the wives of the deacons; in the latter they are undoubtedly simply 'old women.' In certain states of society and public feeling, it may be quite proper to appoint females to discharge certain functions in the Church which properly belong to males; but that any institution to this effect was made by the Apostles is wholly without proof.—W. L. A.

DEAD SEA. [SEA.]

DEARTH. [FAMINE.]

DEATH. Of the Scriptural representations, names, and modes of speech respecting death, may be noticed the following:—

(a). One of the most common in the O. T. is, *to return to the dust, or to the earth*. Hence the phrase, *the dust of death*. It is founded on the description Gen. ii. 7, and iii. 19, and denotes the dissolution and destruction of the *body*. Hence the sentiment in Eccles. xii. 7,—'The dust shall return to the earth as it was, the spirit unto God, who gave it.'

(b). A withdrawing, exhalation, or removal of the breath of life (Ps. civ. 29). Hence the common terms *ἀφῆκε*, *παρέδωκε τὸ πνεῦμα*, *reddidit animam*, *ἐξέπνευσε*, *exspiravit*, etc.

(c). A removal from the body, a being absent from the body, a departure from it, etc. This description is founded on the comparison of the body with a tent or lodgment in which the soul dwells during this life. Death destroys this tent

or house, and commands us to travel on (Job iv. 21; Is. xxxviii. 12; Ps. xxxix. 13). Whence Paul says (2 Cor. v. 1) 'our earthly house of this tabernacle' will be destroyed; and Peter calls death 'a putting off of this tabernacle' (2 Peter i. 13, 14). Classical writers speak of the soul in the same manner, as *κατασκηνοῦν ἐν τῷ σώματι*. They call the body *σκήνος*. So Hippocrates and Æschines. Compare 2 Cor. v. 8, 9—*ἐκδημησάμεν ἐκ τοῦ σώματος*.

(d). Paul likewise uses the term *ἐκδέσθαι*, in reference to death (2 Cor. v. 3, 4); because the body is represented as the garment of the soul, as Plato calls it. The soul, therefore, as long as it is in the body, is clothed; and as soon as it is disembodied is naked.

(e). The terms which denote *sleep* are applied frequently in the Bible, as everywhere else, to death (Ps. lxxvi. 5; Jer. li. 39; John xi. 13, *sq.*) Nor is this language used exclusively for the death of the pious, as some pretend, though this is its prevailing use. Homer calls *sleep* and *death* twin-brothers (*Iliad*, xvi. 672). The terms also which signify to lie down, to rest (*e. g.*, *שָׁכַח*, *occumbere*), also denote death.

(f). Death is frequently compared with and named from a *departure*, a *going away*. Hence the verbs *eundi*, *abeundi*, *discedendi*, signify to die (Job x. 21; Ps. xxxix. 4). The case is the same with *ὑπάγω* and *πορεύομαι* in the N. T. (Matt. xxvi. 24), and even among the classics. In this connection we may mention the terms *ἀναλθεῖν* and *ἀνάλυσθαι* (Phil. i. 23; 2 Tim. iv. 6), which do not mean *dissolution*, but *discessus* (cf. Luke xii. 36). Vid. Wetstein on Phil. i.

Death, when personified, is described as a ruler and tyrant, having vast power and a great kingdom, over which he reigns. But the ancients also represented it under some figures which are not common among us. We represent it as a man with a scythe, or as a skeleton, etc.; but the Jews, before the exile, frequently represented death as a hunter, who lays *snares* for men (Ps. xviii. 5, 6; xci. 3). After the exile, they represented him as a man, or sometimes as an angel (the angel of Death), with a cup of poison which he reaches to men. From this representation appears to have arisen the phrase which occurs in the N. T., to *taste death* (Matt. xvi. 28; Heb. ii. 9), which, however, in common speech, signifies merely to *die*, without reminding one of the origin of the phrase. The case is the same with the phrase to *see death* (Ps. lxxxix. 48; Luke ii. 26). See Knapp's *Christian Theology*, by Dr. Leonard Wood.—J. K.

DEBIR (הַבִּיר and דְּבִיר; Sept. *Δαβειρ*). 1. One of the ancient royal cities of the Canaanites, captured by Joshua during his first great campaign, along with Hebron and others (Josh. x. 33-39). It was inhabited by the Anakim, who appear to have re-occupied the city after Joshua's conquest, and to have been finally expelled and exterminated by Othniel, whose valour on the occasion won for him the daughter of Caleb (xv. 13-17). An incidental remark of the bride is worthy of note, as shewing the topographical accuracy of the sacred writer. She said to her father, 'Give me a blessing, for thou hast given me a *south land*; give me also springs of water' (Judg. i. 11-15). The whole region about Debir is dry and parched, and fountains are extremely rare. The situation of the

city is clearly indicated in Josh. xv. 49, 50: It lay near Anab and Eshtemoth, the ruins of which, still bearing the ancient names, are seen in the mountains about seven miles south of Hebron. Debir was assigned out of Judah to the priests (Josh. xxi. 5); and we hear no more of it in history. The attempts hitherto made to identify it have not been successful.

The names of this city have given rise to both discussion and speculation. Previous to the Israelitish conquest it was called both *Kirjath-sepher*, 'town of the book' (Josh. xv. 15), and *Kirjath-sannah* (xv. 49), the true meaning of which seems to be 'town of the law'—פְּנֵה being a Phœnician

word, and equivalent to the Arabic *مدينة*. In the Targum it is rendered אורבי, 'urbs archivorum;' and in the Septuagint πόλις γραμμάτων (Bochart, *Opp.* i. 771). This name supplies some evidence that the Canaanites were acquainted with writing and books. The town probably contained a noted school, or was the site of an oracle, and the residence of some learned priests. If this be admitted, then it is easy to account for the Hebrew name *Debir*, which Jerome renders 'oraculum,' from דָּבַר, 'to speak.' The same term was used to denote the *adytum* of Solomon's temple.

2. A place on the northern border of Judah, in or close to the great valley of the Jordan, and consequently not far distant from Jericho. It is only mentioned in Josh. xv. 7; and its site has not been identified. De Saulcy and Van de Velde mark a Wady Dabor on their maps as falling into the north-western corner of the Dead Sea; but its connection with Debir is doubtful.

3. A town east of the Jordan, on the northern boundary of Gad, and near Mahanaim (Josh. xiii. 26). It may be questioned whether the real name of the town is *Lilbir* or *Debir*, as the use of ל to indicate the construct state is very remarkable in Joshua. The site is unknown (Keil, *Comm. on Joshua*, in *loc.*)—J. L. P.

DEBORAH (דְּבוֹרָה, *a bee*). This insect belongs to the family *apidae*, order *hymenoptera*, species *apis mellifica*, commonly called the honey-bee, because this species has often yielded honey to man. The bee is one of the most generally diffused creatures on the globe, being found in every region. Its instincts, its industry, and the valuable product of its labours, have obtained for it universal attention from the remotest times. No nation upon earth has had so many historians as this insect. The naturalist, agriculturist, and politician, have been led by a regard to science or interest to study its habits. Cicero and Pliny refer to one philosopher (Aristomachus) who devoted sixty years to it; and another (Philiscus) is said to have retired to the desert to pursue his inquiries, and to have obtained, in consequence, the name of Agrius. [But what alone concerns us here is the place occupied by this insect in the Bible].

In proceeding to notice the principal passages of Scripture in which the bee is mentioned, we first pause at Deut. i. 44, where Moses alludes to the irresistible vengeance with which bees pursue their enemies: 'The Amorites came out against you and chased you as bees do, and destroyed you in Seir unto Hormah.' The powerlessness of man under the united attacks of these insects is well

attested. Even in this country the stings of two exasperated hives have been known to kill a horse in a few minutes.

The reference to the bee contained in Judg. iv. 8, has attracted the notice of most readers. It is related in the 5th and 6th verses that Samson, aided by supernatural strength, rent a young lion, that warred against him, as he would have rent a kid, and that 'after a time,' as he returned to *take his wife*, he turned aside to see the carcase of the lion, 'and, behold, there was a swarm of bees and honey in the carcase of the lion.' It has been hastily concluded that this narrative favours the mistaken notion of the ancients, possibly derived from misunderstanding this very account, that bees might be engendered in the dead bodies of animals (Virgil, *Georg.* iv.); and ancient authors are quoted to testify to the aversion of bees to flesh, unpleasant smells, and filthy places. But it may readily be perceived that it is not said that the bees were *bred* in the body of the lion. Again, the frequently recurring phrase, 'after a time,' literally 'after days,' introduced into the text, proves that at least sufficient time had elapsed for all the flesh of the animal to have been removed by birds and beasts of prey, ants, etc. The Syriac version translates 'the bony carcase.' The learned Bochart remarks that the Hebrew phrase sometimes signifies *a whole year*, and in this passage it would seem likely to have this meaning, because such was the length of time which usually elapsed between espousal and marriage (see ver. 7). He refers to Gen. iv. 3; xxiv. 55; Lev. xxv. 29, 30; Judg. xi. 4; comp. with ver. 40; 1 Sam. i. 3; comp. with vers. 7, 20; and 1 Sam. ii. 19; and 1 Sam. xxvii. 7. The circumstance that 'honey' was found in the carcase as well as bees, shews that sufficient time had elapsed since their possession of it, for all the flesh to be removed. Nor is such an abode for bees, probably in the skull or thorax, more unsuitable than a hollow in a rock, or in a tree, or in the ground, in which we know they often reside, or those clay nests which they build for themselves in Brazil. Nor is the fact without parallel. Herodotus (v. 114) relates that a swarm of bees took up their abode in the skull of one Silius, an ancient invader of Cyprus, which they filled with honeycombs, after the inhabitants had suspended it over the gate of their city. A similar story is told by Aldrovandus (*De Insectis*, lib. 1. p. 110) of some bees that inhabited and built their combs in a human skeleton in a tomb in a church at Verona.

The phrase in Ps. cxviii. 12, 'They compassed me about like bees,' will be readily understood by those who know the manner in which bees attack the object of their fury.

The only remaining passage is Is. vii. 18, 'The Lord shall hiss for the fly that is in the uttermost parts of the river of Egypt, and for the bee that is in the land of Assyria.' [It is commonly supposed that there is an allusion here to the use of sharp or musical sounds to induce bees to hive, and even, as it would appear, to induce them forth of their hives to the fields, or back from the fields to their hives. Lowth translates the verb by 'hist,' and this has been understood, in the sense in which we speak of hissing on a dog, to mean that God would rouse up the enemies of Israel, here represented as bees, and set them on them to sting and destroy them. The objection to this is, that the verb שרק, which occurs

frequently in the O. T., means to *whistle*, to *pipe*, and thence to *collect* or *gather* by such means, but never to *hist* or *set* on. As for the custom assumed in the common interpretation, it is abundantly proved by ancient testimony. (See Aelian, *Animal*, v. 13; Cyril in *Jes.* v. 26; Varro, *De Re Rust.* iii. 16; Plin., *H. N.* ii. 22; Virg., *Georg.* iv. 64.)]

It may be remarked that in the Sept. version there is an allusion to the bee, immediately after that of the ant (Prov. vi. 8), which may be thus rendered 'Or go to the bee, and learn how industrious she is, and what a magnificent work she produces; whose labours kings and common people use for their health. And she is desired and praised by all. And though weak in strength, yet prizing wisdom, she prevails.' This passage is not now found in any Hebrew copy, and Jerome informs us that it was wanting in his time. Neither is it contained in any other version except the Arabic. It is nevertheless quoted by many ancient writers, as Clem. Alex. *Strom.* lib. i.; Origen, in *Num.* Hom. 27, and in *Isai.* Hom. 2; Basil, *Hexameron*, Hom. 8; Ambrose, v. 21; Jerome, in *Ezek.* iii.; Theodoret, *De Providentia*, Orat. 5; Antiochus, Abbas Sabbæ, Hom. 36; and John Damascenus, ii. 89. It would seem probable that it was in the copy used by the Greek translators. The ant and the bee are mentioned together by many writers because of their similar habits of industry and economy (Deut. i. 44; Judg. xiv. 8; Ps. cxviii. 12; Is. vii. 18).—J. F. D.

DEBORAH (דְּבוֹרָה; Sept. Δεββώρα. 1. The nurse of Rebekah, whom she accompanied to the land of Canaan; she died near Bethel, and was buried under an oak, which, for that reason, was thenceforth called Allonbachuth—'the oak of weeping' (Gen. xxxv. 8). [At the time of her death Deborah was with Jacob whilst on his return from Padanaram. This has been variously accounted for by conjecture; some supposing that Rebekah had sent her to fetch Jacob back, according to her promise (xxvii. 45); others, that Rebekah being dead, Deborah had returned home, and was now again journeying back with the son of her former mistress; and others, that she met Jacob on his way with tidings of his mother's death, and that thus a double significance was given to the name assigned to the tree under which she was buried. This last is supported by Jewish tradition, and seems the most probable.]

2. A prophetess, wife of Lapidoth. She dwelt, probably, in a tent, under a well-known palm-tree between Ramah and Bethel, where she judged Israel (Judg. iv. 4, 5.) This probably means that she was the organ of communication between God and his people, and probably on account of the influence and authority of her character, was accounted in some sort as the head of the nation, to whom questions of doubt and difficulty were referred for decision. In her triumphal song she says—

'In the days of Shamgar, son of Anath,
In the days of Jael the ways lay desert,
And high-way travellers went in winding by-
paths.
Leaders failed in Israel, they failed,
Until that I Deborah arose,
That I arose, a mother in Israel.'

From the further intimations which that song contains, and from other circumstances, the people would appear to have sunk into a state of total discouragement under the oppression of the Canaanites, so that it was difficult to rouse them from their despondency, and to induce them to make any exertion to burst the fetters of their bondage. From the gratitude which Deborah expresses towards the people for the effort which they finally made, we are warranted in drawing the conclusion that she had long endeavoured to instigate them to this step in vain. At length she summoned Barak, the son of Abinoam, from Kadesh, a city of Naphthali, on a mountain not far from Hazor, and made known to him the will of God that he should undertake an enterprise for the deliverance of his country; but such was his disheartened state of feeling, and at the same time such his confidence in the superior character and authority of Deborah, that he assented to go only on the condition that she would accompany him. To this she at length consented. They then repaired together to Kadesh, and collected there—in the immediate vicinity of Hazor, the capital of the dominant power—ten thousand men, with whom they marched southward, and encamped on Mount Tabor. Sisera, the general of Jabin, king of Hazor, who was at the head of the Canaanitish confederacy, immediately collected an army, pursued them, and encamped in face of them in the great plain of Esdraelon. Encouraged by Deborah, Barak boldly descended from Tabor into the plain with his ten thousand men to give battle to the far superior host of Sisera which was rendered the more formidable to the Israelites by nine hundred chariots of iron. The Canaanites were beaten, and Barak pursued them northward to Harosheth. Sisera himself being hotly pursued, alighted from his chariot, and escaped on foot to the tent of Heber the Kenite, by whose wife he was slain. This great victory (dated about B. C. 1296), which seems to have been followed up, broke the power of the native princes, and secured to the Israelites a repose of forty years' duration. During part of this time Deborah probably continued to exercise her former authority, but nothing more of her history is known.

The song of triumph which was composed in consequence of the great victory over Sisera, is said to have been 'sung by Deborah and Barak.' It is usually regarded as the composition of Deborah, and was probably indited by her to be sung on the return of Barak and his warriors from the pursuit. Of this peculiarly fine specimen of the earlier Hebrew poetry there is an excellent translation by Dr. Robinson in the 1st vol. of the *American Biblical Repository*, from the introductory matter to which this notice of Deborah is chiefly taken.—J. K.

[3. The mother of Tobiel, the father of Tobit, a woman of Naphthali (Tob. i. 8). In the A. V. this name is spelt Debora.]

DEBTOR. [LOAN.]

DECALOGUE (עֲשֵׂרֵת הַדְּבָרִים; Sept. *oi déka λόγοι* and τὰ δέκα ῥήματα; Vulg. *decem verba*, the ten words. Exod. xxxiv. 28; Deut. iv. 13; x. 4). This is the name most usually given by the Greek Fathers to the law of the two tables, given by God to Moses on Mount Sinai. The decalogue was

written on two stone slabs (Exod. xxxi. 18), which, having been broken by Moses (xxxii. 19), were renewed by God (xxxiv. 1, etc.) They are said (Deut. ix. 10) to have been written by the finger of God, an expression which always implies an immediate act of the Deity. The decalogue is five times alluded to in the N. T., there called ἐπιτάλα, *commandments*, but only the latter precepts are specifically cited, which refer to our duties to each other (Matt. xix. 18, 19, etc.; Mark x. 19; Luke xviii. 20; Rom. xiii. 9; vii. 7, 8; Matt. v.; 1 Tim. i. 9, 10). Those which refer to God are supposed by some to be omitted, from the circumstance of their containing precepts for ceremonial observances (Jeremy Taylor's *Life of Christ*, and *Ductor Dubitan.*; Rosenmüller's *Scholia in Exod.*) [LAW].

The circumstance of these precepts being called *the ten words* has doubtless led to the belief that the two tables contained ten distinct precepts, five in each table, while some have supposed that they were called by this name to denote their perfection, *ten* being considered the most perfect of numbers [ἡ δέκας παντελεία . . . ἀριθμὸν τέλειον, Philo, *De Septen.*, c. 9]. Philo divides them into two pentads, the first pentad ending with Exod. xx. 12, 'Honour thy father and thy mother,' etc., or the fifth commandment of the Greek, Reformed, and Anglican churches, while the more general opinion among Christians is that the first table contained our duty to God, ending with the law to keep the Sabbath holy, and the second our duty to our neighbour [Philo, *De Decalogo*]. As they are not numerically divided in the Scriptures, so that we cannot positively say which is the first, which the second, etc., it may not prove uninteresting to the student in biblical literature if we here give a brief account of the different modes of dividing them which have prevailed among Jews and Christians. These may be classed as the Talmudical, the Origenian, and the two Masoretic divisions.

1. *The Talmudical (Makkoth, xxiv. a)*. According to this division, which is also that of the modern Jews, the first commandment consists of the words 'I am the Lord thy God, who brought thee out of the land of Egypt, out of the house of bondage' (Exod. xx. 2; Deut. v. 6) and the second (Exod. xx. 3), 'Thou shalt have none other Gods beside me; thou shalt not make to thyself any graven image,' etc., to ver. 6; the third, 'Thou shalt not take God's name in vain,' etc.; the fourth, 'Remember to keep holy the Sabbath-day,' etc.; the fifth, 'Honour thy father and thy mother,' etc.; the sixth, 'Thou shalt not kill;' the seventh, 'Thou shalt not commit adultery;' the eighth, 'Thou shalt not steal;' the ninth, 'Thou shalt not bear false witness,' etc.; and the tenth, 'Thou shalt not covet,' etc., to the end. This division is also supported by the Targum of the Pseudo-Jonathan, a work of the sixth century, by Aben Ezra, in his *Commentary*, and by Maimonides (*Sepher Hamizvoth*). It has been also maintained by the learned Lutheran Peter Martyr (*Locis Communibus*, Basle, 1580, loc. 14, p. 684). That this was a very early mode of dividing the decalogue is further evident from a passage in Cyril of Alexandria's treatise against Julian, from whom he quotes the following invective:—'That decalogue, the law of Moses, is a wonderful thing, thou shalt not steal, thou shalt not kill, thou shalt not bear false witness; but let each of the precepts which he asserts to have been given by God himself be written down in the

identical words, 'I am the Lord thy God who brought thee out of the land of Egypt;' the second follows, 'Thou shalt have no strange gods beside me; thou shalt not make to thyself an idol.' He adds the reason, 'for I, the Lord thy God, am a jealous God, visiting the sins of the fathers upon the children.' 'Thou shalt not take the name of the Lord thy God in vain. Remember the Sabbath day. Honour thy father and thy mother. Thou shalt not commit adultery. Thou shalt not steal. Thou shalt not bear false witness. Thou shalt not covet thy neighbour's goods.' What nation is there, by the gods, if you take away these two, 'Thou shalt not adore other gods,' and 'Remember the Sabbath,' which does not think all the others are to be kept, and which does not punish more or less severely those who violate them?

2. The next division is the *Origenian*, or that approved by Origen, and is that in use in the Greek and in all the Reformed Churches, except the Lutheran.

Although Origen was acquainted with the differing opinions which existed in his time in regard to this subject, it is evident from his own words that he knew nothing of that division by which the number *ten* is completed, by making the prohibition against coveting either the house or the wife a distinct commandment. In his eighth *Homily on Genesis*, after citing the words 'I am the Lord thy God, who brought thee out of the land of Egypt,' he adds, 'this is not a part of the commandment.' The first commandment is 'Thou shalt have no other Gods but me,' and then follows 'Thou shalt not make an idol.' These together are thought by some to make one commandment, but in this case the number ten will not be complete—where then will be the truth of the decalogue? But if it be divided as we have done in the last sentence, the full number will be evident. The first commandment therefore is, 'Thou shalt have no other Gods but me,' and the second, 'Thou shalt not make to thyself an idol, nor a likeness,' etc. Origen proceeds to make a distinction between gods, idols, and likenesses. Of gods, he says, 'It is written there are gods many and lords many' (1 Cor. viii. 5); but of idols, 'an idol is nothing;' an image, he says, of a quadruped, serpent, or bird, in metal, wood, or stone, set up to be worshipped is not an *idol*, but a *likeness*. A picture made with the same view comes under the same denomination. But an idol is a representation of what does not exist, such as the figure of a man with two faces, or with the head of a dog, etc. The likeness must be of something existing in heaven, or in earth, or in the water. It is not easy to decide on the meaning of 'things in heaven,' unless it refers to the sun, moon, or stars. The design of Moses he conceives to have been to forbid Egyptian idolatry, such as that of Hecate or other fancied demons.—*Opera*, vol. ii. p. 156, De la Rue's ed.

The Pseudo-Athanasius, or the author of the *Synopsis Scripturæ*, who is the oracle of the Greek church, divides the commandments in the same manner. (Athanasii, *Opera*, fol. Paris, 1698.)

Gregory Nazianzen, in one of his poems, inscribed 'The Decalogue of Moses,' adopts the same division. (*Opera*, ed. Caillaud, Paris, 1840.)

Jerome took the same view with Origen; see his *Commentary on Ephesians* vi. (Hieronymi, *Opera*, vol. iv. Paris, 1693.)

The Pseudo-Ambrose also writes to the same

effect in his *Commentary on Ephesians*. (Ambrosii, *Opera*, vol. ii. Paris edition; Append. pp. 248, 249.)

To these testimonies from the fathers may be added that of Clemens Alexandrinus (*Stromata*, vi. p. 809); but this writer is so confused and contradictory in reference to the subject, that some have supposed the text to have been corrupted.

But the strongest evidence in favour of the Origenian division is that of the learned Jews Philo and Josephus, who speak of it as the received division of the Jewish Church. Philo, after mentioning the division into two pentads already referred to, proceeds:—'The first pentad is of a higher character than the second; it treats of the monarchy whereby the whole world is governed, of statues and images (*ἑστάνων καὶ ἀγαλμάτων*), and of all corrupt representations in general (*ἀφιδρυμάτων*); of not taking the name of God in vain; of the religious observance of the seventh day as a day of holy rest; of honouring both parents. So that one table begins with God the father and ruler of all things, and ends with parents who emulate him in perpetuating the human race. But the other pentad contains those commandments which forbid adultery, murder, theft, false-witness, concupiscence' (*De Decalogo*, lib. i.) The *first* precept, he afterwards observes, enjoins the belief and reverent worship of one supreme God, in opposition to those who worship the sun and moon, etc. And after condemning the arts of sculpture and painting, as taking off the mind from admiring the natural beauty of the universe, he adds: 'As I have said a good deal of the *second* commandment, I shall now proceed to the next, 'Thou shalt not take the name of God in vain.' . . . The fourth commandment respects the sabbath day, to be devoted to rest, the study of wisdom, and the contemplation of nature, with a revision of our lives during the past week, in order to the correction of our transgressions: the fifth speaks of honouring parents. Here ends the first, or more divine pentad. The second pentad begins with the precept respecting adultery; its second precept is against murder; its third against stealing, the next against false-witness, the last against coveting' (lib. ii.) This division seems to have been followed by Irenæus: 'In quinque libris, etc., unaquæque tabula quam accepit a Deo præcepta habet quinque.' And Josephus is, if possible, still more clear than Philo. 'The first commandment teaches us that there is but one God, and that we ought to worship him only; the second commands us not to make the image of any living creature, to worship it; the third, that we must not swear by God in a false matter; the fourth, that we must keep the seventh day, by resting from all sorts of work; the fifth, that we must honour our parents; the sixth, that we must abstain from murder; the seventh, that we must not commit adultery; the eighth, that we must not be guilty of theft; the ninth, that we must not bear false-witness; the tenth, that we must not admit the desire of that which is another's' (*Antiq.* iii. 5. 5, Whiston's translation).

This division, which appears to have been forgotten in the Western Church, was revived by Calvin in 1536, and is also received by that section of the Lutherans who followed Bucer, called the Tetrapolitan. It is adopted by Calmet (*Dictionary of the Bible*, French ed., art. Loi.) It is

supported by Zonaras, Nicephorus, and Petrus Mogislaus among the Greeks, and is that followed in the present Russian Church, as well as by the Greeks in general (see the catechism published by order of Peter the Great, by Archbishop Resensky, London, 1753). It is at the same time maintained in this catechism that it is not forbidden to bow before the representations of the saints. This division, which appeared in the Bishops' Book in 1537, was adopted by the Anglican Church at the Reformation (1548), substituting *seventh* for sabbath day in her formularies. The same division was published with approbation by Bonar in his *Homilies* in 1555.

3. We shall next proceed to describe the two *Masoretic divisions*. The first is that in Exodus. We call it the Masoretic division, inasmuch as the commandments in the greater number of manuscripts and printed editions are separated by a \square or \square , which mark the divisions between the smaller sections in the Hebrew. According to this arrangement, the two first commandments (according to the Origenian or Greek division), that is, the commandment concerning the worship of one God, and that concerning images, make but one; the second is, 'Thou shalt not take the name of the Lord thy God in vain,' and so on until we arrive at the two last, the former of which is, 'Thou shalt not covet thy neighbour's house,' and the last or tenth, 'Thou shalt not covet thy neighbour's wife, nor his servant,' etc., to the end. This was the division approved by Luther, and it has been ever since his time received by the Lutheran Church. The correctness of this division has been at all times maintained by the most learned Lutherans, not only from its agreement with the Hebrew Bibles, but from the internal structure of the commandments, especially from the fact of the two first commandments (according to Origen's division) forming but one subject. If these form but one commandment, the necessity of dividing the precept, 'thou shalt not covet,' etc., into two is obvious. (For a learned defence of this division, see Pfeiffer, *Opera*, vol. i. loc. 96, p. 125). Pfeiffer considers the accentuation also of the Hebrew as equally decisive in favour of this division, notwithstanding the opposite view is taken by many others, including the learned Buxtorf. This division is also followed in the Trent catechism, and may therefore be called the Roman Catholic division. The churches of this communion have not, however, been consistent in following uniformly the Tridentine division, having revived, as in this country, the second Masoretic division, to which we shall presently allude. In the Trent catechism the first commandment is, 'Ego sum Dominus Deus tuus, qui eduxi te de terra Ægypti, de domo servitutis; non habebis Deos alienos coram me. Non facies tibi sculptile,' etc. 'Ego sum Dominus Deus tuus, fortis, zelotes,' etc., to 'præcepta mea.' The two last commandments (according to the Roman division) are, however, in the same catechism, combined in one, thus: 'Non concupisces domum proximi tui; nec desiderabis uxorem ejus, non servum, non ancillam, non bovem, non asinum, nec omnia quæ illius sunt. In his duobus præceptis,' etc. It had appeared in the same form in England, in Marshall's and Bishop Hilsey's *Primers*, 1534, and 1539.

Those who follow this division have been accus-

tomed to give the decalogue very generally in an abridged form; thus the first commandment in the Lutheran shorter catechism is simply, 'Thou shalt have no other gods but me;' the second, 'Thou shalt not take the name of thy God in vain;' the third, 'Thou shalt sanctify the sabbath day' (*Feyer-tag*). A similar practice is followed by the Roman Catholics, although they, as well as the Lutherans, in their larger catechisms (as the Douay) give them at full length. This practice has given rise to the charge made against those denominations of leaving out the second commandment, whereas it would have been more correct to say that they had mutilated the first, or at least that the form in which they give it has the effect of concealing a most important part of it from such as had only access to their shorter catechisms.

The last division is the *second Masoretic*, or that of Deuteronomy, sometimes called the Augustinian. This division differs from the former simply in placing the precept 'Thou shalt not covet thy neighbour's wife' before 'Thou shalt not covet thy neighbour's house,' etc.; and for this transposition it has the authority of Deut. v. 21. The authority of the Masorites cannot, however, be of sufficient force to supersede the earlier traditions of Philo and Josephus.

This division was that approved by Augustin, who thus expresses himself on the subject—'To me it seems more congruous to divide them into three and seven, inasmuch as to those who diligently look into the matter, those which appertain to God seem to insinuate the Trinity. And, indeed, the command, 'Thou shalt have no other gods but me' is more perfectly explained when images are forbidden to be worshipped. Besides, the sin of coveting another man's wife differs so much from coveting his house, that to the house was joined his field, his servant, his maid, his ox, his ass, his cattle, and all that is his. But it seems to divide the coveting of the house from the coveting of the wife, when each begins thus: 'thou shalt not covet thy neighbour's wife, thou shalt not covet thy neighbour's house,' to which it then begins to add the rest. For, when he had said, 'thou shalt not covet thy neighbour's wife, he did not add the rest to this, saying, nor his house, nor his field, nor his servant, etc., but these seem plainly to be united, which appear to be contained in one precept, and distinct from that wherein the wife is named. But when it is said, 'thou shalt have no other gods but me,' there appears a more diligent following up of this in what is subjoined. For to what pertains, 'thou shalt not make an idol, nor a likeness; thou shalt not adore nor serve them,' unless to that which had been said, 'thou shalt have none other gods but me.' The division of Augustin was followed by Bede and Peter Lombard.

The learned Sonntag has entirely followed Augustin's view of this subject, and has written a dissertation in vindication of this division in the *Theologische Studien und Kritiken*, Hamburg, 1836-37; to which there has been a reply in the same miscellany from Züllig, in vindication of what he terms the *Calvinistic division*, or that of Origen, which is followed by a rejoinder from Sonntag. Sonntag is so convinced of the necessity of that order of the words, according to which the precept against coveting the wife precedes (as in Deuteronomy) that against coveting the house, etc., that he puts down the order of the words in

Exodus as an oversight. The order in the Septuagint version in Exodus agrees with that in Deuteronomy. The Greek church follows this order. Sonntag conceives that the Mosaic division of the decalogue was lost in the period between the exile and the birth of Christ.—W. W.

DECAPOLIS (Δεκάπολις). A district lying chiefly on the east side of the Upper Jordan and the Sea of Tiberias, but also including a small portion of southern Galilee around Scythopolis. It received its name, as Pliny says, from the number of leading cities it contained (δέκα, 'ten'); but why these cities should have been grouped together has not been definitely explained by any ancient writer. The name Decapolis does not appear to be older than the Roman conquest of Syria; and probably these cities were endowed with peculiar privileges by the Roman Senate, and permitted to elect their own rulers, and administer their own laws. Lightfoot states, mainly on the authority of Jewish Rabbins, that their principal inhabitants were Gentiles, and that they were not subject to the Jewish taxes (Joseph. *Vita*, lxxiv. 2; Lightfoot, *Opp.* ii. 417, sq.) The boundaries of Decapolis cannot now be fixed with any approach to accuracy; indeed it is questionable whether as a province it ever had any fixed boundaries. The name seems to have been applied indefinitely to a wide region surrounding 'ten cities;' and ancient geographers do not even agree as to what cities these were. Perhaps we may account for this by supposing that the name was originally applied to only ten cities, but in the course of time others had conferred upon them the same privileges, and were therefore called by the same name. Pliny, while admitting that 'non omnes eadem observant,' gives them as follows:—Damascus, Philadelphia, Raphane, Scythopolis, Gadara, Hippo, Dion, Pella, Galasa (Gerasa), and Canatha; he adds, 'The tetrarchies lie between and around these cities. . . namely, Trachonitis, Panias, Abila, etc. (*Hist. Nat.* v. 16). These cities are scattered over a very wide region. If Raphanea be, as many suppose, the same as Raphanea of Josephus, it lay near Hamath (Joseph. *Bell. Jud.* vii. 5. 1); and from thence to Philadelphia on the south is above two hundred miles; and from Scythopolis on the west to Canatha on the east is about sixty. Josephus does not enumerate the cities of Decapolis; but it would seem that he excludes Damascus from the number, since he calls Scythopolis the largest of them (*Bell. Jud.* iii. 9. 7). Cellarius thinks Cæsarea Philippi and Gergasa ought to be substituted in Pliny's list for Damascus and Raphane. Pliny is undoubtedly the only author who extends Decapolis so far north. Ptolemy appears to include Decapolis in the southern part of Coele Syria (*Geogr.* v. 15); and with this agree the statements of Eusebius and Jerome. The former says—*ἄντη ἐστὶν ἡ ἐπὶ Περαιᾶ κευμένη ἀμφὶ τὸν Ἰππον καὶ Πέλλαν καὶ Γαδάραν*—thus placing the Decapolis chiefly, if not wholly, east of Jordan (*Onomast.* s.v.) An incidental notice in Mark v. 20 confirms this view. When our Lord cured the man possessed with devils at Gadara, on the eastern coast of the sea of Tiberias, he would not permit him to accompany him across the lake, but said, 'Go home to thy friends, and tell them how great things the Lord hath done for thee.

And he departed, and began to publish in *Decapolis* how great things Jesus had done for him.'

Another incidental reference by Mark has occasioned some difficulty regarding the situation of Decapolis, and given rise to views at variance with the statements of Pliny, Josephus, and Eusebius. It is said of Jesus that 'departing from the coasts of Tyre and Sidon, he came unto the Sea of Galilee, *through the midst of the coasts of Decapolis*' (Mark vii. 31). From this it has been supposed that a large part of Decapolis must have lain on the west of the Jordan, and between Tyre and Tiberias. Brocardus, a writer of the 13th century, describes it as follows:—'Regionis Decapoleos fines sunt mare Galilææ ab oriente, et Sidon magna ab occidente, et hæc est latitudo ejus. In longitudine vero incipit à civitate Tyberiadis, et vergit per litus maris aquilonare usque ad Damascus. Dicitur autem Decapolis a decem principibus ejus civitatibus, quarum nomina sunt hæc, Tyberias, Sephet, Cedus Nephtalim, Assor, Cæsarea Philippi, Capernaum, Jonitera, Bethsaida, Corazaim, et Bethsan' (*Breviarij Monachi Descriptio Terræ Sanctæ*, in Le Clerc's edition of Eusebius' *Onomasticon*, p. 175). Adrichomius gives an account substantially the same (*Theatrum Terræ Sanctæ*). But there is no authority for these theories. They appear to be pure suppositions, invented to escape an apparent difficulty (See Lightfoot, *Opp.* ii. 417, sq.) In reality, however, there is no difficulty in the case. In Mark vii. 31 the best MSS. read *ἐξελθὼν ἐκ τῶν ὄρων Τύρου ἦλθεν διὰ Σιδῶνος εἰς τὴν θάλασσαν τῆς Γαλιλαίας, ἀπὸ μέσον κ.τ.λ.*; instead of *ἐξελθὼν ἐκ τῶν ὄρων Τύρου καὶ Σιδῶνος ἦλθε πρὸς τὴν θάλασσαν κ.τ.λ.*; and this reading is now adopted by all critics of eminence. The reading of the *Textus Receptus* was probably invented to avoid the unlikelihood of the long detour διὰ Σιδῶνος. Our Lord travelled from Tyre northward to Sidon; then he appears to have crossed Lebanon by the great road to Cæsarea Philippi; and from thence he descended *through Decapolis* to the eastern shore of the lake, where he fed the multitude (cf. Matt. xv. 29-38; and Mark viii. 1-9). This view brings out the full meaning of the sacred text, and is in entire accordance with the geography of the country.

It thus appears that 'the region of Decapolis' lay east of the Jordan, with the exception of the little territory of Scythopolis close to the western bank, at the southern end of the Sea of Galilee. In addition to Damascus and Scythopolis, whose sites are well known, its chief towns were—Gadara, about six miles south-east of the lake; Pella, on the side of the range of Gilead, opposite Scythopolis; Philadelphia, the ancient Rabboth-Ammon; Gerasa, whose ruins are the most magnificent in all Palestine; and Canatha, the Kenath of the Bible, situated eastward among the mountains of Bashan. Decapolis was not strictly a province like Galilee, Peræa, or Trachonitis. It was rather an assemblage of little principalities, classed together, not because of their geographical position, but because they enjoyed the same privileges, somewhat after the manner of the Hanse Towns in Germany. At least six of the great cities of the Decapolis are now ruined and desolate; and the others, with the single exception of Damascus, are represented by poor miserable villages.—I. L. P.

DEDAN (דָּדָן; Sept. Δαιδάν). Two persons of this name are mentioned in Scripture; 1. The son of Raamah, the son of Cush (Gen. x. 7); 2. The second son of Jokshan, Abraham's son by Keturah (Gen. xxv. 3). Both were founders of tribes, afterwards repeatedly named in Scripture; and Gesenius, Winer, and others, are of opinion that these were not really different tribes, but the same tribe derived, according to different traditions, from different progenitors. It seems better, however, to adhere to the usual view, by which they are distinguished from each other.

Of the descendants of the Cushite Dedan, very little is known. It is supposed that they settled in southern Arabia, near the Persian Gulf; but the existence in this quarter of a place called Dadan or Dadena, is the chief ground for this conclusion.

The descendants of the Abrahamite Jokshan seem to have lived in the neighbourhood of Idumæa; for the prophet Jeremiah (xlix. 8) calls on them to consult their safety, because the calamity of the sons of Esau, *i. e.*, the Idumæans, was at hand. The same prophet (xxv. 23) connects them with Thema and Buz, two other tribes of Arabia Petræa, or Arabia Deserta, as does Ezekiel (xxv. 13) with Theman, a district of Edom. It is not always clear when the name occurs which of the two Dedans is intended; but it is probably the Cushite tribe, which is described as addicted to commerce, or rather, perhaps, engaged in the carrying-trade. Its 'travelling companies,' or caravans, are mentioned by Isaiah (xxi. 13); in Ezekiel (xxvii. 20), the Dedanites are described as supplying the markets of Tyre with flowing riding-cloths; and elsewhere (xxxviii. 13) the same prophet names them along with the merchants of Tarshish.—J. K.

DEDICATION, a religious ceremony, whereby anything is dedicated or consecrated to the service of God; and it appears to have originated in the desire to *commence*, with peculiar solemnity, the practical use and application of whatever had been set apart to the divine service. Thus Moses dedicated the Tabernacle in the Wilderness (Exod. xl.; Num. vii.); Solomon his temple (1 Kings viii.); the returned exiles their (Ez. vi. 16, 17); Herod his (Joseph. *Antiq.* xv. 11. 6). The Maccabees having cleansed the temple from its pollutions under Antiochus Epiphanes, again dedicated the altar (1 Maccab. iv. 52-59), and an annual festival was established in commemoration of the event (See next art.)

Not only were sacred places thus dedicated; but some kind of dedicatory solemnity was observed with respect to cities, walls, gates, and even private houses (Deut. xx. 5; Ps. xxx. title; Neh. xii. 27). We may trace the continuance of these usages in the custom of consecrating or dedicating churches and chapels; and in the ceremonies connected with the 'opening' of roads, markets, bridges, etc., and with the launching of ships.—J. K.

DEDICATION, FEAST OF THE. This festival was instituted by Judas Maccabeus, B.C. 164, to be celebrated annually by all the Jews for eight days, commencing on the 25th of Chislev = parts of November and December, in commemoration of the purification of the Temple and the temple

worship, after the three years' profanation by Antiochus Epiphanes, the record of which is given in 1 Maccab. iv. 52-59. The Jews to the present day call this feast simply חֲנֻכָּה *Chanuca* = *dedication*,

the name by which St. John called it (*τὰ ἑγκαίνια*, x. 22), and which is also retained in the Vulgate, *i. e.*, *Encenia*. In 1 Maccab. iv. 56 and 59, however, it is also called *ὁ ἑγκαίνισμός τοῦ θυσιαστηρίου*, *the dedication of the altar*, because the old and profaned altar was pulled down and a new one built and dedicated to the Lord.

The mode in which this festival was and still is celebrated.—During the eight days of festivity, the Jews assembled in the Temple or in the synagogues of the places wherein they resided (Rosh Ha-Shana, 18. 2), carrying branches of trees and palms in their hands, and sang psalms to the God of their salvation. No fast or mourning on account of any calamity or bereavement was permitted to commence during the festival (Mishna, Thaanith, ii. 10; Moed Katon, iii. 9); the temple and all private houses were lighted up within and without by lanterns and torches every evening during the eight days, in token of this joy (1 Maccab. iv. 52-59; 2 Maccab. x. 6, etc.; Mishna, Baba Kama, v. 6), for which reasons Josephus also calls it *φῶτα, λύχνων ἀνακαύσεις, the Feast of Lights* (comp. *Antiq.* xii. 7. 7, with *Cont. Apion.* ii. 39). When Mr. Clark remarks that 'neither the books of Maccabees, the Mishna, nor Josephus, mention this custom' (*Smith's Dictionary of the Bible*, s. v.), we can only express our surprise, and refer to the passages here cited. Maimonides, in discoursing upon this subject, distinctly declares that 'the lighting up of the lamps is a commandment from the scribes.' The injunction respecting the lighting of these lamps, which the Jews observe to the present day, cannot be given better than in the words of Maimonides. 'The order is,' says he, 'that every house should light one light, whether the inmates thereof be many or only one. He, however, who honours the injunction has as many lights as there are inmates in the house, he has a light for every man and woman. And he who respects it still more adds a light for every individual every night, so that if a house wherein are ten inmates began with ten lights, it would end with eighty' (*Mishna Thora Hilchoth Megilla Ve-Chanuca*, sec. iv. p. 326, b). These lamps must be lighted immediately after sunset by the head of the family, who pronounces the three following benedictions:—1. 'Blessed art thou, Lord our God, King of the world, who hast sanctified us with thy commandments, and enjoined upon us to light the lamps of the Feast of the Dedication.' 2. 'Blessed art thou, Lord our God, King of the world, who hast done wonders for our forefathers in those days about this time;' and 3. 'Blessed art thou, Lord our God, King of the world, who hast preserved us in life and health, and hast permitted us to see this day!' The third benediction, however, is only pronounced on the first day of this festival. The practice of illumination in connection with this festival is, as we have seen, of very old date, and was most probably suggested by the fact that 'the lamps which were upon the candlestick' were lighted by the people at the restoration of the temple service (1 Maccab. iv. 50, 51), as well as by the natural feeling existing among most nations to have illuminations on

occasions of great joy. The Egyptians also had a similar festival (comp. Herod. ii. 62). Midrashim of very great antiquity, however, give another reason for this custom of lighting lamps. They tell us that 'when the Maccabees went into the temple after vanquishing the enemy, and wanted to light the candlestick, they could not find any oil, except one vial, and it was sealed with the ring of the high-priest, which assured them that it was not polluted, but it was just enough to light one day. Whereupon God, whose glory dwelleth in the heavens, blessed it, so that they were able to feed the lamps therewith for eight days. Wherefore the Maccabees and all the people, like one man, have ordained that these eight days should henceforth be days of joy and rejoicing, like the festivals ordained in the law, and that lamps should be lighted on those days, to make known the wondrous works which the God of the heavens hath wrought for them' (Megillath Antiochus, p. 145, ed. Jelinek; Talmud, Sabbath, 21, *b*). Now, whatever we may think about the embellishments of this story, it is not at all unlikely that a vial of oil was actually discovered in the temple just at a time when it was most wanted, and that this is one of the reasons why the lighting of lamps has been instituted.

At every morning prayer during the whole of this festival, a portion of the 7th ch. of Numbers is read in the synagogue by the prelector, in accordance with a very old custom (Mishna, Megilla, iii. 6); thus, on the first day Num. vii. 1-17 is read after the regular lesson of the Pentateuch, if it is a Sabbath, and the Haftorah, or the portion from the Prophets, is Zech. ii.; on the second, Num. vii. 18-23 is read, beginning with 'On the second day,' etc., and the same Haftorah, on the third day, Num. vii. 24-29, and the same Haftorah, and so on. Connected with this festival is the celebration of the exploits performed by Judith upon Holophernes, because, as some suppose, she was of the stock of the Maccabees [JUDITH]. Hence some of the Midrashim which give the history of Judas Maccabæus mix up with it the history of Judith. The Karaites do not observe this festival because it is an uninspired ordinance. There are four other dedications of the temple recorded.

1. The dedication of the Solomonic Temple (1 Kings viii.), which took place in the seventh month, or in the autumn.

2. The dedication at the time of Hezekiah, when the temple was purified from the abominations which his father Ahaz introduced into it (2 Chron. xxix.)

3. The dedication of Zerubbabel's Temple, built after the captivity (Ezra vi. 16), which took place in the month Adar, in the spring. And

4. The dedication of Herod's Temple (Joseph. *Antiq.* xv. 2. *b*). Some of the Fathers have therefore thought that Jesus is said to have gone to the celebration commemorative of the dedication of Solomon's Temple or of Zerubbabel's. The fact, however, that there was *no annual festival to commemorate these dedications*, and that the Evangelist St. John distinctly says that it was in the *winter*, establishes it beyond doubt that our Lord went to the Feast of the Dedication instituted by Judas Maccabæus.

LITERATURE. Maimonides, *Mishna Thora* or *Sad Ha-Chazaca*; *Hilchoth Megilla Ve-Chanuca*, sections 3 and 4; *Megillath Antiochus*, printed in

Bartolucci, *Bibliotheca Magna*, i. 382, etc.; *Midrash Le-Chanuca*, and *Midrash Achar Le-Chanuca*, published by Dr. Adolph Jelinek in *Beth Ha-Midrash*, Leipzig, 1853, i. p. 132, etc. This volume also contains (p. 142, etc.) a reprint of *Megillath Antiochus*. See also the volumes quoted in this article.—C. D. G.

DEEP. [ABYSS.]

DEER. [VACHMUR.]

DEFILEMENT. [UNCLEANNES]

DEGREES, PSALMS OF. [PSALMS.]

DEHAVITES (דְּהָוִיִּים; Sept. Δαυαίω). One of the tribes which Asnapper, the Persian king or satrap, brought from the east, and established as colonists in the cities of Samaria (Ezra, iv. 9). The name is supposed to be derived from the Persian دِه, 'a village;' Dehavites will therefore be equivalent to the Latin 'Rustici.' They are mentioned by Herodotus as one of the four great nomad tribes of Persia; he calls them Δάοι (i. 125). They were powerful and warlike, originally inhabiting the high plains and mountains east of the Caspian sea, and north of Bactriana, but subsequently scattered through various countries (Strabo, xi. pp. 352, 355, ed. Casaub. 1587). Their love of war and plunder induced them to serve as mercenaries under various princes (Arrian, iii. 11; v. 12); and their valour has immortalised them in the pages of Virgil, as 'indomiti Dahæ' (*Æn.* viii. 728). A band of them had doubtless entered the service of the Persian monarch, followed him to Palestine, and received for their reward grants of land in Samaria (Stephanus Byzant, s. v.; Ritter, *Erkunde*, vii. 668; Rawlinson's *Herodotus*, i. 425).—J. L. P.

DEKAR, prop. DEQER (דִּקְרָה; Sept. Δακάρ), the father of one of Solomon's officers who provided victual for his household, and whose province lay in the western part of the hill country of Judah (1 Kings iv. 9).—†

DELAIAH (דְּלַיָּהּ, more fully דְּלַיָּהוּ = *Jah is deliverer* (Fürst), or *whom Jehovah hath freed* (Gesens.); Sept. Δαλαΐα, Δαλαΐας). Five persons of this name are mentioned in Scripture:—1. One of the sons of Elieoeni, of the seed of David (1 Chron. iii. 24, A. V. Dalaiah). 2. A priest, the leader of the twenty-third course of priests in the time of David (1 Chron. xxiv. 18, Sept. Vat. Ἀδαλλαῖ). 3. The son of Shemaiah, one of 'the princes' or officers of state in the court of Jehoiakim (Jer. xxxvi. 12, 25). 4. The son of Mehetabel, and father of Shemaiah, associated with Nehemiah in the rebuilding of Jerusalem (Neh. vi. 10). 5. The head of 'the children of Delaiah' who returned with Zerubbabel from Babylon (Ez. ii. 60; Neh. vii. 62).—W. L. A.

DELILAH (דְּלִילָה = *luckless, unhappy*, or like *دليله*, *languishing, lustful*; Sept. Δαλιδᾶ), a courtesan, whose residence was in the vale of Sorek, by whom Samson was inveigled into revealing the secret of his strength, and the means by which he might be overcome. To this she was

bribed by the lords of the Philistines, who gave her each the large sum of 1100 pieces of silver with this view. She was probably a Philistine; and one who used her personal charms for political ends (Joseph. *Antiq.* v. 8. 11). Milton, in his *Samson Agonistes*, following the opinion of several of the Fathers, represents her as Samson's wife; but this is on many grounds improbable. For one thing, as Patrick remarks (*in loc.*), she could hardly have secreted soldiers in the house had it belonged to Samson, and been under the charge of his servants. [SAMSON.]—W. L. A.

DELUGE. The sacred historian informs us that in the ninth generation from Adam, when the race of man had greatly multiplied on the face of the earth, wickedness of every kind had fearfully increased, that every imagination of the thoughts of the human heart was only evil continually, that the earth was filled with violence, and that to such a degree of depravity had the whole race come, that 'it repented the Lord that he had made man on the earth, and it grieved him at his heart.' We are further told, in graphic and impressive language, that the Creator determined to purge the earth from the presence of the creature whom He had made. 'I will destroy man whom I have created from the face of the earth; both man and beast, and the creeping thing, and the fowls of the air; for it repenteth me that I have made them.'

In the midst of a world of crime and guilt there was however one household, that of Noah, in which the fear of God still remained. 'Noah was a just man and perfect in his generations, and walked with God. And Noah found grace in the eyes of the Lord.' He was commanded to make an ark of gopher wood, three hundred cubits long, fifty broad, and thirty high. [ARK.] Into this large vessel he was to collect a pair of 'every living thing of all flesh,' fowls, cattle, and creeping things after their kind, along with a suitable amount of food. He was to enter it himself, taking with him his wife, and his three sons with their wives, but with no other human company. The reason of these preparations was made known in the solemn decree—'Behold I, even I, do bring a flood of waters upon the earth to destroy all flesh, wherein is the breath of life, from under heaven; and everything that is in the earth shall die.' The ark thus commissioned was slowly prepared by Noah. At length, in the six hundredth year of his age, he finished his task, and after having collected in the various chambers of his huge vessel specimens of the different tribes of terrestrial animals, along with a store of their appropriate food, he entered himself with his family. Seven days afterwards 'the fountains of the great deep were broken up, and the windows of heaven were opened; and the rain was upon the earth forty days and forty nights.' The ark floated on the surface of the waters, and the flood increased continually until it had risen 15 cubits above the highest mountains, 'and all the high hills that were under the whole heaven were covered.' As the necessary result of this total change of physical conditions, the inhabitants of the land utterly perished; 'every living substance was destroyed which was upon the face of the ground, both man and cattle and the creeping things, and the fowl of the heaven, they were destroyed from the earth, and Noah only remained alive, and they that were with him in the ark.'

The narrative in the Book of Genesis then goes on to shew how the waters gradually abated until, in the seventh month, the ark rested upon the mountains of Ararat, and at last, within a few days of a year from the time when the deluge began, the land was once more dry, and Noah descended from the ark, bringing with him the various creatures that had been his companions on the deep. The command once again came forth to all flesh, 'Be fruitful and multiply upon the earth;' a new and everlasting covenant was established by God with the earth which He had made, and in all future ages, so long as sun and moon should endure, the rainbow in the clouds was to stand as at once a memorial of the Lord's vengeance upon sin, and a pledge that he would no more destroy the world by a flood of waters.

The memory of this great catastrophe has been preserved among many nations, both in the old and the new world. The details of the story vary indeed in different countries, and have commonly more or less of a local colouring. Such a circumstance, however, is only what might have been looked for, and affords no real ground for the belief that there must have been many local deluges to which alone these somewhat discordant traditions can refer. One primitive story could not fail to receive many additions and alterations as it passed into different climates, and was handed down from generation to generation by men who had lost all memory of the original locality of the event. The best known of all the traditions next to the narrative of the Bible, is the old Greek legend of Deucalion and Pyrrha. According to this version, mankind, for their impiety, were doomed to destruction. The waters accordingly broke from the earth accompanied by violent rains from heaven. In a short time the world was whelmed in the floods, and every human being perished save Deucalion and his wife, with his sons and their wives. They escaped in a large vessel, in which they had previously placed pairs of every kind of animal. While in the ark Deucalion sent forth a dove, which in a little time returned. On being let free a second time, it came not back, or, as another version has it, it alighted again on the ark with mud-stained claws, whence Deucalion inferred that the subsidence of the waters had begun.

The Hindus have a tradition of the Deluge, which in its details bear a close resemblance to the Bible narrative. It represents the god Vishnu as visiting a pious prince named Satyavratu, and warning him to prepare for a great flood that was about to destroy the earth. A capacious vessel was miraculously prepared into which the prince entered, with his sons and their wives, pairs of all kinds of animals, and an abundant supply of vegetable food.

The Chinese legend of the Deluge has little in common with the Mosaic account, save in the fact that the mountains were all covered and the people perished.

The sacred books of the Parsees refer to a flood of waters that deluged the earth, and washed away all the wickedness and impurity that had been brought about by Ahriman, the Evil One.

The version given by Eerosus, the Chaldean, records that among the Antediluvians (who were all giants) there was but one, named Noa, who revered the gods, and that he, foreseeing a

deluge, built a large vessel, in which he saved himself and his three sons, Sem, Japet, Chem, with their wives.

There is an Assyrian tradition which has also preserved very faithfully the original details of the Deluge. According to this version the god Chromus appeared to Xithurus, tenth king of Babylon, and warned him of a flood that would shortly annihilate mankind. The king built a vessel of huge dimensions, stored it with all things needful for the sustenance of life, together with every variety of bird and beast. Into this vessel he entered, taking with him his family and friends. The deluge began, and the ark floated away until after the episode of the freeing of the birds, and their subsequent return. The vessel stranded on the mountains of Armenia.

In the wild Scandinavian Edda the earth is allegorized as the great giant Ymir, whose bones and flesh are represented by the rocks and soil. This giant was killed by the Gods, and his blood (the ocean) poured forth in such a flood that it drowned all the lesser giants—his offspring—save one, who saved himself and his wife by escaping in time to his ship.

In the new world, also, the memory of this great event is still preserved among many of the tribes. The Indians of Peru, Brazil, and Terra Firma retained it. According to Humboldt, it was still fresh among all the tribes of the Orinoco. He mentions that the Tamanacs believe that from a great flood which devastated the world, only one man and woman escaped by betaking themselves to a lofty mountain, and that the earth was peopled anew from the seeds of a certain tree which the two survivors cast behind them. In Cuba there used to be a legend of an old man who, knowing a deluge was about to overtake mankind, prepared a great ship, into which he entered, taking with him his family and abundance of animals. While the flood continued he sent out a crow, which delayed its return to feed on the floating carcasses, but afterwards came back with a green branch. The race which preserved this tradition has been long extinct. The Mexicans held that a deluge destroyed all living things, except a man and his wife, who saved themselves in the hollow trunk of a tree. Some curious Mexican paintings of this catastrophe still exist. The North American Indians say that the father of all their tribes, with his family, and pairs of all the animals, made his escape on a raft which he had made in anticipation of a mighty deluge, foretold to him in a dream.

Thus we see that the records of this great judgment have been preserved by man how far soever he may have wandered from those plains of Ararat whence the race began its second dispersion. The occurrence of these traditions over all the world, however, does not prove that the deluge was universal; for, of course, we should then have to believe that there must have been many Noahs. But it may indicate that all the tribes of mankind have had a community of origin.

With regard to the extent of the deluge, two opinions have been entertained, one that it was general over the whole globe; the other, that it was partial, affecting only those regions over which the human race had extended. In all inquiries into this subject, it is well to bear in mind the design to be fulfilled by the 'flood of waters.'

That design was plainly not to destroy and remodel the surface of the earth. Although the inferior animals were involved in a like fate with the human race, it was not for their destruction that the great catastrophe came. The wickedness of man had evoked the Divine anger; to sweep him and his crimes, therefore, from the face of the earth, the fountains of the great deep were broken up, and the windows of heaven were opened. Hence, we may reasonably infer, that no greater devastation would be permitted than was unavoidable to secure the destruction of the human family.

Against the first opinion there is, accordingly, this preliminary objection, that either it takes for granted that the whole world was peopled in the days of Noah, or it represents as involved in ruin large tracts of land, fair and fertile, though uninhabited by man. For the first alternative there is no evidence in Scripture. Indeed, the whole narrative of the preparation of the ark and Noah's intercourse with his fellow-men, leads us to infer that the population of the globe at the time was not so extensive but that the warnings of the patriarch could be everywhere heard and known. It would have been a vain task if his single voice had been required to sound in all lands. The second alternative is equally adverse to the opinion of the universality of the deluge, for it necessitates our belief in the destruction of large portions of the earth's surface where man had never been, and which could not, therefore, have become tainted and defiled by sin—a view that is opposed to the known modes of God's dealings with his creatures. But against the idea of a general flood over the whole globe simultaneously, many arguments of much greater force may be brought forward. These are derived from a consideration of the laws by which the present economy of nature is regulated. If it be objected to these arguments that the deluge was a miracle, and must, accordingly, be judged apart from the operation of law, it is sufficient to reply that, whether a miracle or not, it was brought about by the ordinary agencies of nature; 'the fountains of the deep were broken up;' that is, the land was depressed and the sea rolled over it; 'the windows of heaven were opened,' in other words, a constant and heavy rain was sent upon the earth; and again, when the waters were to be dried off the land, a wind was made to blow upon them. In short, from the beginning to the end of the narrative in Genesis, we meet with no setting aside of the laws of nature. Everything is done in strict accordance with those laws, as if to teach a truth which is very apt to be forgotten in the present day, that what we call the laws of nature is only the constant mode in which the Creator acts, and that by the operation of these laws, directed as he sees fit, he works out his purposes in creation.

Astronomy, geology, and zoology each furnish evidence against the universality of any flood over this earth.

The astronomical difficulties are indeed insuperable. Granting, for an instant, that from some unknown source a vast body of water was introduced on the surface of our planet, we are led to ask what would be the result? It can be shewn that there was no general collapse of the earth's crust, and the water must therefore have risen five miles above the sea-level, so as to cover the top of the highest mountain. The effect of this would

be to increase the equatorial diameter of the earth by some ten or twelve miles. The orbit round the sun would consequently be altered. The influence of its attraction on the planets would be increased, and thus the element of disorder would reach to the remotest regions of space. But let us suppose that a change of this kind was permitted to extend though the universe, what is the next step in this series of impossible suppositions? After a period of less than a year the waters assuage, and the earth is once more as it used to be. Here, again, another change must have extended through the firmament. The old relations of the heavenly bodies are re-established, and the orbits continue as they were before the flood. Thus we must suppose a serious alteration to have disturbed every celestial body throughout the whole universe, to have lasted while our earth performed some three hundred revolutions on its axis, and then to have ceased by the return of everything to the original condition. And this stupendous system of aberration had for its object the destruction of a race of creatures inhabiting a mere speck among the planetary systems! No one will pretend that this hypothesis has any shadow of probability.

Many years have not elapsed since it was believed that the revelations of geology tended in a very marked manner to confirm the commonly received view of the deluge. Over the greater part of Great Britain and Ireland, and throughout central and northern Europe, as well as North America, there exists immediately under the vegetable soil a deposit of clay, sand, or gravel, often very tumultuously arranged. This deposit, in the infancy of geological science, was set down as the product of some great rush of waters, and as it was plainly one of the most recent formations of the globe, it came to be regarded as beyond question the result of that old deluge by which the human race had been destroyed. It received accordingly the name *diluvium*, and from its very general occurrence in both hemispheres, it was held to be a confirmation of the Bible narrative of the flood that covered 'all the high hills that were under the whole heaven.' But the identification proved too hasty. A more careful examination of the *diluvium* shewed that it belonged to many different periods, and had to a considerable extent resulted from local causes, acting over limited areas. It was ascertained, however, that one kind of *diluvium* having a wide diffusion over the northern parts of Europe and America, must have been produced by one great cause acting in the same geological period. The agency which gave rise to this 'drift' was nevertheless shewn to be not a rush of water, but *ice* coming from the north, either in the form of a glacier or as icebergs, and bearing with it enormous quantities of sand, mud, and stones. Thus the last hope of sustaining the doctrine of a universal deluge by an appeal to geological facts fell to the ground. Not only does geology afford no evidence in favour of such a doctrine, but it tends to support the opposite view. The notion of a simultaneous and universal desolation of the globe finds no countenance among those stony records in which the primeval history of our planet is graven, as with a pen of iron in the rock for ever. There are indeed many gaps in the chronicle, many passages that have been blotted out in whole or in part, and some pages that seem never to have been inscribed

among rocks at all, but these are only local. What is wanting in one place is often made up in another, and though even at the best the record is full of imperfections, the geologist can confidently affirm that its whole tenor goes to disprove any universal catastrophe, and to shew that the extinction of successive races of plants and animals has been imperceptibly effected during immensely protracted periods of time.

Another geological argument has often been adduced as bearing strongly against a general deluge. In Auvergne, and other districts of central France, there occurs a series of volcanos which have not been in action within the historical period. From the association of the remains of long extinct animals among the products of these volcanos, it has been inferred that the era of eruption must be assigned to a time long anterior to the appearance of man. Yet these volcanic cones are in many instances as perfect as when they were first thrown up. The writer of this article has climbed their sides and descended into their craters, and can bear testimony to the fact that they consist of dust and cinders still so loosely aggregated that the traveller sometimes sinks over the ankle in volcanic debris. Such light material has assuredly been exposed to the action of no large body of water, which would have swept it at once away. And hence, since these volcanos belong to a period earlier than that of man, the deluge cannot have extended over central France.

But perhaps the most startling of all the difficulties in the way of the belief in a universal deluge, are presented to us in the researches of the zoologist. From him we learn that, even taking the cubit by which the ark was measured to have been of the longest, the ark was totally inadequate to contain the animals even of a single continent. It would occupy too much space to enter here into the details of this part of the subject. We refer the reader to one of the lectures in Hugh Miller's 'Testimony of the Rocks,' where the subject is treated with the vigour and picturesqueness so characteristic of that lamented writer. Sir Walter Raleigh thought he had exhausted the capabilities of the ark, when, after calculating the amount of space that would be occupied by the animals known to himself at the time, he concluded that 'all these two hundred and eighty beasts might be kept in one storey or room of the ark, in their several cabins, their meat in the second, the birds and their provisions in the third, with space to spare for Noah and his family, and all their necessities.' Since Raleigh's time, however, the known number of terrestrial animals has been enormously increased. Of mammalia alone there are now known between 1600 and 1700 species. To these must be added upwards of 6000 birds, 650 reptiles, and 550,000 insects, all of which would require room and a provision of food in the ark. It is needless to remark, that no vessel ever fashioned by man could have accommodated a tithe of these inmates.

But over and above the impossibility of constructing a vessel large enough to contain all the species of terrestrial animals that inhabit the globe, it would have been equally impossible in the days of Noah, just as it would be utterly impossible in our own day, to collect all these creatures alive into one corner of the earth. No one needs to be informed that the animal tribes are not all represented in any one country, that certain races are confined to high

latitudes, that others roam among the temperate zones, while others are found only between the tropics. Nor is it necessary to do more than allude to the fact that there is a similar grouping on all high land, altitude above the sea being thus representative of recession from the equator, so that the bald head of a lofty mountain may be white with the snows of an eternal winter, its shoulders clad with the spring-like vegetation of the temperate latitudes, while its feet lie rich in the glories of a tropical summer. But besides this arrangement, according to climate and temperature, there is a still further subdivision into *provinces*, and these again into *generic and specific centres*. Thus, while each zone of latitude has its peculiar *facies* of animal and vegetable life, it contains so many distinct and independent areas, in which the animals and plants are to a large extent generically or specifically different from those of contiguous areas. The evidence of these localized groups of organisms points in part to old geological changes of sea and land, and possibly to other causes which are still far from being understood. Professor Edward Forbes treated them as *centres of creation*, that is, distinct areas in which groups of plants and animals had been created, and from which, as a common centre, they had gradually radiated, so as to encroach more or less upon the neighbouring areas. Hence, to collect specimens of all the species of terrestrial creatures inhabiting the earth, it would be necessary not only to visit each parallel of latitude on both sides of the equator, but to explore the whole extent of each parallel, so as to leave out none of the separate provinces. With all the appliances of modern civilization, and all the labours of explorers in the cause of science throughout every part of the world, the task of ascertaining the extent of the animal kingdom is probably still far from being accomplished. Not a year passes away without witnessing new names added to the lists of the zoologist. Surely no one will pretend that what has not yet been achieved by hundreds of labourers during many centuries could have been performed by one of the patriarchs during a few years. It was of course necessary that the animals should be brought alive. But this, owing to their climatal susceptibilities, was in the case of many species impossible, and even with regard to those which might have survived the journey, the difficulties of their transport must have been altogether insuperable. Noah, moreover, was busy with his great vessel, and continued to be 'a preacher of repentance' to his fellow-men—occupations which admitted of no peregrinations to the ends of the earth in search of inmates for the ark. It is indeed beyond our power to follow up the train of impossibilities which such a notion implies. We fear, with the learned and amiable Dr. J. Pye Smith, that the idea of a collection of all the terrestrial animals of the globe brought by Noah to the ark cannot be entertained, 'without bringing up the idea of miracles more stupendous than any that are recorded in Scripture, even what appear appalling in comparison; the great decisive miracle of Christianity—the resurrection of the Lord Jesus—sinks down before it.'

The existence of distinct provinces of plants and animals is a fact full of the deepest interest, and opens out many wide fields of inquiry. Its bearing on the question of the deluge is of course that phase which more especially requires to be noticed

here. In addition to what has just been said, it may be remarked further, that these provinces have a geological as well as a zoological significance. Laying aside as utterly impossible the idea of the representation in the ark of every terrestrial species, we may obtain some confirmatory evidence that the existing races of plants and animals have never been interrupted by a general catastrophe. A careful study of these provinces shews that some are older than others, just as some parts of the earth's surface are geologically older than other parts. In certain cases a province is found to contain within itself the relic of an older province which once occupied the same spot. In the profounder depths of the maritime lochs that indent the western coast of Scotland, there exist little groups of shell fish which are not now found alive in the shallower parts. Yet they once lived even in the shallower water, and their remains are now found fossil along the shores of the Firth of Clyde and elsewhere. They have become gradually extinct in the upper part of the sea, owing probably to a change of climate, and are now confined to the very deepest zones. These and other facts of the same kind point to slow and gradual changes unbroken by any great cataclysmal event. Among plants, too, similar phenomena abound. It should not be lost sight of, that, had the whole earth been covered for a year by a sheet of water, the greater part of our terrestrial plants must have perished. On the disappearance of the flood there would hence require to be a new creation, or rather re-creation, all over the world—a supposition for which there is no evidence either in Scripture or nature, and which is opposed to all that we know of the method of the Divine working. Plants are grouped, like animals, in greater and lesser provinces; and these, too, differ greatly from each other in antiquity. Some assemblages of plants have spread over wide districts, and either extirpated those which had previously occupied the ground or driven them into sheltered corners. In Great Britain and Ireland, for instance, there are five distinct groups of plants which have also corresponding suites of animals. The successive migrations of these groups can still be traced, leading us to a knowledge of certain vast changes which have taken place among the British islands within a comparatively recent geological period. England was still united to the Continent when the oldest group of plants began to flourish. The northern half of the island, with the whole of Scotland, was submerged beneath the sea, and again elevated before the great mass of the British plants crept westward across the plains that united the islands with the Continent. And it was after the whole of our present groups of plants and animals had become fixed in their existing habitats that the isthmus was broken through by the waves and Britain became an island. These changes could not have been brought about save during the lapse of a protracted series of ages. They give evidence of no sudden break, no temporary annihilation and subsequent creation, such as the idea of a general flood would require, but, on the contrary, shew very clearly that the present races of plants and animals have gone on in unbroken succession from a time that long preceded the advent of man.

2. We are thus compelled to adopt the opinion that the deluge was a local event confined to one part of the earth's surface, and that it was 'uni-

versal' only inasmuch as it effected the destruction of the whole human race, the family of Noah alone excepted. Against this opinion no objections of any weight can be urged. It is borne out by the evidence to be derived from a study of the phenomena of nature; and it is not at variance with any statement in Holy Scripture. The universality of the language in which Moses describes the extent of the deluge—'all the high hills that were under the whole heaven were covered'—has indeed been regarded as a testimony to the universality of the catastrophe. But such general expressions are of frequent occurrence in the sacred writings to denote a tract of country which, though large relatively to its inhabitants, yet formed only a very small portion of the earth's surface. No authentic traces of the action of the flood have yet been detected in the East, where the area of submersion was probably situated. Nor indeed is it likely that any such traces will ever be found. They might confirm our faith, but they are by no means necessary, for the fact of the former destruction of the human race is made known to us in the sacred volume, and has been handed down by tradition in almost every nation of the earth, even the most barbarous and the farthest removed from the early cradle of the human race.

By admitting that the deluge affected only a limited portion of the earth's surface, we bring the narrative of Moses into harmony with the laws of nature as these have been made known by the onward progress of science; we rescue it from a hopeless series of difficulties such as only a student of nature can thoroughly realize, but at the very thought of which he stands appalled; and we remove all ground for charging this portion of the Bible with grave contradictions, inconceivable miracles, and even physical impossibilities.—A. G.

DELUS (mentioned only in 1 Maccab. xv. 23), a small island in the Ægean Sea, one of the group called the Cyclades. It is celebrated as the birth-place of Apollo, and as one of the chief seats of his worship in the earliest historical times. It was the religious centre of the Ionians of both Europe and Asia (Grote, *Hist. of Greece*, iii. 222).—S. N.

DEMAS (Δημάς), a Thessalonian Christian, who was for a time associated with St. Paul, but who afterwards abandoned him at Rome, either from being discouraged by the hardships and perils of the service, or in pursuit of temporal advantages (Col. iv. 14; Phil. 24; 2 Tim. iv. 10). The usual unfavourable sense attached to the last text seems the just one.—J. K.

DEMETRIUS (Δημήτριος), a man's name, denoting a votary of Ceres, and very common among the Greeks. The persons of this name mentioned in the history of the Maccabees, and in the N. T., are:—

1. DEMETRIUS SOTER, king of Syria. He was son of Seleucus IV., surnamed Philopator; but, being an hostage at Rome at the time of his father's death, his uncle, the notorious Antiochus Epiphanes, assumed the crown of Syria, and retained it eleven years. After him it was held two years by his son Antiochus Eupator, who was put to death in B.C. 162 by Demetrius, who then arrived in Syria and secured the royal heritage from which he had so long been excluded. He reigned twelve years B.C. 162-150. The points in

which his history connects him with the Jews are alone of interest in this work, and these points belong to the history of the Maccabees [see art. MACCABEES]. To his time belong the latter end of the government of Judas in Israel and the beginning of that of Jonathan. He acted oppressively and unjustly towards them; but, when a rival arose in the person of Alexander Balas, he bade so high for the support of Jonathan as to create a doubt of his sincerity; for which cause, as well as from resentment at the injuries he had inflicted on them, the Jews espoused the cause of Balas, to whose success they in no slight degree contributed. [ALEXANDER BALAS.]

2. DEMETRIUS NICATOR, or NICANOR, son of the preceding, but who was excluded from the throne till B.C. 146, by the success of Alexander Balas, and then recovered it chiefly by the assistance of his father-in-law Ptolemy Philometor. He at first treated the Jews well, but eventually gave them so much cause for dissatisfaction that they readily espoused the cause of Antiochus Theos, son of Alexander Balas. Demetrius underwent many vicissitudes, and passed several years (B.C. 141-135) in captivity among the Parthians, from which he eventually returned and recovered his throne, which he continued to occupy till B.C. 126, when he was defeated in battle by the pretender Alexander Zebina, and afterwards slain at Tyre, whither he had fled. [MACCABEES.]

3. A silversmith at Ephesus, who, being alarmed at the progress of the Gospel under the preaching of Paul, assembled his fellow-craftsmen, and excited a tumult by haranguing them on the danger that threatened the worship of the great goddess Diana, and consequently their own craft as silversmiths. Their employment was to make 'silver shrines for Diana' (Acts xix. 24); and it is now generally agreed that these 'shrines' (ναοί) were silver models of the temple, or of its adytum or chapel, in which perhaps a little image of the goddess was placed. These, it seems, were purchased by foreigners, who either could not perform their devotions at the temple itself, or who, after having done so, carried them away as memorials or for purposes of worship. The continual resort of foreigners to Ephesus on all parts, on account of the singular veneration in which the image of the goddess was held [ARTEMIS], must have rendered this manufacture very profitable, and sufficiently explains the anxiety of Demetrius and his fellow-craftsmen.

4. A Christian, mentioned with commendation in 3 John 12. From the connection of St. John with Ephesus at the time the Epistle was written, some have supposed that this Demetrius is the same as the preceding, and that he had been converted to Christianity. But this is a mere conjecture, rendered the more uncertain by the commonness of the name.—J. K.

DEMON (δαμόνιον, sometimes δαίμων). These words are used as synonymous both by profane and sacred writers. The etymologies they respectively assign to them, all point to some supposed characteristic of those *intelligent beings* to whom the words are applied. For example, Plato, in his *Cratylus* (vol. i. p. 398, ed. Serran.), derives the word from *δαίμων*, 'knowing,' in allusion to the superior intelligence, and consequent efficiency, ascribed to demons; Eusebius (*Præp. Evang.* iv. 5),

from *δειμαίνω*, 'to be terrified'; others, as Proclus (*in Hesiod.*), from *δαίω*, 'to distribute,' because demons were supposed to assign the lots or destinies of mankind.

1. The words in question are used by heathen writers with great latitude, being applied by them — 1. to every order of beings superior to man, including even the Highest; Aristotle applies *δαίμόνιον* to the Divinity, Providence (*Rhet.* ii. 23); 2. to any particular divinity (*Il.* i. 222; iii. 399; and in *Il.* xvii. 98, 99, compared with 104, *δαίμων θεός* are used as interchangeable words); 3. to the inferior divinities, as in the phrase *θεοὶ καὶ δαίμονες*; 4. to a class of beings between gods and men: *minores diis et majores hominibus* (*Liv.* viii. 20; *Adam, Rom. Antiq.* p. 287). Of these latter some were *habitually* benevolent, and others malignant. The word demon, by itself, occurs usually in a good sense in heathen writers; the evil are distinguished as *δαίμονες κακοὶ* or *πονηροί*. To the former class belong the tutelary genii of cities, and the guardian spirits of individuals, as the demon of Socrates. 5. By an easy metonymy it is used to denote fortune, chance, fate. In the Septuagint the word, though comparatively of rare occurrence, is used in a very diversified and indefinite manner: *Deut.* xxxii. 17, *דַּיְמוֹן*, *δαίμόνιον*; *Ps.* xc. 6, *דַּיְמוֹן*, *δαίμόνιον*, where it seems to mean a pestilential blast (*comp.* *Is.* xxviii. 2, *Heb.*); *Ps.* xcv. 5, *דַּיְמוֹן*, *δαίμόνιον*, which Symmachus renders *ἀνύπαρκοι*, and Aquila, *ἐπίπλαστοι*; *Is.* xiii. 21, *דַּיְמוֹן*, *δαίμόνιον*, Aquila, *τριχιδόντας*; *Is.* xxxiv. 14, *דַּיְמוֹן*, *δαίμόνιον*; *Is.* lxxv. 11, *דַּיְמוֹן*, which seems explained by *τῆχη* in the latter part of the verse; *Vulg.* *fortuna*. In the book of Tobit (iii. 8), we meet with *πονηρὸν δαίμόνιον*. Since no distinct ideas of the ancient Jewish doctrines concerning demons can be obtained from the Septuagint, we next have recourse to the heathens, and from their writings, owing to the universal prevalence of belief in demons, ample information may be obtained. The following is offered as a summary of their opinions:—

1. Demons, in the theology of the Gentiles, are middle beings, between gods and mortals. This is the judgment of Plato, which will be considered decisive—*πάν τὸ δαίμονιον μεταξὺ ἐστὶ Θεοῦ τε καὶ θνητοῦ*: 'Every demon is a middle being between God and mortal.' He thus explains what he means by a middle being—*θεὸς ἀνθρώπων οὐ μίγνυται, ἀλλὰ διὰ δαίμονιον πᾶσα ἐστὶν ἡ ὁμιλία καὶ ἡ διάλεκτος θεοῖς πρὸς ἀνθρώπους*: 'God is not approached immediately by man, but all the commerce and intercourse between gods and men are performed by the mediation of demons.' He enters into further particulars—*τὸ δαίμονιον ἐστὶν ἐμμενέον καὶ διαπορηθεὶς θεοῖς τὰ παρ' ἀνθρώπων, καὶ ἀνθρώποις τὰ παρὰ θεῶν, τῶν μὲν τὰς δεήσεις καὶ θυσίας, τῶν δὲ τὰς ἐπιτάξεις τε καὶ ἀμοιβὰς τῶν θυσιῶν*: 'Demons are reporters and carriers from men to the gods, and again from the gods to men, of the supplications and prayers of the one, and of the injunctions and rewards of devotion from the other' (*Plato, Sympos.* pp. 202, 203, tom. iii. ed. Serran.) 'And this,' says the learned Mede, 'was the *ecumenical* philosophy of the apostles' times, and of the times long before them.'

2. Demons were of two kinds; the one were the souls of good men, which upon their departure from the body were called heroes, were afterwards raised

to the dignity of demons, and subsequently to that of gods (*Plutarch, De Defect. Orac.*) Plato (*Cratylus*, p. 398, tom. i. edit. Serran.) says, 'The poets speak excellently who affirm that when good men die they attain great honour and dignity, and become demons.' It is also admitted that *Jamblichus*, *Hierocles*, and *Simplicius*, use the words angels and demons indiscriminately. *Philo (De Gigantibus)* says that souls, demons, and angels, are only different names that imply one and the same substance; and he affirms (*De Somn.*) that Moses calls those angels whom the philosophers call demons. It was also believed that the souls of bad men became evil demons (*Chalcid. in Platon. Tim.* cap. 135, p. 330). Accordingly, *δαίμωνιον* often occurs in ancient authors as a term of reproach. The other kind of demons were of more noble origin than the human race, having never inhabited human bodies (*Plato, Tim.* pp. 41, 42, 69, 71, 75; *Apuleius, De Deo Socratis*, p. 690).

3. Those demons who had once been souls of men were the objects of *immediate worship* among the heathens (*Deut.* xxvi. 14; *Ps.* cvi. 28; *Is.* viii. 19), and it is in contradistinction to these that *Jehovah* is so frequently called 'the living God' (*Deut.* v. 26, etc. etc.; *Farmer's Essay on the Demoniacs*, passim).

4. The heathens held that some demons were malignant by *nature*, and not merely so when provoked and offended. *Plutarch* says, 'it is a very ancient opinion that there are certain *wicked* and *malignant* demons, who envy good men, and endeavour to hinder them in the pursuit of virtue, lest they should be partakers of greater happiness than they enjoy' (*Plut. Dion.* p. 958, tom. i. edit. Paris, 1624). On this passage *Bishop Newton* remarks, 'This was the opinion of all the later philosophers, and *Plutarch* undeniably affirms it of the very ancient ones' (*Dissert. on the Proph.*, Lond. 1826, p. 476). *Pythagoras* held that certain demons sent *diseases* to men and cattle (*Diog. Laert. Vit. Pythag.* p. 514, ed. Amstel.) *Zaleucus*, in his preface to his *Laws (apud Stobæum, Serm. xlii.)*, supposes that an evil demon might be present with a witness to influence him to injustice.

In later times *Josephus* uses the word demon always in a bad sense (*De Bell. Jud.* vii. 6, 3).—*J. F. D.* [He held that they were the spirits of wicked men (*τὰ γὰρ καλούμενα δαίμονια πονηρῶν ἐστὶν ἀνθρώπων πνεύματα*)].

[I. We come now to the statements of the *N. T.* on the subject of demons. Here this word is always used in a bad sense, when the writers speak as from themselves, and in their own sense of it (*Farmer, Essay*, etc.) The substance of what they teach may be presented as follows:—

1. As to their *nature*, they are *πνεύματα* (*comp.* *Matt.* viii. 16; *x.* 1; *xii.* 43-45; *Mark.* ix. 20; *Luke.* x. 20; etc.) Hence there is ascribed to them *intelligence* and *will* (*Mark.* i. 24; *Luke.* iv. 34; *James.* ii. 19; *iii.* 14), as well as great power (*Matt.* viii. 28-32; *Mark.* ix. 26; *Eph.* vi. 12). Whether they are to be reckoned as belonging to the class, and as fallen from the original condition, of the angels, does not clearly appear from any statement of Scripture. As the messengers and agents of Satan, they may be either the one or the other; but the probability seems to be, that they belong to the same class as himself. He is called the Prince of the Demons; the demons whom our Lord cast out are collectively called

Satan (Matt. xii. 24-29; Luke xiii. 16); and the phrase *πνεύματα ἀκάθαρα*, which is applied to them (Matt. x. 1; Mark iii. 11; vi. 7, etc.) is applied also to fallen angels (Rev. xvi. 13; xviii. 2), and even in the singular to Satan himself (Mark. iii. 30; comp. 22). These considerations we think render it probable that the *δαίμονια* of the N. T. belong to the number of those angels 'who kept not their first estate.' By St. Paul also they are identified with the idols of the heathen (1 Cor. x. 20, 21), whom the Jews regarded as evil spirits.

2. As to character, demons are described as *πύθηρα, ἀκάθαρα* (Matt. xii. 45; x. 1, etc.) as belonging to the kingdom of darkness, and used by Satan for his wicked designs (Matt. ix. 34; xxv. 41; Eph. vi. 12).

3. As to their abode, they are represented as 'reserved in everlasting chains under darkness unto the judgment of the great day' (Jude 6; comp. 2 Pet. ii. 4). They are said also to be in the abyss (Luke viii. 31; comp. Rev. ix. 1-11, [ABYSS]). Such descriptions, however, can be understood as intimating nothing more than their being in a state of punishment, and under control; for the activity which is ascribed to them is incompatible with the idea of their being in a state of *confinement*; and, besides, such passages as Eph. ii. 2, vi. 12, would lead to the conclusion that a sphere of extended physical freedom is assigned to these fallen spirits.

III. The Fathers frequently refer to demons in their writings. By some they are represented as angels who, originally created holy, fell into rebellion and sin (Joan. Damasc. *Expos. Fidei*, II. 4), whilst others represent them as the fruit of the intercourse of angels with women (Justin M. *Apol.* II. 5), and others that they are souls of the giants whom the daughters of men bore to devils (*Pseudo-Clementin.* viii. 18). They also teach that they are *ἀσώματα*, yet not in such a sense as to be absolutely impassable, but as *σκιὰ ὄντα* (Clem. Alex. p. 791; comp. Chrysost. *Hom.* cxxv., Theodoret, in *Jes.* xiii.) They all describe them as evil, as deceiving and destroying men, as being the object of worship to the heathen, and as employed by God to punish the wicked (Origen, *Cont. Cel.* v. 234; viii. p. 399, etc.) See the passages collected in Suicer, *Thes.* s. v. *δαίμων*, and in Usteri, *Paulin. Lebrbe-griffe*, Anh. iii. p. 421, ff., 5th ed.; comp. also on the whole subject Anh. ii., and Winzer *De Demonologia in N. T. libris*, etc., *commentt.* v. Viteb. et Lips. 1812-22.—W. L. A.]

DEMONIACS (*δαίμονιοὶ*), demonized persons in the N. T. are those who were supposed to have a demon or demons occupying them, suspending the faculties of their minds, and governing the members of their bodies, so that what was said and done by the demoniacs was ascribed to the indwelling demon. Plato (*apud Clem. Alex. Strom.* i. 405, Oxon.) affirms that 'demoniacs do not use their own dialect or tongue, but that of the demons who have entered into them.' Lucian says, 'the patient is silent, the demon returns the answer to the question asked.' Apollonius thus addresses a youth supposed to be possessed:—'I am treated contumeliously by the demon, and not by thee' (comp. Matt. viii. 28 and 31; Mark v. 2; ix. 12; Luke viii. 27, 32).

The correctness of the opinion respecting those who are called *δαίμονιοὶ* in the N. T., which prevailed among the Jews and other nations in the

time of our Lord and his Apostles, has been called in question. On the one hand it is urged that the details of the evangelical history afford decisive evidence of the truth and reality of demoniacal possessions in the sense already explained, at least during the commencement of Christianity; on the other hand, it is contended that the accounts in question may all be understood as the phenomena of certain diseases, particularly hypochondria, insanity, and epilepsy; that the sacred writers used the *popular language* in reference to the subject, but that they themselves understood no more than that the persons were the subjects of ordinary diseases. Here issue is joined, and it is to the evidence in this cause that our attention will now be directed.

Those who contend that the demoniacs were really possessed by an evil spirit, urge the following considerations:—

1. The demoniacs express themselves in a way unusual for hypochondriacal, insane, or epileptic persons (Matt. viii. 29; Mark i. 24); they possessed supernatural strength (Mark v. 4); they adjure Jesus not to torment them; they answer the questions proposed to them in a rational manner; they are distinctly said to have 'come out of' men and to have 'entered into swine,' and that consequently the whole herd, amounting to about two thousand, ran violently down a precipice into the sea (Matt. viii. 32; Mark v. 13). The supposition which has been maintained by Lardner, among others, that the swine were *driven into the sea* by the *demoniacs*, is irreconcilable with the language of the narrative, being also highly improbable in itself: madmen do not act in concert, and rarely pursue the same train of maniacal reasoning.

2. No mental diseases are predicated of the dumb (Matt. ix. 32), or of the blind and dumb (Matt. xii. 22). Do such diseases ever produce blindness?

3. It is admitted that the *ὄντα* of the youth described Matt. xvii. 15; Mark ix. 17; Luke ix. 39, coincide precisely with those of epilepsy, but they are attributed to the agency of the demon in that very account.

4. The damsel at Philippi is said to have been possessed with a spirit of *divination*, which was the means of obtaining much gain to her masters, and to have understood the divine commission of Paul and his companions (Acts xvi. 17). Is this to be ascribed merely to an aberration of mind?

5. The demoniacs themselves confess that they were possessed with demons (Mark v. 9); the same is asserted of them by their relatives (Matt. xv. 22). The Apostles and Evangelists assert that persons possessed with demons were brought unto Jesus (Matt. iv. 24; Mark i. 32), or met him (Luke viii. 27). Jesus commands them not to make him known as the Messiah (Mark i. 34, margin); rebuked them (Matt. xvii. 18). The Evangelists declare that the demons departed from their victims at his command (Matt. xvii. 18; Mark ix. 25, 26; Luke iv. 35; xi. 14); and Jesus himself asserts it (Luke xiii. 32).

6. The writers of the N. T. make distinctions between the diseased and the demoniacs (Mark i. 32; Luke vi. 17, 18); and Jesus himself does so (Matt. x. 8, etc.).

7. The demoniacs knew Jesus to be the Son of God (Matt. viii. 29; Mark i. 24; v. 7), and the Christ (Luke iv. 41).

8. Jesus addresses the demons (Matt. viii. 32; Mark v. 18; ix. 25; Luke iv. 35); so does Paul (Acts xvi. 18). Jesus bids them be silent (Mark i. 25); to depart, and enter no more into the person (Mark ix. 25).

9. In Luke x. the seventy are related to have returned to Jesus, saying, 'Lord, even the demons are subject to us through thy name;' and Jesus replies, ver. 18, 'I beheld Satan, as lightning, fall from heaven.'

10. When Jesus was accused by the Pharisees of casting out demons by Beelzebub, the prince of the demons, he argued that there could be no discord among demoniacal beings (Matt. xii. 25, etc.)

11. Jesus makes certain *gratuitous* observations respecting demons (see Matt. xii. 43, 44); which seem like facts in their natural history. In regard to the demon cast out of the youth, which the disciples could not cast out, he says, 'this *kind* (i.e., of demons) goeth not out but by prayer and fasting.' Can these words be understood otherwise than as revealing a real and particular fact respecting the nature of demons (Matt. xvii. 21)?

12. The woman which had a spirit of infirmity, and was bowed together (Luke xiii. 11), is, by our Lord himself, said to have been bound by Satan (ver. 16). In the same way St. Peter speaks of all the persons who were healed by Jesus as being 'oppressed of the devil' (Acts x. 38).

13. It is further pleaded that it sinks the importance and dignity of our Saviour's miracles to suppose that when he is said to have cast out devils, all that is meant is that he healed diseases.

To these arguments the opponents of the theory of real demoniacal possessions reply, generally, that there can be no doubt that it was the *general belief* of the Jewish nation, with the exception of the Sadducees, and of most other nations, that the spirits of dead men, especially of those who had lived evil lives, and died by violent deaths; were permitted to enter the bodies of men, and to produce the effects ascribed to them in the *popular* creed; but the *fact* and real state of the case was, that those who were considered to be *possessed* were afflicted with some peculiar diseases of mind or body, which, their true *causes* not being generally understood, were, as is usual in such cases, ascribed to supernatural powers, and that Jesus and his Apostles, wishing of course to be understood by their contemporaries, and owing to other reasons which can be pointed out, were under the *necessity* of expressing themselves in popular language, and of seeming to admit, or at least of not denying, its correctness. They further plead that the fact, admitted on all hands, that the demon so actuated the possessed, as that whatever *they* did was not to be distinguished from *his* agency, reduces the question, so far as *phenomena* are concerned, to one simple inquiry, namely, whether these phenomena are such as can be accounted for without resorting to supernatural agency. They assert that the symptoms predicated of demoniacs correspond with the ordinary symptoms of disease, and especially of hypochondria, insanity, and epilepsy; that the sacred writers themselves give intimations, as plain as could be expected under their circumstances, that they employed popular language; that consequently they are not to be considered as teaching doctrines, or asserting facts, when they use such language; and that the doctrine of the agency of departed spirits on the bodies of men is inconsistent

with certain peculiar and express doctrines of Christ and his Apostles.

With regard to the *symptoms* related of the demoniacs, it is urged that such persons as were called demoniacs in other countries, and who seem to have laboured under precisely the same symptoms, are recorded to have been cured by the use of *medicines*. Helleboro quoque purgatur *lymphaticus* error (Seren. Sammon. c. 27, v. 507), 'Insane delusion is remedied by hellebore.' Josephus and the Jewish physicians speak of medicines composed of stones, roots, and herbs, being useful to demoniacs (*Giltei*, f. 67). The cure of *diseases* by such methods is intelligible, but is it rational to believe that the spirits of dead men were dislodged from human bodies by medical prescriptions? Maimonides (in *Sabat.* ii. 5) says, 'all kinds of diseases which are called melancholy they call an evil spirit' (comp. Matt. xi. 18; John vii. 20; x. 20).

1. With regard to the two demoniacs at Gadara (or *one*, according to Mark and Luke), it is concluded that they were madmen, who fancied that there were within them innumerable spirits of dead men. Accordingly they dwelt among the *tombs*, about which the souls of the dead were believed to hover, went naked, were ungovernable, cried aloud, attacked passengers, beat themselves, and had in their phrensy broken every chain by which they had been bound. Strength almost superhuman is a common attendant of insanity. The subject is illustrated by Wetstein, in extracts from Greek medical writers. P. Ægineta, Actuarius, Cælius Aurelianus, also tell that such persons fancied themselves to be gods, demons, wolves, dogs, etc., hence the disorder was sometimes called *λυκανθρωπία*, or *κυνανθρωπία*. Their question, 'Art thou come to torment us?' refers to the cruel treatment of the insane in those times, and which they had no doubt shared in the endeavours of men to 'tame' them. Both Mark, and Luke the *physician*, describe the demoniac as *σωφρονουντα*, in 'his *right mind*,' when healed, which implies *previous insanity* (see also Matt. xii. 22; xv. 28; xvii. 18; Luke vii. 21; viii. 2; ix. 42). It is true that these demoniacs address Jesus as the Son of God, but they might have heard in their lucid intervals, that Jesus, whose fame was already diffused throughout Syria, was regarded by the people as the Messiah. They shew their insanity, 'their *shaping fancies*,' by imagining they were demons without number, and by requesting permission to enter the swine. Would actual demons choose such an habitation? They speak and answer indeed in a rational manner, but, agreeably to Locke's definition of madmen, 'they reason right on false principles, and taking their fancies for realities, make right deductions from them' (*Essay on Human Understanding*, chap. ii. 11. 13). It is true that Jesus commands the *unclean spirit* (so called because believed to be the spirit of a *dead man*), but he does this merely to excite the attention of the people, and to give them full opportunity to observe the miracle. It is not necessary to suppose that the madmen drove the swine, but merely that, *in keeping with all the circumstances*, the *insanity* of the demoniacs was transferred to them as the leprosy of Naaman was transferred to Gehazi, for the purpose of illustrating the miraculous power of Christ, and though this was a *primitive* miracle, it might serve the good purpose of

discouraging the expectation of temporal benefits from him. If the demoniac is represented as worshipping Jesus, it should be remembered that the insane often shew great respect to particular persons.

2. The men who were dumb, and both blind and dumb, are not said to have been disordered in their intellects any more than the blind man in John ix. The disease in their organs was *popularly ascribed* to the influence of demons. It is observable that in the parallel passage (Matt. ix. 32), the evangelist says the *man* was dumb.

3. The symptoms of epilepsy in the youth described Matt. xvii. 15, are too evident not to be acknowledged. If the opinion of relatives is to be pressed, it should be noticed that in this case the father says his 'son is lunatic.' It was most probably a case of combined epilepsy and lunacy, which has been common in all ages. Epilepsy was ascribed to the influence of the moon in those times. The literal interpretation of popular language would therefore require us to believe that he was 'moonstruck,' as well as a demoniac. A curious instance of the influence of popular modes of speech, even on those who are conscious of its incorrectness, is offered in the case of Hippocrates, who, though he wrote a book to prove that epilepsy is *not* a sacred malady, *i. e.*, influenced by some divinity, is nevertheless in the habit of applying to it that very appellation. In the same way a learned physician still speaks of lunacy, St. Anthony's fire; and persons of education speak of the rising and setting of the sun, falling stars, as we all use phrases derived from the rites and religion of the Gentiles.

4. The damsel at Philippi is said (Acts xvi. 16) by Luke to have been possessed with a *πνεῦμα Πύθωπος*, a spirit of *Apollo*. It was *her* fixed idea. The gift of divination is said by Cicero to have been ascribed to Apollo (*De Divinat.* i. 5). Insane persons, pretending to prophesy under the influence of Apollo, would be likely to gain money from the *credulous*. A belief among the common people that the ravings of insanity were sacred, was not confined to Egypt. The larvati, the lymphatici, the cerriti of the Romans, signify possessed persons. The apostle who taught that an 'idol is nothing in the world,' did not believe in the reality of her soothsaying. Many demoniacs are mentioned, the peculiar symptoms of whose diseases are not stated, as Mary Magdalene (Mark xvi. 9), out of whom Jesus cast seven demons, *i. e.*, restored from an inveterate insanity (seven being the Jewish number of perfection), supposed to be caused by the united agency of seven spirits of the dead. Yet she is said to have been *healed* (Luke viii. 2).

5. If Jesus forbade the demoniacs to say he was the Christ, it was because the declaration of such persons on the subject would do more harm than good. If he *rebuked* them he also rebuked the wind (Matt. viii. 26), and the fever (Luke iv. 39). If it be said of them, they departed, so it is also said of the leprosy (Mark i. 42).

6. It may be questioned whether the writers of the N. T. make a distinction between the diseased and those possessed by demons, or whether they specify the demoniacs by themselves, as they specify the lunatics (Matt. iv. 24), merely as a distinct and *peculiar class* of the *sick*. It is, however, most important to observe that St. Peter includes 'all' who were healed by Jesus, under

the phrase *καταδυναστευόμενοι ὑπὸ τοῦ διαβόλου*, many of whom were not described by the Evangelists as subjects of demoniacal possession, which is urged as a striking instance of the *usus loquendi*. Sometimes the specification of the demoniacs is omitted in the general recitals of miraculous cures (Matt. xi. 5), and this, too, on the important occasion of our Lord sending to John the Baptist an account of the miraculous evidence attending his preaching (Matt. xi. 5). Does not this look as if they were considered as included under the sick?

7. It cannot be proved that *all* the demoniacs knew Jesus to be the Messiah.

8. It is admitted that Jesus addresses the demons, but then it may be said that his doing so has reference partly to the *persons themselves* in whom demons were supposed to be, and partly to the bystanders; for the same reason that he rebuked the winds in an audible voice, as also the fever. It is also remarkable that in the case of the demoniac (Mark v. 9), it is said—*καὶ ἐπὶ πρῶτα αὐτόν*, the man, *τί σοι ὄνομα*, not *αὐτό*, the *δαίμονιον*. The same words occur in Luke viii. 30.

9. With regard to our Lord's reply to the seventy, it will not be urged that it was intended of a local fall of Satan from heaven, unless it may be supposed to allude to his primeval expulsion; but this sense is scarcely relevant to the occasion. If, then, the literal sense be necessarily departed from, a choice must be made out of the various figurative interpretations of which the words admit; and taking the word Satan here in its generic sense, of *whatever* is inimical or opposed to the Gospels, Jesus may be understood to say, I foresaw the glorious results of your mission in the triumphs which would attend it over the most formidable obstacles. Heaven is often used in the sense of political horizon (Is. xiv. 12, 13; Matt. xxiv. 29). To be cast from heaven to hell is a phrase for total downfall (Luke x. 15; Rev. xii. 7-9). Cicero says to Mark Antony, You have hurled your colleagues down from heaven. Satan is here used tropically. Our Lord does not, therefore, assert the real operation of demons.

10. In the refutation of the charge that he cast out demons by Beelzebub, the prince of the demons, he simply argues with the Pharisees upon their *own principles*, and 'judges them out of their own mouth,' without assuming the *truth* of those principles.

11. The facts he seems to assert respecting the wandering of demons through dry places (Matt. xii. 43), were already admitted in the popular creed of the Jews. They believed that demons wandered in desolate places (Baruch iv. 35). Upon these ideas he founds a parable or similitude, without involving an opinion of their accuracy, to describe 'the end of this generation.' The observations respecting prayer and fasting seem to have relation to that faith in God which he exhorts his apostles to obtain. Prayer and fasting would serve to enable them to perceive the divine suggestion which accompanied every miracle, and which the apostles had not *perceived* upon this occasion, though given them, because their animal nature had not been sufficiently subdued.

12. The application of the term Satan to the case of the woman who had a spirit of infirmity, is plainly an *argumentum ad hominem*. It is intended to heighten the antithesis between the *loos-*

ing of an ox from his stall, and loosing the daughter of Abraham whom *Satan*, as they believed, had bound eighteen years.

13. The objection taken from the supposed consequence of explaining the casting out of demons to signify no more than the cure of diseases, that it tends to lower the dignity of the Saviour's miracles, depends upon the reader's complexion of mind, our prior knowledge of the relative dignity of miracles, and some other things, perhaps, of which we are not competent judges.

It remains to be observed, that the theory of demoniacal possessions is opposed to the known and express doctrines of Christ and his Apostles. They teach us that the spirits of the dead enter a state corresponding to their character, no more to return to this world (Luke xvi. 22, etc.; xxiii. 43; 2 Cor. v. 1; Phil. i. 21). With regard to the fallen angels, the representations of their confinement are totally opposed to the notion of their wandering about the world and tormenting its inhabitants (2 Pet. ii. 4; Jude, ver. 6). If it be said that Jesus did not correct the popular opinion, still he nowhere denies that the phenomena in question arose from diseases only. He took no side; it was not his province. It was not necessary to attack the misconception in a formal manner; it would be supplanted whenever his doctrine respecting the state of the dead was embraced. To have done so would have engaged our Lord in prolix arguments with a people in whom the notion was so deeply rooted, and have led him away too much from the purposes of his ministry. 'It was one of the many things he had to say, but they could not then bear them.' It is finally urged that the antidemoniacal theory does not detract from the divine authority of the Saviour, the reality of his miracles, or the integrity of the historians. *Sub judice lis est.* (Jahn's *Biblisches Archæologie*; Winer's *Biblisches Realwörterbuch*, art. 'Besessene'; Moses Stuart's *Sketches of Angelology in Bibliotheca Sacra*, London and New York, 1843).*—J. F. D. [EXORCISM.]

* [This article has been retained unaltered from the preceding editions, because it gives a fair and full statement of the antagonist opinions, with their respective reasons. The editor, however, cannot reissue it without calling attention to the fact that the second view can be made to harmonise with the statements of the sacred writers, confessedly, only by the supposition that our Lord and his Apostles accommodated themselves to Jewish prejudice to such an extent as to utter what was positively untrue. This admission is fatal to the view in question; for on the lowest grounds on which our Lord and his Apostles can be placed, they must at least be regarded as honest men. Now, though honest speech does not require that words should be used always and only in their etymological sense, it does require that they shall not be used so to affirm what the speaker knows to be false. Whilst, therefore, our Lord and his apostles might use the word *δαίμονιζεσθαι*, or the phrase *δαίμονιον ἔχειν*, as a popular description of certain diseases, without giving in to the belief which lay at the source of such a mode of expression, they could not speak of demons entering into a man or being cast out of a man without pledging themselves to the belief of an actual possession of the man by demons (Camp-

DENARIUS (*δηνάριον*), the principal silver coin of the Romans, which took its name from having been originally equal to ten ases. It was in later times (after B.C. 217) current also among the Jews, and is the coin which is called 'a penny' in the A. V. The denarii were first coined in B.C. 269, or four years after the first Punic war, and the more ancient specimens are much heavier than those of later date. Those coined in the early period of the commonwealth have the average weight of 60 grains, and those coined under the empire of 52½ grains. With some allowance for alloy, the former would be worth 8'6245 pence, or 8½d., and the latter, 7½ pence, or 7½d. It has been supposed, however, that the reduction of

205.

weight did not take place till the time of Nero; and in that case the denarii mentioned in the Gospels must have been of the former weight and value, although 7½d. is the usual computation. A denarius was the day-wages of a labourer in Palestine (Matt. xx. 2, 9, 13); and the daily pay of a Roman soldier was less (Tacit. *Ann.* i. 17). In the time of Christ the denarius bore the image of the emperor (Mat. xxii. 21; Mark xiii. 16), but formerly it was impressed with the symbols of the republic.—J. K.

DEPOSIT is a term of the civil law (*depositum*), which Sir W. Jones (*The law of Bailments, Works*, viii. 448) defines as 'a bailment (or delivery of goods in trust) to be kept for the bailor without a recompense; on a contract expressed or implied, that the trust shall be duly executed, and the goods re-delivered as soon as the time or use for which they were bailed shall have elapsed or be performed.' The party who makes the deposit is called in the civil law *deponens* or *depositor* (bailor by Sir W. Jones); and he who receives the property is called *depositarium*. The law of deposit is stated in *the Institutes*, iii. tit. xiv. 3. (See Sandars, p. 428, or Vinnii *Institutiones*, by Heineccius, p. 607.) Comp. *Instit.* iv. tit. vi. 17, 23. (See Sandars, pp. 429, 540, 543; Vinnius, pp. 815, 819.)

A deposit, in Athenian law, was called *παρακαταθήκη* (Herod. vi. 86; Demosthenes, *pro Phorm. Orator. Attic.* Bekker, Oxon. vi. 1042). Comp. the *Δῶρος πρᾶξις* of Isocrates (*Or. Attic.*, Bekker, Oxon. ii. 515-533).

bell, *Prel. Diss.* vi. I, 10). If, consequently, they did not hold this belief, they spoke not as honest men. We do not see how this conclusion is to be avoided; and as it is a conclusion from which every Christian mind will shrink, we find in it the condemnation of the opinion that demoniac possession was only a species of disease. The other view is not without its difficulties; but better have difficulties burdening our opinion than resort to an expedient which lands us in conclusions fatal to Christianity itself.]

The Hebrew law of *Deposit* is contained in Exodus xxii. 7-13, and will be found to receive considerable illustration from the above-mentioned passages, especially of the Roman law. The deposits specified by the lawgiver in these verses are—*money, household stuff, raiment, oxen, asses, sheep, and other cattle*. Dr. Kalisch's analysis of this law is worth quoting:—'If *inanimate* objects were by cunning or violence wrested from the depository, he was not bound to make restitution to the proprietor (ver. 11); but if *animals*, as oxen, asses, or sheep, were intrusted to his care, he was responsible for *theft* (ver. 12), but not for such accidents as the death of an animal, or its abduction by robbers, or laceration* by a wild beast (ver. 13). But if it is found that he had in any way intended to act fraudulently to the proprietor, he was compelled to restore to him the *twofold* value of the deposit (ver. 7, 9). All these disputes were decided by the competent judge, by means of adjuration' (Kalisch, *Exodus*, p. 419). The law, indeed, does not expressly mention the *oath*, but only says (ver. 9), 'He shall come before the gods [judges הַהֲלֵיִם], whether [אִם-לֹא] he has not laid hold of his neighbour's property;' but the phrase אִם-לֹא, *whether not*, is elsewhere so notoriously the usual formula of an oath among the Hebrews, that we can scarcely understand it otherwise than in reference to an oath, more especially as the oath is expressly mentioned in verse 11; and in most cases no other proof of his not having retained his neighbour's property could possibly be had but an oath (Michaelis, *Laws of Moses*, ii. 373, 374). The Septuagint and the Vulgate actually add, *καὶ ὁμείρα, et jurabit*, to this formula of oath.† Josephus, in *Antiq.* iv. 8. 36, treats of this law, and makes the depository go *ἐπὶ τοὺς ἑπτὰ κριτάς, before the seven judges*, as was customary in his own age (Kalisch).

Rashi, expressing the general suffrage of the Rabbinical doctors, makes a distinction between the passage contained in verses 7-9, and that included in verses 10-13. The former passage is supposed to treat of a *gratuitous* depository; the latter is said to be descriptive of a *paid* guardian. Chaskuni alleges as a reason, that as in the care of inanimate deposits no trouble or expense is involved, remuneration cannot well be claimed; whereas in the keep of animals, expense being

* The 13th verse runs—'If it be torn in pieces, then let him bring it for witness,' etc. Bring what? Moses does not say. The Jerusalem Targum, however, explains by a *limb* of the lacerated animal as a witness; the most natural proof to be had, says Michaelis. This may illustrate Amos iii. 12.

† In the Mischna, *Baba Kama* (Surenhusius, iv. 88), a form of adjuration is given [הוֹדוּ בְּקִרְוֵי, וְגוֹ]; 'Where is my deposited property? The answer is, It is stolen. The proprietor says, I adjure thee. The other answers, Amen. But witnesses prove that he has stolen the deposit. He is fined twice the value; or else, if he voluntarily confesses, he restores the deposit with a fine of an extra fifth' [See Levit. vi. 5]. In a subsequent section of the Mischna, *Baba Metsia* (Surenhusius, iv. 117), the Mosaic provision is much refined, in true Rabbinical style, by prescribing a *fourfold* and even a *fivefold* fine for killing and selling, in addition to stealing, an animal.

inevitable, compensation is necessary (Rosenmüller *in loc.*) Sir W. Jones supposes that a distinction was made, in cases of theft, between stealing by *day* and stealing by *night*; and referring to Gen. xxi. 39, says: 'If cattle were bailed and stolen by day, the depository was bound to make restitution to the owner; the reason seeming to be, that when *cattle* are delivered to be kept, the bailee is rather a mandatary than a depository, and is consequently obliged to use a degree of diligence adequate to the charge: sheep, however, can hardly be stolen in the *day-time* without some neglect of the shepherd; and we find that when Jacob, who was (for a long time at least) a bailee [or depository] of a different sort, *inasmuch as he had a reward* ['the paid guardian' of Rashi], lost any of the beasts entrusted to his care, Laban made him answer for them, *whether stolen by day or stolen by night*' (*Laws of Bailments*, p. 367).

To this law of Exod. xxii. we must append Lev. vi. 2-7, as a complementary provision characteristic of the Theocratic constitution of the Jewish state. Michaelis, as is frequent with him, misses the profound idea of the relation between the Hebrew subject and his Divine King, when he, with an imperfect eulogy which takes in but a portion of the conception, speaks of 'that admirable contrivance of legislative wisdom for *keeping the conscience of the perjured on the rack* (!), and thus leading him to repentance.' In this latter passage of Moses we find a Hebrew designation for deposit, which we do not discover in the former passage out of Exodus; it is פְּקוּדֵי, A. V. *That which was delivered him to keep*; Sept. παραθήκη; Vulg. *Depositum*. With respect to the form of the Greek word, Moeris (in Wetstein on 1 Tim. vi. 20, and Schleusner, *O. T. Lexicon*, s. v.) says it is late *Hellenic*, while παρακαταθήκη is *Attic*. Another sort of distinction is alleged by Thomas Magister (see the passage in Wetstein, *ut antea*), that παραθήκη is the word found in Herodotus, and παρακαταθήκη in the Athenian Thucydides. There is probably *some* truth in these statements, but the discrepancies of MSS. and editors render it impossible to vouch for them wholly. It is certain that former editors read παρακαταθήκη, in Josephus, Philo, LXX., and the N. T., contrary to the rule of Moeris (see Grinfield's *Nov. Test. Ed. Hellenistica*, p. 1146); but it is equally certain that the tendency of recent editors, under the direction of a more careful criticism, is to replace the longer word by παραθήκη (see Tischendorf's LXX., e.g., in 2 Macc. iii. 10, 15; and his N. T., *last edition*, in 1 Tim. vi. 20; 2 Tim. i. 12, 14).

The obligation to return a deposit faithfully was in very early times held sacred by the Greeks, and indeed all civilised nations. A most prominent illustration occurs in the beautiful story of the Spartan Glaucus (Herod. vi. 86). We can only give the striking moral with which the story ends: Οὐτω ἀγαθὸν μηδὲ διανόεσθαι περὶ παραθήκης ἄλλο γε, ἢ ἀπαρεῖνταν ἀποδίδουσι; 'It is a good thing, therefore, when a pledge has been left with one, not even in *thought* to doubt about restoring it.' The story of Glaucus is alluded to by Plutarch (ii. 556 D); Pausanias (ii. 18, 2); Juvenal (xiii. 199-208); Clemens Alex. (*Strom.* vi. 749); Dio Chrysostom (*Or.* lxi. p. 640), and other writers (see Rawlinson's *Herod.* iv. 477, *note*). The moral drawn by Juvenal—

'Nam scelus intra se tacitum qui cogitat ullum,
Facti crimen habet'

is conceived in so pure and elevated a strain, transcending the simple light of nature, as to raise the suggestion that the author was indebted to the *true light* (John i. 9) which had now begun to glimmer through the Roman world (Stocker's *Juvenal*, p. 427; and Lubin's note, *in loco*, Varior. ed. p. 1127). A fine application of the universal law of fidelity in deposits is made by an Arabian poet contemporary with Justinian, who remarks 'that life and wealth are only deposited with us by our Maker; and, like all other deposits, must in due time be restored' (Sir W. Jones, *Works*, viii. 379). This principle our Lord has, by an incidental remark in his teaching, made sacred by his recognition of it. (Luke xvi. 12, *ἐν τῷ ἀλλοτρίῳ πιστὸν οὐκ ἐγένεσθε*, κ. τ. λ.) The inviolability of this trust illustrates the force of St. Paul's language in 1 Tim. vi. 20, and 2 Tim. i. 14, where he describes the gospel as a sacred deposit (παράθεκη), which he urges Timothy to preserve and keep; and again, in 2 Tim. i. 12, where he beautifully applies the same word παράθεκη to his own complex self (his body, soul, and spirit), which he commends to the safe keeping of God (Alford, *in loc.*, who quotes a similar use of παράθεκη in Josephus, *Bell. Jud.* iii. 18. 5; Philo, *Quis rerum*, etc., p. 499; and Hermas, *Pastor*, ii. 3; see also Conybeare and Howson, v. ii. (1st ed.) p. 493. For a less tenable application of the phrase see Ellicott, *in loco*). The same sacredness of charge involved in deposits induced the ancients to lay them up in temples, which thus were used as banks in many recorded instances; e.g. the temple of Apollo at Delphi; Jupiter at Olympia (Meier, *Att. Proc.* pp. 512-515, quoted in Smith's *Dicty. of Antiqq.*); also the temple of Castor at Rome (Juvenal, xiv. 260); the temple of Peace at Rome (Herodianus, lib. 1); the temple of Diana at Ephesus (Plautus, *in Bacch.* ii. 3. 73); and the temple of Saturn at Rome (Macrobius, i. 8), with others. This usage was adopted even at Jerusalem, where a large amount of wealth ('which did not pertain to the account of the sacrifices,' but was in fact private property), was consigned to the safe custody of the temple (see 2 Maccab. iii., in the 15th verse of which express reference is made to the Mosaic provision about deposits, in Exod. xxii. 7, etc.)—P. H.

DERBE (Δέρβη). A town of Lycania (Acts xiv. 6), in Asia Minor, situated on the great road from Tarsus to Iconium, and apparently about eighty miles north-west of the former. This road, traces of which still remain, is carried from Cilicia through the Taurus range by a difficult pass called the 'Cilician Gates;' it then enters the extensive upland plain of Lycania, which stretches away on the north-west to Iconium. Near the opening of the pass into the plain Derbe must have stood, but its exact site has not as yet been satisfactorily identified. About twenty miles westward of this pass the mountain of *Kara-dagh*—a black volcanic cone—rises up from the midst of the plain; at its base and on its sides are extensive ruins, supposed to be those of Lystra. The ancient road runs past the ruins, and across the plain to Iconium. This was the route followed by Paul on his missionary journey, as recorded in Acts xv. and xvi., when he came from Cilicia 'to Derbe and Lystra.' On a previous occasion he reached Derbe from the op-

posite direction, having first passed through Lystra. It is evident from these incidental references that the two towns were not far distant from each other; Derbe lying nearer to the border of Cilicia. According to Strabo (*Geogr.* xi. p. 392, ed. Casaubon), Derbe was in Isauria, but on the confines of Cappadocia and Lycania; and Sphen of Byzantium says it was φρούριον Ἰσαυρίας καὶ λιμῆν. It was probably a 'fort' erected to guard the mountain pass; but it could never have been a λιμῆν. It has been suggested that this word is an error for λιμνη; and near the site of Derbe there is a small 'lake.' Hamilton has attempted to identify Derbe with Divle, a small village in a wild valley among the mountains; but it seems to be too far from the ancient road. It is uncertain whether Lystra or Derbe was the birthplace of Timothy; the former seems to be the more likely from Acts xvi. 1, 2. Derbe was the home of another of Paul's favoured companions, Gaius (Acts xx. 4). A full account of Derbe, Lystra, and the surrounding country is given in Conybeare and Howson's *Life of St. Paul*, i. 211, 296, *seq.* Consult also Hamilton's *Researches in Asia Minor*, Journal of Geogr. Society, viii. 137, *seq.*—J. L. P.

DERESER, THADDAEUS ANTON, a learned Roman Catholic priest, was born at Fahr in 1755. Having completed his studies at Würzburg and Heidelberg, he taught philosophy and theology in the latter place. In 1783 he became professor of the oriental languages and the interpretation of Holy Scripture in the University of Bonn. While here he published various works which shewed a free tendency. In 1791 he became professor in Strasburg, superior of the Episcopal Seminary, and preacher in the Domkirche. In 1796 he lived in retirement at Mannheim, but returned to Heidelberg, 1797, as professor; and went to the Catholic University of Freiburg, 1806, as professor of Dogmatik. In 1810 he was pastor at Karlsruhe, where he remained till he was ordered, as a sort of exile, away to Constance to teach the ancient languages there. This, however, he refused to do, and went to Switzerland, where he became professor in the Lyceum at Lucerne. In 1814 he received his dismissal, went to Heidelberg, and was called by the Prussian government as professor to Breslau, as professor of Dogmatik and Bible exegesis, 1815. His death took place there in 1827. Dereser was a very liberal-minded theologian in the Catholic Church. On that account he had a restless life. Bigotry and intolerance drew him into controversies. Persecution followed his steps. He translated part of the O. T. in the work begun by Brentano who only did the N. T., 1790, etc., three vols. 8vo. [BRENTANO.] Dereser and Scholz continued it, four parts, Frankfurt, 1797-1833, or 13 vols. 8vo. He is also the author of a large devotional work (*Erbauungsbuch*), for all days of the church year, Heidelberg, 1810, 4 vols. 8vo.)—S. D.

DEROR (דְּרוֹר), the name of a bird remarkable for its swift flight (Prov. xxvi. 2), and which built its nest in temples (Ps. lxxiv. 4). The older versions make it the turtle dove in the latter passage (LXX. *πυργόστρον*; Vulg. *turtur*; Targ. and Syr. *שפנינה*); whilst in the former some render it sparrow (LXX. *στρουθός*; Vulg. *passer*), and others, simply flying fowl (Targ. *חיהי פרחתה*, or winged animal (Syr. *ܕܪܘܪ*). The

A. V. makes it 'swallow' in both passages. This seems the correcter reading; the bird is probably the *Dururi* of Alexandria, mentioned by Förskaal, the swift or black martin, as known to us. The rapid gyrating flight of this bird corresponds to the etymological meaning of the word, from דרר , *to fly in circles* (Gesén).—W. L. A.

DESERT. This word is employed in the A. V. of the Bible to represent no less than four distinct Hebrew words; and even in the rendering of these it is not employed uniformly. The same Hebrew term is sometimes translated 'wilderness,' sometimes 'desert,' and once 'south.' In one place we find a Hebrew term treated as a proper name, and in another translated as an appellative. This gives rise to considerable indefiniteness in many passages of Scripture, and creates confusion in attempts at interpretation. But besides all this, the ordinary meaning attached to the English word 'desert,' is not that which can be legitimately attached to any of the Hebrew words it is employed to represent. We usually apply it to 'a sterile sandy plain, without inhabitants, without water, and without vegetation'—such for example as the desert of Sahara. No such region was known to the sacred writers; no such region is once referred to in Scripture. It will consequently be necessary to explain in this article the several words which our translators have rendered 'desert.'

1. מִדְבָּר (Sept. $\xi\rho\eta\mu\omicron\varsigma$, and $\acute{\alpha}\nu\theta\rho\omicron\varsigma$ γγ), *Midbar*.

This word is of very frequent occurrence, and is usually rendered 'wilderness' (Gen. xiv. 6; etc.), though in some places 'desert' (Exod. iii. 1; v. 1; etc.), and in Ps. lxxv. 6, 'south.' It is derived from the root דָּבַר , 'to lead to pasture;' and it means a wide open tract used as a pasture land: thus, in Joel ii. 22, 'The pastures of the *desert* do flourish.' It is the name most commonly applied to the country lying between Palestine and Egypt, including the peninsula of Sinai, through which the Israelites wandered (Gen. xxi. 14, 21; Exod. iv. 27; xix. 2; Josh. i. 6; etc.) Now, the peninsula of Sinai is a mountainous region; in early spring its scanty soil produces grass and green herbs, and with the exception of one little plain on the north side of the great mountain chain, there is no sand whatever. This plain is distinguished by the name, *Debbet er-Ramleh*, 'plain of sand' (Robinson, *B. R.* i. 77; Stanley, *S. and P.* 9; Porter, *Handbook for S. and P.*, 2, sq.) On the other hand, in this whole region streams of water are not found except in winter, and after heavy rain; fountains are very rare; and there are no settled inhabitants. *Midbar* is also used to denote the *wilderness of Arabia*; but generally with the article הַמִּדְבָּר , 'the desert' (1 Kings ix. 18). The wilderness of Arabia is not sandy; it is a vast undulating plain, parched and barren during summer and autumn, but in winter and early spring yielding good pasture to the flocks of the Bedawin that roam over it. The *Midbar of Judah* is the bleak mountainous region lying along the western shore of the Dead Sea, where David fed his father's flocks, and hid from Saul (1 Sam. xvii. 28; xxvi. 2, sq.) The meaning of *Midbar* is thus a district without settled inhabitants, without streams of water, but adapted for pasturage. It is the country of nomads, as distinguished from that of the agricultural and settled people (Is. xxxv. 1; l. 2; Jer. iv. 11). The Greek equivalents in the

N. T. are $\xi\rho\eta\mu\omicron\varsigma$ and $\epsilon\rho\eta\mu\lambda\alpha$. John preached in the 'wilderness,' and our Lord fed the multitudes in the 'wilderness' (Matt. iii. 3; xv. 33; Luke xv. 4, etc.; Stanley, *S. and P.* 481).

2. חֲרֹבָה (Sept. $\xi\rho\eta\mu\omicron\varsigma$, etc.), *Chorbah*. This word is translated 'desert' in Ps. cii. 6. Its real meaning is 'a desolation,' or 'desolate place,' and also 'a dry or parched place.' From the same root comes the name of the mountain *Horv*. *Chorbah* is generally applied to what has been rendered desolate by war or neglect; thus in Is. lxi. 4, 'They shall build the old *wastes*' (Lev. xxvi. 33; etc.) The word is employed in Job. iii. 14 to denote buildings which speedily fall to ruin. The only passage in which it is made to express 'a natural waste,' or 'wilderness,' is Is. xlvi. 21, where it means the wilderness of Sinai.

3. יְשִׁימוֹן (Sept. $\acute{\alpha}\nu\theta\rho\omicron\varsigma$, and $\xi\rho\eta\mu\omicron\varsigma$), 'wasteness,' from יָשַׁם , 'to be laid waste.' In the A. V. it is sometimes given as a proper name: thus in Num. xxi. 20, 'The top of Pisgah, which looketh toward *Yeshimon*.' In this place, however, it appears to signify the wilderness of Arabia. In 1 Sam. xxiii. 19, and xxvi. 1, it evidently means the wilderness of Judah; while in the following poetical passages it is applied to the wilderness of Sinai—Deut. xxxii. 10; Ps. lxxviii. 7; lxxviii. 40; cvi. 14. It would appear from the reference in Deuteronomy—'waste, howling wilderness,' that this word was intended to be more expressive of utter wasteness than any of the others. In the A. V. it is rendered by the words 'wilderness,' 'desert,' and 'solitary.'

4. עֲרָבָה (Sept. Αραβα , and $\delta\upsilon\sigma\mu\acute{\iota}$), *Arabah*; 'desert,' from עָרַב , 'to be dry or sterile.' This term is employed to denote any dry or sterile region, as in Job. xxiv. 5, and Is. xl. 3. It is thus used, however, only in poetry, and is equivalent to *Midbar*, to which it is the poetic parallel in Is. xxxv. 1: 'The *wilderness* (*Midbar*) shall be glad for them; and the *desert* (*Arabah*) shall rejoice, etc.,' also in xli. 19. *Midbar* may be regarded as describing a region in relation to its use by man—a pastoral region; *Arabah*, in relation to its physical qualities—a wilderness (Stanley, *S. and P.* 481). But in the vast majority of cases in which it occurs in the Bible, *Arabah* is the specific name given either to the whole, or a part of the deep valley extending from Tiberias to the Gulf of Akabah. With the article הָעֲרָבָה , it denotes, in the historical portions of Scripture, the whole of the valley, or at least that part of it included in the territory of the Israelites (Deut. i. 7; iii. 17; Josh. xii. 1; etc.); when the word is applied to other districts, or to distinct sections of the valley, the article is omitted, and the plural number is used. Thus we find 'the *plains* of Moab' (עֲרָבוֹת), Num. xxii. 1; etc.); 'the *plains* of Jericho' (Josh. iv. 13); 'the *plains* of the wilderness' (2 Sam. xvii. 16). The Dead Sea is called 'the *Sea of the plain*' יַם הָעֲרָבָה . The southern section of this sterile valley still retains its ancient name, *el-Arabah* (Robinson, *B. R.* i. 169; ii. 186; Stanley, *S. and P.* 84). [*ARABAH*].—J. L. P.

DESSAU ($\Delta\epsilon\sigma\sigma\alpha\upsilon\acute{\omicron}$), a village of Judah (2 Maccab. xiv. 16), conjecturally identified by Ewald with Adasa, mentioned in 1 Maccab. vii. 40 (*Gesch.* iv. 368, *note*).—†.

DES VOEUX (A. V.), author of a work of some note, entitled *A Philosophical and Critical Essay on Ecclesiastes; wherein the author's design is stated; his doctrine vindicated; his method explained in an analytical paraphrase annexed to a new version of the text from the Hebrew, etc.*, 4to. Lond. 1760. This work is an elaborate and learned production, and contains much that is worthy of consideration. But the author sacrifices too much to his preconceived theory of the philosophical design of the book, and is too apt to force meanings on the sacred writer by critical emendation and ingenious speculation. The want of due arrangement also stands in the way of the student reaping full advantage from his farrago of notes. The author was a clergyman of the Church of England, and chaplain to a regiment, but beyond this we have not been able to gather any information concerning him. His work was translated into German by Bamberger, 4to. Halle, 1764.—W. L. A.

DEUEL (דְּעוּאֵל; Sept. Παροῦλλ), the father of Eliasaph, one of the captains or princes of the children of Gad (Num. i. 14; vii. 42, 47; x. 20). In ii. 14 he is called Reuel, by a change of the ד into ר; but which of these is the correct reading it is impossible to determine. The LXX. always give the word with an R, and in Num. ii. 14, Onkelos, the Syr. and Pers. Verss. give it the same. But the Samar., Vulg., Jonath., and Arab. V. read ד, and this several codices of the Hebrew give.—W. L. A.

DEUTERONOMY (Δευτερονόμιον), the Greek name given by the Alexandrian Jews to the fifth book of Moses (a corresponding name, מִשְׁנֵה הַתּוֹרָה, is, however, also found with the Rabbins), by which the general tenor of the book is very well characterised. It comprises that series of addresses which the Lawgiver delivered (orally and by writing, i. 5; xxviii. 58, etc.) to assembled Israel in the second month of the fortieth year of their wandering through the desert, when the second generation was about to cross the Jordan, and when the parting hour of Moses had nearly arrived. The book of Deuteronomy contains an account of the sublime and dignified manner in which Moses terminated that work, the accomplishment of which was his peculiar mission. It forms a sacred legacy which he here bequeathed to his people; and very different from those laws which he had announced to them at Sinai. The objective form of the law is less conspicuous, and the *subjectivity* (individuality) of the Lawgiver, and his peculiar relation to his people, stands out more prominently. A thoroughly sublime and prophetic spirit pervades all these speeches from beginning to end. The thoughts of the man of God are entirely taken up with the inward concerns of his people, their relations, future fate, and eventful vicissitudes. The Lawgiver here stands amidst Israel, warning and consoling, commanding and exhorting, surveying and proclaiming the future with marvellous discernment.

The speeches begin with the enumeration of the wonderful dealings of God with the chosen people in the early period of their existence. Moses clearly proves to them the punishment of unbelief, the obduracy of Israel, and the faithfulness of Jehovah with regard to his promises, which were

now on the point of being accomplished. Fully aware of the tendencies of the people, and foreseeing their alienations, Moses conjures them most impressively to hold fast the commands of the Lord, and not to forget his revelations, lest curses should befall them instead of blessings (ch. i-iv.) The Lawgiver then expatiates on the spirit of the law, and its reception into the hearts of men, both in a positive and negative way. *Fear*, he says, is the primary effect of the law, as also its aim. As Israel had once listened to the announcement of the fundamental laws of the theocracy with a sacred fear, in like manner should man also receive, through the whole system of the law, a lively and awful impression of the holiness and majesty of God (ch. v.) But as the essence and sum of the law is love to Jehovah, the only and true God, man shall by the law be reminded of the Divine mercy, so variously manifested in deeds; and this reflection is calculated to rouse in man's heart love for God. This love is the only and true source from which proper respect and obedience to the law can proceed (ch. vi.)

There were, however, two tempting deviations, in following which the people were sure to be led astray. The law, in its strict rigour, was but too apt to tempt them to desert Jehovah, and to yield to idolatry (the very approval of which even in thought polluted the heart), by discontinuing to bear the heavy yoke of the law. Hence the most impressive warnings against Canaan's inhabitants and idols; and hence the declarations that Israel, in placing themselves on a par with the heathens, should have to endure an equal fate with them, and be repulsed from the presence of Jehovah (ch. vii. viii.)

The other, not less dangerous, deviation is that of self-justification—the proud fancy that all the favours Jehovah had shewn to his people were merely in consequence of their own deservings. Therefore Jehovah tells them that it was not through their own worthiness and purity of heart that they inherited the land of the heathens. It was only through his free favour; for their sins bore too strong and constant testimony how little they ought to take credit to themselves for it (ch. ix.)

The history of the people, before and after the exile, shews these two deviations in their fullest bearings. Idolatry we find to have been the besetting sin before that period, and presumptuous pride of heart after it; a proof how intimately acquainted the Lawgiver was with the character and disposition of his people, and how necessary therefore those warnings had been.

Therefore, adds Moses, turn to that which Jehovah, in giving you the tables of the law, and establishing the Tabernacle and priesthood, has intimated as a significant symbol, 'to circumcise the foreskin of your heart,' and to cherish love in your inward soul. Think of Jehovah, the just and merciful, whose blessing and curses shall be set before your eyes as a lasting monument upon the mounts Ebal and Gerizim (ch. x. xi.)

The mention of that fact leads the Lawgiver to the domestic and practical life of the people when domesticated in their true home, the Land of Promise; which he further regulates by a fixed and solid rule, by new laws, which for this, their new design and purport, form a sort of complement to the laws already given. There, in the land of

their forefathers, Jehovah will appoint *one* fixed place for his lasting sanctuary, when every other place dedicated to the worship of idols is to be destroyed. At that chosen spot alone are the sacrifices to be killed, while cattle in general, which are not destined for sacred purposes, but merely for food, may be slaughtered at all places according to convenience—a regulation which still leaves in full force the previous laws concerning the eating of blood, and the share of Jehovah in slaughtered cattle. This sanctuary was to be considered as the central point for all sacred objects. The whole land was, by means of the sanctuary established in the midst of it, consecrated and dedicated to Jehovah. This consecration was incompatible with any defilement whatsoever. On that account the Canaanites must be exterminated, and all idolatrous abominations destroyed, since nothing ought to be added to or taken from the laws of God (ch. xii.) For the same reason (*i.e.*, for the sake of the holiness of the land, diffused from the sacred centre), no false prophets or soothsayers are to be tolerated, as they may turn the minds of the people from *the law*, by establishing a different one, and therefore even a whole town given to the worship of idols must be demolished by force of arms (ch. xiii.) Neither, in like manner, must the heathen customs of mourning be imitated, or unclean beasts eaten; but the people must always remain true to the *previous* laws concerning food, etc., and shew their real attachment to Jehovah and his religion by willingly paying the *tithe* as ordained by the law (ch. xiv.) To the same end likewise shall the regulations concerning the years of release and the festivals of Jehovah (to be solemnised in the place of the new-chosen Sanctuary) be most scrupulously observed (ch. xv. xvi.) Only *unblemished* sacrifices shall be offered, for all idol-worshippers must irrevocably be put to death by stoning. For the execution of due punishment, honest judges must govern the nation, while the highest tribunal shall exist in the place chosen for the Sanctuary, consisting of the priests and judges of the land. If a king be given by God to the people, he shall first of all accommodate himself to the laws of God, and not lead a heathen life. Next to the regal and judicial dignities, the ecclesiastical power shall exist in its full right; and again, next to it, the prophetic order (ch. xvii. xviii.) Of all these institutions, the duties of the judicial power are most clearly defined; for Jehovah does as little suffer that in his land the right of the innocent shall be turned aside, as that indulgence shall be shewn to the evil-doer (ch. xix.) The exposition of the civil law is followed by that of the martial law, which has some bearing upon the then impending war with Canaan, as the most important war and representing that with the heathen nations in general (ch. xx.) These are again followed by a series of laws in reference to the preceding, and referring chiefly to hard cases in the judicial courts, by which Moses obviously designed to exhibit the whole of the civil life of his people in its strict application to the theocratic system of law and right. Therefore the form of prayer to be spoken at the offering up of the firstlings and tithe—the theocratic *confession of faith*—by which every Israelite acknowledges in person that he is what God has enjoined and called him to be, forms a beautiful conclusion of the whole legislation (ch. xxi.-xxvi.)

The blessings and curses of Jehovah, the two opposite extremes which were to be impressed upon the minds of the people at their entrance into Canaan, and which have hitherto been spoken of only in general terms, are now set forth in their fullest detail, picturing in the most lively colours the delightful abundance of rich blessings on the one hand, and the awful visitations of Heaven's wrath on the other. The prophetic speeches visibly and gradually increase in energy and enthusiasm, until the perspective of the remotest future of the people of God lies open to the eye of the inspired Lawgiver in all its chequered details, when his words resolve themselves into a flight of poetical ecstasy, into the strains of a splendid triumphal song in which the tone of grief and lamentation is as heart-rending as the announcement of divine salvation therein is jubilant (ch. xxvii. xxviii.) The history of the law concludes with a supplement concerning him who was deemed worthy by the Lord to transmit his law to Israel (ch. xxxiv.)

Thus much regarding the contents and connection of the book of Deuteronomy.

The critics who have tried to shew that the Pentateuch is composed of miscellaneous documents and by various authors, have more difficulty in applying their theory to this book than to any other of the series. [PENTATEUCH.] Indeed the most sceptical critics admit that, with the exception of a few interpolations (comp. for instance, De Wette, *Introd.* sec. 154, sq.), the whole of this book was moulded, as it were, in one single cast.

The *date*, however, of the composition of Deuteronomy, as well as its *authenticity*, has given rise to a far greater variety of opinion, more especially among those who are opposed to the authorship of Moses. The older critics, such as De Wette, Gesenius, etc., considered Deuteronomy as the *latest* production of all the books of the Pentateuch; while the more recent critics, such as Von Bohlen, Vatke, George, etc., have come to just the contrary opinion, and declare it to be the *earliest* of the Mosaic writings. The whole of their disputes on this head turn chiefly on the prophetic character of Deuteronomy. Some find that this peculiar feature characterizes the book as contemporary with the later prophets, and that it contains reflections on the law, as on a thing long in existence; others, however, are of a quite contrary opinion, and discover in this *subjective* character, so predominant in Deuteronomy, the very proof of its prior and early composition; and they consider, moreover, that the prophetic enunciations contained in it were afterwards developed into *objective*, rigid, and matter-of-fact *laws*, such as we find them in Exodus and Numbers. For this reason, they add, is the legislative tone in Deuteronomy more simple than in the other books, embracing merely the incipient elements and suggestive notes of a complete code of law.

A very strong proof of the genuineness of the book lies in its relation to the later writings of the prophets. Of all the books of the Pentateuch, Deuteronomy has been made most use of by the prophets, simply because it is best calculated to serve as a model for prophetic declarations, as also because of the inward harmony that exists between the *prophecies* and the *laws* upon which they are based.

Deuteronomy exercised a most decisive and remarkable influence more especially on Jeremiah,

owing not only to his priestly character, but also and chiefly to the peculiar circumstances of his time, so admirably suited to illustrate the threats and warnings contained in that book, in the strongest light of sacred and immutable truth. Deuteronomy was a book altogether written for the times of Jeremiah, who could therefore do nothing better than resume the old text, and bring it home impressively to the people. The influence which the spirit of Deuteronomy thus exercised on that prophet, extended even to the adoption, on his part, of a considerable number of its expressions and phraseological terms. These linguistic coincidences have been most erroneously accounted for by some, by assuming the contemporary origin of both books, while others (Von Bohlen) have gone so far in their speculations as even to allot to Jeremiah a share in the composition, or rather interpolation, of Deuteronomy. Such views betray total ignorance of the peculiar and strictly defined character of Deuteronomy, so different in many respects, even as regards the style and language, from the book of Jeremiah, though it cannot be denied that no prophet ever adhered more closely to the prototypes of the earlier periods, or ever repeated more frequently the earlier enunciations, than did Jeremiah.

Among the arguments advanced against the authenticity of Deuteronomy, are :

1. The *contradictions* said to exist between this and the other books of Moses ;

2. Certain *anachronisms* committed by the author.

These contradictions are more especially alleged to exist in the festival laws, where but arbitrary and unwarranted views are mostly entertained by such critics with regard to the nature and original meaning of the festivals, which they identify altogether with *natural* or *season* festivals, and without lending to them a more spiritual character and signification.

3. That the *Sinai* of the other books is always called *Horeb* in Deuteronomy.—They forget, however, that *Horeb* is the general name of the whole mountain, while *Sinai* is the special name of a particular part of it. This distinction is, indeed, most scrupulously observed everywhere in the Pentateuch.

4. That *Priests* and *Levites* are used as synonymous terms in Deuteronomy (on account of the expression *הכהנים הלוים*) ; while, in the other books of the Pentateuch, they are used as terms distinct from each other.—By that expression, however, can only be meant the *Levitical* priests, *i. e.* the only legitimate priests ; this meaning is borne out by Deuteronomy xviii. 3-8, where a clear distinction is made between *Priests* and *Levites*.

5. That in Deuteronomy i. 44, are mentioned the *Amorites* instead of the *Amalekites* as in Num. xiv. 45.—Here also they have forgotten to notice that, in the sequel of the very passage alluded to in Deuteronomy, both the *Amorites* and *Amalekites* are mentioned.

6. That the cause of the punishment of Moses is differently stated in Num. xxvii. 14, and Deut. iii. 26.—To this objection we reply, that both the guilt and punishment of Moses are described in both books as originating with the people ; comp. also Deut. xxxii. 51, etc.

Among the anachronisms in Deuteronomy are reckoned the allusions made in it to the Temple (xii. xvi. 1 sqq.), to the royal and prophetic powers

(xiii. xvii. xviii.), to the different modes of idol-worship (iv. 19 ; xvii. 3), and to the exile (xxviii. sq.) In suggesting these critical points, however, they do not consider that all these subjects are most closely and intimately connected with the spirit and principles of the law itself, and that all these regulations and prophecies appear here in Deuteronomy, as necessary finishing-points to the Law, so indispensable for the better consolidation of the subsequent and later relations of the theocracy.

More *anachronisms* are said to be

1. The dwelling places of Jair mentioned in Deut. iii. 14, sq. (compare Judg. x. 3, sq.) We consider, however, that the men mentioned in the two passages are evidently different persons, though of the same name. Nor is it difficult to prove from other sources, that there really existed at the time of Moses a man by name Jair.

2. The notice (iii. 11) concerning king Og, which looks more like a note of a subsequent writer in corroboration of the story told in the chapter. But this hypothesis falls to the ground when we consider that Moses did not write for his contemporaries merely, but also for late posterity.

The book contains, moreover, not a small number of plain, though indirect traces, indicative of its Mosaic origin. We thus find in it :

1. Numerous notices concerning nations with whom the Israelites had then come in contact, but who, after the Mosaic period, entirely disappeared from the pages of history : such are the accounts of the residences of the kings of Bashan (i. 4).

2. The appellation of ‘mountain of the Amorites,’ used throughout the whole book (i. 7, 19, 20, 44), while even in the book of Joshua, soon after the conquest of the land, the name is already exchanged for ‘mountains of Judah’ (Josh. xi. 16, 21).

3. The observation (ii. 10), that the *Emim* had formerly dwelt in the plain of Moab : they were a great people, equal to the *Anakim*. This observation quite accords with Genesis xiv. 5.

4. A detailed account (ii. 12) concerning the Horim and their relations to the Edomites.

5. An account of the Zamzummim (ii. 20, 21), one of the earliest races of Canaan, though mentioned nowhere else.

6. A very circumstantial account of the Rephaim (iii. 3, sq.), with whose concerns the author seems to have been well acquainted.

The stand-point also of the author of Deuteronomy is altogether in the Mosaic time, and had it been assumed and fictitious, there must necessarily have been moments when the spurious author would have been off his guard, and unmindful of the part he had to play. But no discrepancies of this kind can be traced ; and this is in itself an evidence of the genuineness of the book.

A great number of other passages force us likewise to the conclusion, that the whole of Deuteronomy originated in the time of Moses. Such are the passages where

1. A comparison is drawn between Canaan and Egypt (xi. 10, sq.), with the latter of which the author seems thoroughly acquainted.

2. Detailed descriptions are given of the fertility and productions of Canaan (viii. 7, sq.)

3. Regulations are given relating to the conquest of Canaan (xii. 1, sq. ; xx. 1, sq.), which cannot be understood otherwise than by assuming

that they had been framed in the Mosaic time, since they could be of no use after that period.

Besides whole pieces and chapters in Deuteronomy, such as xxxii. xxxiii., betray in form, language, and tenor, a very early period in Hebrew literature. Nor are the laws and regulations in Deuteronomy less decisive of the authenticity of the book. We are struck with the most remarkable phenomenon, that many laws from the previous books are here partly repeated and impressed with more energy, partly modified, and partly altogether abolished, according to the contingencies of the time, or as the new aspect of circumstances among the Jews rendered such steps necessary (comp. *e.g.* Deut. xv. 17 with Exod. xxi. 6; Deut. xii. with Lev. xvii.). Such pretensions to raise, or even to oppose his own private opinions to the authority of divine law, are found in no author of the subsequent periods, since the whole of the sacred literature of the later times is, on the contrary, rather the echo than otherwise of the Pentateuch, and is altogether founded on it. Add to this the fact, that the law itself forbids most impressively to add to, or take anything from it, a prohibition which is repeated even in Deuteronomy (comp. iv. 2; xiii. 1); and it is but too evident, that, if the opinion of the critics be correct, that this book contains nothing more than a gradual development of the law—it clashes too often with its own principles, and pronounces thus its own sentence of condemnation.

The part of Deuteronomy (xxxiv.) respecting the death of Moses requires a particular explanation. That the whole of this section is to be regarded as a piece altogether apart from what precedes it, or as a supplement from another writer, has already been maintained by the older theologians (comp. *ex. gr.* Carpov, *Introd. in libr. V. T. i. p. 137*); and this opinion is confirmed not only by the contents of the chapter, but also by the express declaration of the book itself on that event and its relations; for chapter xxxi. contains the conclusion of the work, where Moses describes himself as the author of the previous contents, as also of the Song (ch. xxxii.), and the blessings (ch. xxxiii.) belonging to it. All that follows is, consequently, not from Moses, the work being completed and concluded with chapter xxxiii. There is another circumstance which favours this opinion, namely, the close connection that exists between the last section of Deuteronomy and the beginning of Joshua (comp. Deut. xxxiv. 9 with Josh. i. 1, where also the term יְהוָה, in the latter passage, must not be overlooked) plainly shews that ch. xxxiv. of Deuteronomy is intended to serve as a *point of transition* to the book of Joshua, and that it was written by the same author as the latter.

The correct view of this chapter, therefore, is to consider it as a *real supplement*, but by no means as an *interpolation* (such as some critics erroneously suppose to exist in the Pentateuch in general). To apply to it the term interpolation would be as wrong as to give that appellation *ex. gr.* to the 8th book of Cæsar's work, '*De Bello Gallico*,' simply because it was equally written by an unknown author, for the very purpose of serving as a *supplement* to the previous books. [PENTATEUCH.]—H. A. C. H.

DEVIL. [DEMON; SATAN.]

DEVILS, CASTING OUT OF. [EXORCISM.]

DEW. In Palestine the dews fall copiously at night, in spring and autumn, but scarcely any dew falls during the summer months—from the middle of May to the middle of August. It continues, however, to fall for some time after the rains of spring have ceased, and begins to fall before the rains of autumn commence, and we may from this gather the sense in which the Scriptural references to dew are to be understood. Without the dews continuing to fall after the rains have ceased, and commencing before the rains return, the season of actual drought, and the parched appearance of the country, would be of much longer duration than they really are. The partial refreshment thus afforded to the ground at the end of a summer without dews or rains is of great value in Western Asia, and would alone explain all the Oriental references to the effects of dew. This explanation is of farther interest as indicating the times of the year to which the Scriptural notices of dew refer; for as it does not, in any perceptible degree, fall in summer, and as few would think of mentioning it in the season of rain, we may take all such notices to refer to the months of April, May, part of August, and September.—J. K.

DEXIOLABOS (δεξιολάβος). This is the Greek word rendered 'spearmen' in the A. V. of Acts xxiii. 23. It is uncertain what kind of soldiers is denoted by it. It strictly signifies one who takes with the right hand. Hence it has been conjectured [Meursius in *Glossar.*] that it denotes officers who performed the same functions in the camp as lictors did in the city—being appointed to apprehend malefactors, and to guard criminals when led to execution, and called δεξιολάβοι, from taking with the right hand the prisoner. This explanation is, however, deduced from the etymology of the word, and is open to the objection arising from the improbability that such a number of military lictors would be on duty with the forces of the tribune, as that 200 of them at a time could be ready to depart with one prisoner. Others understand the word as denoting the guard of the tribune; [but this is open to the same objection; we can hardly suppose the commander of a cohort to have had so large a bodyguard as to be able to spare 200 men from it on such an errand. The only other writer who uses the word is Constant. Porphy (Themat. i. 1), and by him the δεξιολάβοι are distinguished from the archers and the *pellastæ*. In Acts they are distinguished from the soldiers and the horsemen. We may infer from this that they were a kind of infantry and light-armed, of the class *Rorarii* or *Velites*; perhaps, as Meyer suggests, *facultatores* or *Funditores* (*Comment. iib. d. N. T. in loc.*)] Our version 'spearmen' seems to have been derived from the Vulgate 'lancearii.'

DEYLING, SOLOMON (1677-1755), a learned Lutheran divine, professor of theology in the University of Leipzig. His contributions to biblical science were numerous, and have had a considerable reputation amongst continental scholars. His most important work bears the title, *Observationes Sacre, in quibus multa Scripturæ Veteris et Novi Testamenti dubia vexata solvuntur, loca difficiliora ex antiquitate et varie doctrinæ adparatu illustrantur, atque ab audaci recentiorum criticorum depravatione solide vindicantur*. It consists of three parts, published respectively in the years 1708, 1711, 1715. Other and enlarged editions were subse-

quently issued by the author ; the latest of which were a fourth edition of Part I. in 1735, a fourth of Part II. in 1736, and a third of Part III. in 1739, all in 4to. The contents of the work are in the form of dissertations on difficult passages in the O. and N. T., Hebrew and Greek scriptural terms, biblical antiquities, and various objections urged by Spinoza, Hobbes, and other writers. Two other volumes of a similar kind were published by Deyling. The one bears the title, *Observationes Miscellaneae, in quibus res varii argumenti ex theologia, historia, et antiquitate sacra enodate tractantur, oracula utriusque fœderis difficiliora et loci patrum illustrantur, et a dissentientium imprimis recentiorum depravatione solide vindicantur*, Lips. 1736, 4to ; and may be regarded as forming a fourth part of the preceding work, since, of the twenty-eight dissertations contained in it, the first seven only are upon questions of church history, the remaining twenty-one are devoted to Scriptural exegesis. The other volume was entitled *Observationum Sacrarum pars quinta*, etc. Lips. 1748, 4to.—S. N.

DIADEM. [Crown.]

DIAL. The invention of the sun-dial belongs most probably to the Babylonians. Herodotus affirms, that the Greeks derived from them the pole (supposed to mean the dial-plate), the gnomon, and the division of day into twelve parts (ii. 109). Vitruvius also ascribes the most ancient form of the dial, called hemicycle, to Berosus the Chaldaean (ix. 9), though he probably means no more than that he introduced it into Greece. Certainly those Greeks to whom Vitruvius ascribes inventions or improvements in dialling, can all be proved to have had communication, more or less remote, with the Chaldaeans. The first mention in Scripture of 'the hour,' is made by Daniel, at Babylon (ch. iii. 6). The Greeks used the dial before the Romans ; and with regard to the Egyptians 'there are no indications in the Sculptures to prove the epoch when the dial was first known in Egypt' (Wilkinson, *Anc. Egyptians*, vol. iii. p. 342). The circumstances connected with the dial of Ahaz (2 Kings xx. 11 ; Isa. xxxviii. 8), which is perhaps the earliest of which we have any clear intention, entirely concur with the derivation of gnomonics from the Babylonians. Ahaz had formed an alliance with Tiglath-pileser, king of Assyria (2 Kings xvi. 7, 9) : he was a man of taste, and was ready to adopt foreign improvements, as appears from his admiration of the altar at Damascus, and his introduction of a copy of it into Jerusalem (2 Kings xvi. 10). 'The princes of Babylon sent unto him to inquire of the wonder that was done in the land' (2 Chron. xxxii. 31). Hence the dial also, which was called after his name, was probably an importation from Babylon. Different conjectures have been formed respecting the construction of this instrument. The difficulty is to understand what is meant by the תעלות אהז, 'the degrees or steps of Ahaz.' They may mean lines or figures on a dial-plate, or on a pavement, or the steps to the palace of Ahaz, or some steps or staircase he had erected elsewhere (vid. Carpzov, *Apparat. Historic. Crit.* Lips. 1748, p. 352, etc.) The Sept. in Isaiah reads ἀναβαθμὸς τοῦ οἴκου τοῦ πατρὸς σου, 'the steps or stairs of the house of thy father.' Josephus also says, 'steps or degrees in

his house' (*Antiq. x. 2. 1*). The Chaldee renders the passage in Kings, אבן שעיה, 'hour-stone,' and gives the same meaning to 'the stairs' (2 Kings ix. 13), and renders Isa. xxxviii. 8 אבן שעיה כצורת, by 'the shadow of the stone of hours,' Symmachus most certainly understood a sun-dial : *στρέψω τὴν σκιὰν τῶν γραμμῶν ἢ κατέβη ἐν ὄρολογίῳ* "Αχαζ, 'I will cause to return the shadow of the degrees which (shadow) is gone down on the dial of Ahaz : ' and so Jerome renders it Horologium. On the whole, the dial of Ahaz seems to have been a distinct contrivance, rather than any part of a house. It would also seem probable, from the circumstances, that it was of such a size, and so placed, that Hezekiah, now convalescent (Isa. xxxviii. 21, 23), but not perfectly recovered, could witness the miracle from his chamber or pavilion : 'Shall the הצל, *the or this shadow*,' etc. May it not have been situate 'in the middle court' mentioned 2 Kings xx. 4 ? The cut given below (No. 206) presents a dial discovered in Hindostan, near Delhi, the ancient capital of the Mogul empire, whose construction would well suit the circumstances recorded of the dial of Ahaz. It seems to have answered the double purpose of an observatory and a dial—a rectangled triangle, whose hypotenuse is a staircase, apparently parallel to the axis of the earth, and bisects a zone or coping of a wall, which wall connects the two terminating towers right and left. The coping itself is of a

circular form, and accurately graduated to mark, by the shadow of the gnomon above, the sun's progress before and after noon ; for when the sun is in his zenith he shines directly on the staircase, and the shadow falls beyond the coping. A flat surface on the top of the staircase, and a gnomon, fitted the building for the purpose of an observatory. According to the known laws of refraction, a cloud or body of air of different density from the common atmosphere, interposed between the gnomon and the coping of the dial-plate below, would, if the cloud were denser than the atmosphere, cause the shadow to recede from the perpendicular height of the staircase, and of course to re-ascend the steps on the coping, by which it had before noon gone down ; and if the cloud were rarer, a contrary effect would take place. (See Bishop Stock's *Translation of Isaiah*, Bath, 1803, p. 109.) Such a building might also be called 'a house.' It agrees also with Adam Clarke's supposition, that 'the stairs' were really 'a dial,' and probably this very dial, on which, as being in the most public place, or rather on the platform on

the top of which they set Jehu, while they proclaimed him king by sound of trumpet' (*Commentary on 2 Kings ix. 13*). Bishop Stock's speculation that the retrogression of the shadow *might* be effected by refraction, is supported by a natural phenomenon of the kind on record. On the 27th of March 1703, P. Romauld, prior of the cloister of Metz, made the observation that, owing to such a refraction of the solar rays in the higher regions of the atmosphere, in connection with the appearance of a cloud, the shadow on his dial deviated an hour and a half (Rosenmüller). The phenomenon on the dial of Ahaz, however, was doubtless of a miraculous nature, even should such a *medium* of the miracle be admitted; nothing less than a divine communication could have enabled Isaiah to predict its occurrence at that time and place; besides, he gave the king his own choice whether the shadow should advance or retire ten degrees. There seems, however to be no necessity for seeking *any* medium for this miracle, and certainly no necessity for supposing any actual interference with the revolution of the earth, or the position of the sun. In the more distinct and ample account of it in 2 Kings, it is simply said that the Lord, at the prayer of Isaiah, brought the shadow ten degrees backward. The words *כעלות השמש ותשב השמש* עשר מעלות in Is. xxxviii. 8, 'And the sun went back ten degrees,' are wanting in three of Dr. Kennicott's MSS., and originally in two of De Rosi's; and the words 'The shadow of the degrees which is gone down in the sun-dial of Ahaz' are more correctly rendered on the margin degrees 'by or with the sun,' *i.e.*, by means of the progress of the sun. The first *ὁ ἥλιος* in this verse is omitted in MS. Pachom of the Sept. Even if the mention of the sun be retained, as in Ecclus. xlviii. 23, it is only fair to understand the words in their popular sense, the solar rays, or such a recession of the shadow as would have been occasioned by an actual recession of the sun. Adopting the present state of the text, it is observable that what is called the sun in one part of the verse is called the shadow in the other. It is certainly as philosophical to speak of the sun returning, as it is of his setting and rising. Thus the miracle, from all the accounts of it, might consist only of the retrogression of the shadow ten degrees, by a simple act of Almighty power, without any medium, or at most by that of refracting those rays only which fell upon the dial. It is not said that any time was lost to the inhabitants of the world at large; it was not even observed by the astronomers of Babylon, for the deputation came to inquire concerning the wonder that was done in the *land*. It was temporary, local, and confined to the observation of Hezekiah and his court, being designed chiefly for the satisfaction of that monarch. It is remarkable that no instrument for keeping time is mentioned in the Scripture before the dial of Ahaz, B.C. 700; nor does it appear that the Jews generally, even after his period, divided their day into hours. The dial of Ahaz was probably an object only of curious recreation, or served at most to regulate the occupations of the palace.—J. F. D.

DIAMOND. [YAHALOM; SHAMIR.]

DIANA. [ARTEMIS.]

DIBLATH (*דַּבְּלָתָה*), 'towards Diblath;' Sept. *Δεβλαθὰ*). Gesenius says that *ך* has been here

erroneously written for *ך*, and that *Riblah*, near Hamath, is referred to. It has been attempted to render this theory probable by giving a peculiar interpretation to Ezek. vi. 14, the only passage in which the word occurs. In the A. V. we read, 'I will make the land desolate, yea, more desolate than the wilderness toward Diblath.' The Hebrew would bear another rendering, 'I will make the land desolate . . . from the wilderness to Diblath' (*מִמְדִּבְרָתָהּ*). The 'wilderness,' it is said, means the 'south,' and *Diblah*, or *Riblah*, which is the supposed true reading, the extreme 'north,' and thus the whole land is indicated. But in no other part of Scripture have we such a form of expression, and it would be contrary to sound criticism first to invent a reading, and then to base upon it an unexampled mode of interpretation. The Sept. renders *ἀπὸ τῆς ἐρήμου Δεβλαθὰ*, and the Syriac and Vulgate agree with it. We prefer to regard Diblath as a district on the eastern border of Moab, adjoining the desert, in which were situated Almon-Diblathaim (Num. xxxiii. 46), and Beth-Diblathaim (Jer. xlviii. 22). According to Jerome these lay not far from Medaba, which is a few miles south-east of Heshbon (*Onomast. s. v. Jassa*).—J. L. P.

DIBON (*דִּבּוֹן*; Sept. *Δαββών*), an ancient town on the eastern border of Moab, situated on the plateau about three miles north of the river Arnon. It was one of the stations of the Israelites (Num. xxxiv. 45). The Gadites rebuilt and occupied it temporarily (xxxii. 34), hence probably its name Dibon-Gad. It was eventually allotted to the tribe of Reuben (Josh. xiii. 9, 17). On the decline of the Jewish power the Moabites again seized the place, and both Isaiah and Jeremiah mention it among their towns (Is. xv. 2; Jer. xlviii. 18). Jerome and Eusebius make two Dibons, one in the wilderness where the Israelites encamped, and the other in Moab (*Onomast. s. v. Debon*). This is evidently an error, as may be seen by an examination of the position assigned to the town in Num. xxxiv. 45. Both these writers state that Dibon of Moab was in their day a large village near the Arnon. Its ruins, still retaining the ancient name *Diban*, were visited by Seetzen, and Irby and Mangles. The latter travellers describe them as of considerable extent, but presenting nothing of interest (*Travels*, p. 462).

In Is. xv. 9, *Dimon* of Moab is mentioned, and it appears to be another form of Dibon. Jerome says that in his day both names were applied to the village, and the form *Dimon* may have been used by the prophet in this passage in allusion to the word *dam* (*דָּם*) 'blood' following (Reland. *Pal. p. 735*.)

2. A town in the tribe of Judah, called also DIMONAH. It was occupied by the Jews after the captivity (Neh. xi. 25).—J. L. P.

DIBRI (*דִּבְרִי*), derived by Gesenius from *דָּבַר*, a word, and meaning perhaps *eloquent*; by Fürst from *דָּבַר*, *pasture*, and meaning *one from the fields*), the father of Shelomith, whose son was stoned to death for blaspheming the name of the Lord (Lev. xxiv. 10-14).—†.

DICK, JOHN, D.D., a Presbyterian clergyman, was born at Aberdeen 10th Oct. 1764. He studied

at the university of that city, where he had for his fellow-students and friends Sir James Macintosh and Dr. Charles Burney. His theological studies were prosecuted at Selkirk under the tuition of Dr. Lawson. He became minister, first at Slateford, near Edinburgh, and afterwards at Glasgow, of congregations both connected with the Associate Synod. His first appearance as an author was in 1800, when he published his *Essay on Inspiration*, a work which has since passed through several editions. In 1820 he succeeded Dr. Lawson in the divinity chair, retaining along with this his charge in Glasgow; and when the union took place between the two principal branches of the Secession, he became professor of theology to the United Secession Church. In 1805 he issued two volumes of *Lectures on the Acts of the Apostles*, which afterwards appeared in one volume; in these are given a superior specimen of a style of public instruction much esteemed in Scotland, that by means of expository lectures on Scripture. The degree of D. D. was conferred on him in 1815 by the University of Princeton, U. S. Immediately after his death his theological lectures were published in 4 vols. 8vo, 1834.—W. L. A.

DICKINSON, EDMUND, M. D. (1626-1707), an English physician, whose only claim to a place amongst biblical writers rests upon a small work or tractate entitled, *Delphi Phœnicizantes, sive Tractatus in quo Græcos quicquid apud Delphos celebre erat, etc., a Josuæ historia scriptisque sacris effinxisse rationibus haud inconcinnis ostenditur: cum Diatriba de Noë in Italiam adventu, necnon de origine Druidum*, Oxon. 1655, small 8vo. Anthony Wood not obscurely intimates that the real author of this work was Henry Jacob, son of the celebrated Independent of that name; and he relates in a circumstantial manner how Jacob's papers were appropriated by the subsequent occupier of his rooms at Merton College. It is right to add that Wood does not explicitly charge Dickinson with this literary theft (*Athenæ Oxon.* vol. ii. p. 160; comp. with p. 946).—S. N.

DICKSON, DAVID. This Scottish expositor was born in 1583. Ordained in 1618, he continued minister of Irvine for twenty-three years. He preached the Gospel with remarkable power, so that many from distant parts of the country came to reside in Irvine, merely to enjoy the benefit of his ministry. He became professor of divinity in the University of Glasgow in 1641, and about 1650 was translated to the same chair in the University of Edinburgh. He died in 1662.

Besides other works of a theological character, Dickson is the author of *A short explanation of the Epistle of Paul to the Hebrews*, Aberdeen, 1635, 12mo; *A brief explanation of the Psalms*, London, 1645-1654, 3 vols. 12mo; *Expositio Analytica Omnium Epistolarum*, Glasg., 1645, 4to; *A brief exposition of the Gospel according to Matthew*, Lond., 1651, 12mo; and *An Exposition of all the Epistles*, Lond., 1659, fol. According to a note of Dr. Gillies in his *Historical Collections*, i. 296, he was perhaps 'the principal mover of that concert among several worthy ministers of the Scots church for publishing short, plain, and practical expositions upon the whole Bible.' Mr. Dickson executed his portion of the task very creditably. His exposition of the psalms is, on the whole, the best of his productions—clear, sensible, abound-

ing in practical reflections, and bearing closely at times on Christian experience. His work on the Epistle to the Hebrews was his earliest commentary on Scripture, and the observations on successive passages into which it is divided, are occasionally vague and irrelevant, while the summary prefixed to each chapter scarcely traces with precision the steps of the argument contained in it. But his expository works on the whole are valuable. His strong grasp of the system of divine truth enables him to thread his way among textual difficulties with considerable success. The savour of evangelical feeling pervades all he writes. We can understand as we read his works, how perplexed and anxious consciences could turn to him for relief and guidance, while he laboured as a pastor in Irvine. Nor does Mr. Orme speak too strongly when he affirms that 'none of the puritanical expositors of the period during which Mr. Dickson lived is superior to him, and in distinctness of method and language, and point and condensation of sentiment, he is equal to any of them.' His commentary on the Psalms was republished in 1754, and again in 1834.—W. H. G.

DIDRACHM (*διδραχμον*), a silver coin equal to two drachmæ, and rendered in the English version of the N. T. by the word tribute. The Septuagint renders the Hebrew shekel of the O. T. by didrachma. Hence a great difficulty has arisen, for the extant shekels, which are of the Maccabæan period, have the weight of Ptolemaic tetradrachms. How are we to account for the half of a tetradrachm being called the half of a didrachm?

The late Colonel Leake, in speaking of the shekel, says, 'This weight appears to have been the same as the Egyptian unit of weight, for we learn from Horapollo that the *Μωβάς*, or unit, which they held to be the basis of all numeration, was equal to two drachmæ (i. 11), and *διδραχμων* is employed synonymously with *σικλος** for the Hebrew word shekel by the Greek Septuagint, consequently the shekel and didrachm were of the same weight.'

If the didrachm were the Egyptian unit of weight, the so-called Ptolemaic tetradrachm would be in Egypt at least a didrachm, and not a tetradrachm.

He then argues that 'though some commentators think the translators meant a didrachmon of the Græco-Egyptian scale, weighing about 110 grains, yet it is hardly credible that *διδραχμων* should have been thus employed without any distinguishing epithet, at a time when the Ptolemaic scale was yet of recent origin, especially as the word didrachmon had for ages been applied to a silver piece of money of about 130 grains, the currency of all cities which follow the Attic or Corinthian standard, as well as in the silver money of Alexander the Great, and his successors.' He then goes on to say that 'in all these currencies, as well as in those of Lydia and Persia, the stater was an Attic didrachmon, or at least with no greater difference of standard than occurs among modern nations using a denomination of weight or measure common to all, and hence the word *διδραχμων* was at length employed as a measure of weight without any reference to its origin in the Attic drachma. Thus we find the drachma of

* For the distinction between *σικλος* and *σικυλος*, see article DRACHM, note.

gold described as equivalent to ten didrachma (Hesychius in *δραχμή*), and the half shekel of the Pentateuch translated by the Septuagint *τὸ ἥμισυ τοῦ διδράχμου*. There can be little doubt, therefore, that the Attic and not the Græco-Egyptian didrachmon was intended by them.

As regards the half shekel of silver paid to the Lord by every male of the children of Israel as a ransom for his soul (Exod. xxx. 13, 15), Colonel Leake says 'That it had nothing in common with the tribute paid by the Jews to the Roman Emperor. The tribute was a denarius, in the English version a penny (Matt. xxii. 17; Luke xx. 24); the duty to the temple was a didrachmon, two of which made a stater. It appears then that the half shekel of ransom had in the time of our Saviour been converted into the payment of a didrachmon to the temple, and two of their didrachma formed a stater of the Jewish currency.' He then suggests that the stater was evidently the extant 'Shekel Israel,' which was a tetradrachm of the Ptolemaic scale, though generally below the standard weight, like most of the extant specimens of the Ptolemies; and that the didrachmon paid to the temple was therefore of the same monetary scale. 'Thus,' says he, 'the duty to the temple was converted from the half of an Attic to the whole of a Ptolemaic didrachmon, and the tax was nominally raised in the proportion of about 105 to 65; but probably the value of silver had fallen as much in the two preceding centuries. It was natural that the Jews should have revived the old name Shekel, and applied it to their Stater, and equally so that they should have adopted the scale of the neighbouring opulent and powerful kingdom, the money of which they must have long been in the habit of employing.' (Appendix, *Numismata Hellenica*, pp. 2, 3.)

We have here a tolerably satisfactory account of this difficult question. We learn that the Egyptian unit was a didrachm, and the suggestion is made that the Septuagint intended the Attic, and not the Græco-Egyptian weight. Assuming this to be true, the didrachm of the Septuagint would be a shekel, and the didrachm of the N. T. a half shekel. The word didrachm, however, was the common term employed by the Jews for the shekel, and was not necessarily a piece of money, there being few, if any, Attic didrachms current at the time of our Lord. This last observation, as Mr. Poole has suggested to the writer, is corroborated in the account of the miracle of the tribute-money, where St. Peter finds in the fish a *stater*, which he paid for our Lord and himself (Matt. xvii. 24-27). The stater of silver is a tetradrachm; the tetradrachm of that period current in Palestine had the same weight as the shekels. After the destruction of the temple, Vespasian ordered the Jews to pay tribute yearly to the capitol; the sum consisted of two drachmæ (Joseph. *Bell. Jud.* vii. 6. 6).—F. W. M.

DIDYMUS (*Δίδυμος*, a twin), a surname of the Apostle Thomas, denoting that he was a twin; and, if translated, he would be called 'Thomas the Twin' (John xi. 16). [THOMAS.]

DIDYMUS, *the blind*, a learned monk, was born at Alexandria, A.D. 308. By extraordinary diligence and a retentive memory he became one of the most learned men of his day. He was president of the catechetical school of Alexandria, and died A.D. 395, after having taught in it for upwards of fifty years. Though a violent opponent of the

Arian party, he did not escape the suspicion of heresy; and was condemned after his death at the second Nicene Council, for Origenism. Most of his works, consisting of commentaries or scholia on the Bible, and polemical writings against the Arians, Manicheans, and others, are now lost. A short explanation of the seven canonical epistles is extant, which was translated into Latin by Epiphanius Scholasticus. Lücke has partially restored the original text of this by Matthaëi's scholia. His treatise on the Holy Spirit in Jerome's Latin was published separately at Cologne, in 1531; and at Helmstadt, 1611. Three books on the Trinity were discovered by Mingarelli, and published by his brother (Bonon, 1769). The Greek work against the Manicheans was published by Combefis.—S. D.

DIETENBERGER, JOHANN, a Dominican monk, and professor of theology at Mayence, where he died in 1537. He translated the Scriptures into German—'*Biblia beider A. und N. T. new verdeutscht*,' fol. Meynz, 1534; *ibid.* 1617, 8vo, and often since. In the O. T. he borrows largely from Luther, in the Apocrypha he follows Leo Judah almost word for word, and in the N. T. Emser; so that he has contributed but little of his own, and that chiefly from the Vulgate. His style is rough and stiff; and he speaks contemptuously of the 'falsche Bibel' of the heretics, whom yet he unceremoniously copies (Fritzsche in Herzog's *Cyclop.* iii. 345).—W. L. A.

DIEU, LOUIS DE, a Dutch Protestant divine, born at Flushing, 1590. He studied under his uncle, Daniel Colonio, Professor in the Walloon College at Leyden, till he was old enough to enter on the ministry, when he became pastor to the French church at Flushing. Here he remained two years, and attracted by his preaching the notice of Prince Maurice of Orange, who would have made him court-preacher at the Hague, an office, however, which, together with that of a professor at Utrecht, he preferred to decline. In 1619, he went to Leyden to assist his uncle in the Walloon College, where he continued till his death in 1642. He was eminent for his skill in Hebrew and the kindred languages, as also in Persian, and published the Apocalypse in Hebrew and Syriac, with a Latin version and notes, Leyden, 1627, 4to. He also wrote commentaries on the O. T., the four Evangelists, the Acts, and the Epistles. Those on the O. T. and the Catholic Epistles were published together after his death, under the title of *Critica Sacra*, at Amsterdam, fol. 1693.—S. L.

DIKE (*Δίκη*), the heathen goddess of justice; described as the daughter of Zeus and Themis (Hesiod, *Op.* 266; *Theog.* 902). The punishment of murderers is particularly ascribed to her; and therefore, besides being the goddess of punishment in a general sense, she is often to be considered the same as Nemesis or Vengeance. The word occurs in Acts xxviii. 4, and is there rendered 'vengeance,' appellatively.

DIKLAH (*דִּקְלָה*; Sept. *Δεκλά*); the name of a son of Joktan, of the tribe or nation which descended from him, and of their territory (Gen. x. 27, 31). As the name in Aramaic signifies a palm tree, it has been supposed that the country colonized by the tribe must have abounded in palms.

This, however, is not necessary, as other circumstances of which we are ignorant may have given rise to the name. That section of Arabia which extends from the border of Edom along the coast of the Red Sea to Medina, was anciently called by the Syrians *Dakalah*, from its palm groves. Bochart says, and apparently with truth, that this cannot be the Diklah of the Bible, because it was inhabited by Cushites, afterwards termed Scenites or Saracens, and not by Joktanites. He would identify Diklah with the district of the *Minai*, which was also rich in palms, situated in the province of Arabia-Felix, now called Yemen (Pliny, *H. N.*, vi. 28). The Bedawin retain the name of Joktan, or as they name him Kachtan in their traditional history (D'Herbelot, *Bibliothèque Orientale*, s. v. *Arabs*), and call him 'the father of Yemen.' And there is still an Arab tribe in that region called *Duklai*, which is probably descended from Diklah, as the Arabs have always been as conservative in family names and genealogies as the Jews themselves (Forster's *Geog. of Arabia*, i. 115, 147). It seems probable, therefore, that the Diklaïtes settled in Yemen, and occupied a portion of it a little to the east of the Hejaz (Bochart, *Opp.* i. 118, sq.; Burckhardt, *Travels in Arabia*).—J. L. P.

DILEAN (דִּילְעָן; Sept. Δαλαδ; Alex. Δαλαάν), a city of Judah in the plain country (Josh. xv. 38). The word means 'place of cucumbers,' which doubtless grew abundantly in that fertile district. It has not been identified, except conjecturally by Van de Velde with Tina or Tima.—†

DILHERR, JOH. MICH., born at Themar, in the Herrenberg district, 14th Oct. 1604, was successively professor of rhetoric and history, and of theology at Jena, and of theology at Nürnberg, where also he was first preacher at St. Sebald's Church. He published *Eclogæ Sacræ N. T. Syr. Gr. et Lat., cum obs. philol., quibus præmittuntur Rudimenta Gram. Syr.*, 1638; best edit., Halle, 1646,—a valuable work, of which Hoffman says (*Gram. Syr.* p. 50):—'Concinnata est hæc institutio utilissima secundum Amire et L. de Dieu præcepta;' *Libri iii. electorum in quibus rituum tam sac. quam prof. farrago continetur, etc.*, Nürnberg, 1644. Dilherr was a sound scholar, and all he has written is valuable. He died 3d April 1669.—W. L. A.

DIMNAH (דִּמְנָה; Sept. [Alex.] Δάμνα), a Levitical city of the tribe of Zebulon (Josh. xxi. 35). It is conjecturally identified by Van de Velde with el Dâmon, a village S. S. E. from Acco (ii. 216).—†

DIMOCK, HENRY, M. A., a clergyman of the Church of England, rector of St. Edmund the King and St. Nicolas Acor's, London, and formerly fellow of Pembroke College, Oxford, is the author of two works on the text of Scripture:—*Notes on the Books of Psalms and Proverbs*, 4to, Gloucester, 1791; *Critical and explanatory notes on Genesis, Exodus, Isaiah, Jeremiah, Ezekiel, Daniel, and the Minor Prophets, together with some Dissertations on difficult passages of Scripture, etc.*, 4to, Lond. 1804. These notes are principally of a critical kind. The industry and care of the author are praiseworthy, and his collections may save the critical enquirer some trouble; but be-

yond this these works have no value. The author's judgment cannot be relied on, and his principles of textual criticism are quite unsound. A critic who gravely proposes to read כְּרוּ for בְּרוּ (Gen. i. 1), because he conceives the former may be the origin of the Greek *χάος*, and thus 'applies well to the subject,' will find few to listen to him in the present day.—W. L. A.

DIMONAH (דִּמְוֵנָה; Sept. Περμά; Alex. Δίμωνα), a border city of Judah towards Idumea (Josh. xv. 22), supposed to be the same as Dibon, which was also called Dimon ('usque hodie indifferenter et Dimon et Dibon hoc oppidulum dicitur'—Hieron.)

DINAH (דִּינָה; Sept. Δείνα), daughter of Jacob by Leah (Gen. xxx. 21), and therefore full sister of Simeon and Levi. While Jacob's camp was in the neighbourhood of Shechem, Dinah was seduced by Shechem, the son of Hamor, the Hivite chief or head-man of the town. Partly from dread of the consequences of his misconduct, and partly, it would seem out of love for the damsel, he solicited a marriage with her, leaving the 'marriage price' (see MARRIAGE) to be fixed by her family. To this Dinah's brothers would only consent on the further condition that all the inhabitants of the place should be circumcised. Even this was yielded, and Simeon and Levi took a most barbarous advantage of the compliance by falling upon the town on the third day, when the people were disabled by the effects of the operation, and slew them all (Gen. xxxiv). For this act of truly Oriental vindictiveness no excuse can be offered, and Jacob himself repeatedly alludes to it with abhorrence and regret (Gen. xxxiv. 30; xlix. 5-7). To understand the act at all, however, it is necessary to remember that any stain upon the honour of a sister, and especially of an only sister, is even at this day considered as an insupportable disgrace, and inexpressible offence, among all the nomadic tribes of Western Asia. If the woman be single, her brothers more than her father, if she be married, her brothers more than her husband, are aggrieved, and are considered bound to avenge the wrong. Hence the active vengeance of Dinah's full brothers, and the comparative passiveness of her father in these transactions. Of Dinah's subsequent lot nothing is known.—J. K.

DINAÏTES (דִּינָיִים; Sept. Δεωαίτες), one of the tribes which Asnapper brought and placed in the cities of Samaria after the deportation of the Israelites by Shalmanezzer, king of Assyria (Ez. iv. 9). In the Apocryphal 3d Book of Esdras (ii. 17) the word is translated by *κπtrau*, which is evidently a mistake. Ewald (*Gesch. des Volkes Isrl.* iii. 375) suggests that the name may be derived from the Median city *Deinaver*; 'Geographus Dennani,' says Junius (ap. Poli. *Synops.* in loc.), a statement we must leave to those who can discover its meaning, there being but one *Denna* known to geographers, and that an obscure town in Africa (Plin. *Hist. Nat.* vi. 35).—W. L. A.

DINHABAH (דִּינְהָבָה; Sept. Δεναβδ). Gese- nius suggests that this word may be compounded of דִּי 'master' (= 'place of'), and נְהָבָה 'plunder,' and it may thus signify 'den of thieves.' It is mentioned only in Gen. xxxvi. 32, and 1 Chron.

i. 43, as the native place of Bela, a king of Edom. Probably the name of his city may have been expressive of the character of his people. The site of the city is unknown; it is not even clear from Scripture whether it was in Edom. Eusebius calls it *Δαυαβὰ*, and Jerome *Damnaba*; and they both state that in their day there was a village of that name eight miles from Areopolis, on the road to Arnon (*Onomast. s. v.*)—J. L. P.

DIODATI, DOMINICO, born at Naples 1731, studied under the most distinguished men of his day, and, in 1767, published the work for which he is chiefly famous, viz., *De Christo Grace loquente exercitatio qua ostenditur Græcam linguam cum Judæis tum ipsi Christo et Apostolis nativam ac vernaculam fuisse*, in which he sought to prove that Greek was the spoken language in Palestine for two hundred years before our era, and that the original text of the N. T. was Greek and not Hebrew; of this a new edition appeared, with a preface by O. T. Dobbin, LL.B., Lond. 1843. In token of her estimation of this work, the Empress Catharine sent him a gold medal and a costly copy of the Russian codex at St. Petersburg printed in four languages. The academy of La Crusca also enrolled him among its members. He died at Naples in the beginning of the present century.—S. L.

DIODATI, GIOVANNI, a famous theologian of the Reformed Church. His family, originally of Lucca, had settled at Geneva, where he was born 1576. He became professor of Hebrew there at 21, and succeeded Beza as professor of theology, 1609. He was a rigid and uncompromising Calvinist. He is chiefly celebrated for his translation of the Bible into Italian, which was published in folio, 1603, and again with notes, 1607. It is, however, rather a paraphrase than a translation. He also undertook a French translation of the Bible, which met with considerable opposition from the clergy at Geneva, though it appeared complete with short notes, 1644. While travelling in Italy he became acquainted at Venice with Sarpi and Fulgenzio, both antagonists of the court of Rome, and they appear to have entertained the idea of attempting a religious reform in Italy, which the greater foresight of Sarpi, however, prevented them from carrying out. Diodati's theological studies were based on a sound knowledge of the biblical languages, and zealous investigations in the sacred Scriptures. He published *Les Pseaumes mis en rimes Françaises*, 1646; *Cento Salmi di Davidi tradotte in rime vulgare*, 1683. He also translated into French Sarpi's *History of the Council of Trent*. Diodati was sent by the clergy of Geneva on several missions to the reformed churches of France and Holland. He was present at the Synod of Dort, 1618 and 1619, and was one of the six divines appointed to draw up the acts of that assembly. He fully concurred in the condemnation of the Remonstrants or the Arminian party. His other works are—*Annotations in Biblia*, Geneva, fol., 1607, which were translated into English and published in London the following year; and sundry treatises, *De Fictitio Pontificiorum Purgatorio*; *De Antichristo*; *De Ecclesia*, etc. He became pastor or parish minister at Geneva 1608, and died there 1649, having retired from his professorship a few years before.—S. L.

DIONYSIUS THE AREOPAGITE, and PSEUDO-DIONYSIUS. The name of 'Dionysius the Areopagite' enlivens the scanty account of success which attended the visit of Paul to Athens (Acts xvii. 34). Nothing further is related of him in the N. T., but ecclesiastical historians record some particulars concerning his career, both before and after his conversion. Suidas recounts that he was an Athenian by birth, and eminent for his literary attainments; that he studied first at Athens and afterwards at Heliopolis in Egypt; and that, while in the latter city, he beheld that remarkable eclipse of the sun, as he terms it, which took place at the death of Christ, and exclaimed to his friend Apollonides, *ἢ τὸ θεῶν πάσχει, ἢ τῷ πασχόντι συμπασχει*, 'Either the divinity suffers, or sympathises with some sufferer.' He further details, that after Dionysius returned to Athens, he was admitted into the Areopagus; and, having embraced Christianity about A.D. 50, was constituted Bishop of Athens by the Apostle Paul himself. Syncellus and Nicephorus both record the last particular. Aristides, an Athenian philosopher, asserts that he suffered martyrdom—a fact generally admitted by historians; but the precise period of his death, whether under Trajan or Adrian, or, which is most likely, under Domitian, they do not determine. Whatever credit may be given to these traditions, the name of Dionysius is certainly interesting in a literary point of view, owing to an attempt made by some writer, in after times, to personate the Areopagite; and who contrived to pass his productions on the Christian world as of the Apostolic age, and thereby greatly influenced the spirit both of the Eastern and Western Churches. Dailé (*de Scriptis Dionysii Areopagite*, Geneva, 1696) places this Pseudo-Dionysius A.D. 420; Pearson, in the latter times of Eusebius Cæsariensis (*Vindic. par. i. c. 10*, in fine). Others have conjectured that these productions were written about A.D. 360, but not compiled till the fifth or nearly the sixth century. There have been some persons who have contended that they are the real works of the Areopagite. Among these are Claude David, a Maurist monk, in 1702; Bernard of Sept Fonds, under the name of Adrian, in 1708; and F. Honoratus, of St. Mary, a Carmelite friar, in 1720. The first uncontroverted occasion on which these suppositious writings are referred to, is in the conference between the Severians (a sect of Eutychians) and the Catholics, held in the emperor Justinian's palace, A.D. 532, in which they are quoted by the heretical party. Maximus, and other writers in the following ages, refer to them frequently. Different opinions have been held as to the real author of these productions. They were ascribed at an early period to Apollinaris, Bishop of Laodicea in the fourth century—an opinion to which the learned Cave inclines, though he thinks that Apollinaris, the son, may have been the author. He remarks that the peculiar acquirements and turn of mind of Apollinaris, the father, as described by Socrates and Sozomen, would have well qualified him to have written the *Areopagitica*. There have not been wanting instances in which suppositious works were fathered upon great names by disciples of the Apollinarian school (Leontius, *Lib. de Sect. act. viii. p. 527*).

The resemblance between the *Areopagitica* and

the writings of Proclus and Plotinus is so obvious as to afford great probability that the Pseudo-Dionysius did not write much earlier than the fifth century (Cave's *Hist. Literar. Colonizæ*, 1720, p. 142, 143; Lardner's *Works*, vol. vii. p. 371, ed. 1788; Fabric. *Bib. Bibliog.*; Herzog, *Encl. s. v.*)—J. F. D.

DIONYSIUS CARTHUSIANUS, a learned Belgian monk, born about the close of the 14th century at Ryckel, a small town in the neighbourhood of Looz, a few miles N. W. of Liege, whence he is sometimes called Dionysius à Ryckel, and sometimes Denis De Leeuwis. He passed 48 years of his life in the Carthusian monastery at Ruremonde, and by his contemplative habits won for himself the title of Doctor Ecstaticus. He died in 1471, leaving behind him so large a number of works that it has been said of him, 'tot ac tanta scriptis ut numero opusculorum præter Augustinum apud Latinos parem habuerit neminem' (Trithemius quoted by Cave, *Hist. Lit.* ii. 166). His most important biblical work is a commentary on the entire Scriptures, to the publication of which, some sixty years after his death, the members of his order were instigated by the spread of the reformed doctrines. The part first published was that which included the four gospels, and bore the title *Enarrationes pie ac erudite in Quatuor Evangelistas*, Colon. 1531, fol. The other parts speedily followed under corresponding titles, the whole forming 10 folio volumes. Several subsequent editions were published at Cologne, and the work was reprinted at Paris two or three times, and in various forms. It has been described as a prodigy of erudition. R. Simon states (*Hist. Critique du N. T.*, 487) that it is almost entirely composed of what Ryckel had read in the Fathers and in the authors who preceded him. It is not, however, a Çatena, but a continuous commentary.—S. N.

DIONYSUS. [BACCHUS.]

DIOTREPHES (Διοτρεφής, *Love-nourished*), a person who seems to have been one of the false teachers condemned by St. John in his third epistle. He appears to have been a presbyter or deacon—probably the former. He refused to receive the letter sent by John, thereby declining to submit to his directions or acknowledge his authority (3 John 9).

DISCERNING OF SPIRITS. [SPIRITUAL GIFTS.]

DISCIPLE (μαθητής), a scholar or follower of any teacher, in the general sense. It is hence applied in the gospels not only to the followers of Christ, but to those of John the Baptist (Matt. ix. 14, etc.), and of the Pharisees (Matt. xxii. 16). Although used of the followers of Christ generally, it is applied in a special manner to the twelve apostles (Matt. x. 1; xi. 1; xx. 17; Luke ix. 1). After the death of Christ the word took the wider sense of a believer, or Christian; *i. e.*, a follower of Jesus Christ.

DISCUS (δίσκος), one of the exercises in the Grecian gymnasia, being included in the *πένταθλον*, which was introduced in the 18th Olympiad (B.C. 708). The profligate high-priest Jason, in the reign of Antiochus IV., surnamed Epiphanes (B.C. 175-164) introduced public games at Jerusalem,

where he erected a gymnasium, or 'place of exercise, and for the training up of youth in the fashions of the heathens' (2 Maccab. iv. 9). He also induced even the priests to neglect their sacrifices, and hasten 'to be partakers of the unlawful allowance in the place of exercise, after the game of discus called them forth' (2 Maccab. iv. 14). The discus was a circular plate of stone or metal made for throwing to a distance, as an exercise of strength and dexterity. In the British Museum there is an excellent statue of a discobolus, or thrower of the discus, representing the position in which the discus was thrown. This is doubtless a copy of the famous work of Myron mentioned by Quintilian (ii. 13), and Lucian (*Philopseud.*, 18, Didot. ed., p. 585). There are no less than eight copies known to exist, of which the best are the one in the Villa Massimi at Rome, and the one of the Towneley Gallery already mentioned. The Massimi statue better agrees with Lucian's description; it is also doubtful whether the head really belongs to the one in the British Museum (*Towneley Gallery*, by Sir H. Ellis, K.H., vol. i., pp. 239, 240, where it is engraved). (See Dr. Smith's *Grk. and Rom. Antiq. s. v. Discus and Pentathlon*.) By metaphor the word discus, among other things, signified a flat round plate, whence the word *dish*. The word *πίναξ*, occurring in Matt. xiv. 8, 11, and Mark vi. 25, 28, is translated in the English by charger, and in the Vulgate by discus.—F. W. M.

DISEASES OF THE JEWS. The most prevalent diseases of the East are cutaneous diseases, malignant fevers, dysentery, and ophthalmia. Of the first of these the most remarkable are leprosy and elephantiasis. [LEPROSY.] To the same class also belongs the singular disease called the mal d'Aleppo, which is confined to Aleppo, Bagdad, Aintab, and the villages on the Segour and Kowick. It consists in an eruption of one or more small red tubercles, which give no uneasiness at first, but, after a few weeks, become prurient, discharge a little moisture, and sometimes ulcerate. Its duration is from a few months to a year. It does not affect the general health at all, and is only dreaded on account of the scars it leaves. Foreigners who have visited Aleppo have sometimes been affected by it several years after their return to their own country. It is a remarkable fact that dogs and cats are likewise attacked by it (Russell's *Nat. Hist. of Aleppo*, ii. 299). The Egyptians are subject to an eruption of red spots and pimples, which cause a troublesome smarting. The eruption returns every year towards the end of June or beginning of July, and is on that account attributed to the rising of the Nile (Volney, i. 231). Malignant fevers are very frequent, and of this class is the great scourge of the East, the plague, which surpasses all others in virulence and contagiousness. [PLAGUE.] The Egyptian ophthalmia is prevalent throughout Egypt and Syria, and is the cause of blindness being so frequent in those countries. [BLINDNESS.] Of inflammatory diseases in general, Dr. Russell (*l. c.*) says that at Aleppo he has not found them more frequent, nor more rapid in their course, than in Great Britain. Epilepsy and diseases of the mind are commonly met with. Melancholy monomaniacs are regarded as sacred persons in Egypt, and are held in the highest veneration by all Mohammedans (Prosper Alpinus, *De Med. Ægypt.*, p. 58).

Diseases are not unfrequently alluded to in the O. T.; but, as no description is given of them, except in one or two instances, it is for the most part impossible even to hazard a conjecture concerning their nature. The issue mentioned in Lev. xv. 2 cannot refer to gonorrhoea virulenta, as has been supposed by Michaelis and Hebenstreit (Winer, s. v. *Krankheiten*); for the person who exposed himself to infection in the various ways mentioned was only unclean until the evening, which is far too short a time to allow of its being ascertained whether he had escaped contagion or not. Either, then, the law of purification had no reference whatever to the contagiousness of the disease (which is hardly admissible), or the disease alluded to was really not contagious. Jehoram's disease is probably referable to chronic dysentery, which sometimes occasions an exudation of fibrine from the inner coats of the intestines. The fluid fibrine thus exuded coagulates into a continuous tubular membrane, of the same shape as the intestine itself, and as such is expelled. This form of the disease has been noticed by Dr. Good under the name of diarrhoea tubularis (*Study of Med.* i. 287). A precisely similar formation of false membranes, as they are termed, takes place in the wind-pipe in severe cases of croup.

Hezekiah suffered, according to our version, from a *boil*. The term here used, שחין, means literally *inflammation*; but we have no means of identifying it with what we call boil. The same may be said of the plague of boils and blains, and of the names of diseases mentioned in the 28th chapter of Deuteronomy, such as pestilence, consumption, fever, botch of Egypt, itch, scab. The case of Job, in which the term translated *boil* also occurs, demands a separate notice. [JOB.] Nebuchadnezzar's disease was a species of melancholy monomania, called by authors zoanthropia, or more commonly lycanthropia, because the transformation into a wolf was the most ordinary illusion. Esquiroi considers it to have originated in the ancient custom of sacrificing animals. But whatever effect this practice might have had at the time, the cases recorded are independent of any such influence; and it really does not seem necessary to trace this particular hallucination to a remote historical cause, when we remember that the imaginary transformations into inanimate objects, such as glass, butter, etc., which are of every-day occurrence, are equally irreconcilable with the natural instincts of the mind. The same author relates that a nobleman of the court of Louis XIV. was in the habit of frequently putting his head out of a window, in order to satisfy the urgent desire he had to bark. Calmet informs us that the nuns of a German convent were transformed into cats, and went mewing over the whole house at a fixed hour of the day (Esquiroi, *Maladies Mentales*, i. 522). Antiochus and Herod died, like Sylla, from phthiriasis, a disease which was well known to the ancients. Plutarch, in his *Life of Sylla*, mentions several names of persons who had died from it, amongst whom are Pherecydes the philosopher, Alcman the poet, and Mutius the lawyer. M. Alibert was consulted by a celebrated French academician, who complained that his enemies even pursued him into the academy, and almost carried off his pen (*Dermatoses*, i. 585). Nothing is known respecting the immediate causes of this malady; but there is no doubt that it depends on the general

state of the constitution, and must not be attributed to uncleanness. Alibert mentions the case of a person who, as soon as these animals had been destroyed, fell into a typhoid state, and shortly after died. The question of demoniacal possession, so often mentioned in the N. T., has been considered under another head [DEMONIACS], and need not be re-opened in this place [PHYSICIAN]. —W. A. N.

DISH. Different Hebrew words are thus translated in the A. V.: 1. כֶּסֶל (aug. of קֶסֶף = קֶסֶף), Judg. v. 25; 2. קֶעֶרָה, Exod. xxv. 29; Num. vii. 13, 84, 85; 3. צִלְחָה (a deep dish, from צָלַח, to *deepen or hollow*), 2 Kings xxi. 13; rendered *pans* in 2 Chron. xxv. 13. Various kinds of dishes are mentioned in Scripture; but it is impossible to form any other idea of their particular

forms than may be suggested by those of ancient Egypt and of the modern East, which have much resemblance to each other. The sites of such ancient towns as were built of sun-dried bricks are usually covered with broken potsherds, some of them large enough to indicate the form of the entire vessel. These are remarkably similar to those in modern use, and are for the most part made of a rather coarse earthenware, covered with a compact and strong glaze, with bright colours, mostly green, blue, or yellow. Dishes and other vessels of copper, coarsely but thickly tinned, are now much used in the East; but how far this may have been anciently the case we have not the means of knowing. The cut (No. 208) represents a slave bringing dishes to table; the dishes have covers, and the manner in which they are carried on the reverted hand is the mode still used

by Eastern servants. The specimens in the other cut (No. 207) are modern Oriental, and speak for themselves.

DISHON (דִּישׁוֹן; Sept. πύργαρος; A. V. *Pygarg*, Deut. xiv. 5). Under this name the *Oryx addax* may have been known to the Hebrews. It is three feet seven inches at the shoul-

der, has the same structure as others of the same group, but is somewhat higher at the croup: it has a coarse beard under the gullet, a black scalp and forehead, divided from the eyes and nose by a white bar on each side, passing along the brows and down the face to the cheek, and connected

209.

with one another between the eyes. The general colour of the fur is white, with the head, neck, and shoulders more or less liver-colour grey; but it is distinguished mostly from the others by the horns, which in structure and length assimilate with those of the other species, but in shape assume the spiral flexures of the Indian antelope. The animal is figured on Egyptian monuments, and may be the *pygarg* or *dishon*, uniting the characters of a white rump with strepsicerotine horns, and even those which Dr. Shaw ascribes to his '*lidmee*.'—C. H. S.

DISPERSION OF NATIONS. [NATIONS, DISPERSION OF.]

DISPERSION, THE (of the Jews), Διασπορά (2 Maccab. i. 27; Jam. i. 1; 1 Pet. i. 1; John vii.

35; Joseph. *Antiq.* xii. 1. 3, etc.; LXX. for נְבִינָה לְגוֹת [נְבִינָה לְגוֹת], which it also renders ἀποικία, μετοικεσία, ἀρχμαλωσία, —αρχμαλωτος) is the collective name given to all those descendants of the twelve tribes (Jam. i. 1; τὸ δωδεκάφυλον, Acts xxvi. 7) who lived without the confines of Palestine (ἐξω, 1 Cor. v. 13, etc., מדינת הים, חוצה לארץ, Mishna, Talmud) during the time of the second temple. The number of exiles, mostly of the tribe of Judah and Benjamin (Ezra i. 5, etc.), who availed themselves of the permission of Cyrus to return from their captivity in Babylon to the land of their fathers, scarcely exceeded, if indeed it reached, the number of 50,000 [the total stated both in Ezra and Nehemiah is, exclusive of the slaves, 42,360; but the sum of the items given—with slight differences—in both documents, falls short of 30,000]. Old Jewish authorities see in this surplus Israelites of the ten tribes (cf. *Seder Olam Rabbah*, ch. 29), and among these few but the lowest and humblest, or such as had yielded to force, were to be found (cf. Mishna *Kidushin* iv. 1.; Gem. lxxi. 1). The great bulk of the nation remained scattered over the wide dominions

of the Persian empire, preferring the new homes in which they enjoyed all the privileges of native-born subjects, and where they had in many cases acquired wealth and honours, to the dangers and difficulties of a recolonization of their former country. But while, by the hands of the despised minority who had bravely gone forth, was to be recreated not only the temple, the visible centre of Judaism, but also the still more imposing and important edifice of the Jewish law and Jewish culture, to the much larger section which remained behind and gradually diffused itself over the whole of the then known world, it was given to participate in the intellectual life and the progress in civilization of all the nations with whom their lot was cast. To the dispersion is thus due the cosmopolitan element in Judaism which has added so vastly not only to its own strength and durability, but also, geographically at least, to the rapid spread of Christianity. So far, however, from the dispersion paving the way for the new faith by relaxing the rigour of Jewish law, written or oral—as has been assumed by some—one of the strongest ties by which these voluntary exiles were bound to Palestine and Jerusalem consisted in the very regulations and decisions on all ritual and legal points which they received from the supreme religious authorities, either brought back by their own delegates, or transmitted to them by special messengers from the Central Court, the Synedrium (Acts xxviii. 21). Generally, it might be said of the whole diaspora, as Philo (c. *Flacc.* sec. 7) said of that of Egypt: that while they looked upon the country in which they had been born and bred as their home, still they never ceased, so long as the temple stood, to consider Jerusalem as the spiritual metropolis to which their eyes and hearts were directed. Many were the pilgrimages undertaken thither from their far-distant lands (Acts ii. 5, 9-11; Joseph. *Bell. Jud.* vi. 9. 3, etc.) The Talmud, *Jer. Meg.* iii. 75 (cf. *Tos. Meg.* c. 2), speaks of no less than 380 synagogues in Jerusalem, besides the temple, all belonging to different communities of the dispersion (cf. also Acts vi. 9). Abundant and far exceeding the normal tax of half a shekel (*Shek.* vii. 4), were the gifts they sent regularly for the support of the holy place (gold instead of silver and copper, *Tos. Shek.* c. 2), and still more liberal were the monetary equivalents for sacrifices, propitiatory offerings [*χύτρα*, Philo], for vows, etc., which flowed from all countries into the sacred treasury. The Synedrium again regulated the year, with all its subdivisions, throughout the wide circle of the dispersion; the fact that the commencement of the new month had been officially recognised being announced either by beacon-fires to the adjoining countries, or by messengers to places more remote. That, in general, there existed, as far as circumstances permitted, an uninterrupted intercourse between the Jews abroad and those in Palestine, cannot be doubted. Probably, owing to this very connection, two foreign academies only seem to have existed during the time of the second temple; the youth of the dispersion naturally preferring to resort to the fountain-head of learning and religious instruction in the Holy City. The final destruction of the temple and Jerusalem was thus a blow hardly less sensibly felt by the dispersion than by their brethren of Jerusalem themselves. From that time forward no visible centre

bound the widely-scattered members of the Jewish nation together; nothing remained to them but common memories, common hopes, and a common faith.

Foremost in the two or three chief groups into which the dispersion has been divided, stands the Babylonian (*ὑπὲρ Εὐφράτην*, Joseph. *Antiq.* xv. 3. 1), embracing all the Jews of the Persian empire, into every part of which (Esth. iii. 8)—Babylonia, Media, Persia, Lusiana, Mesopotamia, Assyria, etc.—they penetrated. The Jews of Babylonia proper prided themselves on the exceptional purity of their lineage—a boast uniformly recognised throughout the nation. What Judæa, it was said, was with respect to the dispersion of other countries—as pure flour to dough—that, Babylonia was to Judæa (Jer. Kid. vi. 1). Herod pretended to have sprung from Babylonian ancestors (Joseph. *Antiq.* xiv. 1. 3), and also bestowed the high-priesthood upon a man from Babylon (Joseph. *Antiq.* xv. 2. 4). In the messages sent by the Synedrium to the whole dispersion, Babylonia received the precedence (Synh. 11); although it remained a standing reproach against the Babylonians that they had held aloof from the national cause when their brethren returned to Palestine, and thus had caused the weakness of the Jewish state (Joma 9); as indeed living in Palestine under any circumstances is enumerated among the (613) Jewish ordinances (Nachmanides *Comm.* to Maimonides' *Sefer Hammizwoth*). The very territory of Babylonia was, for certain ritual purposes, considered to be as pure as Palestine itself. Very little is known of the history of the Babylonian diaspora; but there is no reason to suppose that its condition was, under Persian as well as under Seleucid and Parthian rule, at most times other than flourishing and prosperous; such as we find that it was when it offered Hyrcanus 'honours not inferior to those of a king' (Joseph. *Antiq.* xv. 2. 2). Of Alexander the Great, Josephus records expressly that he confirmed the former privileges of the Jews in Babylonia (Joseph. *Antiq.* xi. 8. 5), notwithstanding their firm refusal to assist in rebuilding the Temple of Belus at Babylon (Hecat. *ap.* Joseph. c. *Ap.* 1. 22). Two great cities, Nisibis in Mesopotamia, and Nehardea on the Euphrates, where the moneys intended for transmission to Jerusalem were deposited (Joseph. xviii. 9. 1, 3, 4, etc.), as was the case also at Apamea in Asia Minor, Laodicea in Phrygia, Pergamus and Adramythium in Æolis—seem to have been entirely their own, and for a number of years they appear even to have enjoyed the undisputed possession of a whole principality (l. c. 5). Great calamities, however, befell them, both about this time under Mithridates (l. c. 9), and later under Caligula, through the jealousy of the Greeks and Syrians; and at both of these epochs they emigrated in large numbers. Whether they had in those times, as was afterwards the case, a universally recognised Ethnarch at their head, is open to doubt, although Seder Olam Sutta enumerates the names of fifteen generations of such, down to the third century. The ties which linked Babylonia to Palestine were perhaps closer than in the case of any other portion of the dispersion; both on account of their greater proximity, which enabled them to communicate by beacons [Beth-Biltin being the last station on the frontiers; Rosh Hash. 2, 7], and of their common Aramaic idiom. That this dis-

persion was not without an influence on the development of the Zoroastrian religion (cf. Anquetil, Spiegel, *Intr.* to *Zendavesta*), which in its turn again influenced Judaism (and, at a later stage, Gnosticism), can hardly be doubted; at the same time, it was Babylon, which, after the final destruction of the temple, by its numerous and far-famed academies, became for a long time the spiritual centre of the Jewish race, and was the seat of the Prince of the diaspora (Resh Gelutha).

The second great and pre-eminently important group of the dispersion we find in Egypt. Of the original immigrations from Palestine (cf. Zech. x. 11), and of those which took place in the times of the last kings of Judah (Jer. xli. 17, 42), we have no more certain traces than of those under Artaxerxes Ochus (Joseph. *Ap.* 1, etc.). It was only after Alexander the Great, who first settled 8000 Jewish soldiers in the Thebais, and peopled a third of his newly-founded city Alexandria with Jews, and Ptolemæus, the son of Lagus, after him, who increased the number of Egyptian Jews by fresh importations from Palestine, that the Egyptian dispersion began to spread over the whole country, from the Lybian desert in the north to the boundaries of Ethiopia in the south (Philo c. *Fl.* ii. 523), over the Cyrenaica and parts of Lybia (Joseph. *Antiq.* xvi. 7. 2), and along the borders of the African coast of the Mediterranean. They enjoyed equal rights with their fellow-subjects, both Egyptian and Greek [*ἰσοπολιτεία*] (Joseph. *Ap.* ii. 4, etc.), and were admitted to the highest offices and dignities. The free development which was there allowed them enabled them to reach, under Greek auspices, the highest eminence in science and art. Their artists and workmen were sent for to distant countries, as once the Phœnicians had been (Joma 3. 8, a.; Erach. 10, b.). In Greek strategy and Greek statesmanship, Greek learning and Greek refinement, they were ready disciples. From the number of Judæo-Greek fragments, historical, didactic, epic, etc. (by Demetrios, Malchos, Eupolemos, Artapan, Aristæos, Jason, Ezechielos, Philo the Elder, Theodot, etc.; collected in Müller, *Fragm. Hist. Græc.* iii. 207-230), which have survived, we may easily conclude what an immense literature this Egyptian dispersion must have possessed. To them is owing likewise the Greek translation of the Bible known as the Septuagint, which, in its turn, while it estranged the people more and more from the language of their fathers, the Hebrew, gave rise to a vast pseudo-epigraphical and apocryphal literature (Orphica, Sybillines, Pseudophoclea; poems by Linus, Homer, Hesiod; additions to Esther, Ezra, the Maccabees, Book of Wisdom, Baruch, Jeremiah, Susannah, etc.) Most momentous of all, however, was that peculiar Græco-Jewish philosophy, which sprang from a mixture of Hellenism and Orientalism, and which played such a prominent part in the early history of Christianity. The administrative government of this Egyptian or rather African dispersion, which, no less than all other branches, for all religious purposes looked to Jerusalem as the head, was, at the time of Christ, in the hands of a Gerousia (Succah. 51, b.; Philo c. *Fl.* ii. 5, 28), consisting of seventy members and an Ethnarch (Alabarch), chosen from their own body, of priestly lineage. These sat at Alexandria, where two of the five divisions of the city, situated on the Delta (the site best adapted for navigation and commercial purposes), were occupied exclusively by Jews

(Joseph. *Antiq.* xiv. 7. 2). Of the splendour of the Alexandrine temple, there is a glowing account in *Jerus. Suk.* 10. 6., and when, in consequence of the Syrian oppression in Palestine, Onias, the son of the last high-priest of the line of Joshua, had fled to Egypt, where Ptolemy Philometor gave him an extensive district near Heliopolis: a new temple (Beth Chonjo) had arisen at Leontopolis (Joseph. *Antiq.* xiii. 3. 2, f.), 180 B.C., which bade fair to rival the temple of Jerusalem. Such, indeed, was the influence of the Jews in Egypt, whom Philo (c. *Fl.* 6) in his time estimates at a million, that this new temple was treated with consideration even by the Synedrium (*Menach.* 109, a.) Their condition, it may easily be inferred, was flourishing both under the Seleucidian and Roman sway, but under Caligula, and still more under Nero (Joseph. *Bell. Jud.* ii. 18. 7), they, like their brethren in other parts of the Roman empire, suffered greatly from sudden outbursts of the populace, prompted and countenanced, in some instances, by their rulers. From Egypt the diaspora spread southwards to Abyssinia, where some remnants of it still exist under the name of the Falasha, and in all likelihood eastwards to Arabia (Mishna, *Shab.* 6. 6), where we find a Jewish kingdom (Yemen) in the south (Tabari ap. Silv. de Sacy *Mem. de l'Acad. d. Inscr.* T., 78), and a large Jewish settlement (Chaibar) in Hedjaz in the north.

Another principal section of the dispersion we find in Syria, whither they had been brought chiefly by Sileucus Nicator or Nicanor (*Antiq.* vii. 3. 1), when the battle of Ipsos (301 B.C.) had put him in possession of the countries of Syria Proper, Babylonia, Mesopotamia, Persia, Phœnicia, Palestine, etc. Under his and his successors' fostering rule they reached the highest degree of prosperity (*l.c.*), principally at Antioch on the Orontes, and Seleucia on the Tigris, and other great cities founded by Seleucus; and the privileges which this king had bestowed upon them were constantly confirmed up to the time of Josephus (*Antiq.* xii. 3. 1). Antiochus Epiphanes, or Epimanes, as he was called, seems to have been the only Syrian potentate by whom the Syrian dispersion was persecuted; and it was no doubt under his reign that they, in order to escape from his cruelty, began to emigrate in all directions—to Armenia, Cappadocia (Helena, the Jewish Queen of Adiabone, Joseph. *Antiq.* xx. 2), Cyprus, and over the whole of Asia Minor; Phrygia and Lydia alone possessed Jewish colonies of a previous date, planted there by Antiochus the Greek (Joseph. *Antiq.* xii. 3. 4). Hence they dispersed themselves throughout the islands of the Ægean, to Macedonia, to Greece, where they inhabited chiefly the seaports and the marts of trade and commerce.

Although, to use the words of Josephus (*Antiq.* xiv. 7. 2), the habitable globe was so full of Jews that there was scarcely a corner of the Roman empire where they might not be found—a statement fully confirmed by the number of Roman decrees issued to various parts of the empire for their protection (Joseph. *Antiq.* xiv. 10, *seqq.*)—there is yet no absolute proof of their having acquired any fixed settlements in the metropolis itself, anterior to the time of Pompey, who, after the taking of Jerusalem, carried back with him many Jewish captives and prisoners to Rome (Joseph., 63 B.C.) These being generally either allowed to retire from the service or ransomed, remained there as *Libertini*,

and in time formed, by the addition to their number of fresh immigrants from Asia and Greece, a large and highly influential community, which occupied chiefly the Transtiberine portion of the city, together with an island in the Tiber. Their prosperity grew with their numbers, and suffered but short interruptions under Tiberius (Suet. in *Tib.* c. 36). [The expulsion under Claudius (Suet. in *Cl.* 25) and Caligula (Joseph. *Antiq.* xviii. 6) is contradicted (Dio. Cass. 60. 6; Orosius 7. 6.)] They built numerous synagogues, founded schools (even a—short-lived—academy), made proselytes, and enjoyed the full privileges of Roman citizens. In the decrees they are styled *πολίται Ρωμαίων*, *πολίται ἡμέτεροι Ἰουδαίον*, Joseph. *Antiq.* xiv. 10. The connection between the Roman dispersion and Palestine was very close, especially so long as the young princes of the Herodian house were, in a manner, obliged to live in Rome. There is no doubt that to the influence of this powerful body, whose number, origin, strange rites and customs, attracted no small share of public notice (Tacitus, Sueton. Cicero, Juven. Horace, Martial, Justin. etc. etc., *passim*), and to their access to the Imperial Court was due the amelioration of the condition of the Jewish people throughout every country to which the sway of Rome extended. It was also through Rome chiefly, both before, and still more after, the final destruction of Jerusalem, that the stream of Jewish emigration was poured over the greater part of Europe. Of the world-wide influence of the Jewish dispersion on Christianity, which addressed itself first of all to the former as a body (Acts xiii. 46; ii. 9, 11), farther mention will be found under the special article JEWIS. See also CAPTIVITIES; ALEXANDRIA; ROME.—E. D.

DIVINATION, or the art of forecasting the future and discovering the unknown, has been resorted to by all nations, under all degrees of religious gift and civilisation, with remarkable pertinacity. The curiosity of mankind has devised numberless methods of accomplishing the art. By a perversion and exaggeration of the sublime faith which sees God everywhere, men have laid everything, with greater or less ingenuity, under contribution, as means of eliciting a *divine* answer to every question of their insatiable curiosity; e.g., the portents of sky, and sea, and earth (Plutarch, *de Superstit.*; Homer and Virgil, *passim*); the mysteries of the grave (*νεκρομαντεία* and *σκιομαντεία*); the wonders of sleep and dreams (emanations as they were thought to be from the gods) (comp. *Iliad*, i. 63; *Hecuba*, 70; *Æneid*, v. 838; Homer, *Hymn. in Mercur.* 14, etc.); the phenomena of victims sacrificed (in which the deities were supposed to be specially interested and near at hand; comp. the facts of the *λεπομαντεία* in Potter's *Gr. Antiqq.* ii. 14); the motions and appearances of the animal creation (such as the flight of birds—a copious source of superstition in the *ὀρνιθοσκοπία* of the Greeks and the *Aurugium* of the Latins—and the aspect of beasts); and the prodigies of inanimate nature (such as the *ἐνθία σύμβολα*, omens of the way, upon which whole books are said to have been written; the *κληθδὸνες*, ominous voices; and the long list of magic arts, which the reader may find in Hoffmann's *Lexicon*, ii. 87; Potter, ii. 18, and *Occult Sciences* in *Encycl. Metropol.* Part v., which contains some thirty names compounded of *μαντεία*, all

branches of the magic art). Nor have these exponents of superstition been confined to one age or a single nation. The meteoric portents, for instance, which were used to excite the surprise and fear of the old Greeks and Romans, are still employed among the barbarians of Africa (comp. the *Muansa* of the Wanika; Dr. Krapf's *Missionary Travels in E. Africa*, p. 165, etc.); and if the ancients read fearful signs in the faces of animals:

Obscenique canes, importunæque volucres
Signa dabant; *Georgic*, i. 469, 470.

the savage Bakwains indicate the presence of the terrible alligator with their *boleo hi bo* ('there is sin'), as if the sight of it would give their eyes some physical evil (see Dr. Livingstone's *Missionary Travels in S. Africa*, p. 255). The manifold processes of the divining art were summed up by the logical Greeks and Romans into two great classes, one of which they called *ἀρεχρος*, *ἀδιδάκτος*, *naturalis*; i.e., unartificial, as not being attained by any rules or observations, but inspired into the diviner or *μάντις* by a power external to himself; the other species was *τεχνηκή* or *artificial*; because it was not obtained by immediate inspiration, but was the effect of observation and sagacity, or depended chiefly on human art (Potter, ii. 7; Bacon, *De Augment. Scient.* iv. 3—Ellis and Spedding, iv. 399). This division is Plato's, who is followed in it by Aristotle, Cicero, and Plutarch. Cicero, in his definition, consistently embraces both kinds of Divination, calling it 'a presaging and knowledge of things to happen'—*presensio et scientia rerum futurarum* (*De Divinatione*, i. 1, 1; in the *De Nat. Deorum*, ii. 65, he employs the word *prædictio*). Plato's definition as *ἐπιστήμη προσηλατικὴ πράξεως, ἀνε ἀποδείξεως*, 'the science which is presignificant of any event, but without the demonstration of reason,' seems to exclude the whole of the *τεχνηκή* or artificial kind of divination. There were many reasons why men of higher and purer intellects, like Plato, should look only to the *divine* side of the predictive art; its *human* side was miserably disfigured with the most grovelling artifice and superstition. Cicero labours to clear away the evils with which this 'grand and wholesome subject—*magnifica quidem res et salutaris*,' was overlaid, and refers the entire power and origin of divination, even in its technical aspect, to the gods; he expresses his own belief in it, thus purified of its dross ('hoc non dubitans dixerim . . . esse certe divinationem,' *De Divin.* i. 55), and asserts for it a universal reception among men; 'It is derived,' he says, 'from the age of heroes, and is not only entertained by the Romans, but confirmed by the consent of all nations.*' Elevated, however, as were the great Roman's views of divination, his field of vision was too circumscribed for him to exclude from it

the very functions which led to all the evils he deplored: 'Est profecto divinatio, quæ multis locis, rebus, temporibus apparet . . . multa enim aruspices, multa augures provident, multa oraculis providentur, multa vaticinatumibus, multa somniis, multa portentis' (*De Nat. Deor.* ii. 65). In this respect how remarkable is the contrast afforded in the inspired words of the Hebrew law-giver! 'There shall not be found among you any one . . . that useth divination, or an observer of times, or an enchanter, or a witch, or a charmer, or a consulter with familiar spirits, or a wizard, or a necromancer; for all that do these things are an abomination to the LORD' (*Deut.* xviii. 10-12). Not that the desire to know the future, so natural to man, was wrong in itself; rather it was an instinct to be satisfied. Only the satisfaction was to be prescribed by God himself: 'The LORD thy God will raise up unto thee a *Prophet* from the midst of thee, of thy brethren, like unto me; unto him ye shall hearken' (*Ibid.* v. 15). Here is the impassable limit between human capacity and Divine gift. The unerring solution of the future was never put within the attainment of man's unaided intellect; God reserved it as his own prerogative. Cicero stated the problem clearly enough—'Si unum aliquid ita sit prædictum præsensumque, ut quum evenierit, ita cadat ut prædictum, neque in eo quidquam casu et fortuito factum esse appareat' (*De Divin.* i. 65); but he failed to discover anywhere a trustworthy solution, because it was not given him to search within the precincts of inspiration. With heavy heart he ends his still beautiful treatise with these striking words: 'Ut vere loquamur, superstitio fusa per gentes oppressit omnium fere animos, atque hominum imbecillitatem occupavit. The truth must be confessed, the superstition which has spread through the nations has well nigh oppressed the minds of all, and has laid firm hold on the feebleness of mankind' (*De Divin. sub finem*). Lord Bacon well explains the radical defect of divination in his *Essay on Superstition* (xviii. Whateley, p. 154), where he describes it as 'the taking an aim at Divine matters by human, which cannot but breed mixture of imaginations.' The history of divination presents a uniform result everywhere. The human mind revelling in superstitious imaginations loses the ballast of purity, probity, and piety.

Of the many instances of divination which occur in Holy Scripture, some must be taken in a *good sense*. These have accordingly been classed by J. Christopher Wichmannshausen (*Dissert. de Divinat. Babyl.*) as truly 'Divine.' It will be convenient to consider them first. (1.) The class which meets our view at the outset is designated in Greek *κληρομαντεία*, *divination by lot*. This mode of decision was used by the Hebrews in matters of extreme importance, and always with solemnity and religious preparation (*Josh.* vii. 13). The land was divided by lot (לֹוֹרָה, *κληροί, sors*); *Num.* xxvi. 55, 56; *Josh.* xiv. 2). Achan's guilt was detected by lot (*Josh.* vii. 16-19). Saul was elected king by lot (1 *Sam.* x. 20, 21). And, more remarkable still, St. Matthias was chosen to the vacant apostleship by solemn lot, and invocation of God to guide the decision (*Acts* i. 26). This solemnity and reverence it is which gives force to such passages as *Prov.* xvi. 33; xviii. 18.

* Cicero's statement of the origin of the various branches of divination in *different* nations (*De Divin.* i. 1, 2) may be compared with the still more copious distribution given by Gregory Nazienzen (*Works, ed. Bened.* ii. 137). See also Pliny, *Nat. Hist.* vii. 56. Long previously Herodotus (ii. 82) had said: 'The Egyptians discovered more *prognostics* (τέρατα) than all the rest of mankind besides . . . and with respect to divination (*μαντική*) they hold that it is a gift which no mortal possesses, but only certain of the gods.'

(See S. Augustin, *de Doctr. Christ.* i. 28; Thom. Aquin. ii. 2, *qu.* 95, *art.* 8). (2.) Under this process of **גִּזְרֵל** or *lot*, were appointed the interesting ordinances of the scape-goat and the goat of the sin-offering for the people (Lev. xvi. 8-10). (3.) Some instances of what the Greeks technically called *δνειρομαντελα*, require a place in our category of *heavenly divination*. The interpretation of Pharaoh's dreams by the divinely-gifted Joseph (*Gen.* xii. 25-32); and the retracing and interpretation of those of Nebuchadnezzar by the inspired prophet (*Dan.* ii. 27, etc., and again iv. 19-28), as opposed to the diviners of false dreams in *Zech.* x. 2, are very prominent cases in point; and still more, the *dreams themselves* divinely sent [as those in *Gen.* xx. 6; *Judg.* vii. 15; *1 Kings* iii. 5; so those in *Matt.* i. 20; ii. 12, 13, 19, 22], must be regarded as instances of divination in a good sense, a heavenly *δνειρομαντελα* (comp. Mohammed's *dicta*; 'Good dreams are from God; ' Good dreams are one of the great parts of prophecy.' Lane's *Arab. Nights*, i. 68). This is clear from *Num.* xii. 6 (where *dreams* [to the sleeping] and *visions* [to the awake] are expressly mentioned as correlative divinations authorised by God), compared with *1 Sam.* xxviii. 6. In this latter ver. there occur two other means of divination, which we mention under the next two heads. (4.) The *Urim and Thummim* (*Num.* xxvii. 27), which seem to have had the same relation in true divination, which the *Teraphim* had in the idolatrous system. (See *Hos.* iii. 4, and *URIM and THUMMIM*.) (5.) The *Bath-Kol* (**בַּת קוֹל**), or direct vocal communication) which God vouchsafed especially to Moses (See *Deut.* xxxiv. 10). Various concomitants of revelation were employed by the Deity; as the *Rod-Serpent* (*Exod.* iv. 3); the *Leprous-Hand* (*ver.* 4); the *Burning Bush* (*iii.* 4); the *Plagues* (*vii.-xii.*); the *Cloud* (*xvi.* 10, 11); but most instances are without phenomena (*Deut.* iv. 15; *1 Kings* xix. 12, 13, 15, and perhaps *Matt.* iii. 13). This, the true Bath-Kol, must not be confounded with the fabulous one of the Rabbis, which Dr. Lightfoot calls 'a fiction of their own brain to bring their doctors and their doctrines into credit' (*Harm. Gosp.*; *Works* iii. 132); nor yet with the *παρρηρησις ὀδῶων*, the human voice (referred to in Smith's *Bibl. Dict.* Divination [7]). See *BATH-KOL*. (6.) The *Oracles*; first, of the Ark of the *Testimony* or *Covenant* (**אֲרוֹן הָעֵדוּת**), described in *Exod.* xxv. 22, and *1 Kings* vi. 16-31 (Cfr. *Ps.* xxviii. 2); secondly, of the *Tabernacle* of the *Congregation* or *Testimony* (**אֲתֵל הָעֵדוּת**), described in *Exod.* xxix. 42, 43. [In the account of the Temple, both in *1 Kings* vi., and 2 *Chron.*, the word **דְּבִיר** is used fifteen times to designate the 'Oracle'; i.e., the Holy of Holies (see *1 Kings* vi. 16), in which was placed the Ark of the *Covenant* (*ver.* 19); whose golden cover, called the *Mercy-seat*, was the actual *situs oraculi*.] (7.) The *Angelic Voice*, **דְּבַר בְּלִיאָה** (e.g., *Gen.* xxii. 15; *Judg.* xiii. 3, 13). (8.) The *Prophetic Institution* **נְבוּאָה**, see Buxtorf, *Lex. Rab.*, s. v. This was the most illustrious and perfect means of holy divination (as the *oracular* system in the heathen world was the

most eminent perversion and imitation of it;) and was often accompanied with symbolical action (*2 Kings* xiii. 17; *Jer.* li. 63, 64). We may learn the importance of the place it was designed to occupy in the Theocracy as a means of divination, by the express contrast drawn between it, on the one hand, and the divinations of idolatry on the other. *Comp.* v. 14 with v. 15, of *Deut.* xviii. (See Michaelis' *Larus of Moses*, *Art.* xxxvi.) Under this head of Prophecy we must of course include the **הִרְתָּ הַקְּנִישׁ**, as the Jews call the *Inspiration of the Holy Spirit* (comp. Nicene Creed, 'Who spake by the Prophets.') The Scriptures of the O. T. are most suitably called '*oracles*,' **ὀράκια** Θεοῦ in the N. T. (See *Acts* vii. 38; *Rom.* iii. 2; *Heb.* v. 12; *1 Pet.* iv. 11.) Such are the chief modes of divine communication to men, or inspired divination: they are referred to in *Heb.* i. 1, *πολυμέρως καὶ πολυτρόπως πάλαι ὁ Θεὸς λαλῆσας τοῖς πατέράν.* The antithesis points to the Son of God as the Ultimate Oracle [the *Logos* of St. John], the fulfiller of the promise, which Moses gave when he prohibited all spurious divination. (9.) Before we close our notice of divination in a good sense, we must adduce two instances of the word **קֶסֶם**. Of the thirty-one occurrences of this expressive term in the O. T., no less than twenty-nine bear an evil meaning. In *Prov.* xvi. 10, and *Is.* iii. 2, we claim for it a good sense. In the former of these passages the noun **קֶסֶם** (*LXX.* *μαρτεῖον*; *Vulg.* *Divinatio*), is rendered in A. V. *A divine sentence* [*Marg.* *Divination*]; and denotes '*sagacitas qualis divinantium*' (*Poli Synops. in loc.* Melancthon, as quoted by Bishop Patrick *in loc.*, refers to the acute wisdom of Solomon, in his celebrated judgment, and of Gonzaga, in his sentence on the governor of Milan, as instances of this **קֶסֶם**; we might add the case supposed by Solomon himself of the sagacious poor man who successfully defended the city against the mighty invader, *Ecl.* ix. 15). In *Is.* iii. 2, the word occurs in the *Poel* form, **קֶסֶם** (*στοχαστής*; *ariolus*), and is rightly rendered in A. V. *prudent*; the company in which the term is found requires for it a good signification.

We now proceed to enumerate the phrases which indicate the *forbidden* cases of Divination. Allusion has already been made in the commencement of this art. to *Deut.* xviii. 10-12. As these verses contain the most formal notice of the subject, we will first take the seven or eight kinds of diviners there denounced in the order in which they are mentioned. (1.) At the very outset we encounter in the phrase **קֶסֶם קְסָמִים** (*LXX.* *μαρτυβόμενος μαντελων*; *Vulg.* *Qui ariolos sciscitatur*), the same word which we have just noticed in a good sense. The verb **קָסַם**, like the Arabic

قسم primarily signified to *cleave* or *divide* (*Meier, Hebr. W.w. buch*, 344; *Fürst, Hebr. Wörterb.* ii. 322; *Hottinger, Lexicon Heptagl.* 44 1), thence it acquired the sense of *deciding* and *determining*; and became a generic phrase for various kinds of divination. Rabbi David de Pomis says: — 'It is a word of large signification, embracing many specific senses, such as *γεομαντελα*, *νεκρομαντελα*, *δνομαντελα*, *χειρομαντελα*, and others.'

Maimonides (in his treatise הלכות עבודת כוכבים וכי, cap. xi. sec. 6), includes besides these methods γαστρομαντεία, λθρομαντεία, and καρομαντεία; and Raschi (on Deut. xviii. 10) makes דסק mainly concerned with the process of βαβδομαντεία. Amid the uncertainty arising from this generic sense of the word, the LXX. has rendered it by the general phrase μαρτυροῦσθαι μαντείας; wherein it is followed by the Targum of Jonathan as well as by the Syriac and Arabic versions. (J. Clodius, *Dissert. de Magia Sagittar.* i. 5; and Wichmannshausen, *Dissert.* i. 4.) The word is used of Balaam (Josh. xiii. 22); of the Philistine soothsayers (1 Sam. vi. 2); of the Hebrew false prophets (Micah iii. 3, 6, 7, 11, and in other passages), without specifying any mode of divination. We therefore regard this as a general phrase introductory to the seven particular ones which follow. [The absence of the copulative $\kappa\alpha\iota$, which is prefixed to every other word but מעוני confirms this view.]

(a) מעוני. This word is variously derived and explained. In our A. V. it is, in six out of ten times of its occurrence as a verb or part. poel. rendered 'observer of times,' comp. Luther, *Tagewähler* (as if from $\text{מְעוּנֵי} \text{tempus statutum}$. Fuller, *Misc.* SS. i. 16, after Raschi.) The idea is—the assigning certain times to things, and distinguishing by astrology lucky from unlucky days—and even months (as when Ovid [*Fasti*] says; *Mense malum maio nubere vulgus ait*) and years (Maimonides, *Havoda Sara*, cap. 9; Spencer, *De Leg. Hebr.* i. 387). It is not necessary to refer Gal. iv. 10 to this superstition; the Mosaic institution of sacred seasons is itself there prohibited, as being abrogated to Christians (Selden, *De Ann. Civil. Vet. Jud.* c. 21, and Alford *in loc.*) The LXX. version by the verb and part. κληδονίζεσθαι (in four places) and the noun κληδονομῆς (in two others) refers to divination by words and voices [Suidas: κληδονομοί, αἱ διὰ τῶν λόγων παρατηρήσεις]. Festus derives *omen* itself, quasi *orem*, because it proceeds from the mouth, *quia fit ab ore*. Words of ill omen (δυσφημιαί, which Horace calls *malè ominata verba* and Plautus *obsœcœnata* [prob. obsœcœvata] were exchanged for *bona nomina*, as when Cicero reported to the Senate the execution of Lentulus and others by the word 'vixerunt,' they have ceased to live, instead of 'mortui sunt,' they are dead. So Leotyches embraced the omen of Hegesistratus (Herodot. xi. 91). Hebrew instances of this observing of words occur in Gen. xxiv. 14, and 1 Sam. xiv. 9, 10, where a divine interposition occurred; in 1 Kings xx. 33, the catching at the word of the king of Israel was rather a human instinct than a παρατήρησις in its proper [superstitious] sense. Akin to and arising from this observance of verbal omens, arose the *Sortes Homericæ, Virgilianæ, Biblicæ*, etc. The elevation of Severus is said to have been foretold by his opening at Virgil's line, *Tu regere imperio populos, Romane, memento*. Most remarkable were the responses which it is said Charles I. and Lord Falkland, obtained, when they consulted their Virgils before the civil war. The former opened *Æneid* iv. where Dido predicts a violent death to Æneas, while the latter chanced upon *Æneid* xi., at Evander's lamentation over his son. According to Nicephorus Gregoras the *Psalter* was the best book for the *Sortes Biblicæ*, but Cedrenus informs us, that the *N. T.* was more

commonly used. This superstition became so rife that it was necessary to denounce it from the pulpit as forbidden by the divine precept—'Thou shalt not tempt the Lord thy God.' The Moslems consult the Koran in similar manner, but they take their answer from the seventh line of the right-hand page. (See *Occult Sciences*, 332.) Another origin for מעוני is found by some in the noun עין the eye, which root occurs once only (1 Sam. xviii. 9) as a verb, 'Saul eyed David.' This derivation would point to *fascination*, the Greek βασκανία and the Latin *fascinum*. Vossius derives these words from φάσει *kalveu* to kill with the eyes. Pliny [Holland's trans., i. 155] says: 'Such like these are among the Triballians and Illyrians, who with their very eyesight can witch (effascinate) yea, and kill those whom they looke wistly upon any long time.' (Cfr. Aul. Gell. ix. 4, 8; Plutarch, *Sympos.* v. 7.) Reginald Scot speaks of certain Irish witches as 'eyebiters' (*Discovery of Witchcraft*, iii. 15). Whole treatises have been written on this subject, such as the *De Fascino* by the Italian Vairus in 1589; the *Opusculum de Fascino* by Gutierrez, a Spaniard, in 1593, and the *Tractatus de Fascinatione* in 1675 by a German physician called Frommann. (See also Shaw, *Trav.* p. 212.) In Martin's *Description of W. Isles of Scotland* 'Molluka beans' are mentioned as amulets against fascination. Dallaway (*Account of Constantinople* as quoted in *Occult Sciences*, 210) says that 'nothing can exceed the superstition of the Turks respecting the evil eye of an enemy or infidel. Passages from the Koran are painted on the outside of houses, etc. etc., to divert the sinister influence.' Hottinger (quoted by Nicolai, *on Sigonius*, v. 9, note f.) defines עינים אורו as what would now be called a *mesmerist*, 'qui velocitate manuum ita fascinat spectatorem ut existimet magna solertia eum efficere miracula,' and accounts for the prohibition in Deut. xviii. 10—'quòd facile homines cum veris confundant miraculis, adeoque ad Atheismum viam sternant.' But the derivation of מעוני which finds most favour with modern authorities deduces the word from ענן a cloud, so that the diviner would

ply his art by watching clouds, thunders, lightnings (Meier, *Hebr. Wurzel*, *zv. b. v. 6*, p. 92; Fürst, *H. Worterb.* ii. 167, who, however finds room for all the derivations; and Gesenius, s. v., ענן, leans to the figurative sense of *to cloud*, viz., *to use covert arts*). Rosenmüller, *Scholia in Levit.* xix. 26, follows Aben Esra, who thinks this diviner obtained his omens from observation of the clouds. The notion that the terms קדם east, ארר west, ימין south, צפואל north, were derived from the position of the *Planetarius* as he faced the east, taking his celestial observations (Goodwin's *Moses and Aaron*, iv. 10) is rejected by his annotator Carpov as a *putida hariolatio*! Jeremiah (x. 2) clearly refers to this divination, which had its counterpart in Greek and Latin literature (e.g., in *Iliad* ii., Nestor says 'Αστράπτων ἐπὶ δεξιῇ ἐναλωμοῖα σήματα φάλωω, right-hand flashes being lucky. (See also Odyssey δ . 304.) Diodorus Siculus (vol. iii. p. 340, ed. Bipont.) mentions the *κεραυοσκομία*, and the $\alpha\iota \epsilon\nu \tau\omicron\iota\varsigma \kappa\epsilon\rho\alpha\nu\omicron\iota\varsigma \delta\iota\omega\sigma\mu\epsilon\iota\alpha$ of the Etrurians. (Comp. 'fulguratores—hi fulgurum inspectores,' *Cato de Mor. Claud. Neron*; Nonius lxi. 21; Cicero *de Div.* ii. 53. [In Orelli 2301, *fulgurator*.] Pliny, in ii. 43, treats of the *physical*, and in ii. 54 of the *ocular* qualities of thunder, lightning, etc.; as

does L. A. Seneca in *Natur. Quæst.* ii. 41. Statius mentions the winds for purposes of divination (*Thebaid.* iii. 512-538). See Humboldt, *Kosmos*, ii. 135, for the probable scientific adaptations by the Etrurians of their divining arts.) To this class must we refer 'the astrologers' (הַכּוֹרֵי שְׁמַיִם here only found); 'the star-gazers or rather star-prophets' (הַחֹזֵי בַכּוֹכָבִים); and 'the monthly prognosticators,' or rather they that make known at the new-moons what will happen to thee (מּוֹדִיעִים לְחַדְשֵׁים) כִּי־אֵשֶׁר יבֹאֵר עֲלֶיךָ. See Rosenmüller in *loc.*) which are all mentioned in the sublime challenge of God to the Chaldee sorcerers, in Isa. xlvii. 13. Astrology retained a long hold even on the minds of astronomers; e. g., Stöffler from its evaluation predicted a deluge for 1524; Cardan his own death; Wallenstein was a great amateur of astrology; Tycho Brahé studied and practised it; so did Morinus; Kepler supposed that the planets by their configurations exercised certain influences over sublunary nature; Lord Bacon, moreover, thought that astrology needed only to be reformed, not rejected. (Arago, *Pop. Astron.* [by Smyth and Grant] ii. 8; Brewster, *Martyrs of Science*, 150, 211.)

(b.) The next word in our list (Deut. xviii. 10) is קַנְהָשׁ 'an Enchanter,' (LXX. *οἰωνίζομενος*. Vulg. *Qui observat auguria*). In Gen. xlv. 5, 15, this somewhat general word is used of divining by the cup; the Greek *κυλικομαντεία*. Primatively this was the drinking cup which contained the libation to the gods (Potter). This divination prevailed more in the East and in Egypt. The LXX. *κόνδυ*, used to designate Joseph's cup, resembles both the Arabic

كُؤْدُن and the Hindu *kundi*, sacred chalice (Schleusner, *Lex. V. T.* s. v.; Kitto, *Bib. Illus.* i. 424). One of the Assyrian kings, in the sculptures from Nimroud, holds a *divining cup* in his right hand. The famous cup of Djemscheid which is the constant theme of the poetry and mythology of Persia, was said to have been discovered full of the elixir of immortality, while digging to lay the foundation of Persepolis. It possessed the property of representing the whole world in its concavity, and all things good and bad then going on it. Homer describes Nestor's cup in similar manner; and Alexander the Great had a mystic cup of a like kind. In the storming of Seringapatam the unfortunate Tippoo Saib retired to gaze on his divining cup; after standing a while absorbed, he returned to the fight and soon fell. The 'great magicien' Merlin's cup is described (Spenser's *Faerie Queene*, iii. 2. 19) 'Like to the world itself, it seem'd a world of glass.' In Norden's Travels in Egypt, and Capt. Cook's voyages, the use of divining cups in modern Nubia and at Tongataboo, one of the Friendly Islands, is mentioned. The orientals ascribe much of Solomon's wisdom to his possession of a sacred cup, a *Giamshid*, or vase of the sun. (D'Herbelot, s. v. *Giam*; *Occult Sciences*, 317.) The supposed virtues of the divining cup in the East probably suggested the language of, e. g., Psalm xvi. 5—'The Lord is the portion of my cup;' xxiii. 5—'My cup runneth over,' etc. (Bonomi's *Nineveh*, etc., p. 306.) But the versions of the LXX. and Vulgate give quite a different turn to our מִנְהָשׁ, and point to that part of the augural art which consisted of *omens from birds* [ὄρνιθομαντεία, οἰωνισμός, ὄρνιθοσκοπική]. The

Syriac and Arabic versions favour this view [= augurari ab animali *alato*]. Birds in their flight over the earth were supposed to observe men's secret actions, and to be cognisant of accidents, etc. [Cfr. Eccl. x. 20]. Aristophanes (Birds) says, οὐδὲις οἶδε τὸν θρασυαῦρον τὸν ἐμὸν, πλὴν εἰ τις ἀπ' ὄρνις, none but some bird perhaps knows of my treasure: so that the birds assume prerogatives of deity; ἐσμεν δ' ὑμῖν Ἄμμων, Δελφοί, Δωδώνη, φοῖβος Ἀπόλλων, we are as good as oracles and gods to you, etc. The notes, the flight, and the feeding of birds were the main phenomena. [Augur, ab *avium garritu*; auspex auspiciam ab *avibus speciebundis*; Bochart, *ed. Leusd.* ii. 19.] Homer is full of this divination, *Il.* ὦ. 310; *Od.* δ. 160, et passim. So the Latin classics, see Servius, *Virg. Æn.* iii. 361 ('aves *oscines, præpetes*'); also Cicero, *Fam.* vi. 6, 13; *De Divin.* ii. 72, etc., and *Liv.* x. 40 (*tripudium solistimum*). For qualities of various birds, see Potter, xv. and *Occult Sciences* 142, 143. This divination was much in vogue in the East also; so Cicero (*de Div.*) 'Arabes *avium significationibus plurimum obtemperant*.' So Philostratus (*Vit. Apollon.* i. 14) speaks of this, as τὸν Ἀράβιον τρῶπον. Porphyrius (*De Abst. Animal.* iii.) says Ἀραβες κοράκων ἀκούουσι. Rabbinical doctors discover *augury* among king Solomon's attainments, in such passages as Eccl. x. 20, and 1 Kings iv. 30.

Rashi comments חָכַם בְּלִשׁוֹן הַעוֹפוֹת, learned in the tongue of birds; So Kimchi and the *Midbar Rabba*, xix. The root שָׁשׁ has the primary sense of a low hissing, whispering sound; from this arises the derivative נָחָשׁ a serpent, of frequent occurrence in

O. T. Gesenius, *Thes.* 875; *Lex.* by Robinson, 665, and Fürst, *Hebr. Wörterb.* 31, prefer to derive from the primary sense [q. d. *divinare* vel *augurari* as general terms]; but Bochart, ii. 21, 22, peremptorily derives from the secondary sense of the serpent, and discovers in this מִנְהָשׁ

the divination called *ὄφιομαντεία*. Fürst admits this as 'tolerable' (*nicht unpassend*). Classical instances of *Ophiomancy* occur in *Iliad* B. 308; *Æneid*, v. 84; Cicero, *De Div.* i. 18, 36; Valer. Maxim. i. 6, 8; Terent. *Phorm.* iv. 4, 26; Clem. Alex. *Strom.* vii.; Horat. *Carm.* iii. 27, 5. [According to Hesychius, s. v. *ὄφιας*, and Suidas, s. v. *οἰωνιστική*, omens from serpents as well as from birds formed a usual branch of the augur's art; hence probably the general phrase employed in the LXX. and other versions.] *Serpent-charming*, referred to in Psalm lviii. 5, and Jer. viii. 17, is a part of this divination. Frequent mention of this art also occurs in both ancient and modern writers. (See Kalisch on Exod. vii. 12, who [after Winer, *R-w-buch*, ii. 719] refers to Ælian, *Hist. Anim.* xvii. 5; Sil. Italic. iii. 300; Strabo, xii. 814; Gellius, *Noct. Attic.* xvi. 11; Shaw, *Travels*, 354; Niebuhr, *Travels*, i. 189; Bochart, *Hieroz.* iii. 162; *Description de l'Égypte*, viii. 108; xviii. i. 333. [In I. 159 there is a description of the feats of some Cairo jugglers with the serpent *Hajé*]. Quatremère, *Mém. sur l'Égypte*, i. 202; Minutoli, *Travels*, 226; Hengstenberg, *Mos. and Egypt*, 97-103; Lane, *Mod. Egypt*, ii. 230). The serpent was the symbol of health and healing (*Anguis Aesculapius*, Plin. xxiv. 4. 22); Moses' brazen serpent (*Numb.* xxi. 9), which was *σύμβολον σωτηρίας* (*Wisdom* xvi. 6, comp. John iii. 14), was at length made an object of idolatrous worship. Hezekiah, to destroy thr

charm, reduced its name to its mere material (נהש = נחש = 2 Kings xviii. 4)

(c.) מְכַשֵּׁף (LXX. φαρμακός; Vulg. Maleficus).

This word has always a bad sense in O. T. in the twelve instances in which the verb [always *Piel*] and the noun are used. The Syriac, however, כַּשַׁפ (kasap), bears the good sense of prayer and public service to God, δέησις, λειτουργία in Acts iv. 31 ;

xiii. 2. The Arabic, كَشَف (kashaf) suggests the meaning of the missing Kal = 'to reveal.'

In Exod. vii. 11 this word describes (in plur.) the magicians of Pharaoh, who are also there called תְּכַמִּים *sages*, and in vii. 22 (Cfr. Gen. xli. 8, 24), תְּרַמְּוִים, the *ισερογραμματοῖς* (Clem. Al. vi. 633), or *sacred scribes* of Egypt. This latter title identifies these with the Magi, or *sacerdotes*, of the Chaldean court (see Dan. ii. 10, 27). The prophet was himself made by the king of Babylon, רַב הַתְּמַיִן, 'master of the magicians' (Dan. v. 11). The arts of these diviners [תְּמַיִם, Exod. vii. 11, לְטִים, ver. 22], which enabled them to withstand Moses, were doubtless *imposing*, though so inferior to the miracles by which they were ultimately foiled (viii. 19), and their gods confounded (xii. 12). The conjecture of Aben Esra, that it was 'their skill in the secrets of physical science' (quoted in Carpov, *Apparatus*, 543), such as is attributed to the Etrurian *fulguratores* by Humboldt (*Kosmos*, l. c.), which enabled them to sustain their impious contest, is not unreasonable. The names of two of these *Chartummim* [or מְכַשְׁפִּים] are given by St. Paul, 2 Tim. iii. 8. (For Talmudic traditions about these, see Buxtorf, *Lex. Ch. Tal.* 945; Cfr. Pliny, *Hist. Nat.* xxx. 1, who associates *Jannes* and *Jotapes* with Moses as *Jeus*; Apuleius, *Apol.* 108 [ed. Casaub.], who mentions *Moses*, *Jannes*, etc., as *inter magos celebrati*; Numenius Pythag. in Euseb. *Præp. Evang.* ix. 8, who mentions *Ἰαννης καὶ Ἰαυβήης Ἀργύριου καὶ Μουσαίου ὁ Ἰουδαίος*. The Moslems call these magicians *Sadur* and *Gadur*; D'Herbelot, s. v. *Mousa*; and Sale, *Koran*, 237; Schoettgen, *Hor. Hebr.* 893; Rosenmüller, on *Exod.* l. c.) The N. T. gives us the names of other diviners also—in this respect differing observably from the reserve of the O. T.—e.g. of Simon Magus (Acts vii. 9, μαγέωσ); of Barjesus or Elymas (Acts xiii. 6, 8, ὁ μάγος); the sons of Sceva (Acts xix. 13, 14, ἑξοριστῶν). We have alluded to the supposed scientific basis of the arts of these *כַּשְׁפִּים*, *הַכְּמִים*, *הַתְּמַיִם* (for the identity of these see Kalisch, on *Exod.* p. 114; and Keil and Delitzsch's *Bibl. Commentar.* i. 357); by Umbreit, on Job, and Deyling (*Observ.* s. iii. 129), the words *כְּמִרְיָיוֹם*, 'the blackness of the day,' in Job iii. 5, are taken to mean certain 'incantations which darken the day,' practised by magicians (whom Winer, ii. 719, thinks indicated in the 8th verse by the words *אֲזַרְרִייוֹם*, 'that curse the day,' and) who were able, as the superstitious imagined, to change the brightest day into the darkest midnight. Popular ignorance has always connected magic power with scientific skill. The foretelling of the rise and setting of sun, moon, and stars, and the prediction of eclipses, used to invest astronomers of old with a *marvellous* reputation (hence

Virg. *Æn.* iv. 489. *Vertere sidera retro, nocturnosque ciet Manes, etc.*; Ovid, *Metam.* xii. 263. *Deduxisse canendo cornua lunæ*; Horat. *Epod.* v. 45. *Quæ sidera ... lunamque celo deripit*; Tibull. i. 2, 42. *Hanc ego de calo ducentem sidera vidi* [magico saga ministerio.] So Shakespere's magician, Prospero, says (*Tempest*, V. 1), *By whose aid I have bedimmed the noon-tide sun*; and (*ibid.*) Caliban's mother was a witch and one so strong she could control the moon; so again Milton, *While the labouring moon eclipses at their charms*. In Exod. xxii. 18, the feminine מְכַשֶּׁפָה is translated

a witch in A. V. In the Theocratic system, where women as well as men were endued with supernatural gifts (such as Deborah, Hannah, Huldah), female pretenders were to be found—indeed, according to Maimonides (*Moreh Nev.* iii. 37), and Babil. Gemara (*Sanhed* [Ugol. Thes. xxv. 776]), more rife even than males. Their divination is referred to in Ezek. xiii. 23, and described ver. 17-22 (Cfr. H. G. Triumphi *Dissert. de pulvillis et pepilis prophetiss* [in Thes. Nov. suppl. ad Crit. Sacr. i. 972], and Ephrem Syrus, in Rosenmüller, *in loc.*, who supposes the 'pillows' to be amulets

לְטִים for divination fitted to their sleeves).

(d.) The next phrase in the Mosaic catalogue of forbidden divination is (Deut. xviii. 11), הַכְּרָה, 'a charmer' (LXX. ἐπαείδων ἐραοίδων; Vulg. *Incantator*). The root of these words denotes *binding, or joining together*. Gesenius by Robinson, p. 293 refers to a species of magic which was practised by *binding magic knots* (Cfr. Gordian knot). Carpov, *Apparatus*, 544, quotes Rabbinical authority, and Bochart (*Hieroz.* ii. 3, 6), for a kind of divination which *drew together* noxious creatures (serpentes and scorpiones) for purposes of sorcery; and in Ps. lviii. 6, the very phrase before us is applied to *serpent charmers*. (See above under (b)). Gaulmin (in Carpov) mentions δεσμός Θεῶν, as if the very gods might be bound by magic arts. The LXX. version suggests *our spell-bound*. 'Spell is a kind of incantation per sermones vel verba,' says Somner. Hence the frequent allusions to such a charm in poetry. The refrain in the chorus of the Furies (Æschyl. *Eumen.* 296, 318, 327), ἄφρονος ἐξ Ἐρινύων δεσμός φρενῶν, ἀφρονιακτος, ἀνὸν [a spell-blight] βρότος, is imitated by Byron (Manfred, i. 1)—

'Lo! the spell now works around thee,
And the clankless chain hath bound thee,
O'er thy heart and brain together
Hath the word been passed—now wither!'

So Milton (*Comus*, 852), 'She can unlock the clasping charm and thaw the numbing spell'; Jonson's witch (in the *Sad Shepherd*), is said 'to rivet charms'; and Beaum. and Fletcher (*The Royal Subject*, ii. 2), 'What strange spells these rings have!' This last quotation directs us to the best explanation of divination by *כַּר*. Its idea is *binding together*; the ring has always been regarded as the symbol of such conjunction [cfr. *wedding-ring*, in marriage service of Church of England.] In the phenomena of *δακτυλομαντεία*, or divination by ring (see Potter, ii. 18; *Occult Sciences*, 37-40, 343), we have the most exact illustration of the subject before us. Josephus (*Antiq.* viii. 2. 6), among the attributes of king Solomon's wisdom, ascribes to him much magical skill, and

with the rest, *τὴν κατὰ τῶν δαιμόνων τέχνην, ἐπιώδης τε* [cf. our Sept. word] *αἷς παρηγορεῖται τὰ νοσήματα καὶ τρόπους ἐξορκώσων*, and goes on to specify an instance of exorcism by virtue of Solomon's magic ring, *προσφέρων ταῖς ῥίσι τοῦ δαιμονιζομένου τὸν δακτύλιον, κ. τ. λ.* D'Herbelot (*s. v. Giam*, already quoted), calls Djemsheed the *Solomon of Persia*, and according to Minutoli (*Reise*, 83), Solomon is ordinarily regarded in Moslem countries as the great master of divination (see Winer, *s. v. Zauberei*).

(c.) *שְׂאֵל אוֹב*, 'a consulter with familiar spirits' (LXX. *εγγαστριμβος*; Vulg. *Qui Pythones consultit*). Most writers treat this class of diviners as *necromancers*; so Gesenius, *Theo.* i. 34; and so the author of the art. *Divination*, in Smith's *Bibl. Dict.* [5.] But whatever be the close connection of the two as deducible from other passages, it is impossible to suppose that in Deut. xviii. 11, *שְׂאֵל אוֹב* is synonymous with *הַמְתִּים אֵל דְּרִשֵׁן אֵל הַמְתִּים*. They would not occupy two distinct and not consecutive places in the list. Sound criticism requires that the two phrases should be kept separate. Böttcher, *De Inferis*, carefully distinguishes between the two expressions. In page 108 he lays down these positions; '*אוֹב* in necromantia positum proprie non necromantem ipsum neque spectrum aut daemonem, sed *ventroloqui quiddam* utri simile dictum fuisse;' and then, '*in necromantia ventroloquos non peculiariter sed potissimum versari solitos fuisse.*' Böttcher identifies the *אוֹב*, which occurs in the plural in Job xxxii. 19 (in its primary sense of a *leathern bottle*, or *waterskin*), with the noun of the same form which is found in so many other passages with a different meaning. In these, the LXX. has invariably used *εγγαστριμβος*, as the best rendering. This version connects our phrase with *ventroloquism*, as a branch of the divining art.* (For the supposed connection between the primary and secondary senses of *אוֹב*, see Gesenius in *Theo.* i., and *Lex.* by Robinson, p. 20, also Böttcher, p. 107. The analogy is also in close consistency with the words of Job, *l. c.*, especially in the Vulgate: '*En venter meus quasi mustum absque spiraculo*'—Umbreit, *in loc.*) Having settled the sense of the word, Böttcher goes on to draw a noticeable distinction in certain phrases where it occurs. First, *אוֹב* in the singular number designates the *familiar spirit* (*i. e.*, what he calls *murmelbauch*, *venter fremens* [in a correct sense]; or *murmelwesen*, *dæmon fremens* [in a superstitious sense]). Hence we have such phrases as *אוֹב בעלת אוֹב*, *mistress* [or owner] of a *familiar spirit*† (1 Sam. xxviii. 7); *שְׂאֵל אוֹב*, a *consultor* or *questioner* of a *familiar spirit* [*i. e.*, says Böttcher,

'*ventroloquus vates ipse*'] (Deut. xviii. 11). Secondly, *אוֹב*, when governed by the particle *בְּ*, refers not to the *vates*, or professional consulter, but to the person who requests his aid: thus, while *אוֹב שְׂאֵל* is said of the diviner, *loc. cit.*, *בְּאוֹב שְׂאֵל* (with the particle) is applied to King Saul, who sought the familiar spirit by the aid of the *vates*, or *pythouissa* (1 Chron. x. 13). 'Idem discrimen,' says Böttcher, 'est etiam apud Targumistas et Talmudicos.' (Compare 1 Sam. xxviii. 8, '*Divine to me*, *בְּאוֹב*, *by the familiar spirit.*')

Thirdly, *אוֹבֹת*, in the plural, is used in a *concrete* sense, to indicate the ventroloquists or diviners themselves, and not 'the familiar spirits' which were supposed to actuate them. (*De Inferis*, p. 101, sec. 205, where the learned writer adduces similar cases of metonymy from other languages: as *γαστέρες ἀργαί*, '*slow-bellies*,' Tit. i. 12; so our '*Wits about town*;' the German '*Witzköpfe*,' '*Dickbäuche*,' etc.) By this canon we discover the general accuracy of our A. V. in such passages as Lev. xix. 31, where the *הַאֹבֹת* is well rendered, '*Them that have familiar spirits.*' Comp. Lev. xx. 6; 1 Sam. xxviii. 3, 9; 2 Kings xxiii. 24. Is. viii. 19; xix. 3. In Is. xxix. 4, the same concrete rendering is applied to *אוֹב* in the singular, contrary to Böttcher's first and third canons, but this rendering is inferior to what Böttcher would suggest, viz.:—'Thy voice shall be as of a *familiar spirit*, out of the ground,' etc. This is the only passage where the accuracy of our version, thus tested, seems to be at fault; it contrasts strikingly with the LXX. in this point, which maintains no distinction between the sing. and the plur. of this word, other than the mechanical one of putting *εγγαστριμβος* for *אוֹב*, and *εγγαστριμβοι* for *אוֹבֹת*. The Vulgate is more cautious, *e. g.*, it renders most of the plurals *magi*, rightly; but is, on the whole, inferior to A. V. in its accuracy, for it translates both the sing. *אוֹב* of 2 Kings xxi. 6, and the plur. *אוֹבֹת* of 2 Kings xxiii. 24, by the same word, *Pythones*, and similarly Is. viii. 19, and xix. 3. (For a description of the Delphian, Pythia, or Pythonissa, and why ventroloquist faculties were attributed to her [whence one of her designations, *εγγαστριμβος*], see Potter's *Antiqq.* c. ix. A vast amount of information touching the Hebrew *γαστρομαγνῆτα*, and its connection with the witch of Endor, is contained in the treatises of Leo Allatius, and Eustathius Antiochen., *De Engastrimytho*; and the *Samuel redivivus* of Michael Rothard, all reprinted in *Critici Sacri*, viii. 303-458. See also St. Chrysostom, *Opera* [ed. Bened.], vol. vii. p. 445.) A concise statement is contained in Böttcher's work, pp. 111-115. The identity of *אוֹב* and *אוֹבֹת* with *Necromancy*, con-

certain *damsel* possessed with a spirit of divination,' comes as near as possible to the *אוֹב בעלת אוֹב* of 1 Sam. xxviii. 7, which the Vulg. renders *mulier pythionem habens*. See the learned note of Weststein (*Nov. Test. Græc.* ii. 555), in which quotations from the Talmud and Jewish doctors, as well as from Christian and Pagan writers, are adduced in proof of the wide-spread usage of the word *Πύθων* (*Python*), in the sense of which we treat.

* Böttcher, p. 110, sec. 221, reasonably objects to the translation of De Wette, who ('ut in ceteris fere Gesenium secutus') invariably makes *אוֹב* synonymous with *necromancy*, or *necromancer* ['*Todtenbeschwörung*,' or *Todtenbeschwörer*], and who in this is in direct opposition to the LXX. in every passage. The Vulg. varies between *Pytho*, *Pythones*, *Pythonicus spiritus*, and *Magi*.

† This expression occurs in Acts xvi. 16, where St. Luke's *παίδισκη τις ἐχουσα πνεύμα Πύθωνος*, 'a

tray to Böttcher's view, is maintained in D. Millii *Dissertatio*, especially in chap. vi., whom Gesenius follows, in *Thes. s. v.* **חֹזֵן**. See the *Dissertatio in Ugol. Thes.* xxiii. 517-528. For ancient Jewish opinions on the apparition of Samuel to Saul, see Josephus, vi. 14. 2, and Whiston's note *in loc.*, and Ecclesiasticus xvi. 20. On this subject, the second letter of Sir W. Scott, 'On *Demonology and Witchcraft*,' with the note in the appendix of the volume, is well worthy of perusal. Whatever reality God may have permitted to this remarkable case of divination, the resort to it by Saul was most offensive to the Divine Being; the king's rejection is partly ascribed to it in I Chron. x. 13: somewhat similar is the reason assigned for God's vengeance on Manasseh (2 Kings xxi. 11. See the remarkable canons, 61 and 65, of the Trullan [*Quinisextum*] Council; Beveregii *Synod.* i. 227, 235).

(f.) **דַּעֲנִי**, from **דָּעַן**, to know, is uniformly rendered in A. V. by 'Wizard,' akin to 'wise' and to the German verb 'wissen' (old German *Wizan*), to know. [LXX. in four places, **γινώσκεις**, a *knowing one*; Vulg. *Ariolus*, most frequently.] This Hebrew noun occurs eleven times, and in every instance is coupled with **חֹזֵן**; we may thus regard it as indicating a usual concomitant (perhaps of cleverness and dexterity) with ventriloquism: this view is confirmed by the LXX., **ἐγγαστρομυθός**, as the rendering of **דַּעֲנִי** in Is. xix. 3, a verse which proves the Egyptian arts of divination were substantially the same as the Hebrew in that age (comp. Böttcher, p. 115, sec. 231; and see Rawlinson's note on *Herod.* ii. 83, in explanation of a seeming discrepancy between the prophet and the historian). In another passage of Isaiah [viii. 19], there occurs a good description of the **הַיְדוּעִים**, in the two epithets, **הַמְעַפְפִּים**, expressive of the *chirping, piping* sounds of young-birds; and **הַמְהוּגִים**, applied to the *cooing* of the dove, in xxxviii. 14. (With the former of these, compare Horace, *Sat.* i. 8. 40, 'Loquentes umbræ resonant triste et acutum'; and with the latter, Virgil, *Æn.* iii. 39, 'Gemitus lacrymabilis imo auditur tumulo.' So in Homer, *Il.* ψ. 101, the shade of Patroclus departs with what Shakspeare, *Hamlet*, i. 1, calls a 'squeak and gibber,' **ψέχετο τετραγυῖα**. An unexpected illustration of these arts may be met with in Capt. Lyons' *Private Journal*, p. 358, where he describes the feats of the Esquimaux ventriloquist Toolenak of Igloodik. Comp. the curious account of a modern necromancy left us by Benvenuto Cellini; both of these are narrated in Sir D. Brewster's *Letters on Natural Magic*, pp. 68-75, and 176-178.) The LXX. version, much more inexact than the English, renders the **דַּעֲנִי** of Deut. xviii. 11 by **τερασκόμος**; what the *prodigies* were, which, according to the extravagant belief of the Rabbinical writers, were used by these diviners, are described by Carpov, *Apparatus*, 545, 546, where, among others, are adduced the bird *Jiddoa* and the monster *Jaddua*, to account for the origin of our term.

(g.) The last designation used by Moses in the great passage before us, Deut. xviii. 10, 11, is **חֵם אֵל־הַמֵּתִים** [LXX. **ἐπερωτῶν τοὺς νεκροὺς**; Vulg. *Qui querit a mortuis veritatem*]. This points to the famous art of Necromancy, the **νεκρο-**

μαντεία, or (as they preferred to write it) **νεκρομαντεία** of the Greeks. This was a divination in which answers were given by the dead. It was sometimes performed by the magical use of a bone, or vein of a dead body, or by pouring warm blood into a corpse, as if to renew life in it (Lucan, *Phar.* vi. 750); sometimes they used to raise the ghosts of deceased persons by various ceremonies and invocations. Ulysses, in *Odys.*, book ix., having sacrificed black sheep in a ditch, and poured forth libations, invites the ghosts, especially that of Tiresias, to drink of the blood, after which they become willing to answer his questions. (Comp. the evocation of the shades of Darius, for counsel, after the defeat at Salamis, in the *Persæ* of Æschylus, 630-634, 'Ἄλλὰ χθόνιοι θαύμονες ἄγρολ, Γῆ τε καὶ Ἑρμῆ, βασιλεὺ τ' ἐνέρων, πεμψατ' ἐνερθε ψυχῆν ἐς φῶς' κ. τ. λ. This evocation of spirits was called *ψυχαγωγία*—the offerings to the dead on this occasion were mild and unbloody—but Gregory Nazianzen (*in Orat. II. contra Julian.*) speaks also of τῶν ἀνατεμνομένων παρδένων τε καὶ παιδῶν ἐπὶ ψυχαγωγία—'virgins and boys slaughtered at the evocation of ghosts.' From Is. lxx. 4, it would appear that the ancient Jews increased the sin of their superstition by using *unclean* offerings on such occasions: 'They remain among the graves, and lodge in the monuments' [**לַיְלִינָה**, they spend the night in these *adyta*]; such were the favourite haunts of the necromancers: 'they eat swine's flesh'; an idolatrous practice (comp. Ovid, *Fasti*, i. 349; Horace, *Satir.* ii. 3. 164; Varro, *de Re rust.* ii. 4); and broth of abominable things is in their vessels.' (We are reminded of the celebrated witch scenes in Shakspeare, *Macbeth*, i. 3; iii. 5; and especially iv. 1.) Rosenmüller, *in loc.*, refers, for a like incantation, to Marco Polo, *Travels in the East*, iii. 24; and Sir J. F. Davis, in his *China* [last ed.] ii. 73, mentions certain magic spells practised by the Taou sect, 'with the blood of swine, sheep, dogs, and other impure things.' A curious case of necromancy also occurs in the story of the philosopher Chuang-tse and his wife, in the same vol., pp. 87, 88. In the 15th chap. of *Sketches of Imposture*, etc. [in the Family Library], 'on Sepulchral and perpetual lamps,' may be found an interesting account of the reasons which induced the Egyptians to bestow so great attention on their dead; one of them, quoted from Kircher's *Hist. of Egyptian Antiqq.*, rests on the opinion, 'that the souls of the deceased tarry with their bodies in the grave.' This, added to the conception of the more enlarged knowledge of the dead, lay at the foundation of *necromancy*. The earliest historical tale of this sort of divination which we recollect, is related by Herodotus concerning Periander of Corinth, and his wife Melissa, whose spirit he consulted for information about a hidden treasure (v. 92). In one of the most interesting dialogues of Lucian, the '*Menippus*,' or '*Necromanteia*,' a very good description is given of various necromantic ceremonies. (For an abstract, see *Occult Sciences*, by Smedley, etc., pp. 183, 185.) In Tertullian's treatise, *De Anima*, occurs a remarkable passage on necromancy, at the conclusion of which he says, 'If certain souls have been recalled into their bodies by the power of God as manifest proofs of His prerogative, that is no argument that a similar power should be conferred on audacious magicians, fallacious dreamers, and licentious poets' (c. 56, 57). We may ob-

serve, in concluding this subject, that in confining (with Böttcher) *necromancy proper* to the last phrase on Moses' list, דְּרִישׁ אֶל-הַמֵּתִים, we have the authority of A. V., which limits the word *necromancer* (an ἀπαξ λεγόμενον in our Bible) to this phrase. So much for the great passage on divination contained in Deut. xviii. 10, 11. We saw the seven species, comprising that list, were introduced by the general phrase קָסָמוֹם קָסָמוֹם.

We next find this same general phrase introductory to another but much shorter catalogue; for (2.) In the remarkable passage of Ezek. xxi. 21, or 26 in Hebrew Bible, we have the three famous divinations of the king of Babylon. The prophet represents the monarch as standing 'at the parting of the way, at the head of the two ways, to use divination (לְקַסֵּם קָסָם). (a.) He made his arrows bright' [or rather, *he shook and mingled them together*, Vulg. *commiscens sagittas*, לְקַלְקֵל בְּחַצְיָם];

each arrow having inscribed on it the name of some town to be assaulted. From the quiver the arrows were drawn one by one; and the city which was written on the first arrow drawn out was the first to be beleaguered' (St. Jerome, *in loc.*) In this instance Jerusalem was the ill-fated object of this divination, as we learn from the next verse, where the *divination for* 𐤀𐤓𐤋𐤍 (הַקָּסָם יְרוּשָׁלַם) signifies the arrow bearing the inscription of the doomed capital, as it first emerged from the divining quiver. We have here a case of the *βελομαντεία*. This superstition, which is prohibited in the Koran (chap. iii. 39; v. 4), was much practised by the idolatrous Arabs. Their arrows, which were consulted before anything of moment was undertaken, as when a man was about to marry, or undertake a journey, or the like, used to be without heads or feathers, and were kept in the temple of some idol. Seven such arrows were kept at the temple of Mecca, but in divination they generally used but

three.* On one of these was written ^{أَمْرِي رَبِّي} رَبِّي, *my Lord hath bidden me*; on the second was inscribed ^{نَهَيْتَنِي رَبِّي} رَبِّي, *my Lord hath forbidden me*; whilst the third was ^{غُفْل} blank. If the first was drawn, it gave the god's sanction to the enterprise;

* Not always; Della Valla says (p. 276), 'I saw at Aleppo a Mohametan who caused two persons to sit on the ground opposite each other, and gave them *four arrows* into their hands, which both of them held with their points downward,' etc. The *two arrows* in the right hand of the Assyrian king (sculptured on one of the large slabs brought from Nimroud), are conjectured to be proofs that *divination by arrows* was practised in ancient Nineveh. The king is represented as attended by two divinities with fir-cone and basket; and therefore is in a religious and not a martial occupation (Bonomi, *Nineveh and its palaces*, 3d edit. p. 306). Three suitors of an Eastern princess decided their claims by shooting each an arrow inscribed with his own name. The most distant arrow indicated the name of the successful competitor (Roberts' *Orient. Illustr.* p. 491).

the second prohibited it; but the third being drawn required that the arrows should again be mixed and again drawn until a decisive answer was obtained (Pocock's *Spec. Arab.* 324, etc.; Gesenius, *Thes.* 1224; Sale's *Koran, Prelim. Disc.* 90; Clodius, *Diss de Mag. Sagitt.* iii. 2). This *βελομαντεία* of the king of Babylon must not be confounded with the *βελοβωλία* of Jonathan, the affectionate expedient of his secret warning to David, 1 Sam. xx. 20, etc., in which, though there were three arrows, there was no uncertain divination, but an understood sign. Again, in the shooting of arrows by Joash, king of Israel, at the command of the dying prophet (2 Kings xiii. 17, 18), there is in the three arrows only an accidental, not a real resemblance; moreover, we have in this action not an unauthorised superstition, but a symbolical prophecy (comp. the symbol with Virgil, *Æn.* ix. 52, 'En, ait, et jaculum attorquens emittit in auras; Principium fugue').

(b.) 'He consulteth with images,' שָׂאֵל בְּתַרְפִּימִים (LXX. ἐπερωτήσῃαι ἐν τοῖς γλυπτοῖς; Vulg. *interrogavit idola*), literally, as in the margin, *He consulted with Teraphim*. We postpone the description of these household gods of the Semitic nations [TERAPHIM], which are often mentioned in O. T. from the time of the Syrian Laban (Gen. xxxi. 19), to this of the Chaldee Nebuchadnezzar (see Aug. Pfeiffer, *De Teraphim*, in Ugolini *Thes.* xxiii. 566); who, unnecessarily indeed, suggests, on grammatical grounds, that the king of Babylon may have used these three divinations of the *Athnach* clause *previous to his leaving home*. Dr. Fairbairn [on Ezek. xxi. 21], says, 'This is the only passage where the use of teraphim is expressly ascribed to a heathen.'

(c.) 'He looked in the liver,' רָחַהּ בְּקֶבֶר (LXX. κατασκοπήσασθαι; Alex. ἡπατοσκοπήσασθαι; Vulg. *Extā consuluit*). Here we have a case of a well-known branch of the *Extispicium* (or art of the Haruspices), practised in Rome by the Etrurian soothsayers, and much referred to in both Greek and Latin authors. Cicero, *de Divin.* ii. 15, mentions the importance of the *liver* in divination of this kind; hence this branch was called ἡπατοσκοπία (Herodian. viii. 3. 17). See also Pliny, xi. 37; Ovid, *Metam.* xv. 136. Arrian (*Anabas.* vii. 18) mentions an evil prognostication in reference to the deaths of Alexander and Hephæstion; and Suetonius (*Aug.* xcv. 2, a happy one; *victimarum omnium jecinora replicata intrinsecus ab ima fibra*). Strabo also, *Book III.*, p. 232 [ed. Casaub.], mentions this divination as practised by the Lusitani: not only animals offered in sacrifice, but *captives in war* furnished these barbarians with τὰ σπλάγχνα [ὄσθ' τοῦ ἱεροσκοποῦ μαρτυροῦνται]. A still more hideous mode of divination is mentioned of the ancient Britons, who would cut down at a blow of the sword one of their human sacrifices, in order to observe the posture of his fall, his convulsions, flow of the blood, etc., etc., and so gather their predictions according to the rule of their ancestors. This is the only instance mentioned in Scripture of this superstition. (3.) The generic word קָסָם is once more rendered specific in 1 Sam. xxviii. 8, where Saul requests the witch of Endor 'to divine to him, בְּאֹזֶב, by the familiar spirit.' But we have already considered this phrase under Deut. xviii. 10, 12 (See above, I. e).

What remains for us to do, is to collect the other terms of divination which lie scattered in various passages. (4.) The first of these terms is **הַאֲפִים**. This word occurs in Is. xix. 3, in a passage descriptive of the idolatry and superstition of Egypt. It is derived by Gesenius and

Meier from a root **אָפַף**, akin to Arab. **أَفَفَ**, which signifies to utter a dull murmuring sound. Meier defines our noun by 'Die Lispelnden,' *murmurers* or *lispers*. If so, we have here a class of the ventriloquists already described. But the LXX. gives another turn to the word: rendering by *ἀγάλαμα*; as if, after **הַאֲלִים**, *gods*, it meant their *shrines*. Herodotus (ii. 83) tells us the Egyptians possessed many oracles besides that of Latona at Buto, which was most esteemed of all. He adds, that 'the mode of delivering the oracles (*αἱ μαντήαι*) varied at the different shrines.' These oracular officials were probably the **הַאֲפִים**

of Isaiah. (5.) The 6th verse of chap. ii. of this prophet, in giving a reason why God forsook his people, the house of Jacob, charges them with being '*soothsayers*,' **עֲנִיִּים**. This word is substantially the same as that which we considered above, under (1 a): we have here the additional information that this species of divination was copied by the Jews from 'the Philistines'; their proneness to follow the idolatrous practices of their various neighbours was in direct defiance of God's injunctions to them, and contributed more than anything to their ruin. (6.) In Dan. ii. 2, four classes of diviners are mentioned; two were described above, in (1 c); of the others, **אֲשָׁפִים** (Chald. **אֲשָׁפִין**, in Dan. ii. 27) is probably allied by derivation with the word **כֹּכְבָּשׁ**, which we have already described

[Meier says '**אֲשָׁפִים** = **כֹּכְבָּשׁ**']. The noun **אֲשָׁפָה** (a quiver), from the same root, suggests the notion of *concealment* and *covering*. This, the probable meaning of our term, suits very well with the idea of divination, though it ill accords with the A. V., which in all the eight* passages in Daniel, where it is found, renders it *astrologers*. Divination by the stars is not implied in the original. The LXX. in every place except one [and that is doubtful, see Trommii *Concord.* ii. 1], translates **אֲשָׁפִים** by *μάγος*, and the Vulg. generally by *magus*. This suggests the association of the **אֲשָׁפִים** with the *μάγοι ἀπὸ ἀνατολῶν* of St. Matthew ii. 1. (Dutripion, *Concord. Bibl. Sacr.* 824.) This, added to the fact that the **אֲשָׁפִים** is generally coupled with the *Chartummim* and the *Chaldaans*, probably influenced our translators in their choice of the English word.† The original, however, is much less specific. Some philologists have imagined the word *σοφός* is no other than **אֲשָׁפִים** with the aleph dropped, and

have also connected it with the Persian *Sophi*. Such a derivation would rather point to occult arts and cabalistic divination. (7.) **הַרְטָמִים** [See above, i. c.] The expression used by Daniel in i. 20—**הַרְטָמִים הַאֲשָׁפִים** is an *asyndeton*, for other places prove the second to be a different class from the first; see ii. 2, 10. The close conjunction of the **אֲשָׁפִים** with the *Chartummim* indicates their participation of the qualities of the latter, the *επιγομματεῖς* of both Egypt and Babylon, over whom Daniel was appointed *Rab* or Master. In the learned *Dissertatio* D. Millii *de Chartummim aliusve orientaliū magis* [Ugolini *Theis.* xxiii. 529-538] nearly all the accomplishments of the divining art are attributed to this influential caste, beginning with the *geneethlic* mysteries. The horoscope, which was much in use by the *γερεθ-λακοί*, brings us back to *astrology*, which (though not implied in the designation **אֲשָׁפִים**) was no doubt a part of their wisdom. Gesenius, in *Theis.* and *Lex.*, derives the word from **הָרַת**, 'a graving tool,' and (on the authority of Creuzer, *Symbolik. u. Mythologie*, i. 245; and Jablonski, *Proleg. in Panth. Egypt.*, p. 91, etc.) connects the arts of the *Chartummim* with the sacred *hieroglyphical* writings. Not less probably, from such a derivation, these diviners might be connected with the system of *talismans*, so rife in the East, and in Egypt

in ancient times. The talisman [Arab. **طَلِسمان** ;

Greek *τέλεσμα*] is defined (in Freytag, *Lex. Arab. s. v.* iii. 64) to be 'a magical image upon which, under a certain horoscope, are engraved mystic characters, as charms against enchantment or fascination.' Talismans, among other uses, are buried with treasures, to prevent them from being discovered. Thus this divination appears as a counterpart against another species (in rhabdomanicy) which was used for the *discovery* of treasure. Equally varied are the gifts ascribed to the *Chartummim* in the translations of the LXX. and the Vulgate. In eleven of the fifteen occurrences of the word (all descriptive of the magicians of Egypt and Babylon), *ἐπισοιδός* and *Incantator* are used; *φαρμακός* and *Veneficus* in two; and in the remaining two *ἐξηγητής* and *Interpres*. (8.) **כְּשָׂרִים** (LXX. *Χαλδαῖοι*; Vulg. *Chaldaei*). Here, says Cicero (*de Div.* i. 1), we have a class 'so named, not from their art, but from their nation'—'*Non ex artis, sed ex gentis vocabulo nominati.*' And only a section of the nation, the learned caste; 'the dominant race,' says Ernest Renan, 'which gave their name, though only a minority, as the Turks elsewhere, to the mass of the population, which differed from them in descent' (*Histoire des langues Sémitiques*, pp. 67, 68). They are mentioned by Herodotus (i. 181) as a *Sacerdotal* caste. Cicero, *l. c.*, notices their devotion to astrology, and 'their working out a science by which could be predicted what was to happen to each individual, and to what fate he was born.' Diodorus Siculus, after Ctesias, assigns the same office at Babylon to the Chaldaeans as the priests bore in Egypt (*Hist.* ii. 29). Juvenal (*Sat.* vi. 552) and Horace (*Carm.* i. xi., *neq Babylonios tentaris numeros*) refer to the Chaldaean divination. The prophet Isaiah (xlvi. 12, 13) mentions several details of it, in terms which we have already described. (How the

* In Wigram's *Englishman's Hebrew and Chaldee Concordance*, s. v. **אֲשָׁפִים**, only six occurrences of the word are given; Daniel i. 20; and ii. 2, should be added. Flaws of this kind are quite unusual in that very valuable and generally accurate and elaborate work.

† Saadias, Kimchi, and other authorities justify this version by rendering the word by astronomical terms. See Rosenmüller, *in loco*.

same appellation, כְּשֵׁרִים, came to designate both the *military* and the *learned* classes of Babylon [comp. 2 Kings xxiv. 5, 10, etc., with Dan. ii. 2]; and how conflicting are the views of the modern learned as to the *origin* of the Chaldeans, see Renan *l. c.*, and Sir H. Rawlinson, in note of Rawlinson's *Herod.*, vol. i. p. 319. See also CHALDEANS, p. 467 of this work.) (9.) One name more (occurring in Dan. ii. 27; iv. 4; and v. 7, 11) remains to be noticed descriptive of the *savans* of Babylon—נְרִיָּן [LXX. Πασηρηνοί; Vulg. *aruspices*]. Gesenius and Rosenmüller agree in deriving this word from נָרָה, *to divide, cut up*, etc.; but differ in the application of the idea—the former making it mean the heavens *divided* into astrological sections, of which he gives a diagram in his *Comment. on Isaiah*, iii. 555; the latter (*Schol. in Daniel*, ll. cc.) supposing it to refer to the division and inspection of the entrails of victims by *aruspices*: both these kinds of divination have been described above. Winer (*Realw.-b. s. vv.* 'Sterne,' 'Sternkunde') refers to Josephus (*Bell. Jud.* vi. 5. 3) for astronomical portents such as the *Gozrin* would interpret (see also St. August. *De Doctr. Christ.* ii. 32, etc.). St. Jerome in his *Commentary in loc.*, defends his own version, *Aruspices*, by the authority of Symmachus. The Sept. and Theodotion translate the word Πασηρηνοί as if it were a proper noun, like כְּשֵׁרִים, Χαλδαίαι.

We have at last exhausted the long vocabulary of the terms of divination mentioned in the O. T. and N. T., with the exception of the phrases which occur in Hosea iv. 12. These will suitably bring up the rear of our catalogue. (10.) The verse runs—'My people ask counsel at their stocks' (or *wood* בְּעֵצוֹ יִשְׁאָל; and their staff declareth unto them' (בְּקֹלָו יִגִּיד). Those who hold that two separate prognostications are here referred to, generally make the former a consultation of wooden idols, or *teraphim*, which has been already treated under 2 *b* (see Rosenmüller and Pocock, *in loc.*) Jeremiah reproaches the Jews for 'saying to a stock (עֵץ) my Father' (ii. 27); and Habakkuk, 'Woe unto him that saith to the wood (עֵץ) awake' (ii. 19). But Pocock (on Hosea iv. 12) gives reasons for supposing that *one* sort of superstition is meant in this verse—such as the Greeks called *βαθουαυρελα*, divination by staves or rods. Many kinds of this are on record, Maimonides (*Præcept. neg.* 31) mentions the practice of 'taking a staff and striking the ground with it, and making horrid noises, while the diviners would stand in a reverie, intently looking on the ground, till they became like men struck with epileptic fits;—when reduced to this phrenzy they would utter their prophecy.' The learned Rabbi says he saw such a case himself in Barbary. Chaskuni (quoted by Drusius on Deut. xviii. 10) adduces another method by which 'the diviner measures his staff with his finger or his hand: one time he says *I will go*; another time, *I will not go*; then if it happens at the end of the staff to be, *I will not go*, he goes not.' Rabbi Moses Mikkotzi (in Pocock, *l. c.*) mentions a divination by a piece of stick, *peeled* on one side, which, thrown afar out of the hand, decided a doubt, according as the peeled or unpeeled side fell uppermost. Tacitus

(*Germ. x.*) describes a similar prognostication among the Germans. Theophylact, after Cyril, on this passage of Hosea, mentions the use of two rods, set upright, with enchantments and muttering of verses. 'The rods,' says he, 'falling through the influence of demons, suggested answers to inquirers, according as they fell to the right or to the left, forward or backward.' Staves were sometimes carried about as the shrines of deities; *delubrum dicebant fustem decorticatum*, says Festus. Tibullus (l. eleg. xi. 15) refers to these 'lignæ Dii,' and says:—

'Sed patri servate Lares; aluistis et iidem,
Cursarem vestros cum tener ante pedes.
Neu pudeat prisco vos esse e stipite factos
Sic veteris sedes incoluistis avi.'

In allusion to the same superstition, Clement of Alexander, *Strom.* i. 151, mentions certain *tubes* as the *shrines of deities*, κίονας ἱερῶντες ὁ παλαιὸς ἔθεβον τοῦτους ὡς ἀφιδρύματα τοῦ Θεοῦ (comp. Euseb. *Præp. Evang.* i. 9). We mentioned, under Talismans, the concealment of treasure by divination; by other processes of the same were treasures *discovered*. Sir J. Chardin says it is common in India for diviners to accompany conquerors, to point out where treasures may be found; and he adduces a case at Surat; when Siragi went thither, he made his soothsayers use divining rods, struck on the ground, or on walls, etc. Harmer (ii. 282) supposes a reference to such a practice may be implied in Is. xlv. 3 (see St. Chrysostom, *Opera* [ed. Bened.], vol. xi. pp. 518, 824). Sir J. F. Davis, *China*, ii. 101, mentions a Chinese 'mode of divination by certain pieces of wood, in shape the longitudinal sections of a flatfish oval. These are thrown by pairs, and as they turn up, a judgment is formed of a future event by consulting the interpretation afforded by a Sibylline volume, hung up in the nearest temple.' Captain Burton, in his *Eastern Africa*, mentions some not dissimilar practices of divination; nor are these 'fooleries of faith,' as he calls them, unknown among ourselves. Even now, as the writer is credibly informed, miners in the south-west of England walk with their *dowsing stick* in hand over suspected spots; a motion of this divining rod is in their view an infallible sign of a *lode*. Rudolf Salchlin has written a treatise on this curious subject: *Idolomania et Rhabdomantia antichristiana, sive Dissertatio historico-theologia ad Hos.* iv. 12 (Berne, 1715). A good deal of information may be obtained in Jacobi Lydii *Syntag. Sacr. de re Militari*, c. 3 (Ugolini, *Thes.* xxvii. 142-146), and in Del Rio, *Disquis. Magic.*, lib. iv., cap. 2, quæst. 3, sect. 1, *sub fin.*; sect. 3, *sub init.*

In this article it has been our purpose to confine ourselves to the varied *facts* of this elaborate subject. It would have exceeded both our object and our space to have entered on the inquiry with which its treatment has been so largely encumbered—as to the *reality* of profane divination. If we reject, indeed, ninety-nine-hundredths of recorded cases from the category of credible things, we should not, by allowing the possibility that the small residue of instances were true and real (such as the achievements of Jannes and Jambres before Pharaoh, and the apparition of Saul by the agency of the witch of Endor), impeach one attribute of the Almighty. In no instance do we suppose His previous permission was refused; and in no instance do we find his subsequent approbation was ac-

corded (in 1 Sam. xv. 23, *the sin of divination*, **תַּמְתִּיקָהּ**, is denounced as the climax of *rebellion* against God); while in all instances we believe that His power and wisdom were vindicated (see the crowning example, Exod. viii. 18, 19). In considering the events of Scripture history, we dismiss *à priori* conceptions, and form our judgment on the ground and testimony of holy writ alone. In coming to a conclusion on the broad question of the literal truth of the phenomena of profane divination which are recorded in the Bible, we cannot but derive much assistance from such passages as 1 Kings xx. 20-22; Job ii. 3-7; Rev. xii. 12, and xx. 3; for they clear the way, by revealing to us the mystery that God is pleased to permit, under his own limitation, the agency of the power of evil. To what extent and in what manner this agency was at any time exerted, we learn from the sacred narrative itself. (For an interesting disquisition on the *theology* of the subject, see Andr. Riveti, *Explicatio Decalogi*, in sect. *De magicis artibus; De divinationum variis generibus; De Astrol. judiciaria; An Damon interrogari possit de iis que facultatem ejus non excedunt?* [Opp. Roterodami, 1651, tom. i. pp. 1244, *sqq.*]; for details of the several branches of this extensive subject, the reader is referred to the numerous works mentioned *passim* in the article.)—P. H.

DIVORCE. [MARRIAGE.]

DIZAHAB (**דִּזְחָב**; Sept. *Καταχρῶσα*). The passage in which this word occurs was long regarded as one of the most difficult, in a geographical point of view, in the Bible: 'These be the words which Moses spake unto all Israel on this side Jordan, in the wilderness, *in the plain* over against the Red Sea, between Paran, and Tophel, and Laban, and Hazeroth, and *Dizahab*' (Deut. i. 1). The object of the sacred writer is to point out definitely where Moses spake. It was '*in the plain*,' that is, as the Hebrew has it, the *Arabah*. This Arabah lay 'over against' (**מול**) the Red Sea; it began at the Red Sea and ran from it northward. It lay between Paran on the west, and Tophel, a town of Edom, on the east. Three other places are named along its borders, the last of which is *Dizahab*. The word means 'possessor (or place) of gold,' and was probably at or near gold fields. There is a place called *Dahab* ('gold') on the western shore of the Aelanitic Gulf, which Robinson, Gesenius, and others, would identify with *Dizahab*, but it is too far south (Robinson, *B. R.* ii. 187; Wilson, *Lands of the Bible*, i. 235; Burckhardt, *Travels in Syria*, 523).—J. L. P.

DOB (**דוֹב**; Sept. *ἄρκτος*), in Arabic *dub*, in Persic *deb* and *dob*, is noticed in 1 Sam. xvii. 34, 36, 37; 2 Sam. xvii. 8; 2 Kings ii. 24; Prov. xvii. 12; xxviii. 15; Is. xi. 7; Lam. iii. 10; Hos. xiii. 8; Amos, v. 19, etc. Although the moderns have denied the existence of bears in Syria and Africa, there cannot be a doubt of the fact, and of a species of the genus *Ursus* being meant in the Hebrew texts above noted. David defended his flock from the attacks of a bear (1 Sam. xvii. 34, 35, 36), and bears destroyed the children who mocked the prophet (2 Kings ii. 24). The genus *Ursus* is the largest of all the plantigrade carnivores, and with the faculty of subsisting on fruit or honey unites a greater or less propensity, according to

the species, to slaughter and animal food. To a sullen and ferocious disposition it joins immense strength, little vulnerability, considerable sagacity, and the power of climbing trees. The brown bear *Ursus arctos*, is the most sanguinary of the species of the Old Continent, and *Ursus Syriacus*, or the bear of Palestine, is one very nearly allied to it,

210. *Ursus Syriacus*.

differing only in its stature being proportionably lower and longer, the head and tail more prolonged, and the colour a dull buff or light bay, often clouded, like the Pyrenean variety, with darker brown. On the back there is a ridge of long semi-erect hairs running from the neck to the tail. It is yet found in the elevated woody parts of Lebanon. In the time of the first crusades these beasts were still numerous and of considerable ferocity; for during the siege of Antioch, Godfrey of Bouillon, according to Math. Paris, slew one in defence of a poor woodcutter, and was himself dangerously wounded in the encounter.—C. H. S.

DOCHAN (**דוֹחָן**; Arab. **دُحْن**, *dukhan*), a

211. Millet—*Panicum miliaceum*.

species of millet (Ezek. iv. 9). It is believed by

some to be the common millet, the *Panicum miliaceum*, but others take it to be the *durra*, or 'Turkish millet,' of which considerable quantities are imported into this country to be used in the feeding of cattle, if not also for human food (*Encycl. Brit.* xv. 17). In Arabia, Niebuhr found it in use among the people for food, but speaks of the bread produced from it as of very inferior quality (*Descript. de l'Arabie*, i. 216). It is described as growing from four to five ells in height, and as producing grain of an oval shape like rice, and brown colour. It grows also in Egypt (comp. *Plin. Hist. Nat.* xxvii. 10; Rosenmüller, *Bib. Bot.*, p. 83, E. T.; Winer, *Real W. B. s. v.* Moorhirschen).—W. L. A.

DOCUS (Δῶκ, Vulg. *Doch*), a small fortress near Jericho, in which Simon Maccabæus was treacherously murdered by his son-in-law Ptolemy (1 Maccab. xvi. 15). Josephus calls it Δαγῶν (*Antiq.* xiii. 8. 1; *Bell. Jud.* i. 2. 3). Traces of ancient substructions, discovered by Robinson near to the fountain of Dūk, between Jericho and Bethel, are supposed to mark the site of the ancient castle (*Bib. Res.* ii. 309).—S. N.

DODAI. [*Dodo*, 2.]

DODANIM (דֹּדַיִם; Sept. 'Ρόδοι), the descendants of the fourth son of Javan (*Gen.* x. 4). Bochart and other commentators on the ethnographical sketch in *Gen.* x. suppose that the first settlements of the Dodanim were in the south-west part of Asia Minor; where the country called by the Greeks Doris, with the neighbouring isle of Rhodes, are conceived to exhibit traces of this origin, the Hebrew letters ד (*d*) and נ (*n*) being, from their similarity, often transposed. In fact, some copies have the נ, and read Rodanim (as in the margin of the Auth. Vers.), and the Septuagint gives the same reading both in *Gen.* x. 4, and 1 *Chron.* i. 7, where it has 'Ρόδοι. It is further supposed that settlers of this family may be traced in Thessaly and Epirus, where the name is traced in the city of Dodona and in the country of Doris. But there seems much of uncertainty in all these ingenious speculations.—J. K.

DODD, WILLIAM, a clergyman of the Church of England, who, after being for many years one of the most popular preachers of the day, was induced, in order to relieve himself from debts which his extravagant habits had contracted, to forge a bond in the name of Lord Chesterfield, who had once been his pupil, and was executed for the crime at Tyburn in 1777. He was born in 1729. His father was a clergyman, and he was educated at Cambridge. Dodd was a most industrious writer and preacher, and published many volumes of sermons and commentaries, but none of any particular value, all of that peculiar style of theology and religion which prevailed in the middle of the last century, which had none of the vigour of our elder divines, and was without any originality and freshness. Of his commentary Orme says, 'This is mostly a compilation, the chief value of which consists in notes furnished from the original papers of John Locke, Dr. Waterland, Lord Clarendon, Gilbert West, and some others. Great use is made of some of the printed and long established commentaries on Scripture, such as Calmet, Houbigant, and Doddridge. . . . It is a curious fact

that the notes which are ascribed to Locke do not belong to him, but to Dr. Cudworth' (*Biblioth. Bibl.* p. 152). [COKE.]

DODDRIDGE, PHILIP, D.D., born in London, where his father was an oilman, 1702; died at Lisbon, whither he had gone for the recovery of his health, in 1751, a fortnight after his arrival there. He belonged to the old dissenters of England, or those who adhered to the clergy ejected from the Church by the act of uniformity, which was passed in 1662, and prescribed the terms of ministerial conformity. These persons were both numerous and powerful, and at length succeeded, though not till after the revolution, in getting their worship protected by law under the Act of Toleration in 1689. Doddridge passed his earliest years in London, but was afterwards for a time at St. Albans, under the care of a minister named Clarke, who, upon the death of the elder Doddridge, seems to have acted like a parent to Philip, for whose support little had been left by his father. While yet young Doddridge gave evidences of predilections for the ministry, and was entered at a dissenting school kept at Kibworth in Leicestershire, by one Mr. John Jennings, the son of a clergyman, who had suffered by the Act of 1662. At this place he commenced his ministry in 1722, Jennings having left it, and dying in the following year. The academy over which he presided thus being left without a head, Doddridge began to be regarded as a person eminently qualified to carry it on. He continued, however, to preach at Kibworth and Market Harborough, and to prosecute his theological studies, and did not open his academy till 1729. It soon became celebrated, and was the nursery of many of the old dissenters of the eighteenth century. He first established it at Market Harborough, and subsequently removed to Northampton upon being chosen minister of a large congregation in that town. Here he continued till his death, discharging the duties of pastor and head of the academy for the education of ministers. Doddridge was very anxious to waken his countrymen to deeper earnestness and piety. With this aim he wrote his celebrated and excellent work, *The Rise and Progress of Religion in the Soul*, and also his equally valuable *Family Expositor*, which consists of the N. T., the gospels being arranged in harmony, with a paraphrase, critical notes, and reflections, or, as he calls them, improvements of each section, into which the whole is divided. This has been often printed, and is a monument at once of his learning and piety. The notes are original, and selected from various authors. The course of his educational lectures was published after his death, and is esteemed as a text-book of divinity (especially the later edition of Dr. Kippis, 2 vols. 8vo). It contains a body of valuable references to various writers on subjects connected with divinity. Doddridge also wrote the life of Colonel James Gardiner, and was the author of several beautiful hymns. He lived and died universally respected, and was admired even beyond the pale of his own community for his calm and placid piety. He instructed his pupils with the freedom and tenderness of a father, and never desired that they should blindly follow his sentiments, but encouraged them to judge for themselves. He would check any appearance of bigotry, and endeavour to shew them

all that could be said in support of the principles which they disliked. His works have been translated into French, German, and Dutch.—S. L.

DODO (דודו, according to Fürst, contracted from דודו יהוה = *Jah is friend*; LXX. Δουδὶ and Δωδωέ). 1. 'A man of Issachar,' whose grandson Tola was one of the Judges of Israel' (Judg. x. 1). 2. 'The Ahohite,' one of David's three mighty men (2 Sam. xxiii. 9; 1 Chron. xi. 12). This is believed to be the same person who is called Dodai

in 1 Chron. xxvii. 4, where the words אֶלְעָזָר בֶּן אֶלְעָזָר, 'Eleazar, son of,' are supposed to be omitted. In 2 Sam. xxiii. 9, the K'tib-is דודי, *Dodai*. 3. 'The Bethlehemite,' the father of Elhanan, who was one of the thirty of 'the valiant men of the armies' of David (2 Sam. xxiii. 24; 1 Chron. xi. 26). The name Dodo is the same as Dodavah (דודוהו, 2 Chron. xx. 37).—W. L. A.

DODSON, MICHAEL (1732-99), an English barrister and biblical scholar of the Unitarian school. He was the treasurer and active supporter of the society for promoting the knowledge of the Scriptures; and contributed several papers to its publication, entitled 'Commentaries and Essays.' These, revised and expanded, were subsequently published under the title, *A New Translation of Isaiah, with Notes, supplementary to those of Dr. Lowth, late Bishop of London, and containing remarks on many parts of his Translation and Notes*, by a Layman, Lond. 1790, 8vo. The freedom of his censures upon Lowth led to a defence of the bishop in a pamphlet, entitled, *Short Remarks on a New Translation of Isaiah*, by John Sturges, LL.D.; and to this, Dodson replied in *A Letter to the Rev. Dr. Sturges*. 'A good deal of acuteness and candour are displayed in the pamphlets on both sides.' [ORME.]—S. N.

DOEDERLEIN, JOHANN CHRISTOPH, a German theologian, was born at Windsheim in Franconia, 20th January 1745. In 1764 he repaired to the University of Altorf; and in 1767 became deacon in his native city, where he devoted his leisure hours to the study of the Fathers. In 1772 he was appointed theological professor at Altorf; and in 1782 professor of theology at Jena. He died here 2d December 1792. He published *Curæ critica et exegetica; Jesaias; Sprüche Salomō's; Institutio theologia Christiana; Theologische Bibliothek* 1780, etc. etc. Doederlein had an important influence in his day; and contributed much to that freer theology which gradually passed into rationalism. He formed no inconsiderable link in the chain of transition from strict orthodoxy to moderatism. He was a very accomplished man, to whom almost all branches of theology were familiar; an excellent teacher and preacher. His *Isaiah*, translated into Latin with notes, was his chief exegetical work, which passed through three editions, 1775, 1789, 3d edition; but it is almost forgotten now.—S. D.

DOEG (דוגג; Sept. Δωγη), an Edomite, and chief overseer of King Saul's flocks, which is an important trust in Oriental courts. At Nob he was witness of the assistance which the high-priest Ahimelech seemed to afford to the fugitive David, by furnishing him with the sword of Goliath, and by supplying him with bread even from the sacred

table (1 Sam. xxi. 7). Of this he failed not to inform the king, who, regardless of the explanation offered by Ahimelech, and finding that the chiefs censured him, and hesitated to lay their hands upon a person so sacred, commanded Doeg to slay him and his priests—a task which was executed with equal readiness and cruelty by the Edomite (1 Sam. xxii. 18, *sqq.*)—J. K.

DOG. [KELEB.]

DOORS. [GATES.]

DOPHKAH, an encampment of the Israelites in the Wilderness. [WANDERING, THE.]

DOR (דור, and דאָר; Sept. Δῶρα), an ancient royal city of the Canaanites (Josh. xii. 23), situated on the coast of the Mediterranean (1 Maccab. xv. 11), fourteen miles south of the promontory of Carmel, and seven north of Caesarea. Its king joined the great confederacy under Jabin, and was, with the others, defeated by Joshua at the waters of Merom. But though the Israelites were victorious on the field, they could not obtain possession of the strong city (Josh. xvii. 12; Judg. i. 27). The district of which Dor was capital appears to have been within the allotted territory of Asher (Reland, *Pal.* 539), but was assigned to Manasseh (Josh. xvii. 11). The Israelites never expelled the old inhabitants, though they seem to have made them pay tribute in the days of Solomon (1 Kings iv. 11). After this period Dor is not mentioned in Bible history.

In Scripture we read of 'the borders of Dor,' 'the coast of Dor,' and 'the region of Dor;' the same Hebrew word, נֶפֶחַ, being thus variously translated (Josh. xi. 2; xii. 23; 1 Kings iv. 11). In the Sept. it is treated as one name, Ναφεθδῶρ Winer, Rosenmüller, and others, also make Napheth-dor the real name of the city. This, however, is an error, as may be seen from Josh. xii. 23, where 'Dor' is distinguished from 'the coast (Napheth) of Dor.' Napheth signifies an elevated tract, and hence 'a coast' as being elevated above the water. Dor stood on a rocky promontory, behind which lies a beautiful and fertile plain, extending southward to Sharon, and northward to Carmel. Along its eastern side runs a line of wooded hills, completely enclosing it. This plain is undoubtedly the 'coast or region of Dor,' which is rightly rendered by Symmachus παραλία Δῶρα (Reland, *Pal.* 738).

In Josh. xvii. 11, Dor and Endor (עֵינֹרַיִם) are mentioned together. Bertheau (*Comm. on Josh.*) and Stanley (*S. and P.*), following the Vatican Codex of the Sept., state that Endor is interpolated; and Stanley adds, 'from this, *Napheth* would appear to be a local word applied to the plains at the foot of Carmel, much as Ciccar and Gellioth were to the Jordan valley.' But we have no authority here for questioning the integrity of the sacred text, and consequently the theory about *Napheth* must be rejected. The 'three countries,' or rather 'triple district' (שְׁלֹשֶׁת הַנְּהַפְתִּים), includes Endor, Taanach, and Megiddo, and has no connection with Carmel (see Keil on Josh. xvii. 11).

Dor was one of the Phœnician strongholds, and seats of commerce. On its rocky coast the *maræx* abounded (Stephanus, Ἐθνακα; Reland, *Pal.* 739). It was still a flourishing town in the Roman age; and afterwards became the seat of a bishop. It is

now represented by a little fishing village, consisting of some thirty houses. The houses are modern, but the materials are manifestly ancient. North of the village is a rocky promontory, covered for a space of half a mile with ruins and rubbish. This was the site of the old city. The most conspicuous object is a tall fragment of a tower, which forms the landmark of *Tantûra*, for such is the modern name. It is visible along the whole coast from Cæsarea to Carmel. The writer visited some rock-tombs, and an excavation resembling a small theatre. The harbour was on the south side of the promontory, and was sheltered by two or three small islands.—J. L. P.

DORCAS. [TABITHA.]

DORCAS. [TSEBI.]

DORSCHÉUS, JOANNES GEORGIUS (DORSCHÉ, J. G.), one of the most distinguished Lutheran theologians of the sixteenth century. He was born at Strasburg, Nov. 19, 1597. After the completion of his preparatory studies, he entered upon the work of the Christian ministry as pastor at Ensisheim, in the year 1622. In 1627, he was called to the chair of theology in the university of Strasburg, and in 1654 to a similar post in the university of Rostock. He died Dec. 25, 1659. Of his numerous works, those which were published during his lifetime belong, for the most part, to polemical theology. His biblical writings are, with scarcely an exception, posthumous works; and the number of these, with the dates of their publication, some of them many years after his death, may be not unfairly taken as evidence of the great extent of his influence and reputation. The following are the most important of them:—1. *Biblia numerata; seu index specialis in vetus et novum testamentum ad singula omnium librorum capita et commata*, Francofurti, 1674, fol. This was edited by J. Grammbius, and may be described as a work giving, instead of annotations on the text of Scripture, references to passages in various authors, principally the Fathers, which elucidate the verse or paragraph. 2. *Ad entheas Jesaie prophetias, earumque singula capita analysis ex operose collatis pene multis optimisque tam abæis quam Christianis interpretibus, adeo ut commentarii vicem præstare possit, præmissa ubique apodixi penitentiam urgente instituta*, Hamb. 1703, 4to. 3. *In quatuor evangelistas commentarius, per solidam apodixin analysis, exegesis, harmoniam item ac parallelismum verum sensum exhibens, falsum refutans*, Hamb. 1706, 4to. This is the most valuable of his exegetical works, and is edited from notes of his academical prelections found amongst his papers. Buddeus (*Isagoge*, 1472) thus characterises it: 'Nervose brevitèr que auctor multa complexus est, talia que simul subministrat quæ apud alios inter longas verborum ambages frustra requiras.' Prefixed to the commentary is a preface by the editor, J. F. Fechtius, in which the life and writings of Dorscheus are reviewed at length. 4. *In epistolam Pauli ad Ebraeos commentarius*, Francof. et Lips., 1717, 4to. This also appears to have been derived from notes of his lectures; the latter part, from the middle of chap. x. to the end of the epistle, is by Christopher Pfaff. 5. *Fragmentum commentarii in epistolam Judeæ*, Francof. et Lips., 1700, 4to, along with which is given the commentary of B. H. Gebhard on Jude. 6. *Znřřpara in epistolas i. et ii. Joannis*,

Rostochii, 1697, 4to. Of the authenticity of this work some doubt is intimated in the preface by the editor J. N. Quistorpius.—S. N.

DORYMENES (Δορυμένης), the father of Ptolemy Macron (2 Maccab. x. 12), mentioned 1 Maccab. iii. 38; 2 Maccab. iv. 45; 'probably the same who had fought against Antiochus the Great when he attacked Coelosyria; see Polyb. v. 61' (Grimm, *Exeget. Hdb.* in loc.)—W. L. A.

DOSITHEUS (Δοσίθεος), a priest and Levite, who, according to the Apocryphal additions to the Book of Esther (LXX., c. x. *in fin.*; Vulg. c. xi. v. 1), carried into Egypt the letter of Mordecai respecting the feast of Purim.—S. N.

DOSITHEUS (Δοσίθεος). 1. One of the generals of Judas Maccabæus (2 Maccab. xii. 19, 24). 2. A horse soldier in the army of Judas Maccabæus, of the company of Bacenor (2 Maccab. xii. 35). 3. A renegade Jew in the camp of Ptolemy Philopator (3 Maccab. i. 3).—S. N.

DOTHAN (דוֹתָן, דוֹתָן; Sept. Δωθαίμ).

Dothan is only twice mentioned in Scripture, and yet there are few Bible cities round which so much of romantic interest clings. Joseph was sent from Hebron by his father to visit his brethren, then supposed to be pasturing their flocks on Jacob's property at Shechem. On reaching the plain of Shechem, he was told they had gone to *Dothan*; he followed, and found them there (Gen. xxxvii. 14-17). Among the wooded hills of Ephraim, about 14 miles north of Shechem, is a beautiful little plain, carpeted with green grass. On its southern side is a large mound or tell covered with ruins. This is the site of Dothan, and it is still called by its ancient name. At the base of the tell is a fountain; and probably beside it Joseph's brethren were grouped when they saw him in the distance approaching from the direction of Shechem. Near it, too, are some deep wells or cisterns, into one or other of which, doubtless, Joseph was let down. The word דוֹתָן (and its contracted form, דוֹתָן), is dual of the Chaldee דוֹת, 'a well' or 'cistern.' Close by Dothan runs the great road from Bethshean and Northern Gilead to Egypt; and along this the Ishmaelites travelled (Gen. xxxvii. 25).

Dothan was the scene of another remarkable episode in Israelitish history. When the Syrian army under Benhadad invaded Samaria, Elisha the Prophet was living at Dothan, and gave full information to his countrymen of the designs and tactics of the enemy. The Syrian king knew this and determined to capture him. Accordingly one morning the people of Dothan found their village surrounded by the chariots and horsemen of Benhadad. Elisha's servant cried in dismay, 'Alas, my master! how shall we do?' 'Fear not,' was the reply, 'for they that be with us are more than they that be with them.' Still the servant doubted and trembled; but Elisha prayed, and the Lord opened the eyes of the young man; 'and he saw; and, behold, the *hill* was full of horses and chariots of fire round about Elisha.' Again he prayed, and the Syrians were smitten with 'confusion of sight,' and were then led away to Samaria (2 Kings vi. 8-23).

Dothan is mentioned several times in the Book of Judith in connection with the fortress of Bethu

lia (iii. 11 ; vii. 3). In the time of Eusebius it was still inhabited, and he gives its exact position, in the twelfth mile (Roman) from Samaria (*Onomast. s. v. Dothaim*). From that period until within the last few years its site has remained unknown. A comparatively late tradition located it north of the Lake of Tiberias, and pointed out the well there in which Joseph was put. The discovery of the true site was made in 1852, by Dr. Robinson and M. Van de Velde. They both came upon it by accident, and at once identified it (Robinson, *B. R.*, iii. 122, 338 ; Van de Velde, i. 365 ; Reland, *Pal.* 739).—J. L. P.

DOUGHTY, JOHN, D.D. (DOUGTAEUS), was born in 1598 at Martley, near Worcester, and died at Westminster, 25th Dec. 1672. He was educated at Oxford, and was rector of Lapworth in Warwickshire at the time of the breaking out of the war between Charles I. and the Parliament. After the restoration he was made a prebendary of Westminster and rector of Cheam in Surrey. He is best known by his *Analecta Sacra ; sive excursus philologici super diversis SS. locis*, etc., Lond. 1658-60. A second edition appeared at Amsterdam in 1684, to which the annotations of Knatchbul are appended. His illustrations of Scripture are chiefly drawn from the usages, etc., of heathen antiquity. Orme says he 'is more successful in elucidating the Old than the New Covenant Scriptures' (*Bib. Bib.* 156).—W. L. A.

DOVE. [YONEH.]

DOVES' DUNG. This expression occurs in 2 Kings vi. 25, as a literal translation of *חריונים* *chirionim* or *charei-yonim*, which in the margin is written *דביונים* *dib-yonim*, both meaning the same thing ; and it is curious that in the Arabic there are two words very similar to these, *خره*

khureh, and *ذبل* *zabil*, which also signify the same thing, that is, the dung of animals. In the above compounds, *khir* and *dib* being prefixed to *yonim*, the plural form for *doves*, the literal meaning is as above translated. By many the expression is considered to signify literally the dung of pigeons, as in the passage of 2 Kings vi. 25 : 'And there was a great famine in Samaria, and behold they besieged it, until an ass's head was sold for threescore pieces of silver, and the fourth part of a cab of *doves' dung* for four pieces of silver.' Different opinions, however, have been entertained respecting the meaning of the words which are the subject of this article, namely, whether they should be taken literally, or as a figurative name of some vegetable substance. The strongest point in favour of the former view is that all ancient Jewish writers have understood the term literally. Taking it, however, in this sense, various explanations have been given of the use to which the doves' dung was applied. Some of the rabbins were of opinion that the doves' dung was used for fuel, and Josephus, that it was purchased for its salt. Mr. Harmer has suggested that it might have been a valuable article, as being of great use for quickening the growth of esculent plants, particularly melons ; and he shews, what is well known, that the Persians live much on melons in the summer months, and use pigeons' dung in raising them. All travellers describe the

number of pigeon-houses in Persia. Mr. Edwards, as cited by Dr. Harris, remarks that it is not likely they had much ground to cultivate in so populous a city for gardens ; and is disposed, therefore, to understand it as meaning the offals or refuse of all sorts of grain, which was wont to be given to pigeons, etc. Dr. Harris, however, observes that the stress of the famine might have been so great as to have compelled the poor among the besieged in Samaria to devour either the intestines of the doves, after the more wealthy had eaten the bodies, or, as it might perhaps be rendered, the *crops* ; and reference has been made in the *Edinb. Christian Instructor*, No. 122, to an abridged Chronicle of the History of England, in which it is said that in the famine which laid England waste in 1316 the poor ate *pigeons' dung*. But these explanations are not more satisfactory than the older ones.

212. Ornithogalum umbellatum.

Bochart, however, has shewn (*Hierozyicon*, ii. 37) that the term 'pigeons' dung' was applied by the Arabs to different vegetable substances. He quotes Avicenna as applying the term *stercus columbarum* to two different plants or substances. One of these is described by Avicenna and other Arab authors, under the names *kuz-kundem* and *joug-kundem*, as a light substance like moss. Secondly, this name was given to the *ashnan* or *usnan*, which appears to be a fleshy-leaved plant, that, like the *salsolas*, *salicornias*, or *mesembryanthemums*, when burnt, yields alkali in its ashes. From this Bochart has been led to consider it as identical with another plant, which occurs under the name of *kali* both in the Hebrew and Arabic languages, and which was one of the pulses used in ancient times, as at the present day, as an article of diet [KALI]. With reference to this grain it has been observed that 'large quantities of it are parched and dried, and stored in magazines at Cairo and Damascus. It is much used during journeys, and particularly by the great pilgrim-caravan to Mecca ; and if this conjecture be correct it may be supposed to have been among the provisions stored up in the besieged city, and sold at the extravagant price mentioned in the text' (*Pict. Bible*). The late Lady Callcott, in her *Scripture Herbal*, 1842, adduces the *ornithogalum umbellatum*, or common Star of Bethlehem, as

the 'doves' dung' of Scripture, and assigns this, as well as 'birds' milk,' as two of its vernacular names, and infers that the *pigeons' dung* which has been mentioned above as being eaten in England in the famine of 1316 was the roots of this plant. It is a native of this country, and also of Taurus, Caucasus, and Northern Africa. Dioscorides states that its bulbs were sometimes cooked with bread, in the same way as the *melanthium*, and also that it was eaten both raw and roasted. The roots were also commonly eaten in Italy and other southern countries at an early period. Sprengel (*in Dioscor.* ii. 471), with reference to the above passage of Dioscorides on *δρυθόγαλον*, says, 'Ebraice dicta fuit planta יוֹנִים הָרִי *stercus columbinum* (2 Reg. vi. 25), ob floribus albidum cum herbeo mixtum colore, sicut in stercore plerumque avium herbivorarum ea mixtio observatur. Est enim *ornithogalum umbellatum*, quod per orientem proveniens, bulbos habet edules, licet a pauperibus duntaxat petantur. Hæc Linnaeus expositio biblicæ loci multi plus valet, quam septem et quod excedit *ἐξηγήσεις*, quas Bochartus enumerat.'

Having seen that the name of pigeons' dung has been, and probably still is, applied by the Arabs to different vegetable substances, we are not disposed to adopt the literal meaning of the term, as doves' dung, being devoid of nutriment, was not likely to have served as food, even during the famine, especially as we find that an ass's head was sold for sixty pieces of silver. Now if any asses remained for sale, or ass-loads of corn, as the expression has been interpreted, there is no reason for supposing that other substances may not have remained stored up in secret for those who had money to buy. But it is not easy to say what vegetable substance, serving as an article of diet, is alluded to by the name of 'doves' dung.' If the besieged had communication with the exterior, or even if any of their body could have dug in the neighbourhood of the walls for the kind of 'earth-nut' offered by the bulbs of the *ornithogalum*, or Star of Bethlehem, which is said to be abundant in the neighbourhood of Samaria, there does not appear any good reason why it should not be the substance alluded to. But it does not appear so likely to have been stored up; and we have been unable to discover any reference in the Arab authors to such a plant, under the name of *stercus columbarum*. Pulse was as likely to have been stored up in ancient times as at the present day; and it may, therefore, as shewn by Bochart, have been one of the substances to which the name was applied by the Arabs, and have been known to the Hebrews also by a similar name [KALI].—J. F. R.

DOWRY. [MARRIAGE.]

D'OYLY, GEORGE, D.D., was born October 31, 1778, in London. He was the fourth son of the Ven. Matthias D'Oyly, Archdeacon of Lewes, Sussex, and member of a family which traces its lineal descent from the D'Ouillys of Ouilly in Normandy, who helped to swell the ranks with whose aid William conquered this country. In 1796, Mr. D'Oyly proceeded to the University of Cambridge, and became a member of Bene't, or Corpus Christi College. The result of his hard study was his attainment of the high place of second wrangler and second Smith's prizeman previous to

his B.A. degree in 1800. In February 1801 he was elected to a fellowship of his college. After holding the office of moderator for three years in rotation, and that of public mathematical examiner for two, and performing the duties of a select preacher during the years 1809, 1810, 1811; he became, in the November of the last-mentioned year, Christian advocate of the University, being already B.D. In this capacity he published some useful writings suitable to his office, but not for enumeration in this work. He also contributed some valuable articles to early numbers of the *Quarterly Review*, among which may be mentioned a review of the Socinian version of the N. T., and an examination of Dr. Herbert Marsh's *Lectures on Criticism and Interpretation*. Two more of his contributions to the *Quarterly* are interesting to students of Hebrew criticism, viz., two elaborate articles on 'Bellany's *Translation of the Bible*.' In them the proposed version is carefully examined, and the unsoundness of the suggested deviations from our A. V. exposed in a moderate but masterly manner. In 1813, Mr. D'Oyly was appointed domestic chaplain to the Archbishop of Canterbury, Dr. Manners Sutton. He had held the situation of chaplain a very short time when the idea was entertained among the leading members of the S.P.C.K. of a work which served eventually more than any other to gain for Mr. D'Oyly's name celebrity in the church, i.e., the well-known Commentary on the Bible. The undertaking (which was first suggested, it is said, by Dr. Cleaver, Bishop of St. Asaph), was eventually entrusted to Dr. Mant, afterwards Bishop of Down, Connor, and Dromore, and Mr. D'Oyly—both chaplains of the Archbishop. The execution of his share of this useful work occupied the greater part of Mr. D'Oyly's time for the next three years. In the year 1815, he was presented to the Vicarage of Hernhill, near Feversham, in Kent, which, however, he shortly afterwards resigned on being collated by his former patron the Archbishop to the rectory of Buxted, with the chapelry of Uckfield. Towards the close of the year 1820 he was appointed by the same patron to the rectory of Lambeth, Surrey, and to that of Sundridge, Kent—preferment which he retained to the end of his life. In the management of this most important cure Dr. D'Oyly (for he had proceeded to the highest academical degree at Cambridge on this last promotion, for which he also resigned his other appointments) secured in London general respect as 'an exemplary and diligent clergyman, a distinguished scholar, and an honourable man.' His active duties did not quench his literary energy. Besides some volumes of excellent sermons, he published an interesting work, the *Life of Archbishop Sancroft*. In 1827 he became instrumental in the foundation of King's College, London. His life of usefulness was closed January 8, 1846, in his 67th year. The title-page of his chief work explains its character; 'THE HOLY BIBLE, according to the A. V., with notes explanatory and practical; taken principally from the most eminent writers of the United Church of England and Ireland, together with appropriate introductions, tables, indexes, maps, and plans—prepared and arranged by the Rev. George D'Oyly, D.D., and the Right Rev. Richard Mant, Bishop of Down and Connor.' This work, which was at first published in 3 volumes 4to, has been often reprinted for popular use by the S.P.C.K. (with

the text, in 3 volumes imperial 8vo, without the text, in 2 volumes). 'This work,' says Mr. Hartwell Home (*Introduction* [9th ed.] vol. v. p. 302), 'professes to communicate only the results of the critical inquiries of learned men, without giving a detailed exposition of the inquiries themselves. These results, however, are selected with great judgment, so that the reader who may consult them on difficult passages will rarely be disappointed. Of the labour attending this publication some idea may be formed, when it is stated that the works of upwards of 160 authors have been consulted for it, amounting to several hundred volumes. . . . The imperial 8vo edition is perhaps the cheapest commentary in the English language. The reprint at New York, which is very neatly executed in 2 large 4to volumes [*annis* 1818-20], was edited by the Right Rev. John Henry Hobart, D.D., Bishop of the Protestant Episcopal Church in the State of New York, who greatly enhanced the value of this work by numerous additional notes, selected from the writings of upwards of 30 of the most eminent divines (not noticed by Drs. D'Oyly and Mant), whose names are a sufficient pledge for the value of the annotations taken from their writings. . . . Many other notes are likewise selected from several of the authors cited by Dr. D'Oyly and Bishop Mant. Bishop Hobart's additional notes are twofold—1. Critical and explanatory; 2. Practical. The latter are very numerous, and are calculated greatly to increase the value of this commentary as a FAMILY BIBLE.' We are indebted for the biographical details of this article to the *Memoir of George D'Oyly*, D.D., F.R.S. etc., by his son, prefixed to two volumes of *Sermons*, etc., which were published in the year 1847.—P. H.

DRACHM (*δραχμή*, drachma), a principal silver coin of the Greeks, which became current among the Jews after the exile (2 Maccab. iv. 19; x. 20; xii. 43; Luke xv. 8, 9).^{*} It is of various weights, according to the use of the different talents.

1. The drachm of the Ptolemaic or Alexandrian talent weighed about 58 grains, but fell gradually to a much lower rate. This was the drachm used in Thrace and Macedon before the time of Alexander the Great. It was restored in the coinage of the kings of Egypt, and weighed about 55 grains. This talent was used in Egypt, and at Tyre, Sidon, and Berytus.

2. The drachm of the later Phœnician or Persian talent weighed about 58 to 59 grains. This talent in Palestine merged into the talent of Egypt during the sway of the Ptolemies. It was used at Aradus, and by the Persians.

3. The drachm of the Attic talent, which became almost universal after Alexander, weighed about 66·7 grains. In later times (about B. C. 27) it weighed only 61·3 grains, and thus became very nearly equal to the Roman denarius, the average weight of which was 60 grains. Under the earlier emperors it fell as low as 55 grains.

With the drachm of the Eginetan talent, which weighed about 96 grains, we have nothing to do, as the first three talents only were known to the Jews. Each of our shillings contains 80·7 grains of alloy. The earliest Attic drachm is therefore worth $\frac{80\cdot7}{66\cdot7}$ of a shilling, or 9·91 pence, which

is $9\frac{1}{2} + \frac{1}{10}$ of a farthing, or may be called tenpence. The drachms mentioned in 2 Maccabees are most likely of the Seleucidæ, and therefore of the Attic standard. The later Attic drachm is worth $\frac{81\cdot3}{80\cdot7}$ of a shilling, or 9·11 pence, which is $9 + \frac{1}{2}$ of a farthing. From this the value of the latest or N. T. drachm may therefore have been about eightpence. This value is of course merely nominal, for the real value of money was far greater in the time of our Lord than at present. The ten pieces of silver (*δραχμαὶ δέκα*) mentioned in Luke xv. 8, are most likely denarii, for the Attic drachm and the denarius were at that time identical, and the latter had almost, if not altogether, superseded the former. This accounts for the remark of Josephus, *σίκλος** . . . 'Ἀττικὰ δέχεται δράχμας τέσσαρας (*Antiq. Jud.* iii. 8. 2). At this same period the denarius was almost equal to the quarter of a Maccabæan shekel. Josephus is then speaking of four of the current Attic drachms, to which four Ptolemaic drachms of the shekel, and four denarii of his time, were equal.

There are also pieces struck at Ephesus a little earlier than the time of Josephus, with the inscriptions ΔΡΑΧΜΗ and ΔΙΑΔΡΑΧΜΟΝ, having the weight of a denarius and of two denarii. The thirty pieces of silver mentioned in Zech. xi. 12 are probably shekels, while those mentioned in Matt. xxvi. 15; xxvii. 3, 9, as also the fifty thousand pieces in Acts xix. 19, are most likely denarii, if these latter are not drachmæ of account. In all these cases the word Ἀργύριον is employed.—F. W. M.

DRAGON. [TAN.]

DRAM. [ADARCONIM.]

DREAMS. Of all the subjects upon which the mind of man has speculated, there is perhaps none which has more perplexed than that of dreaming; but whatever may be the difficulties attending the subject, we know that it has formed a channel through which Jehovah was pleased in former times to reveal His character and dispensations to His people. Under the three successive dispensations we find this channel of communication with man adopted. It was doubtless in this way that God appeared to the father of the faithful, ordering him to forsake country, kindred, and his father's house, and to go into the land that he would shew him. To this divine command Abraham paid a ready obedience. It was by a similar prompt obedience to the admonition conveyed to him in a dream that Abimelech (Gen. xx. 3), himself, and Abraham, too, were saved from the evil consequences of his meditated act.

When Jacob was, as it were, banished from his

* In Xenophon (*Anab.* i. 5, 6) there is a coin described as equal to $7\frac{1}{2}$ Attic oboli. The name is Σίγλος. The obolus weighed about 11·25 grains, and 84 grains is the full weight of the silver Darics. This does not in any way agree with the shekel of the Septuagint, equal to an Attic didrachmon, nor with the Ἐβραϊκὸν νόμισμα, called the shekel, and therefore we must conclude that the word Σίγλος, though the same as the Σίκλος of the Septuagint, and derived from shekel, was applied by the Greeks of Asia to this peculiar coin, as being the principal silver currency of Persia. (Cf. Leake, Appendix, *Num. Hell.* p. 2.)

* In the former two passages the Vulgate has didrachma.

father's house, in order to avoid the effects of his brother's implacable rage, he came to a place called Luz (Gen. xxviii. 19), and, whilst there, sleeping under the canopy of heaven, he had communication by dream, not only with angels, but with God also. In Gen. xxxi. 10, Jacob informs his wives that it was God who saw how Laban oppressed him—who had directed him to take the speckled, etc., cattle for his wages, and had ordered him to return home. He obeyed; and when Laban, designing to do Jacob some harm (Gen. xxxi. 24), pursued, and after seven days overtook him, God, by a dream, prevented the meditated evil.

Joseph, whilst yet a child, had dreams *predictive* of his future advancement (Gen. xxxvii. 6-11). These dreams are *one*, and were repeated under different forms, in order, it would seem, to express the certainty of the thing they predicted. How they formed the first link in an extended chain of God's providential dealings the sacred record fully informs us. In the course of time, by being able to give an accurate interpretation of three *predictive* dreams, Joseph was raised from the prison to a participation with King Pharaoh in the government of Egypt! That the same divine mode of communicating with man was continued under the Mosaic dispensation is evident from an express word of promise (Num. xii. 6), 'If there be a prophet among you, I the Lord will make myself known unto him in a vision, and will speak to him in a *dream*.' When Gideon warred with the Amalekites, and was alarmed at their vast multitudes, he was encouraged to do God's will by overhearing one of them relate his dream, and another giving the interpretation (Judg. vii.). When the spirit of Samuel (whom the witch pretended to raise up) asked Saul, 'Why hast thou disquieted me to bring me up?' Saul answered, 'I am sore distressed; for the Philistines make war against me, and God is departed from me, and answers me no more, neither by prophets, nor by *dreams*: therefore I have called thee that thou mayest make known to me what I shall do.' Again, it was in a dream that God was pleased to grant Solomon a promise of wisdom and understanding (1 Kings iii. 5, etc.) Job says (xxxiii. 14) 'God speaketh once, yea twice, yet man perceiveth it not. In a dream, in a vision of the night, when deep sleep falleth upon men, in slumbering upon the bed, then he openeth the ears of men and sealeth their instruction.' In order to guard against imposition, Moses pronounced a penalty against dreams which were invented and wickedly made use of, for the promotion of idolatry (Deut. xiii. 1-5). Thus Zachariah (x. 2) complains, 'The idols have spoken vanity, and the diviners have spoken a lie, and have told *false dreams*; they comfort in vain.' And so Jeremiah (xxiii. 25), 'I have heard what the prophets said that prophesy lies in my name, saying, I have dreamed, I have dreamed,' etc. Yet this abuse did not alter God's plan in the right use of them, for in the 28th verse of the same chapter it is said, 'The prophet that hath a *dream*, and he that hath my word, let him speak my word faithfully. What is the chaff to the wheat? saith the Lord.'

The knowledge of visions and dreams is reckoned amongst the principal gifts and graces sometimes bestowed by God upon them that fear him (Dan. i. 17; v. 11-14).

In the N. T. we read that when Joseph designed to put Mary away because he perceived her to be

with child, he was turned from his purpose by a dream, in which an angel made the truth of the matter known to him (Matt. i. 20). And in the following chapter it is stated that God in a dream warned the wise men not to return to Herod. Moreover, in verses 13 and 19, Joseph is instructed to flee into and return from Egypt with the child Jesus. Whether the dream of Pilate's wife was a divine intimation we cannot tell.

That divine dreams, which actually were imparted to God's servants, should be imitated in fictitious representation by ancient and modern writers, was consistent no less with the general objects of superstition and imposture than with those of literature. Hence divine dreams became the constant appendages of the heathen mythology, and accounts, real and fictitious, of communications in vision were interwoven in every production. Information which was superior to the vulgar philosophy of the time intimated its discoveries as suggestions imparted by *inspiration*. If a warning was to be conveyed, what so affecting as the admonition of a departed friend! Such machinery was particularly adapted to works of imagination, and the poems of antiquity, as well as those of modern times, were frequently decorated with its ornaments.

We inquire not *how* far God may have revealed himself to man beyond what Holy Scripture records. Some of the dreams, both of ancient and modern times, which lay claim to a divine character, are certainly striking, and may, for aught we know, have had, and may still have, a collateral bearing on the development of God's purposes. [DIVINATION.]—J. W. D.

DRESS. The subject of the costume of the ancient Hebrews is involved in much obscurity and doubt. Sculptured monuments and coins afford us all needful information respecting the dress of the ancient Egyptians, Babylonians, Persians, Greeks, and Romans; and even the garb worn by the barbarous nations is perpetuated in the monuments of their antagonists and conquerors. But the ancient Hebrews have left no monuments, no figures of themselves; and the few figures which have been supposed to represent Jews in the monuments of Egypt and Persia are so uncertain, that their authority remains to be established before we can rely upon the information which they convey. There are, however, many allusions to dress in the Scriptures, and these form the only source of our positive information. They are often, indeed, obscure, and of uncertain interpretation; but they are invaluable in so far as they enable us to compare and verify the information derivable from other sources. These sources are—

1. The costume of neighbouring ancient nations, as represented in their monuments.
2. The alleged costume of Jews as represented in the same monuments.
3. The present costumes (which are known to be ancient) of Syria and Arabia.
4. Tradition.

1. The range of inquiry into monumental costume is very limited. It is a common mistake to talk of 'Oriental costume' as if it were a uniform thing, whereas, in fact, the costumes of the Asiatic nations differ far more from one another than do the costumes of the different nations of Europe. And that this was the case anciently, is shewn by

the monuments, wherein the costumes of Egyptians, Babylonians, Persians, Medes, Syrians, and Greeks differ as much from one another as do the costumes of the modern Syrians, Egyptians, Arabs, Turks, and Persians. It is therefore useless to examine the monumental costume of any nation remote from Palestine, for the purpose of ascertaining the costume of the ancient Hebrews. Syria, Arabia, and Egypt are the only countries where monuments would be likely to afford any useful information: but Arabia has left no monumental figures, and Syria none of sufficiently ancient date; and it is left for Egypt to supply all the information likely to be of use. The extent and value of this information, for the particular purpose, we believe to be far less than is usually represented. That we are not disposed to undervalue the information derivable from the Egyptian monuments for the purpose of illustrating biblical history and antiquities, the pages of the present work will sufficiently evince; and its editor may indeed claim to be the first in this country to work this mine of materials for biblical illustration. But the rage for this kind of illustration has been carried to such preposterous lengths, and is so likely in its further progress to confuse our notions of the real position which the Hebrews occupied, that it may not be an unwholesome caution to remind our readers that the Egyptians and the Hebrews were an exceedingly different people—as different in every respect as can well be conceived; and that the climates which they inhabited were so very different as to necessitate a greater difference of food and dress than might be pre-supposed of countries so near to each other. This consideration appears to us to render of little value the very ingenious illustrations of Jewish costume which have been deduced from this source. It is true that the Jewish nation was cradled in Egypt, and this circumstance may have had some influence on ceremonial dresses, and the ornaments of women; but we do not find that nations circumstanced as the Jews were, readily adopt the costumes of other nations, especially when their residence in Egypt was always regarded by them as temporary, and when their raiment was of home manufacture, spun and woven by the women from the produce of their flocks (Exod. xxxv. 25). We find also that, immediately after leaving Egypt, the principal article of dress among the Hebrews was some ample woollen garment, fit to sleep in (Exod. xxii. 27), to which nothing similar is to be seen among the costumes of Egypt.

2. With respect to the supposed representation of Jews in ancient monuments, if any authentic examples could be found, even of a single figure, in the ancient costume, it would afford much satisfaction, as tending to elucidate many passages of Scripture which cannot at present be with certainty explained. The sculptures and paintings supposed to represent ancient Hebrews are contained in—

(a.) A painting at Beni Hassan, representing the arrival of some foreigners in Egypt, and supposed to figure the arrival of Joseph's brethren in that country. The accessories of the scene, the physiognomies of the persons, and the time to which the picture relates, are certainly in unison with that event, but other circumstances are against the notion. Sir J. G. Wilkinson speaks hesitatingly on the subject, and, until some greater certainty is obtained, we may admit the possible correctness of

the conjecture. The annexed cut shews the variety of costume which this scene displays. All the men wear sandals. Some of them are clad only in a short tunic or shirt, with close sleeves (fig. 3); others wear over this a kind of sleeveless plaid or mantle, thrown over the left shoulder, and passing under the right arm (fig. 2). It is of a striped and curiously figured pattern, and looks exceedingly like the fine grass woven cloth of the South Sea. Others have, instead of this, a fringed skirt of the same material (fig. 1). All the figures are bare-headed, and wear beards, which are circumstances favourable to the identification. The fringed skirt of fig. 1 is certainly a remarkable circumstance.

213.

Moses directed that the people should wear a fringe at the hem of their garments (Numb. xv. 38), and the probability is that this command merely perpetuated a more ancient usage.

(b.) This fringe re-appears, much enlarged, in the other Egyptian sculpture in which Jews are supposed to be represented. These are in a tomb discovered by Belzoni, in the valley of Bab-el-Melook, near Thebes. There are captives of different nations, and among them four figures, supposed to represent Jews. The scene is imagined to com-

214.

memorate the triumphs of Pharaoh-Necho in that war in which the Jews were defeated at Megiddo, and their king Josiah slain (2 Chron. xxxv. xxxvi.) It will be seen that the dress of these figures differs little, excepting in the length of the fringe, from that of the skirted figure in the earlier painting; and so far this is a corroborative circumstance in favour of both. The band round the head is the other principal difference. These figures are manifestly in what we would call undress, and the comparison being made with the similar undress figures in the earlier scene, the resemblance is greater than might be expected from the distance of time and difference of manners. The internal evidence is so far good; and if the external evidence were equally strong, there would not be much ground for hesitation.

(c.) The inscription and sculpture on the rock of Behistun were once presumed to have some reference to the history of the Hebrews, but, according to Col. Rawlinson, they record the personal history of Darius the son of Hystaspes. A number of captives are represented strung together by the neck, and brought before some king and conqueror. Sir R. K. Porter was led to fancy that the sculpture commemorates the subjugation and deportation of the *ten* tribes by Shalmanezzer, king of Assyria (2 Kings xvii. 6). The reasons which he assigns for this conclusion are of little weight, and not worth examination. But the single fact that the figures are arrayed in a costume similar to the ancient and present garb of the people of Syria and Lebanon, inclines us to think that the figures really do represent the costume of nations west of the Euphrates, including probably that of the Jews and their near neighbours. The dress here shewn is a

215.

shirt or tunic confined around the waist by a strap or girdle; while others have a longer and larger robe, furnished with a spacious cape or hood, and probably worn over the other.

There is no reason to think that the dress of the Jews was in any important respect different from that of the other inhabitants of the same and immediately bordering countries. It would therefore be satisfactory, and would enable us to judge better of the figures which have been noticed, if we had representations of Canaanites, Phœnicians, Syrians, Moabites, etc., by the Egyptian artists, who were so exact in discriminating, even to caricature, the peculiarities of nations. At p. 227 there is a supposed figure of a Canaanite warrior from this source. The dress being military, does not afford much room for comparison in the present instance, but we at once recognize in it most of the articles which formed the military dress of the Hebrews. The following figures (No. 216), however, convey more information, as they appear to represent the inhabitants of Syria and Lebanon. The evidence for the last (fig. 2) is as conclusive as can be obtained, for not only is there the name Lebanon (*m* being constantly interchanged with *b*), but the

216.

persons thus attired are represented as inhabiting a mountainous country, and felling *fir*-trees to im-

pede the chariots of the Egyptian invaders. The dresses are similar to each other, and this similarity strengthens the probability that the dress of the Jews was not very different; and it is also observable that it is similar to the full dress of some of the figures in the sculpture at Behistun; the figures are bearded, and the cap, or head-dress, is bound round with a fillet. The figures are arrayed in a long gown reaching to the ankles, and confined around the waist by a girdle, and the shoulders are covered by a cape, which appears to have been common to several nations of Asia. At first view it would seem that this dress is different from those already figured. But in all probability this more spacious robe is merely an outer garment, covering that inner dress which is shewn in the figures that seem more scantily arrayed.

Such is the amount of the information to be derived from ancient monuments.

217.

That to be obtained from tradition is embodied — 1. In the dresses of monks and pilgrims, which may be traced to an ancient date, and which are an intended imitation of the dresses supposed to have been worn by the first disciples and apostles of Christ. 2. The garb conventionally assigned by painters to Scriptural characters, which were equally intended to embody the dress of the apostolical period, and is corrected in some degree by the notions of Oriental costume which were collected during the Crusades.

To judge of the value of these costumes, we must compare them, first, with the scanty materials already produced, and then with the modern costumes of Syria and Arabia. The result of this examination will probably be that these traditional garbs are by no means bad reminiscences of Hebrew costume; and that the dresses which the painters have introduced into Scriptural subjects are far more near to correctness than it has latterly been the fashion to suppose. It is perhaps as nearly as possible a just medium between the ecclesiastical tradition and the practical observation. No dress more suitable to the dignity of the subjects could possibly be devised; and, sanctioned as it has been by long use, and rendered venerable by Scriptural associations, we should be reluctant to see it exchanged for the existing Oriental costumes, which the French artists have begun to prefer. But this is only with regard to pictorial associations and effects; for, in an inquiry into the costume *actually* worn by the Israelites, modern

sources of illustration must be by no means overlooked. And to that source of illustration we now turn.

The value of the modern Oriental costumes for the purposes of Scriptural illustration arise from the fact that the dress, like the usages, of the people is understood to be the same, or nearly the same, which was used in very ancient times. Of the fact itself, nakedly taken, there is not the least room for doubt. But this must be under-

218.

stood with some limitations. The dress of the Turks is distinctive and peculiar to themselves, and has no connection with the aboriginal costumes of Western Asia. The dress of the Persians has also been changed almost within the memory of man, that of the ruling Tartar tribe having been almost invariably adopted; so that the present costume is altogether different from that which is figured by Sir Thomas Herbert, Chardin, Le Bruyn, Niebuhr, and other travellers of the seventeenth and eighteenth centuries. But with the exceptions of the foreign Turkish costume, and the modifications thereof, and with certain local exceptions, chiefly in mountainous regions, it may be said that there is one prevailing costume in all the countries of Asia between the Tigris and Mediterranean, and throughout Northern Africa, from the Nile to Morocco and the banks of the Senegal. This costume is substantially Arabian, and owes its extension to the wide conquests of the Arabians under the first caliphs; and it is through the Arabians—the least changed of ancient nations, and almost the only one which has remained as a nation from ancient times—that the antiquity of this costume may be proved. This is undoubtedly the most ancient costume of Western Asia, and while one set of proofs would carry it up to Scriptural times, another set of strong probabilities and satisfactory analogies will take it back to the most remote periods of Scriptural history, and will suggest that the dress of the Jews themselves was very similar, without being strictly identical.

It would be a pleasant task to trace out these lines of proof and analogy. This cannot here be done; but it may be proper to remark—1. That the usages of the Arabians in Syria and Palestine are more in agreement with those of Scripture than those of any other inhabitants of those countries. 2. That their costume throws more light on the Scriptural intimations than any other now existing,

while it agrees more than any other with the materials supplied by antiquity and by tradition. 3. That the dress which the Arabian garbs gradually superseded in Syria and Palestine was not the same as that of Scriptural times, excepting, perhaps, among the peasantry, whose dress appears to have then differed little from that of the Arabian conquerors. The Jews had for above five centuries ceased to be inhabitants of Palestine; and it is certain that during the intermediate period the dress of the upper classes—the military and the townspeople—had become assimilated to that of the Greeks of the Eastern empire. Arabia had meanwhile been subjected to no such influences, and the dress which it brought into Syria may be regarded as a restoration of the more ancient costume, rather than (as it was in many countries) the introduction of one previously unknown.

It is to be observed, however, that there are two very different sorts of dresses among the Arabians. One is that of the Bedouin tribes, and the other that of the inhabitants of towns. The distinction between these is seldom clearly understood, or correctly stated; but is of the utmost importance for the purpose of the present notice. Instead therefore of speaking of the Arabian costume as one thing, we must regard it as two things—the desert costume, and the town costume.

If, then, our views of Hebrew costume were based on the actual costume of the Arabians, we should be led to conclude that the desert costume represented that which was worn during the patriarchal period, and until the Israelites had been some time settled in Canaan; and the town costume that which was adopted from their neighbours when they became a settled people.

This is a subject which, more than any other, requires the aid of pictorial illustration to render the details intelligible. Having provided ourselves with these, our further observations will most advantageously take the form of explanations of them, and of comments upon them.

Under the notion that the desert costume belongs to the patriarchal period, the precedence is here given to it. Only the outer articles of dress are *distinctive*, those which are worn underneath being similar to other articles worn by the town and peasant classes, and which as such will be hereafter noticed.

The annexed cut (No. 219) represents, in fig. 2, a Bedouin, or desert Arab, in the dress usually worn in Asia; and fig. 1 represents a townsman in a cloak of the same kind, adopted from the Arabs, and worn very extensively as an outermost covering in all the countries from the Oxus (or even the Persians use it) to the Mediterranean. The distinctive head dress of the Bedouin, and which has not been adopted by any other nation, or even by the Arabian townsmen, is a kerchief (*keffeli*) folded triangularly, and thrown over the head so as to fall down over the neck and shoulders, and bound to the head by a band of twisted wool or camel's hair. We forbear at the moment from inquiring whether this was or was not in use among the ancient Hebrews. The cloak is called an *abba*. It is made of wool and hair, and of various degrees of fineness. It is sometimes entirely black, or entirely white, but is more usually marked with broad stripes, the colours of which (never more than two, one of which is always white) are distinctive of the tribe by which it is worn. The

cloak is altogether shapeless, being like a square sack, with an opening in front, and with slits at the sides to let out the arms. The Arab who wears it by day, sleeps in it by night, as does often the peasant by whom it has been adopted; and in all probability this was the garment similarly used by the ancient Hebrews, and which a benevolent law, delivered while Israel was still in the desert, forbade to be kept in pledge beyond the day, that the poor might not be without a covering at night (Exod. xxii. 27). This article of dress appears to have been little known to biblical illustrators, although it is the principal and most common outermost garment in Western Asia. This singular

219.

neglect has arisen from their information being chiefly derived from Shaw and others, who describe the costume of the Arab tribes or Moors of Northern Africa, where the outer garment is more generally the *bournoos* (No. 219, fig. 3), a woollen cloak, not unlike the *abba*, but furnished with a hood, and which is sometimes strangely confounded even by well-informed persons with a totally different outer garment worn in the same regions, usually called the *hyke*, but which is also, according to its materials, quality, or colour, distinguished by various other names; and writers have produced some confusion by not observing that these names refer to an article of raiment which under all these names is essentially the same. Regardless of these minute distinctions, this part of dress may be described as a large woollen blanket, either white or brown, and in summer a cotton sheet (usually blue or white, or both colours together). Putting one corner before over the left shoulder, the wearer brings it behind, and then under the right arm, and so over the body, throwing it behind over the left shoulder, and leaving the right arm free for action. This very picturesque mode of wearing the *hyke* is shewn in fig. 2 (No. 220). Another mode of wearing it is shewn in fig. 3. It is sometimes thrown over the head as a protection from the sun or wind (fig. 1), and calls to mind the various passages of Scripture in which persons are described as covering their heads with their mantles (2 Sam. xv. 30; 1 Kings xix. 13; Esther vi. 12). This article of dress, originally borrowed from the nomades, is known in Arabia, and extends westward to the shores of the Atlantic, being most extensively used by all classes of the population. The seat of this dress, and of

the *abba* respectively, is indicated by the direction of their importation into Egypt. The *hykes* are imported from the west (*i.e.*, from North Africa), and the *abbas* from Syria. The close resemblance of the above group of real costume to those in which the traditionary ecclesiastical and traditionary artistical costumes are displayed, must be obvious to the most cursory observer. It may also be noticed that the *hyke* is not without some resemblance, as to the manner in which it was worn, to the outer garment of one of the figures in the

220.

Egyptian family, supposed to represent the arrival of Joseph's brethren in Egypt (No. 220, fig. 1).

We now turn to the costumes which are seen in the towns and villages of south-western Asia.

In the Scriptures *drawers* are only mentioned in the injunction that the high-priest should wear them (Exod. xxviii. 42), which seems to shew that they were not generally in use; nor have we any evidence that they ever became common. Drawers descending to the middle of the thighs were worn by the ancient Egyptians, and workmen often laid aside all the rest of their dress when occupied in their labours. As far as this part of dress was used at all by the Hebrews, it was doubtless either like this, or similar to those which are now worn in Western Asia by all, except some among the poorer peasantry, and by many of the Bedouin Arabs.

221.

They are of linen or cotton, of ample breadth, tied around the body by a running string, or band, and

always worn next the skin, not over the shirt as in Europe.

It will be asked, when the poor Israelite had pawned his outer-garment 'wherein he slept,' what dress was left to him? The answer is probably supplied by the annexed engraving (No. 221), which represents slightly different garments of cotton, or woollen frocks or shirts, which often, in warm weather, form the sole dress of the Bedouin peasants, and the lower class of townspeople. To this the abba or hyke is the proper outer robe (as in fig. 1, No. 220), but is usually, in summer, dispensed with in the day-time, and in the ordinary pursuits and occupations of life. It is sometimes (as in No. 221, fig. 2) worn without, but more usually with, a girdle; and it will be seen that the shorter specimens are not unlike the dress of one of the figures (fig. 3, No. 213) in the earliest of the Egyptian subjects which have been produced. The shirt worn by the superior classes is of the same shape, but of finer materials. This is shewn in the figure below (No. 222), which represents a gentleman as just risen from bed. If we call this a shirt, the Hebrews doubtless had it—the sole dress (excepting the cloak) of the poor, and the inner robe of the rich. Such, probably, were the 'sheets' (translated 'shirts' in some versions), of which Samson despoiled thirty Philistines to pay the forfeit of his riddle (Judg. xiv. 13, 19). It is shewn

222.

from the Talmud, indeed, that the Hebrews of later days had a shirt called חלוך *chaluq*, which it would appear was often of wool (Lightfoot, *Hor. Heb.* on Luke ix. 3), and which is described as the ordinary inner-garment, the outer being the cloak or mantle. This shews that the shirt or frock was, as in modern usage, the ordinary dress of the Jews, to which a mantle (abba, hyke, or bournoos) was the outer covering.

The Talmud enumerates eighteen several garments which formed the clothing of the Jews from head to foot (T. Hieros. *Sabb.* fol. 15; T. Bab. *Sabb.* fol. 120), mentioning, however, two sandals, two buskins, etc. This shews, at least, one thing, that they were not more sparingly clad than the modern Orientals. This being the case, we may be sure that although persons of the humbler classes were content with the shirt and the mantle, the wealthier people had other robes between these two, and forming a complete dress without the mantle, which with them was probably confined to out-of-door wear, or ceremonial use. It is of

VOL. I.

course impossible to discriminate these precisely; but in this matter we cannot be far wrong in trusting to the analogy of existing usages.

In all the annexed figures (No. 223), represent-

223.

ing persons of the superior class, we observe the shirt covered by a striped (sometimes figured) gown or caftan, of mingled silk and cotton. It descends to the ankles, with long sleeves, extending a few inches beyond the fingers' ends, but divided from a point a little above the wrist, so that the hand is generally exposed, though it may be concealed by the sleeve when necessary; for it is customary to cover the hands in the presence of a person of high rank. It is very common, especially in winter, for persons to sleep without removing this gown, but only unloosing the girdle by which it is bound. It is not unusual within doors to see persons without any article of dress outside this; but it is considered decidedly as an undress, and no respectable person is beheld out of doors, or receives or pays visits, without an outer covering. Hence persons clad in this alone are said to be 'naked' in Scripture—that is, not in the usual complete dress; for there can be no manner of doubt that this, or something like this, is the כְּתוֹנֶת, *ketoneth*, of the Scripture (Exod. xxviii. 40; Job xxx. 18; Is. xxii. 21, etc.) A similar robe is worn by the women, as was also the case among the Israelites (2 Sam. xiii. 18, 19; Cant. v. 3). It is in the bosom of this robe that various articles are carried, and hence the Scriptural expression of giving things 'into the bosom.'

The girdle worn over this, around the waist, is usually a coloured shawl, or long piece of figured white muslin. The girdle of the poorer classes is of coarse stuff, and often of leather, with clasps. This leathern girdle is also much used by the Arabs, and by persons of condition when equipped for a journey. It is sometimes ornamented with workings in coloured worsted, or silk, or with metal studs, shells, beads, etc. Both kinds of girdles were certainly in use among the Hebrews (2 Kings i. 8; Matt. iii. 4; Mark i. 6; comp. Jer. xiii. 1). It is known to all readers of Scripture how often the 'girdle' and the act of 'girding the loins' is mentioned. It seems from 2 Sam. xx. 8 (comp. also the Syrian figure, No. 216, fig. 1), that it was usual to wear a knife or poniard in the girdle. This custom is still general, and denotes not any

deadly disposition, but the want of clasp-knives. Men of literary vocations replace it by an inkhorn, as was also the case among the Israelites (Ezek. ix. 2).

Over the gown is worn either the short-sleeved *gibbeh* (fig. 3), which is a long coat of woollen cloth; or the long-sleeved *benish* (fig. 2), which is also of woollen cloth, and may be worn either over or instead of the other. The *benish* is, by reason of its long sleeves (with which the hands may be covered), the robe of ceremony, and is worn in the presence of superiors and persons of rank. Over one or both of these robes may be worn the *abba*, *bourmoos*, or *hyke*, in any of the modes already indicated. Aged persons often wrap up the head and shoulders with the latter, in the manner shewn in fig. 4.

This same *hyke* or wrapper is usually taken by persons going on a journey, for the purpose of being used in the same manner as a protection from the sun or wind. This is shewn in the annexed cut, representing a group of persons equipped for travel. The robe is here more succinct and compact, and the firm manner in which the whole dress is girded up about the loins calls to mind the passages of Scripture in which the action of 'girding up the loins' for a journey is mentioned.

From this it is also seen that travellers usually wear a sword, and the manner in which it is worn is correctly shewn. It would also appear that the Jews had swords for such occasional uses (Matt. xxvi. 51; Luke xxii. 36).

224.

The necessity of baring the arm for any kind of exertion must be evident from the manner in which it is encumbered in all the dresses we have produced. This action is often mentioned in Scripture, which alone proves that the arm was in ordinary circumstances similarly encumbered by the dress. For ordinary purposes a hasty tucking up of the sleeve of the right arm suffices; but for a continued action special contrivances are necessary. These are curious, as will be seen by the cut (No. 225). The full sleeves of the shirt are sometimes drawn up by means of cords, which pass round

each shoulder, and cross behind, where they are tied in a knot. This custom is particularly affected by servants and workmen, who have constant occa-

225.

sion for baring the arm; but others, whose occasions are more incidental, and who are, therefore, unprovided with the necessary cords, draw up the sleeves and tie them together behind between the shoulders (fig. 2).

For the dress of females we must refer to the article WOMEN. Certain parts of dress, also, admit of separate consideration, such as the head-dress [TURBAN], and the dress of the feet [SANDALS].—J. K.

DRINK, STRONG. [SHECHAR.]

DROMEDARY. [CAMEL.]

DRUSILLA (*Δρούσιλλα*), youngest daughter of Herod Agrippa I. She was much celebrated for her beauty, and was betrothed to Epiphanes, prince of Commagene; but was afterwards married to Azizas, king of Emesa, whom the procurator Felix induced her to abandon, in order to live with him. She is mentioned in Acts xxiv. 24 (comp. Joseph. *Antiq.* xix. 9. 1; xx. 7. 1, 2).—J. K.

DRUSIUS, JOHANNES, a celebrated oriental and exegetical scholar, was born at Oudenarde, East Flanders, 28th June 1550. At the age of ten he was sent by his father to Ghent, to study Greek and Latin. Three years afterwards he went to Louvain. In 1567 his father was obliged to take refuge in England in consequence of his religion; and the son followed him thither. Here Drusius met with an excellent teacher of Hebrew, who treated him kindly and took him to Cambridge with him. When le Chevalier returned to his native land, Drusius remained at Cambridge for a time, whence he went back to London. In 1572 he became professor of the oriental languages in Oxford, and after remaining there four years went to Louvain to study jurisprudence, which place he soon left for London. In 1576 he returned to his native land. In 1577 he became professor of the oriental languages at Leyden. In 1585 he went to Franeker as professor of Hebrew, and died there, 1616. Drusius was a very able scholar, as well as an upright and conscientious man. But his times were stormy. Theological disputes and acrimony prevailed. Peace-loving as he was he had many enemies, who embittered and disturbed the last sixteen years of his life. His fame was deservedly great, and attracted num-

bers of young Protestants from most countries in Europe to hear his lectures. His principal work is his *Annotations* on the difficult parts of the O. T., which the States-General commissioned him to write, and for which they agreed to pay him an annual sum, and to release him from the duties of his professorship by providing a substitute. He died before the work was completed. Indeed but a small portion was published in his lifetime. *Commentarii ad loca difficiliora Pentateuchi* appeared at Franeker, 1617, 4to; On Joshua, Judges, and Samuel, 1618, 4to; on the twelve minor prophets, 1627; and on Job, 1636. They are all printed in the *Critici Sacri*. He is also the author of *Alphabetum Ebraicum vetus. Interp. ex Hieronymo et Eusebio, etc.*, 1587; *Veterum interpretum Græcorum in totum vetus Testamentum fragmenta*, 1662, 4to; *Annotatio in totum Jesu Christi Testamentum, sive prætoriorum libri decem*, 4to, 1612; *Ecclesiasticus Græce et Latine*, 4to, 1600; *Liber Hasmonæorum Græce et Latine*, 1600, 4to.—S. D.

DUBNO, SOLOMON B. YOEL. This distinguished poet, geographer, grammarian, and commentator was born October 12, 1738, at Dubno, whence he derived his name. Attracted by the great reformation in Judaism and in Hebrew literature which had just then commenced in Germany, under the leadership of the immortal Mendelssohn, Dubno left his native place early in life for the birthplace of modern Judaism. Being a thorough master of the *Massora*, he betook himself at the age of 26 to the editing of a work on the accents of Job, Proverbs, and the Psalms, written by Solomon ben Moses, who, because he was successively chief Rabbi of Chelm, Lemberg, and Salonika, is also called Salomo Chelmo, or Salomo Lemberger, which Dubno published with notes in 1765, under the title of נְעִימָה שְׁעָרֵי, *Portæ Jucunditatis*, in Frankfort-on-the-Oder, of which a second edition appeared in 1777. The great object of promoting biblical literature, which both he and Mendelssohn had at heart, soon drew these two literati together, and in 1768 we find Dubno living in the house of Mendelssohn, and writing a Commentary on the Pentateuch, which his colleague was translating. He, however, only wrote the

מֵאוּר עַל כֹּפֶר בְּרֵאשִׁית וְשִׁמּוֹת, *Commentary on Genesis and Exodus*, which was published in Berlin 1781-1783, then again in Vienna 1791, 1806, etc.; as he took some offence, and withdrew from the work, which obliged Mendelssohn to solicit the help of Hartwig, Weseley, Aaron Jaraslaw, and H. Homberg, who finished the commentary on the remaining portions of the Pentateuch [MENDELSSOHN]. About this time Dubno also wrote קִיצוֹר חִיקוֹן סוֹפְרִים, *a Massoretic Commentary on Genesis and Exodus*, which was printed with Mendelssohn's translation in 1831-33, and afterwards published the *Geography of the Bible*. His commentaries are distinguished for their brevity and good sense; they abound in valuable linguistic remarks, Massoretic explanations, and geographical information, as may be seen by a casual reference to any page. It was to be expected that with his vast erudition, great independence of thought, and with a biblical library in his possession such as hardly ever fell to the lot of a private student in those days (he had 106 MSS., and 2076 printed books, as may be seen from the catalogue of his books printed in Amsterdam 1814),

that he would bring forth things new and old; and he fully realized all such expectations. His Hebrew style is truly classical. Shortly after his separation from Mendelssohn, Dubno went to Amsterdam, where he died June 23, 1813.—C. D. G.

DUDAIM (דֻדַּיִם). This word, in its plural form, only occurs in two places of Scripture, Genesis xxx. 14-16, and Canticles vii. 13, in both of which it is rendered by *mandrakes*. From the above passages it is evident that the *dudaim* were collected in the fields, that they were fit for gathering in the wheat harvest in Mesopotamia, where the first occurrence took place; that they were found in Palestine; that they or the plants which yielded them diffused an odour, which Michaelis paraphrases, 'Jam et somnifero odore, venerus mandragoras;' and that they were supposed to be possessed of aphrodisaic powers, or of assisting in producing conception.

From this it is manifest that there is little to guide us in determining what plant is alluded to at such early periods, especially as no similar name has been recognised in any of the cognate languages. Hence great diversities of opinion have been entertained respecting the plant and produce intended by the name *dudaim*. These Dr. Harris has thus summed up: 'Interpreters have wasted much time and pains in endeavouring to ascertain what is intended by the Hebrew word *dudaim*. Some translate it by 'violet,' others 'lilies,' 'jas-

226. *Atropa Mandragora*.

mins,' 'truffles or mushrooms;' and some think that the word means 'flowers,' or 'fine flowers.' Bochart, Calmet, and Sir Thomas Browne suppose the *citron* intended; Celsius is persuaded that it is the fruit of the *loté-tree*; Hiller that *cherries* are spoken of; and Ludolf maintains that it is the fruit which the Syrians call 'mauz' (that is the

plantain), resembling in figure and taste the Indian fig; but the generality of interpreters and commentators understand *mandrakes*, a species of melon, by *dudaim*.⁷ Here, however, the author has confounded the melon '*cucumis dudaim*' with the mandrake or mandragora, adopted by the generality of authors. The grounds upon which the mandragora has been preferred are, first, 'The most ancient Greek translator interprets the Hebrew name in Gen. xxx. 14, by mandrake apples (*μηλα μανδραγοῶν*); and in the Song of Solomon, by mandrakes, *οἱ μανδραγοῦραι*. Saadia's Onkelos and the Syriac version agree with the Greek translators.

The first of these puts **לפאח** *laffach*; the two

latter **יברוחין** *yabruchin*; which names denote the same plant¹ (Rosenmüller, *Bib. Bot.* p. 130, and note). The earliest notice of *μανδραγοῦραι* is by Hippocrates, and the next by Theophrastus (*Hist. Plant.* vi. 2). Both of these C. Sprengel (*Hist. Rei Herb.* i. 38, 82) supposes, intend *atropha mandragora*. Dioscorides notices three kinds: 1. the female, which is supposed to be the *mandragora autumnalis* of Berloton; 2. the male, *mandragora vernalis* of the same botanist (these two are, however, usually accounted varieties of *atropha mandragora*); 3. a kind called *morion*. It has been inferred that this may be the same as the mandragora of Theophrastus, which, by some authors, has been supposed to be *atropha belladonna*. To all of these Dioscorides ascribes narcotic properties, and says of the first, that it is also called *Circaea*, because it appears to be a root which promotes venery. Pythagoras named the mandragora *anthropomorphon*, and Theophrastus, among other qualities, mentions its soporific powers, and also its tendency to excite to love. Its fruits were called apples of love, and Venus herself Mandragorites. But it is not easy to decide whether the above all refer to the same plant or plants.

Persian authors on *materia medica* give *mandragoras* as a synonyme for **یبروخ** *yebrookh*, or *yabrooz*, which is said to be the root of a plant of which the fruit is called **لپاف** *loofah*. This, there is little doubt, must be the above *atropha mandragora*, as the Arabs usually refer only to the plants of Dioscorides, and, on this occasion, they quote him as well as Galen, and ascribe narcotic properties to both the root and the fruit. D'Herbelot, under the article 'Abrousanam,' details some of the superstitious opinions respecting this plant, which originated in the East, but which continued for a long time to be retailed by authors in Europe.

By the Arabs it is said to be called *tufah-al-sheitan*, or devil's apple. If we look to the works of more modern authors, we find a continuance of the same statements. Thus Mariti, in his *Travels* (vol. ii. p. 195), says that the Arabs called the mandrake plant *yabrochah*, which is, no doubt, the same name as given above. 'At the village of St. John in the mountains, about six miles southwest from Jerusalem, this plant is found at present, as well as in Tuscany. It grows low, like lettuce, to which its leaves have a strong resemblance, except that they have a dark green colour. The flowers are purple, and the root is for the most part forked. The fruit, when ripe, in the beginning of May, is of the size and colour of a small apple,

exceedingly ruddy, and of a most agreeable odour; our guide thought us fools for suspecting it to be unwholesome. He ate it freely himself, and it is generally valued by the inhabitants as exhilarating their spirits and a provocative to venery.' Maundrell was informed by the chief priest of the Samaritans that it was still noted for its genial virtue. Hasselquist also seems inclined to consider it the *dudaim*, for, when at Nazareth, he says, 'what I found most remarkable in their villages was the great quantity of mandrakes that grew in a vale below it. The fruit was now (May 16) ripe. From the season in which this mandrake blossoms and ripens its fruit, one might form a conjecture that it is Rachel's *dudaim*. These were brought her in the wheat harvest, which in Galilee is in the month of May, about this time, and the mandrake was now in fruit.'

Considering therefore that the earliest translators have given *mandragora* and *yabruchim* as the synonymous names for dudaim, and that the root and fruits of *atropha mandragora* have, from early times, been supposed to be possessed of the same properties which are ascribed to the *dudaim*, there does not appear to us any other plant, which has been yet adduced, better entitled than it to stand for the dudaim. But there does not exist sufficient collateral proof to confirm the selection by the Greek translator of the mandragora as the *dudaim*, in preference to some other plants, which might be adduced, and to which similar properties have from ancient times been ascribed.—J. F. R.

DUKE. This word is from the Latin *dux*, 'a captain or leader,' from *duco*, 'to lead.' It thus corresponds with tolerable exactness to the Hebrew **אלוף** *alluph*, from **אלף** *alaph*, to 'lead,' 'guide.' This word, *alluph*, is usually rendered by 'prince' or 'chief;' but by 'duke' in Gen. xxxvi. 15-30, where we find 'dukes of Edom.' The translator was doubtless seduced by the identity of signification into the use of a modern title.—J. K.

DUKHIPHATH (**דוקיפאת**), an unclean bird (Lev. xi. 19; Deut. xiv. 18). As the word does not occur except in these two passages, our means of identifying the bird whose name it is with any known species are very slender. The LXX. rendering is *ἔπιψ*, the Vulg. *upupa*, and with these the Arab. agrees. The Targum makes it the *Tetrao Urogallus*, or mountain-cock, a species of grouse. There is no probability that it is the Lapwing, which is the rendering in the A. V. Bochart argues in favour of the rendering of the ancient versions, and with him most subsequent enquirers have agreed. According to him, the word is a compound of **דוק** or **דון**, cock, and **כפא**, rock; so that the word means gallus rupis, or gallus montanus; and he compares, in support of this, the explanation of Hesychius, who calls the *ἔπιψ* *ἀλετριβία ἄγριον*, and the fact that Æschylus speaks of it as *πετραῖον θῆενν* (*Frag. Incert.* 23, 3). To this etymology Gesenius inclines (*Thes.* in voc.); but Fürst remarks that 'the word is not yet sufficiently explained, and the root may be **דכף**, to bruise, to tear' (*H. W. B.*, in voc.)

'The hoopoe is not uncommon in Palestine at this day, and was from remote ages a bird of mystery. The summit of the augural rod is said to have been carved in the form of an hoopoe's head; and one of the kind is still used by Indian

gossains, and even Armenian bishops, attention being no doubt drawn to the bird by its peculiarly arranged black and white bars upon a delicate vinous fawn-colour, and further embellished with a beautiful fan-shaped crest of the same colour, tipped with white and black. Its appellations in all languages appear to be either imitations of the bird's voice, or indications of its filthy habits; which, however, modern ornithologists deny, or do not notice. In Egypt these birds are numerous; forming, probably, two species, the one permanently resident about human habitations, the other migratory, and the same that visits Europe. The latter wades in the mud when the Nile has subsided, and seeks for worms and insects; and the

227. Hoopoe.

former is known to rear its young so much immersed in the shards and fragments of beetles, etc., as to cause a disagreeable smell about its nest, which is always in holes or in hollow trees. Though an unclean bird in the Hebrew law, the common migratory hoopoe is eaten in Egypt, and sometimes also in Italy; but the stationary species is considered inedible. It is unnecessary to give further description of a bird so well known as the hoopoe, which, though not common, is nevertheless an annual visitant of England, arriving soon after the cuckoo.—[C. H. S.] W. L. A.

DULCIMER. [MUSICAL INSTRUMENT.]

DUMAH (דִּמְיָה; Sept. Δουμά, Ἰδουμά). A son of Ishmael (Gen. xxv. 14; 1 Chron. i. 30). It is probable that he was the founder of a tribe of Ishmaelite Arabs which had its head quarters in the district called Dumah [DUMAH], where may have been a town of which he was the founder, or which was so named in honour of him by his posterity.

DUMAH (דִּמְיָה; Sept. Ἰδουμαία). The name of the country colonized by the posterity of Dumah, the son of Ishmael (Gen. xxv. 14-16). No indication is given either in Genesis or Chronicles (1 Chron. i. 30) of its position. In Is. xxi. 11, Dumah is mentioned in such a way as to shew that it was closely connected in its position and in its doom with Seir or Edom. There is no other reference to it in Scripture or in ancient authors.

In the midst of the Arabian desert, about 240 geographical miles due east of Petra, is an ancient town, to which all Arab geographers give the name Dumah or Daumah (دوماه); though it is now, from the peculiarity of its site, called *el-fauf*, 'the

belly.' A tradition is found in Arab writers, and is preserved orally among the Bedawin, that it was founded by Dumah, the son of Ishmael (Wallin *Journal of Geographical Society*, vol. xxiv. 139, sq.) The town stands in a circular valley three miles in diameter, and is surrounded by a ridge of sandstone hills, which rise above it to the height of 500 ft. It contains a population of about 3000, composed of emigrants from Syria, and settlers from several tribes of Bedawin. Almost the only trace of antiquity appears to be the remains of a castle, built of massive stones. The gardens and orchards which fill the valley are very productive. There can be little doubt that this is the Dumah of the Bible. It is called Dumat el-Jandal to distinguish it from a Dumah in Irak, and another in the plain of Damascus.

2. A town in the mountains of Judah. In the Sept., Syr., and Vul. it is written Ruma (Ρουμά). Eusebius describes it as a large village in Darom, belonging to the territory of Eleutheropolis, and seventeen miles from that city; but he does not say in what direction. Van de Velde would identify it with a small village called Daumah about five miles south by west of Hebron; this, however, would not agree with Eusebius, and requires confirmation.—J. L. P.

DUNASH = ADONIM BEN LABRAT OR LIBRAT

(לְבָרַט) HA-LEVI, who is called by the Germano-French writers (e. g. Rashi, Cara, etc.) *Dunash*, and by the Italian school (e. g., Ibn Ezra, Kimchi, etc.), is denominated *R. Adonim*, was one of the earliest Jewish philologists, whose writings greatly influenced the development of Hebrew lexicography and biblical exegesis. He was born in Bagdad about 920 A.D., lived at Fez, and died about 980. This profound Hebraist and charming poet was the first who introduced the Arabic metre into the modern Hebrew poetry in Spain and among the Rabbinites, and was so highly esteemed for his great knowledge that he was appointed teacher of a large number of young men when only thirty years of age. Being independent in circumstances, he prosecuted his lingual and biblical researches, and published the results without fearing or caring how they would be regarded by his co-religionists. Dunash's important contributions to lexicography and exegesis are contained in his polemical works which he wrote both against Saadia Gaon [SAADIA] and Menachem ben Saruk. [MENACHEM.] Though he was a friend, and had most probably also been a pupil of Saadia, Dunash wrote elaborate and severe strictures on his grammatical and exegetical works which the unsparing critic put forth in a volume entitled *ספר תשובות* the book of *animadversions*. This book has become a prey to time, but the celebrated Ibn Ezra, who espoused the cause and became the champion of Saadia, has preserved parts of it in his work called *שפת יתר*, which, in their present form, consist of one hundred and sixty-one numbers or articles, and contain strictures on Saadia's grammatical as well as exegetical productions. Dunash's criticisms are full of valuable matter, and shew that he understood more thoroughly the science of grammar, and had a better idea of the formation of the verb than Saadia.

Dunash's second work is also of a polemical nature and consists of a minute examination of Menachem ben Saruk's Hebrew Lexicon. It con-

sists of one hundred and sixty articles, in which he criticises Menachem's lexicon in alphabetical order, and every article concludes with some terse remark or saying in rhyme. These articles extend over nearly the whole field of grammar and Biblical exegesis, and contain very important contributions to Hebrew lexicography and to the exposition of the O. T. Dunash, 1. Properly distinguishes

between *adverbs* (מלות הטעם) and *verbs*, and says that the former are unalterable, and no verbs can be formed from them. (Comp. art. מוה, כה, ותהינו). 2. He gives grammatical rules how to distinguish the servile letters of verbs from nouns of a similar form (comp. art. ובניקול). 3. He points out the proper construction of some verbs (comp. art. ולענה). 4. He shews how the Chaldee and Arabic may be advantageously used in the explanation of Hebrew words (comp. art. פנור, פנור, מרה). 5. In more than four and twenty different verses his explanations depart from the present Masoretic text, and it must be confessed that his explanations yield a better sense (comp. תשובות 50, 6; 59; 81; Ibn Ezra's שפת יתר 107-117; 120, 122). The influence which Dunash exercised over grammarians and expositors of the Bible may be seen from the fact that he is constantly quoted by the principal lexicographers and commentators of both the Germano-French (comp. Rashi Exod. xxviii. 28; Num. xi. 8; Is. xxvii. 11; Eccl. xii. 11, etc.; Joseph Cara on Hos. ii. 9; viii. 6; xiii. 7, etc.) and Spanish schools (comp. Ibn Ezra on Ps. ix. 1; xlii. 5, etc.; Kimchi, Lex. under שאר, פאר, ועלה). That which has survived of Dunash's work against Saadia is contained in *Ibn Ezra's* שפת יתר published with a critical commentary and introduction by Lippman, and preface by Jost. Frankfort-on-M., 1843. His work against Menachem ben Saruk entitled *כפר תשובת דונש בן לברט* has been published, with notes by H. Filipowski, the editor, as well as remarks by Leopold Dukes and R. Kirchheim, by the Hebrew Antiquarian Society, London and Edinburgh, 1855. Comp. Dukes, *Literarische Mittheilungen ueber die aeltesten hebraischen Exegeten Grammatiker und Lexicographen*, Stuttgart, 1844, p. 149, etc.; Steinschneider, *Catalogus Librorum Hebræorum in Bibliotheca Bodleiana*, col. 897, etc.; Pinker, *Lickute Kadmoniot*, p. 66, and notes, p. 157, etc.; Graetz, *Geschichte der Juden*, v. 377, etc.—C. D. G.

DUNASH = ADONIM BEN TAMIM, the *Babylonian*, was born at Irak about 900 A. D., and died about 960. He was educated when a youth at Kairwan, by the celebrated Isaac Israeli, who instructed him in metaphysics, medicine, and philology. He distinguished himself in his studies at such an early period that he was enabled to write a very elaborate critique on Saadia's works at the age of twenty. Dunash even became master of the whole cycle of sciences of that day, and was the representative of Jewish literature in the Fatimite dominion. He wrote works on medicine, astronomy, and on the Indian arithmetic which had then just been introduced, as well as treatises on Hebrew grammar, in which he traced the analogies between the Hebrew and Arabic linguistic phenomena, and a commentary on the *Book of Creation*, as Saadia's work on it did not satisfy him. Though his grammatical and exegetical works are still buried somewhere, yet there is no doubt that he greatly

contributed to the development of Hebrew lexicography, as is evident from the fact that he is quoted by the first expositors. He was the first who maintained that the Hebrew language has diminutives which are effected by the terminations הן and הן aducing as an instance אַמְיָנוּן, 2 Sam. xiii. 20.

Ewald in his Hebrew grammar, c. 167, espouses this opinion, whilst Ibn Ezra, who quotes Dunash's interpretation of Eccl. xii. 5, disputes altogether the existence of diminutives in Hebrew. Another of Dunash's interpretations is quoted by Ibn Ezra on Gen. xxxviii. 9. Comp. Dukes, *Literarische Mittheilungen u. s. w.*, Stuttgart, 1844, p. 116; Munk, *Notice sur Aboulualid*, p. 43-60; Graetz, *Geschichte*, v. p. 350.—C. D. G.

DUNCAN, ROBERT, born 1699, and ordained minister of the parish of Tillicoultry 1728, where he died in the following year. His *Exposition of the Epistle to the Hebrews* was published in 1731. It is a simple but useful work, consisting of a running comment, never at any great length, on the whole epistle, verse by verse. He follows very much in the wake of Owen, and may be said to possess three excellences as a commentator;—his views are sound and judicious, his diction is perspicuous and correct, and the comment, in respect of amount, is well-proportioned to the importance of the passages expounded.—W. H. G.

DUNG. [This word represents several words in the original.—1. גִּלְגַּל, גִּלְגַּל, properly a ball or roll of dung, from גָּלַל, to roll; used of a heap of dung (1 Kings xiv. 10); of dung generally (Zeph. i. 17); of the human excrement specially (Job xx. 7; Ez. iv. 12). 2. דָּמָן, used properly of manure (2 Kings ix. 37; Ps. lxxxiii. 11; Jer. viii. 2; ix. 22). 3. חֲרָאִים, used only in the plural, and only of the human excrement (2 Kings xviii. 27; Is. xxxvi. 12). 4. כֹּוֹהֶה, properly sweepings (Sept. κοπρᾶ, Is. v. 25). 5. פָּרָשׁ, used only of the unvoided dung of the sacrifices (Exod. xxix. 14; Lev. iv. 11; viii. 17; Num. xix. 5; Mal. ii. 3). 6. צִפְעִים, used only in the plural from צָפַה, to thrust out; used of cow's dung (Ez. iv. 15). 7. Σκύβαλα (Phil. iii. 8), properly refuse (see Gataker, *Advers. Miscell.* ch. 43). The third of these terms seems to have become offensive to the Jews, as in the places where it occurs, there is a K'ri substituting a more refined expression.]

Among the Israelites, as with the modern Orientals, dung was used both for manure and for fuel. In a district where wood is scarce, dung is so valuable for the latter purpose, that little of it is spared for the former.

[In preparing the dung for manure, it was collected in heaps, and straw seems to have been trodden amongst the more liquid portions of it for the purpose of absorbing the liquid (Is. xxv. 10, where בְּמֵי נִדְמָנָה means, 'in the water of (i. e., flowing from) the dung heap'). Heaps of manure seem also to have been formed outside the gate of the town or city (comp. the dung-gate of Jerusalem, Neh. ii. 13), composed probably of the sweepings of the streets, and the refuse of the houses.] Some of the regulations connected with this use of dung we learn from the Talmud. The

heaping up of a dunghill in a public place exposed the owner to the repair of any damage it might occasion, and any one was at liberty to take it away (*Bava-kama*, i. 3. 3). Another regulation forbade the accumulation of the dung-hill to be removed, in the seventh or sabbatic year, to the vicinity of any ground under culture (*Sabb.* iii. 1), which was equivalent to an interdiction of the use of manure in that year; and this must have occasioned some increase of labour in the year ensuing.

The use of dung for fuel is collected incidentally from the passage in which the prophet Ezekiel, being commanded, as a symbolical action, to bake his bread with human dung, excuses himself from the use of an unclean thing, and is permitted to employ cows' dung instead (*Ezek.* iv. 12-15). This shews that the dung of animals, at least of clean animals, was usual, and that no ideas of ceremonial uncleanness were attached to its employment for this purpose. The use of cow-dung for fuel is known to our own villagers, who, at least in the west of England, prefer it in baking their bread 'under the crock,' on account of the long-continued and equable heat which it maintains. It is there also not unusual in a summer evening to see aged people traversing the green lanes with baskets to collect the cakes of cow-dung which have dried upon the road. This helps out the ordinary fire of wood, and makes it burn longer. In many thinly-wooded parts of south-western Asia the dung of cows, camels, horses, asses, whichever may happen to be the most common, is collected with great zeal and diligence from the streets and highways, chiefly by young girls. They also hover on the skirts of the encampments of travellers, and there are often amusing scrambles among them for the droppings of the cattle. The dung is mixed up with chopped straw, and made into cakes, which are stuck up by their own adhesiveness against the walls of the cottages, or are laid upon the declivity of a hill, until sufficiently dried. It is not unusual to see a whole village with its walls thus garnished, which has a singular and not very agreeable appearance to a European traveller. Towards the end of autumn, the result of the summer collection of fuel for winter is shewn in large conical heaps or stacks of dried dung upon the top of every cottage. The usages of the Jews in this matter were probably similar in kind, although the extent to which they prevailed cannot now be estimated.—J. K.

DUNGEON. [PRISON.]

DUPIN, LOUIS ELLIES, a distinguished French writer, was born on the 17th June 1657, at Paris. After studying in the College of Harcourt at a very early age, he entered the Sorbonne with a view to the ecclesiastical profession; devoted himself there to the study of the ecclesiastical writers of antiquity, and became lecturer on moral philosophy in the University of Paris. His life was a troubled one. He died at Paris, June 6th, 1719, at the age of 62. Dupin was a good theologian, a laborious and learned writer. His spirit was good and moderate in religious matters; his sentiments in advance of his church. But he had a flexibility in retracting obnoxious sentiments which cannot be justified. His principal work is *Novvelle Bibliothèque des auteurs ecclésiastiques, contenant l'histoire de leur vie, le catalogue, la critique, la chronologie de leurs ouvrages*, 43 vols.

8vo, 1688, *et seq.*; reprinted in 21 vols. 4to. To this may be added a continuation by Gouget, containing the 18th century, 3 vols. 8vo. The plan of this work is excellent, and the author's judgments generally just and impartial. Mistakes and marks of haste are numerous. In biblical literature he produced *Liber psalmodum, cum notis quibus eorum sensus literalis exprimitur*, 1691, 8vo; *Le livre de psaumes traduits selon l'Hebreu*, 1691 and 1710, 12mo; *Note in Pentateuchum*, 1701, 8vo. He published many other works, theological and not theological; and edited the writings of Gerson, Chancellor of Paris, as well as those of Optatus of Milevi.—S. D.

DURA (דורה; Sept. Δευρά), a plain in the province of Babylon where Nebuchadnezzar set up his golden image (*Dan.* iii. 1). The word means 'a plain' or 'circuit'; and it would seem from the narrative in Daniel that it was not far distant from Babylon. There is a spacious plain still called Dura on the left bank of the Tigris, about 70 geographical miles north of Bagdad; but, as it is at least 120 miles distant from Babylon, it could scarcely be that referred to in the Scriptures. Another Dura is mentioned by Polybius (v. 48) as situated on the Euphrates, near the mouth of the river Chaboras, but it is also too far distant. The true site of Dura must be sought in the neighbourhood of Babylon (*Layard, Nineveh and Babylon* 469, *sq.*)—J. L. P.

DURELL, DAVID. An English divine, born in 1728, in Jersey. He was educated at Oxford, and in 1757 became principal of Hertford College. He published, in 1763, a work, called *The Hebrew text of the parallel prophecies of Jacob and Moses relating to the twelve tribes, with a translation and notes, and the various readings of near 40 MSS. To which are added*—1. *The Samaritan Arabic version of those passages, and part of another Arabic version made from the Samaritan text, neither of which have been before printed.* 2. *A map of the land of promise.* 3. *An appendix, containing four dissertations on points connected with the subjects of these prophecies.* Oxford, 4to. In 1772, he published another work of considerable learning, called *Critical Remarks on the books of Job, Psalms, Ecclesiastes, and Canticles.* Oxford, 4to. In the preface to this work he argues for a new translation of the Bible. He died in 1775.—H. W.

DURHAM, JAMES, born 1622, ordained to the ministry in Blackfriar's Church, Glasgow, 1647, and appointed professor of divinity in the university of the same city in 1650. He could not enter on the discharge of this office, however, as he had to attend the king in the capacity of royal chaplain. Ultimately he was settled as one of the ministers of Glasgow, where he died in 1658.

Though cut off by death after so brief a course on earth, Durham has left several works behind him which amply vindicate the esteem in which he was held as a divine. His expository works are—*An exposition of the book of Job*, 1659, 12mo; *Clavis Cantici, or an exposition of the Song of Solomon*, 1669, 4to; *A commentary on the book of Revelation*, 1660, 4to; *The law unscaled, or an exposition of the Ten Commandments*, 1675, 4to; and to these may be added, *Christ Crucified, or the marrow of the Gospel evidently set forth in 72 sermons on Is. liii.*, 1683. The last work was republished in 1792,

with a strong recommendation prefixed to it by various divines, among whom appear such well-known names as Ridgeley, Watts, Wilcox, and Bradbury. On the principle of interpretation adopted, no commentary on the Song of Solomon yet exceeds in value that of Durham. The preliminary discussion on the nature and scope of the book is shrewd and sensible, while the exposition itself is characterized at once by sobriety of tone and depth of evangelical feeling. The allegory is pursued to the utmost minuteness of the figure, but the whole is briefly given, and the spiritual instruction of the reader is not sacrificed to the enforcement of a mere conceit. In the commentary on the Revelation, the details of the interpretation are loosely stated, but a great amount of practical instruction is elicited from every part of the book. Generally, under the seals he treats of the early persecutions to which the church of Christ was subjected; under the trumpets he finds the early heresies which corrupted the simplicity of the faith, and which reached their consummation in the great antichristian apostasy of Rome; and under the vials he holds that the downfall of the Romish antichrist is predicted. Passages of considerable power occur in the writings of this author, and though some of his works have been more than once republished, it may be questioned if Durham has been appreciated to the extent he deserves. Dr. Owen speaks in warm terms of his *Law unsealed* as 'a complete Christian directory in our walking before God in all the duties of obedience.'—W. H. G.

DUST. For storms of dust, etc., see STORM, for throwing dust on the head, see MOURNING.

E.

EAGLE. [NESHER.]

EARING (הַרִישׁ); Sept. ἀροτραίσις, the time of ploughing (Gen. xlv. 6; Ex. xxxiv. 21). The verb to ear (חַרַשׁ) is also used (1 Sam. viii. 12; Deut. xxi. 4; Is. xxx. 24). So Shakespeare says 'to ear the land that has some hopes to grow' (*Richard II.* iii. 2). The root *ar* is one of wide use in all the Indo-European languages (see Müller, *Science of Language*, p. 239). It may be doubted, however, whether the Semitic חַרַשׁ has the slightest affinity with this.—W. L. A.

EARNEST. Ἀρραβών is evidently the Hebrew עֶרְבֹן in Greek characters. With a slight alteration in the letters, but with none whatever in the sense, it becomes the Latin *arrhabo*, contr. *arraha*; French *arres*; English *earles* and *earnest*. These three words occur in the Hebrew, Septuagint, and Vulgate in Gen. xxxviii. 17, 18, and in ver. 20, with the exception that the Vulgate there changes it to *pignus*. The use of these words in this passage clearly illustrates their general import, which is, that of an earnest or pledge, given and received, to assure the fulfilment of an engagement. Hesychius explains ἀρραβών by πρόδομα, somewhat given beforehand. This idea attaches to all the particular applications of the word, as anything given by way of warrant or security for the performance of a promise, part of a debt paid as an

assurance of paying the remainder, part of the price of anything paid beforehand to confirm the bargain between buyer and seller, part of a servant's wages paid at the time of hiring for the purpose of ratifying the engagement on both sides. The idea that the earnest is either to be returned upon the fulfilment of the engagement, or to be considered as part of the stipulation, is also included. The word is used three times in the N. T., but always in a figurative sense; in the first (2 Cor. i. 22), it is applied to the gifts of the Holy Spirit, which God bestowed upon the apostles, and by which He might be said to have hired them to be the servants of his Son, and which were the earnest, assurance, and commencement of those far superior blessings which He would bestow on them in the life to come as the wages of their faithful services; in the two latter (2 Cor. v. 5; Eph. i. 13, 14), it is applied to the gifts bestowed on Christians generally, upon whom, after baptism, the Apostles had laid their hands, and which were to them an earnest of obtaining an heavenly habitation and inheritance, upon the supposition of their fidelity. This use of the term finely illustrates the augmented powers and additional capacities promised in a future state. Jerome, in his comment on the second passage exclaims, Si arrhabo tantus, quanta erit possessio; 'If the earnest was so great, how great must be the possession.' See Kypke, Macknight, and Middleton on these passages. Le Moine, *Not. ad Var. Sacr.*, pp. 460-80.—J. F. D.

EAR-RINGS. No custom is more ancient or universal than that of wearing ear-rings, from which it would appear to be a very natural idea to attach such an ornament to the pendulous lobe of the ear. There are two words in Hebrew denoting ear-rings, viz., עֵגִיל *agil*, which is applied to any kind of ring, particularly to ear-rings (Num. xxxi. 50; Ezek. xvi. 12). The name implies roundness, and it is a fact that nearly all the ancient ear-rings exhibited in the sculptures of Egypt and Persepolis are of a circular shape. The other word is נֶזֶם *nezem*, and, as this word is also applied to a nose-jewel, we may suppose that it was a kind of ear-ring, different from the round 'agil,' and more similar to the nose-jewel. It most certainly denotes an ear-ring in Gen. xxxv. 4, but in Gen. xxiv. 47; Prov. xi. 22; Is. iii. 21, it signifies a nose-jewel, and it is doubtful which of the two is intended in Judg. viii. 24, 25; Job xlii. 11. Ear-rings of certain kinds were anciently, and are still in the East instruments or appendages of idolatry and superstition, being regarded as talismans and amulets. Such probably were the ear-rings of Jacob's family, which he buried with the strange gods at Bethel (Gen. xxxv. 4).

No conclusion can be formed as to the shape of the Hebrew ear-rings, except from the signification of the words employed, and from the analogy of similar ornaments in ancient sculpture. Those worn by the Egyptian ladies were large, round, single hoops of gold, from one inch and a half to two inches and one-third in diameter, and frequently of still greater size, or made of six single rings soldered together. Such, probably, was the round 'agil' of the Hebrews. Among persons of high or royal rank the ornament was sometimes in the shape of an asp, whose body was of gold, set with precious stones [AMULETS]. Silver ear-rings have also been found at Thebes, either plain hoops like

the ear-rings of gold, or simple studs. The modern Oriental ear-rings are more usually jeweled drops or pendants than circlets of gold. But the writer has seen a small round plate of silver or gold suspended from a small ring inserted into the ear. This circular plate (about the size of a half-penny) is either marked with fanciful figures or set with small stones. It is the same kind of thing which, in that country (Mesopotamia), is worn as a nose-jewel, and in it we perhaps find the Hebrew ear-ring, which is denoted by the same word that describes a nose-jewel.

The use of ear-rings appears to have been confined to the women among the Hebrews. That they were not worn by men is implied in Judg.

228.

viii. 24, where gold ear-rings are mentioned as distinctive of the Ishmaelite tribes.* The men of Egypt also abstained from the use of ear-rings; but how extensively they were worn by men in other nations is shewn by the annexed group of heads of different foreigners, collected from the Egyptian monuments. By this also the usual forms of the most ancient ornaments of this description are sufficiently displayed.—J. K.

EARTH. There are two words in Hebrew which are translated sometimes by *earth*, and sometimes by *land*. These are ארץ *eretz*, and אדמה *adamah*, both of which are rendered by γῆ in the Septuagint, and by 'earth,' 'land,' 'ground,' in the A. V. The word *adamah*, however, is applied chiefly to the very *substance* of the earth, as soil, ground, clay, although sometimes denoting a region, land, or country; whereas *eretz* more generally denotes the *surface* of the earth, and is hence, in the earlier parts of the Bible, opposed to שמים *shamayim*, 'the heavens.'

Besides the ordinary senses of the word or words rendered 'earth' in our translation—namely, as denoting mould, the surface of the earth, and the terrestrial globe—there are others in Scripture which

require to be discriminated. 1. 'The earth' denotes 'the inhabitants of the earth' (Gen. vi. 11; xi. 1). 2. *Heathen countries*, as distinguished from the land of Israel, especially during the theocracy; *z.e.*, all the rest of the world excepting Israel (2 Kings xviii. 25; 2 Chron. xiii. 9, etc.) 3. In the N. T. especially, 'the earth' appears in the A. V. as applied to the land of Judæa. As in many of these passages it might seem as if the habitable globe were intended, the use of so ambiguous a term as 'the earth' should have been avoided, and the original rendered by 'the land,' as in Lev. xxv. 23; Is. x. 23, and elsewhere. This is the sense which the original bears in Matt. xxiii. 35; xxvii. 45; Mark xv. 33; Luke iv. 25; xxi. 23; Rom. ix. 28; James v. 17. For the cosmological uses of the term, see GEOGRAPHY.

EARTHENWARE. [POTTER.]

EARTHQUAKE (רעשׁ). There is good reason for holding that earthquakes are closely connected with volcanic agency. Both probably spring from the same cause; and may be regarded as one mighty influence operating to somewhat dissimilar results. Volcanic agency, therefore, is an indication of earthquakes, and traces of the first may be taken as indications of the existence (either present or past, actual or possible) of the latter.

Syria and Palestine abound in volcanic appearances. Between the river Jordan and Damascus lies a volcanic tract. The entire country about the Dead Sea presents indubitable tokens of volcanic agency. Accordingly these countries have not unfrequently been subject to earthquakes. The first visitation of the kind, recorded to have happened to Palestine, was in the reign of Ahab (B.C. 918-897), when Elijah (1 Kings xix. 11, 12) was directed to go forth and stand upon the mountain before Jehovah: 'and behold Jehovah passed by, and a great and strong wind rent the mountains, and brake in pieces the rocks before Jehovah; but Jehovah was not in the wind; and after the wind *an earthquake*; but Jehovah was not in the earthquake: and after the earthquake, a fire; but Jehovah was not in the fire; and after the fire a still small voice.' A terrible earthquake took place 'in the days of Uzziah, king of Judah' (B.C. 811-759), which Josephus (*Antiq.* ix. 10. 4) says, 'shook the ground, and a rent was made in the Temple, so that the rays of the sun shone through it, which, falling upon the king's face, struck him with the leprosy, a punishment which the historian ascribes to the wrath of God consequent upon Uzziah's usurpation of the priest's office. That this earthquake was of an awful character, may be learnt from the fact that Zechariah (xiv. 5) thus speaks respecting it—'Ye shall flee as ye fled from before the earthquake in the days of Uzziah, king of Judah;' and also that it appears from Amos (i. 1) that the event was so striking, and left such deep impressions on men's minds, that it became a sort of epoch from which to date and reckon; the prophet's words are 'two years before the earthquake.'

That earthquakes were among the extraordinary phenomena of Palestine in ancient times is shewn in their being an element in the poetical imagery of the Hebrews, and a source of religious admonition and devout emotion. In Ps. xviii. 7, we read, 'Then the earth shook and trembled; the foundations also of the hills moved and were shaken, be-

* [The statement here referred to, however, is not conclusive on this point, for it may have been the golden ear-ring, and not the mere ornament itself, that distinguished the Ishmaelites; see Bertheau *in loc.*]

cause he was wroth' (comp. Hab. iii. 6; Nah. i. 5; Is. v. 25). It was not an unnatural transition that any signal display of the will, sovereignty, or goodness of Providence, should be foretold in connection with, and accompanied as by other signs in the heavens above or on the earth below, so by earthquakes and their fearful concomitants (see Joel ii. 28; Matt. xxiv. 7, 29). The only earthquake mentioned in the N. T. is that which happened at the crucifixion of the Saviour of mankind (Matt. xxvii. 50, 51; Luke xxiii. 44, 45; Mark xv. 33). This darkness has been misunderstood, and then turned to the prejudice of Christianity [DARKNESS]. The obscuration was obviously an attendant on the earthquake. Earthquakes are not seldom attended by accompaniments which obscure the light of day during (as in this case from the sixth to the ninth hour, that is, from twelve o'clock at noon to three o'clock P.M.) several hours. If this is the fact, then the record is consistent with natural phenomena, and the darkness which sceptics have pleaded against speaks actually in favour of the credibility of the Gospel. Now it is well known to naturalists that such obscurations are by no means uncommon. It may be enough to give the following instances. A very remarkable volcanic eruption took place on the 19th of January 1835, in the volcano of Coseguina, situated in the Bay of Fonseca (usually called the Coast of Conchagua), in Central America. The eruption was preceded by a rumbling noise, accompanied by a column of smoke which issued from the mountain, increasing until it assumed the form and appearance of a large dense cloud, which, when viewed at the distance of thirty miles, appeared like an immense plume of feathers, rising with considerable velocity, and expanding in every direction. In the course of the two following days several shocks of earthquakes were felt; the morning of the 22d rose fine and clear, but a dense cloud of a pyramidal form was observed in the direction of the volcano. This gradually ascended, and by eleven o'clock A.M. it had spread over the whole firmament, entirely obscuring the light of day, the darkness equalling in intensity that of the most clouded night: this darkness continued with little intermission for three days; during the whole time a fine black powder continued to fall. This darkness extended over half of Central America. The convulsion was such as to change the outline of the coast, turn the course of a river, and form two new islands. Precisely analogous phenomena were exhibited on occasions of earthquakes that took place at Cartago, in Central America, when there prevailed a dense black fog, which lasted for three days (*Recreations in Physical Geography*, p. 382).

In the case of the volcanic eruption which overwhelmed Herculaneum and Pompeii (A.D. 79), we learn from the younger Pliny that a dense column of vapour was first seen rising vertically from Vesuvius, and then spreading itself out laterally, so that its upper portion resembled the head, and its lower the trunk of a pine. This black cloud was pierced occasionally by flashes of fire as vivid as lightning, succeeded by darkness more profound than night, and ashes fell even at Misenum. These appearances agree perfectly with those witnessed in more recent eruptions, especially those of Monte Nuovo in 1538, and Vesuvius in 1822. Indeed earthquakes appear to exert a very marked influence on our atmosphere: among other effects Lyell (*Prin-*

ciples of Geology, i. 400) enumerates sudden gusts of wind, interrupted by dead calms, evolution of electric matter, or of inflammable gas, from the soil, with sulphureous and mephitic vapours; a reddening of the sun's disk and a haziness in the air often continued for months (Joel ii. 30, 31).

An earthquake devastated Judæa some years (31) before the birth of our Lord, at the time of the battle of Actium, which Josephus (*Antiq.* xv. 52) reports was such 'as had not happened at any other time, which brought great destruction upon the cattle in that country. About ten thousand men also perished by the fall of houses.' Jerome writes of an earthquake which, in the time of his childhood (about A.D. 315), destroyed Rabbath Moab (Jerome *on Is.* xv.) The writers of the middle ages also speak of earthquakes in Palestine, stating that they were not only formidable, but frequent. In 1834 an earthquake shook Jerusalem, and injured the chapel of the nativity at Bethlehem. As late as the year 1836 (Jan. 1) Jerusalem and its vicinity were visited by severe shocks of earthquake, yet the city remains without serious injury from these subterranean causes.—J. R. B.

EAST. This is the rendering in the A. V. of two Hebrew words מִזְרֵחַ and קֶדֶם, and of the Greek ἀνατολή ἀνατολά.

1. מִזְרֵחַ properly denotes the *sun-rising*, from זָרַח. It is used tropically for the east indefinitely (Ps. ciii. 12; Dan. viii. 9; Am. viii. 12, etc.); also definitely, for some place in relation to others, thus—'The land of the east,' *i.e.*, the country lying to the east of Syria, the Elymais (Zech. viii. 7); 'the east of Jericho' (Josh. iv. 19); 'the east gate' (Neh. iii. 29), and adverbially 'eastward' (1 Chron. vii. 28; ix. 24, etc.) Sometimes the full expression מִזְרֵחַ מִי is used (indefinitely, Is. xli. 25; definitely, Judg. xi. 18).

2. קֶדֶם properly means *what is in front of, before* (comp. Ps. cxxxix. 5; Is. ix. 11 [12]). As the Hebrews, in pointing out the quarters, looked towards the east, קֶדֶם came to signify the east, as אַחֲרָי behind, the west, and יְמִינֵי the right hand, the south. In this sense it is used (a) indefinitely, Gen. xi. 2; xiii. 11, etc.; (b) relatively, Num. xxxiv. 11, etc.; (c) definitely, to denote the regions lying to the east of Palestine (Gen. xxix. 1; Num. xxiii. 7; Is. ix. 11; sometimes in the full form, אֶרֶץ קֶדֶם [Gen. xxv. 6], the inhabitants of which are denominated בני קֶדֶם [BENEI KEDEM]. In Is. ii. 6, the house of Jacob is said to be 'replenished from the east' (מִלְּאָו מִקֶּדֶם), which some explain as referring to witchcraft, or the arts of divination practised in the East, while others, with greater probability, understand it of the men of the East, the diviners and soothsayers who came from the east. There seems no reason for altering the reading to מִקֶּדֶם, as suggested by Brentius.

3. ἀνατολή. This word usually occurs in the plural, and without the article. When, therefore, we read, as in Matt. ii. 1, 2, that 'μάγοι ἀπὸ ἀνατολῶν came to Jerusalem saying we have seen his star ἐν τῇ ἀνατολῇ,' we are led to suspect some special reason for such a variation. The former phrase is naturally rendered as equivalent to Oriental Magi, and the indefinite expression is to be explained by reference to the use of קֶדֶם in the O. T. The latter phrase offers greater difficulty. If it be taken = 'in the east,' the questions

arise, why the singular and not the customary plural should be used? why the article should be added? and why the wise men should have seen the star in the east when the place where the child was lay to the west of their locality (for that *ἐν τῇ ἀνατολῇ* relates to the star and not the wise men themselves, seems too obvious to be questioned). Pressed by the difficulties thus suggested, the majority of recent interpreters take *ἐν τῇ ἀνατολῇ* literally=*in its rise*, and trace a correspondence of this with the *rebels* of the preceding clause: they enquired for the child, whom they knew to be born, because they had seen the rising of his star, the signal of his birth. Alford objects to this, that for such a meaning we should expect *αὐτοῦ*, if not in ver. 2, certainly in ver. 9; but the construction falls under the case where the article, by indicating something closely associated with the subject, supersedes the use of the demonstrative pronoun.—W. L. A.

EAST WIND. [WIND.]

EASTER (πάσχα), Acts xii. 4. [PASSOVER; FESTIVALS OF THE JEWS].

EBAL (עֵבַל; Sept. Γαιβάλ). In the midst of the mountains of Samaria lies the beautiful upland plain of Mukhna. The ridge which shuts it in on the west is steep and rocky, and towards its northern end is cleft asunder at right angles to its course by the picturesque vale of Shechem. On each side of the opening of the vale the ridge rises several hundred feet, thus forming two distinct peaks, overtopping all the neighbouring summits. That on the south is Gerizim, and that on the north *Ebal*. They are not isolated mountains, but culminating points of a chain. Their declivities facing the vale bear a singular resemblance to each other. They are equally rugged and bare; the limestone strata here and there project, forming bold bluffs and precipices; but the greater portion of the slopes, though steep, are formed into terraces, partly natural and partly artificial. For this reason both mountains appear more barren from below than they are in reality, the rude and naked supporting walls of the terraces being then alone visible. The soil, though scanty, is rich, and, to a large extent, is still cultivated. In the bottom of the vale are olive groves; and a few straggling trees extend some distance up the sides. The broad summits and upper slopes have no trees, yet they are not entirely bare. The steeper banks are here and there scantily clothed with dwarf shrubbery; while in spring and early summer rank grass, brambles, and thistles, intermixed with myriads of bright wild flowers—anemones, convolvulus, tulips, and poppies—spring up among the rocks and stones. The summits of both Ebal and Gerizim are distinctly marked; their sides towards the vale and the plain of Mukhna are steep and often precipitous; but the western slopes are very gradual, leaving sections of high table-land, which, though stony, is cultivated. The elevation of the sister peaks is about equal. To the writer, Gerizim seemed to be a little higher than Ebal; others, however, have thought differently. The height of Ebal has never been measured; that of Gerizim, according to barometrical measurement, is 2700 feet, and about 900 feet above the vale of Shechem (Van de Velde, *Memoir*, p. 178).

Ebal has not been so often ascended nor so

fully explored as Gerizim. It does not possess so much of interest for the traveller or the antiquary. Bartlett went up it from Nabalus, and passed the small *wely*, or tomb, of Sitty Salamiyeh, from which the mountain takes one of its modern names, *Jebel Salamiyeh*. He says, 'I reached the summit, and ranged for more than a mile over its rugged surface without encountering a living soul, or even a solitary flock. There were traces of old habitations, but I could discover nothing which afforded any sort of evidence that Ebal, like Gerizim, had been a site of importance. The prospect was very fine—the hills of Gilead beyond Jordan, Gerizim with its ruins, the vale of Nabalus melting into the plains of the sea-coast; and the dim blue Mediterranean stretching lazily away, till lost in a distant cloud' (*Walks about Jerusalem*, p. 251). The writer of this article ascended Gerizim twice, and spent many hours on its summit. He directed special attention to the appearance of Ebal, and examined its sides and summit minutely by the aid of a telescope. It presented nothing worthy of special note. Some have imagined that because the curses were pronounced upon Ebal, that mountain should bear some marks of them in its greater barrenness; and some travellers have even thought that they could perceive the barrenness of Ebal as compared with Gerizim (Benjamin of Tudela, and Maundrell, in *Early Travels in Palestine*, pp. 82, 433; Wilson, *Lands of the Bible*, ii. 71); but there is no ground for any such expectation; and assuredly the closest scrutiny has failed to detect any difference in the quality of the soil or general physical aspect of the two mountains. In the cliffs along the base of Ebal are a number of ancient rock tombs. This was, doubtless, the necropolis of Shechem (Robinson, iii. 131; Van de Velde, ii. 290).

The first reference to Ebal in Scripture is where Moses gives the charge to the Israelites regarding the reading of the Law in solemn assembly upon their entrance into Canaan—'Thou shalt put the blessing upon Mount Gerizim and the curse upon Mount Ebal' (Deut. xi. 29). The position of the mountains is then defined: 'Are they not on the other side Jordan, by the way where the sun goeth down, in the land of the Canaanites, which dwell in the champaign over against Gilgal, beside the plains of Moreh?' This passage is not very definite, and has given rise to considerable difference of opinion. It has been thought that the Ebal and Gerizim here referred to must have been situated 'in the Arabah opposite Gilgal,' as it is

in Hebrew *בְּעֵרְבָה מוֹל הַגִּלְגָּל*. So Eusebius and Jerome affirm. The latter says, 'Sunt autem juxta Hierichum duo montes vicini contra se invicem respicientes, è quibus unus Gerizim, alter Gebal dicitur. Porrò Samaritani arbitrantur hos duos montes juxta Neapolim esse, sed vehementer errant; plurimum enim inter se distant, nec possunt invicem benedictentium seu maledictentium inter se audiri voces, quod Scriptura commemorat' (*Onomast.* s. v. *Gebal*). The latter arguments regarding the distance of the mountains from each other are of no weight, as the tribes were ranged, not on the summits, but on the lower slopes; and that Ebal and Gerizim are actually meant is proved by the last clause of the verse, where it is said they are 'beside the plains (or *terebinthis*, אֵלוֹנֵי) of

Moreh; which we know, from Gen. xii. 6, was at Shechem. The mention of Gilgal and Arabah is connected with the whole territory of the Canaanites, and not with the immediate situation of these mountains. It is farther argued that in Josh. viii. 30-33, where the fulfilment of the command is narrated, there is no reference to any journey of the people from Gilgal, where they had established their camp, to Shechem. This is true; but then it must be remembered that only the leading events are detailed.

The selection of this spot for one of the most solemn assemblies of the Israelites was not without a reason. When Abraham first entered Canaan he encamped on the plain of Moreh, and there the Lord appeared to him, and he built an altar (Gen. xii. 6, *sq.*) When Jacob returned from Haran, this also was his first resting-place in Canaan; and here he bought 'a parcel of a field and erected an altar, and called it El-Elohe-Israel' (xxxiii. 18-20). It is not strange, therefore, that the same spot should have been selected for the first great national assembly of the Israelites, and the renewal of their covenant with the Lord, on their taking possession of the land. The exact scene was doubtless near the mouth of the vale of Shechem, immediately below the highest peaks of both mountains. The vale is here about 200 yards wide; and the roots of the mountains, though steep, are not precipitous. The ark, with the attendant priests and Levites, was placed in the centre of the vale. Six tribes were ranged along the lower slopes of Ebal on the one side, and six along the corresponding slopes of Gerizim upon the other. Every individual of that vast assemblage could thus both hear and see all that passed. Each command was read 'with a loud voice' by the Levites, with its annexed blessing and curse; to the blessing the tribes ranged on Gerizim responded 'Amen'; and to the curse the tribes ranged on Ebal responded 'Amen.' The whole scene must have been singularly grand and impressive (Deut. xxvii. 11, *sq.*)

Moses also commanded the Israelites to 'set up great stones' on Mount Ebal, 'and plaster them with plaster; and write upon them all the words of this law;' and also to build an altar there, and offer burnt-offerings (Deut. xxvii. 1, *sq.*) Joshua (viii. 30) relates how the command was obeyed; and it seems from his words that the altar was not on the summit of the mount, but at the place of the assembly. In this passage the Samaritan Pentateuch reads *Gerizim* instead of *Ebal*. All critics of eminence, with the exception of Kennicott, regard this as a corruption of the Sacred text; and when it is considered that the invariable reading in Hebrew MSS. and ancient versions, both in this passage and the corresponding one in Josh. viii. 30, is 'Ebal,' it seems strange that any scholar would for a moment doubt its correctness. Kennicott takes an opposite view, maintaining the integrity of the Samaritan reading, and arguing the point at great length; but his arguments are neither sound nor pertinent (*Dissertations on the Hebrew Text*, ii. 20, *sq.*) The Samaritans had a strong reason for corrupting the text, seeing that Gerizim was their sanctuary; and they desired to make it not merely the mountain of blessing, but the place of the altar and the inscribed Law.

EBED (עֶבֶד). This word, which properly designates a servant who is the property of his master, is used frequently in Scripture as the first part of proper names, of which the latter part describes some person who is the object of reverence or worship. Hence in such combinations עֶבֶר has the sense of worshipper or devotee. It is thus combined in such words as Abednego, *worshipper of Nego (Nebo)*; Ebedmelech, *devotee of Melech*; Abdeel, *worshipper of God*; Abdi, and (in the form עֹבֵד) Obadiah, *worshipper of Jah*, etc. Ebed, Obed, and Abdon occur as proper names, without any addition (Judg. ix. 26; Ezra viii. 6; Ruth iv. 17; 1 Chron. ii. 37; Judg. xii. 13; 1 Chron. viii. 23, etc.)—W. L. A.

EBED-MELECH (עֶבֶד-מֶלֶךְ, *worshipper of Melech or Molech*; Sept. Ἀβδεμέλεχ), a servant of King Zedekiah, through whose intervention Jeremiah was delivered from the dungeon into which he had been cast (Jer. xxxviii. 7, ff.), and who, for his piety, was assured of deliverance when the judgments of God came on the Jewish state (xxxix. 15-18). He was an eunuch and a Cushite; and had probably the charge of the king's harem (comp. xxxviii. 22, 23), an office which would give him the privilege of free private access to the king. His name may have reference simply to this = *servant of the king*.—W. L. A.

EBEN-EZEL (אֶבֶן הַאֵזֶל, *stone of departure*); an old stone of testimony, mentioned in 1 Sam. xx. 19. The circumstance which it commemorated is not known.

EBEN-EZER (אֶבֶן הָעֵזֶר, *stone of help*), the name given to a stone which Samuel set up between Mizpeh and Shen, in witness of the divine assistance obtained against the Philistines (1 Sam. vii. 12).

EBER. [HEBER.]

EBIASAPH. [ABIASAPH.]

EBODA, one of the stations of the Israelites in the wilderness. [WANDERING, THE.]

EBONY. [HABENIM.]

EBRONAH, prop. ABRONAH (אֲבְרֹנָה; Sept. Ἐβρωνά), a station of the Israelites between Jotbathah and Ezion-gaber (Num. xxxiii. 34, 35). This Ezion-gaber, Knobel thinks, cannot be the port of that name at the head of the Elanitic gulf, for, as the next station mentioned is Kadesh, this was too far from the north end of the gulf to be reached in one march (*Exeget. Hob.* in loc.)—†

ECBATANA. [ACHMETHA.]

ECCLESIASTES, THE BOOK OF, one of the three canonical volumes, the other two being *Proverbs* and the *Song of Songs*, which have come down to us by tradition as the production of Solomon the son of David.

1. *The Title of the Book and its Signification.*—

This book is called in Hebrew קהלת, *Qohelath*, after its hero, who calls himself by this name. The

name occurs seven times in this book, three times in the beginning (i. 1, 2, 12), three times at the end (xii. 8, 9, 10), and once in the middle of it (vii. 27), and is an *appellative*, as is evident from the fact that it has the *article* in xii. 8, and more especially from its being construed with a *feminine verb* in vii. 27.

The signification of קהלת will best be seen from an analysis of its form, and the meaning of its root. It is participle feminine Kal, from קהל kindred with קול, Greek *kaléo*, Latin *calo*, and our English word *call*, which primarily signifies *to call*, then *to call together*, *collect*, *to assemble*, and is INVARIABLY used for assembling or gathering people, especially for religious worship, as may be seen from the following references to the passages where the verb occurs—Ex. xxii. 1; xxv. 1; Lev. viii. 3, 4; Num. i. 18; viii. 9; x. 7; xvi. 3, 19; xvii. 7; xx. 2, 8, 10; Deut. iv. 10; xxi. 12, 28; Josh. xviii. 1; xxii. 12; Judg. xx. 1; 2 Sam. xx. 4; 1 Kings viii. 1, 2; xii. 21; 1 Chron. xiii. 5; xv. 3; xxviii. 1; 2 Chron. v. 2, 3; xi. 1; xx. 26; Esth. vii. 11; ix. 2, 15, 16, 18; Jer. xxvi. 9; Ezek. xxxviii. 7, 13; Job xi. 10. So also its derivatives, קהל, קהלה, מקהלים and מקהלות, without exception, denote assemblies or gatherings of people.

Accordingly קהלת signifies a *collectress* or *assembler* of people into the presence of God, a *female gatherer* of the community to God. That Solomon is meant by this designation is evident from the fact that he was the only son of David who was king of Israel in Jerusalem (*vide* i. 1, 12). He has this feminine and symbolic appellation because he *personifies wisdom* (comp. vii. 27) who appears herself in Prov. 1, 10; viii. 1, etc., as *Coheloth*, or the *female gatherer* of the people; and because it is both descriptive of the design of the book and connects Solomon's labours here with his work recorded in 1 Kings viii. Solomon, who in 1 Kings viii. is described as *gathering* (יקהל) the people to hold communion with the Most High in the place which he erected for this purpose, is here again represented as *the gatherer* (קהלת) of the far-off people to God. It must, however, be borne in mind that though Solomon is animated by and represents wisdom, he does not lose his individuality. Hence he sometimes describes his own experience (comp. i. 16, 17; ii. 9, 12; vii. 23, etc.), and sometimes utters the words of Wisdom, whose organ he is; just as the apostles are sometimes the organs of the Holy Ghost (comp. Acts xv. 28).

Against the common rendering of קהלת by *preacher* or *Ecclesiastes*,—which is derived from the Midrash, where we are told that Solomon obtained this title because his discourses were delivered before the congregation (נאמרין בקהל), hence the Sept. ἐκκλησιαστής, the Vulg. *ecclesiastes*; St. Jerome's explanation ἐκκλησιαστής *Græco sermone appellatur qui cœtum, i. e., ecclesiam congregat* (*Comment. in loco*), Luther, Coverdale, the Geneva Bible, the Bishops' Bible, the A. V., and many modern commentators, and which is supported by Desvœux, Gesenius, Knobel, Herzfeld, Stuart, etc., who account for the *feminine gender* by saying that persons holding certain *ranks* and *offices* are desig-

nated in Hebrew by *feminine* and *abstract* nouns,—is to be urged—1. The verb קהל does not at all include the idea of *preaching*. 2. It ascribes to Solomon the office of *preacher* which is nowhere mentioned in the Bible, it is too modern a title, and is quite inconsistent with the contents of the book. 3. It destroys the connection between the design of the book, and the import of this symbolic name. Moreover, a. *Coheloth* is neither a name of *rank* nor of *office*, but simply describes the act of gathering the people together, and can, therefore, not come within the rule which the advocates of the rendering *preacher* or *Ecclesiastes* are obliged to urge. b. The construction of the feminine verb with it in vii. 27, is utterly incompatible with this view. c. Abstracts are never formed from the *active participle*; and d. There is not a single instance to be found where a *concrete* is first made an *abstract*, and then again taken in a *personal sense*. The other explanations of *Coheloth*, viz., *Gatherer* or *Acquirer of wisdom*, and Solomon is called by this name because he gathered much wisdom (Rashi, Rashbam, etc.); *Collector*, *Compiler*, because he collected in this book divers experience, views, and maxims, for the good of mankind (Grotius, Mayer, Mendelssohn, etc.); *Eclectic*, ἐκλεκτικός, a name given to him by his father because of his skill in selecting and purifying from the systems of different philosophers the amassed sentiments in this book (Rosenthal); *Accumulated wisdom*, and this appellation is given to him because wisdom was accumulated in him (Ibn Ezra); *The Re-united, the Gathered Soul*, and it describes his re-admission into the church in consequence of his repentance (Cartwright, Bishop, Reynolds, Granger, etc.); *The Penitent*, and describes the contrite state of his heart for his apostasy (Coccejus, Schulten, etc.); *An assembly, an academy*; and the first verse is to be translated 'The sayings of the academy of the son of David' (Döderlein, Nachtigal, etc.); *An old man*; and Solomon indicates by the name *Coheloth* his weakness of mind when, yielding to his wives, he worshipped idols (Simonis, Lex. Heb. s.v. Schmidt, etc.); *Exclaiming voice*, analogous to the title assumed by John the Baptist; and the words of the inscription ought to be rendered, 'The words of the voice of one exclaiming!' (de Dieu); *Sophist*, according to the primitive signification of the word, which implied a combination of philosophy and rhetoric (Desvœux); *Philosopher* or *Moralist* (Spohn, Gaab, etc.); *The departed spirit of Solomon* introduced as speaking throughout this book in the form of a shadow (Augusti, *Einleit. in d. A. T.*, p. 240); and *Coheloth* is the feminine gender, because it refers to נפש *the intellectual soul*, which is understood (Rashi, Rashbam, Ewald, etc.), it is to shew the great excellency of the preacher, or his charming style which this gender indicates (Lorius, Zirkel, etc.), because a preacher travails, as it were, like a mother, in the spiritual birth of his children, and has tender and motherly affection for his people, a similar expression being found in Gal. iv. 19 (Pineda, Mayer, etc.), it is to describe the infirmity of Solomon, who appears here as worn out by old age (Mercer, Simonis, etc.); it is used in a neuter sense, because departed spirits have no specific gender (Augusti), the termination ת is not at all feminine, but, as in Arabic, is used as an *auxesis*, etc., etc., we believe that the simple enumeration of these views will tend to shew the

soundness of the interpretation we defend, and at the same time indicate the history of the interpretation of this book.

2. *Design and Method of the Book.*—The design of this book, as has already been remarked, being indicated by the symbolic title of its hero, is to gather together God's people, who were distracted and led astray by the inexplicable difficulties in the moral government of the world, into the community of the Lord, by shewing them that the only true wisdom under these perplexing circumstances is to enjoy our lot in this life in resignation to the dealings of Providence, and in the service of the Most High, and to look forward to a future state of retribution, when all the present mysteries shall be solved, and when the righteous Judge shall render to every man according to his deeds.

The method adopted by the sacred writer is most striking and effective. Solomon is represented as recounting his perplexities arising from these unfathomable dealings in the moral government of God, telling us how he had vainly striven to divert the longings of his soul by various experiments, and the conclusion at which he ultimately arrived.

3. *Division and Contents of the Book.*—The book consists of a *Prologue, four sections, and an Epilogue.* The prologue and epilogue are distinguished by their beginning with the same phrase (i. 1; xii. 8), ending with two marked sentences (i. 11; xii. 14), and embodying the grand problem and solution proposed by the sacred writer, whilst the four sections are indicated by the recurrence of the same formula, giving the result of each effort to satisfy the cravings of the soul (ii. 26; v. 19; and viii. 15).

(a.) THE PROLOGUE (i. 2-11) gives the theme or problem of the disquisition. Assuming that there is *no hereafter* in the face of the condition of mankind, Coheleth declares that all human efforts to satisfy the cravings of the soul are utterly vain (2, 3), that conscious man is more deplorable than unconscious nature: he must speedily quit this life whilst the earth abides for ever; (4), the objects of nature depart, and retrace their course again, but man vanishes and is for ever forgotten (5-11).

(b.) THE FIRST SECTION (i. 12.-ii. 26) recounts how Coheleth, under these desponding circumstances, with all the resources of a monarch at his command (12), applied himself assiduously to discover, by the aid of wisdom, the nature of earthly pursuits (13), and found that they were all fruitless (14), since they could not rectify destinies (15). Reflecting, therefore, upon the large amount of wisdom he had acquired (16), he came to the conclusion that it is all useless (17), since the accumulation of it only increased his sorrow and pain (18). He then resolved to try *pleasure*, to see whether it would satisfy the longings of his aching soul, but found that this, too, was vain (ii. 1), and hence denounced it (2), for after he had procured every imaginable pleasure (3-10) he found that it was utterly insufficient to impart lasting good (11). Whereupon he compared wisdom with pleasure, the two experiments he had made, and though he saw the former had a decided advantage over the latter (13, 14 a), yet he also saw that it does not exempt its possessor from death and oblivion, but that the wise man and the fool must both die alike and be forgotten (14 b-16). This melancholy consideration made him hate

both his life and the wealth which, though acquired by industry and wisdom, he must leave to another, who may be a reckless fool (17-21), convincing him that man has nothing from his toil but wearisome days and sleepless nights (22, 23); that there is, therefore, nothing left for him but to enjoy himself (24, a); yet this, too, he found was not in the power of man (24 b-25). God gives this power to the righteous, and withholds it from the wicked, and it is after all but transitory (26). Thus Coheleth concludes the first portion of his disquisition, by shewing that wisdom, knowledge, and enjoyment of earthly blessings, which are the best things for short-lived man, cannot calm the distracted mind which dwells upon the problem that whilst the objects of nature depart and retrace their course again, man vanishes and is for ever forgotten.

(c.) THE SECOND SECTION. (iii. 1.-v. 19) describes the inability of *industry* to avert this doom. All the events of life are immutably fixed (iii. 1-8), hence the fruitlessness of labour (9). God has, indeed, prescribed bounds to man's employment in harmony with this fixed order of things, but man, through his ignorance, often mistakes it (10, 11); thus again shewing that there is nothing left for man but the enjoyment of the things of this world in his possession, and that even this is a gift of God (12, 13). The cause of this immutable arrangement in the events of this life is that man may fear God, and feel that it is he who orders all things (14, 15). The apparent success of wickedness does not militate against this conclusion (17); but even if, as affirmed, all terminates *here*, and man and beast have the same destiny (18-21), this shews all the more clearly that there is nothing left for man but to enjoy life, since this is his only portion (22). The state of suffering (iv. 1), however, according to this view, becomes desperate, and death, and not to have been born at all, are preferable to life (2, 3). The exertions made despite the prescribed order of things often arise from jealousy (4), and fail in their end (5, 6), or are prompted by avarice (7, 8) and defeat themselves (9-16). Since all things are thus under the control of an omnipotent God, we ought to serve him acceptably (17-v. 6), trust to his protection under oppression (7, 8), remember that the rich oppressor, after all, has not even the comforts of the poor labourer (9-11), and that he often brings misery upon his children and himself (12-16). Having thus shewn that all things are immutably fixed (iii. 1-22), and that the mistaken exertions made by men to alter their destinies arise from impure motives, and defeat themselves (iv. 1; v. 16), Coheleth again concludes this section by reiterating that in the face of this mournful problem there is nothing left for man but to enjoy the few years of his existence, this being the gift of God (17-19).

(d.) THE THIRD SECTION (vi. 1.-viii. 15) shews the impotency of wealth to secure lasting happiness in the face of this melancholy problem (vi. 1-9), since the rich man can neither overrule the order of Providence (10), nor know what will conduce to his well-being (11, 12), as well as the utter illisiveness of *prudence*, or what is generally called the *common sense view of life*. Coheleth thought that to live so as to leave a good name (vii. 1-14), to listen to merited rebuke (5-9), not to indulge in a repining spirit, but to submit to

God's Providence (10-14), to be temperate in religious matters (15-20), not to pry into everybody's opinions (21, 22), such being the lessons of prudence or common sense, as higher wisdom is unattainable (23, 24); to submit to the powers that be, even under oppression, believing that the mightiest tyrant will ultimately be punished (viii. 1-9), and that, though retribution is sometimes withheld (10), which, indeed, is the cause of increased wickedness (11), yet that God will eventually administer rewards and punishments (12, 13); that this would satisfy him during the few years of his life. But as this did not account for the melancholy fact that the fortunes of the righteous and the wicked are often reversed all their lifetime, this common sense view of life, too, proved vain (14), and Coheleth therefore recurs to his repeated conclusion that there is nothing left for man in the face of this mournful problem, that whilst the objects of nature depart and retrace their course again, man vanishes and is for ever forgotten, but to enjoy the things of this life (15).

c. THE FOURTH SECTION (viii. 16-xii. 7) gives a *résumé* of the investigations contained in the foregoing three sections, and states the final conclusion at which Coheleth arrived. Having found that it is impossible to fathom the work of God by wisdom (viii. 16, 17), that even the righteous and the wise are subject to this inscrutable providence, just as the wicked (ix. 1, 2); that all must alike die, and be forgotten (3-5), and that they have no more participation in what takes place here (6); that we are therefore to indulge in pleasures here whilst we can, since there is no hereafter (7-10); that success does not always attend the strong and the skilful (11-12); and that wisdom, though decidedly advantageous in many respects, is often despised and contravened by folly (13-x. 3); that we are to be patient under sufferings from rulers (4), who, by virtue of their power, frequently pervert the order of things (5-7), since violent opposition may only tend to increase our sufferings (8-11); that the exercise of prudence in the affairs of life will be more advantageous than folly (12-20); that we are to be charitable, though the recipients of our benevolence appear ungrateful, since they may, after all, requite us (xi. 1, 2); that we are always to be at work, since we know not which of our efforts may prove successful (3-6), and thus make life as agreeable as we can (7), for we must always bear in mind that this is the only scene of enjoyment, that the future is all vanity (8); but as this, too, did not satisfy the cravings of the soul, Coheleth at last came to the conclusion that enjoyment of this life, together with the belief in a future judgment, will secure real happiness for man (9, 10), and that we are therefore to live from our early youth in the fear of God and of a final judgment, when all that is perplexing now shall be rectified (xii. 1-7).

THE EPILOGUE (xii. 8-14) gives the solution of the problem contained in the prologue. All human efforts to obtain real happiness in the face of the assumption therein stated are vain (xii. 8); this is the experience of the wisest and most painstaking Coheleth (9, 10); the sacred writings alone are the way to it (11, 12); there is a righteous Judge who marks, and will, in the great day of judgment, judge everything we do; we must therefore fear him, and keep his commandments (13, 14).

4. *Author, date, and form of the Book.*—That the symbolic Coheleth, to whom the words of this book are ascribed, is intended for Solomon, is evident from the fact that he was the only son of David who was king over Israel. This is moreover corroborated by the unquestionable allusions made throughout the book to particular circumstances connected with the life of this great monarch. Comp. chap. i. 16, etc., with 1 Kings iii. 12; chap. ii. 4-10 with 1 Kings v. 27-32; vii. 1-8; ix. 7-19; x. 14-29; chap. vii. 20 with 1 Kings viii. 46; chap. vii. 28 with 1 Kings xi. 1-8; chap. xii. 9 with 1 Kings iv. 32. But this by no means declares that Solomon was the *real author* of the book, it may simply denote *personated* authorship. This well-known form of personated authorship, which was used by Plato, Cicero, and other Greek and Roman writers as a legitimate mode of expressing different opinions, or the quasi-dramatic representation of character employed by some of the best writers of this day without any *animus decipiendi*, may have been used by the inspired writer, since other figures of speech, *involving the same principle*, are employed both in the O. T. and N. T. The fact that the concurrent voice of tradition declares against this figure of speech as applied to this book, and speaks for the Solomonic authorship, does not decide the question. It is now acknowledged by all expositors of note that tradition has no power to determine points of criticism. Clement of Alexandria, Origen, Tertullian, Cyprian, Athanasius, Cyril, Epiphanius, Eusebius, Augustine, Isidore, etc., have handed down the Book of Wisdom as the inspired work of Solomon, the third council of Carthage in 397, the council of Sardica in 347, of Constantinople, in Trullo, in 629, the eleventh of Toledo in 675, that of Florence, in 1438, and the fourth session of the council of Trent declared it canonical [WISDOM OF SOLOMON]; most of the Fathers also declared that *Ecclesiasticus* was an inspired work of Solomon [ECCLESIASTICUS], yet all Protestant expositors, and even some Catholic critics reject the traditional opinion, and maintain that these works are neither Solomonic nor canonical. Internal evidence alone must determine the question of authorship, which is of a purely critical nature. Now, the following objections are urged against the Solomonic and for the personated authorship of this book:—1. All the other reputed writings of Solomon have his name in the inscription (comp. Prov. i. 1; Song of Songs i. 1; Ps. lxxii., lxxvii.), whereas in this book the name of Solomon is studiously avoided, thus shewing that it does not claim him as its actual author. 2. The symbolic and impersonal name *Coheleth* shews that Solomon is simply introduced in an ideal sense, as the representative of wisdom. 3. This is indicated by the sacred writer himself, who represents Solomon as belonging to the *past*, inasmuch as he makes this great monarch say, 'I was (הָיִיתִי) king,' but had

long ago ceased to be king when this was written. That this is intended by the præterite has been acknowledged from time immemorial (comp. Midrash. Rabba, Midrash Jalkut *in loco*; Talmud, Gittin, 68 b; the Chaldee paraphrase, i. 12; Midrash, Maase, Bi-Shloma, Ha-Melech, ed. Jellinek in Beth Ha-Midrash, ii. p. 35; Rashi on i. 12). 4. This is moreover corroborated by various statements in the book, which would otherwise be irreconcilable, e.g., Coheleth comparing himself with

a long succession of kings who reigned over Israel in Jerusalem (i. 16, ii. 7); the term king in *Jerusalem* (*ibid.*) shewing that at the time when this was written there was a royal residence in Samaria; the recommendation to *individuals* not to attempt to resent the oppression of a tyrannical ruler, but to wait for a *general revolt* (viii. 2-9); a doctrine which a monarch like Solomon is not likely to propound; the description of a royal spendthrift, and of the misery he inflicts upon the land (x. 16-19), which Solomon would not give unless he intended to write a satire upon himself. 5. The state of oppression, sufferings, and misery depicted in this book (iv. 1-4; v. 7; viii. 1-4, 10, 11; x. 5-7, 20, etc.), cannot be reconciled with the age of Solomon, and unquestionably shews that the Jews were then groaning under the grinding tyranny of Persia. 6. The fact that Coheleth is represented as indulging in sensual enjoyments, and acquiring riches and fame *in order to ascertain what is good for the children of men* (ii. 3-9; iii. 12, 22, etc.), making philosophical experiments to discover *the summum bonum*, is utterly at variance with the conduct of the historical Solomon, and is an idea of a much later period. 7. The admonition not to seek divine things in the profane books of the philosophers (xii. 12), shews that this book was written when the speculation of Greece and Alexandria had found their way into Palestine. 8. The doctrine of a future bar of judgment, whereby Coheleth solves the grand problem of this book when compared with the vague and dim intimations respecting a future state in the pre-exile portions of the O. T., most unquestionably proves that it is a *post-exile* production. 9. The strongest argument, however, against the Solomonic authorship of this book is its vitiated language and style. To quote examples would be to quote the whole book, as it is written throughout in the Rabbinic language which developed itself long after the Babylonian captivity. So convincing is this fact, that not only have Grotius, J. D. Michaelis, Eichhorn, Döderlein, Spohn, Jahn, J. E. C. Schmidt, Nachtigal, Kaiser, Rosenmüller, Ewald, Knobel, Gesenius, De Wette, Noyes, Hitzig, Heiligstedt, Davidson, Meier, etc., relinquished the Solomonic authorship, but even such unquestionably orthodox writers as Umbreit, Hengstenberg, Gerlach, Vaihinger, Stuart, Keil, Elster, etc., declare most emphatically that the book was written after the Babylonian captivity; and there is hardly a chief Rabbi or a literary Jew to be found who would have the courage to maintain that Solomon wrote Coheleth. Dr. Herzfeld, chief rabbi of Brunswick, Dr. Philippson, chief rabbi of Magdeburg; Dr. Geiger, rabbi of Breslau; Dr. Zunz, Professor Luzzatto, Krochmal, Steinschneider, Jost, Graetz, Fürst, and a host of others, affirm that this book is one of the latest productions in the O. T. canon. And be it remembered that these are men to whom the Hebrew is almost vernacular, and that some of them write better Hebrew, and in a purer style, than that of Coheleth.

The *date* cannot be definitely settled, inasmuch as the complexion of the book, and the state of society indicated therein, might be made to harmonize with almost any period of the Jewish history after the return from Babylon to the advent of Christ. Hence, though most scholars, as we have seen, agree that it is a post-exile production, yet they differ in their opinion as to its real age. The

following table will shew the different periods to which it has been assigned—

	B. C.
Nachtigal, between Solomon and Jeremiah	975-588
Schmidt, Jahn, etc., between Manasseh and Zedekiah	699-588
Grotius, Kaiser, Eichhorn, etc., shortly after the exile	536-500
Umbreit, the Persian period	538-333
Van der Hardt, in the reign of Xerxes II. and Darius	464-404
Rosenmüller, between Nehemiah and Alexander the Great	450-333
Hengstenberg, Stuart, Keil	433
Ewald, a century before Alexander the Great	430
Gerlach, about the year	400
De Wette, Knobel, etc., at the end of the Persian and the beginning of the Macedonian period	350-300
Bergst, during Alexander's sojourn in Palestine	333
Bertholdt, between Alexander and Ant. Epiphanes	333-164
Zirkel, the Syrian period	312-164
Hitzig, about the year	204
Nachtigal, the time of the Book of Wisdom	150

We believe that the language and complexion of the book would fully justify us in regarding it as the latest composition in the O. T. canon.

The *form* of the book is *poetico-didactic*, without the sublimity of the beautiful parallelism and rhythm which characterise the older poetic effusions of the inspired writings. The absence of vigour and charm is manifest even in the grandest portion of this book (xii. 1-7), where the sacred writer rises infinitely above his level.

5. *Canonicity of the Book and its position.*—The earliest catalogues which the Jews have transmitted to us of their sacred writings give this book as forming part of the canon (Mishna, *Jadaim*, iii. 5; Talmud, *Baba Bathra*, 14). All the ancient versions, therefore—viz., the Septuagint, which was made before the Christian era; the versions of Aquila, Symmachus, and Theodotion, which belong to the second century of Christianity, as well as the catalogue of Melito, Bishop of Sardis (fl. 170 A. D.)—include Coheleth. It is true that its inspiration was questioned at a very early period in the Jewish church. Thus, when the Mishna, amongst other things, declared that both the Song of Songs and Coheleth are canonical, this as usual called forth a division of opinion. 'R. Jehudah said the Song of Songs is canonical, but Coheleth is disputed; R. Josi affirmed that Coheleth is not canonical, and the Song of Songs is disputed; whilst R. Simon remarked that Coheleth is one of those points upon which the school of Shammai is more heterodox, and the school of Hillel more orthodox, whereupon R. Simon b. Assai declared: I have received it from the mouth of the seventy-two elders, on the day when R. Eliezer was inducted Patriarch, that both the Song of Songs and Coheleth are canonical' (*Jadaim*, iii. 5). In the *Thosseftha* (*ibid.*, c. ii., cited in the *Bab. Megilla*, 7, a) is added, 'Simon b. Menassiah said the Song of Songs is written by the inspiration of the Holy Ghost; but Coheleth emanates from Solomon's own

wisdom.' A bolder remark is to be found in the Babyl. Talmud (*Sabbath*, 30, *a*), where a Talmudist apostrophises Solomon with respect to Coheleth—'Where is thy wisdom, where thy prudence? Not enough that thy words contradict those of thy father David, but they also contradict each other!' These apparent contradictions are then explained and reconciled in the Hagadic manner; and it is added—'The sages wanted to declare Coheleth apocryphal, because its statements contradict each other; but they abstained from doing it, because it begins and ends with the words of the law' (comp. also Midrash Vayikra Rabba, c. xxviii., and St. Jerome, *Comment.* xii. 13, who relates the same thing in the name of a Jewish rabbi). Again, in the Mishna (Edajoth, v. 3), R. Ismael, or, according to another reading, R. Simon, mentions *Coheleth* as one of those things upon which the school of Shammai are more heterodox, and the school of Hillel more orthodox, inasmuch as the former regard this book as not belonging to the canon, whilst the latter maintain its canonicity (קהלת אינו מטמא את הידיים כדבר ב"ש ובה"א מטמא את הידיים).

Now, in examining these discussions, it will be seen that, so far from impairing the canonicity of this book, they shew, beyond all doubt—1. That Coheleth was included in the canon from a very early period, inasmuch as the whole question hinges upon retaining it among the number of sacred books. 2. That the objections to its canonicity were based upon difficulties which arose from the ancient mode of trying to find some heavenly lessons in every detached sentence of the Bible, without due regard to the position which every such apparently heterodox sentence occupies in the whole argument—a proceeding which has no weight with us. 3. That these objections have been so satisfactorily answered by the Rabbins themselves, that, when the apparent contradictions of the Book of Proverbs were urged against retaining it in the canon, Coheleth was adduced as a warning against accepting contradictions too rashly (*Sabbath* 30, *b*); and 4. That the cavilling school of Shammai, who persisted in regarding this book as uncanonical, were looked upon as lax in their notions upon this point as they were on several other questions.

Coheleth is the fourth of the *five Megilloth* or books (חמש מגילות) which are annually read in the synagogue at five appointed seasons. Its occupying the fourth position in the present arrangement of the Hebrew canon, is owing to the fact that the Feast of Tabernacles, on which it is read, is the fourth of these occasions.

6. *Literature on the Book.*—Of primary importance to the literary history of this book are the ancient versions—viz., the Sept., the fragments of Aquila, Theodotion, and Symmachus, the Vulgate, St. Jerome's translation and commentary (*Opp.* tom. ii.). The long neglected Syriac version in Walton's Polyglot, and separately published by the Bible Society, is the best of all, and is of inestimable value for the interpretation of this book; the translator often reproducing in his version the very roots, and following the order of the original Hebrew. The Chaldee Paraphrase, too, is very valuable, inasmuch as it embodies the Hagadic mode in which this book was interpreted, and thus furnishes us with the sources whence the ancient

versions derived their deviations from the text. From St. Jerome down to the time of the Reformation, nothing is to be found in the Christian Church of any value to the elucidation of this book. The Jews, however, both in the East and in Europe, were busily engaged during this time in explaining the word of God; and as results of these labours we have the Commentary of the immortal Rashi (1040-1105 A.D.), the founder of the Germano-French school of interpreters (in the Rabbinic Bibles); the elegant exposition of this book by the cultivated and far-seeing Rashbam (1085-1155), edited by Dr. Adolph Jelinek, Leipzig, 1855; the thoroughly grammatical commentary by the erudite Ibn Ezra (1092-1167 A.D.), given in the Rabbinic Bibles; and a host of others, some still unpublished, and dispersed through the public libraries of Europe, and some published, but not of sufficient importance to be enumerated. With the Reformation, we have the revival of biblical literature, and as its result Luther's excellent Latin commentary on this book (Wurtemberg, 1532), which was so highly regarded that it was translated the following year into German by the reformer's friend Justus Jonas (Wurtemberg, 1533). This was followed by Melancthon's valuable commentary (Wurtemberg, 1556). In our own country the reformers were more dependent upon the Germans for their biblical knowledge, and the first commentary on Ecclesiastes in the English language is a translation of Luther's work (printed by John Daye, dwelling our Aldersgate, 1573); we then have the more independent but less valuable translation of Ecclesiastes, with an introduction by 'the far-famed Hebraist' Hugh Broughton, 'for the instruction of Prince Henry, our hope' (1605). And now the Roman Catholics were fairly roused by the Protestant zeal for elucidating the Bible, and the result of it was the unparalleled commentary of the Jesuit Pineda (Antwerpiae, 1620). In this most elaborate work, Pineda gives a thorough digest of all that the Fathers and others have said upon each verse, nine different versions in nine parallel columns at the end of each chapter—viz., the Vulg., the Venice version, that of our countryman Robert Shirwode (1523), translations of the Sept., Syriac, Arabic, the Brylinger version (1582), and two versions of the Chaldee Paraphrase, the one by Zomara from the Complutensian Bible, and the other by Peter Costus, published in 1554; and a catena of the Greek Fathers. This work is indispensable to the historico-critical expositor. Passing over a number of minor works, we come to the commentary of Grotius (1644), which gave a new tone to the interpretation of Ecclesiastes. This was followed by the excellent commentary on Ecclesiastes by Bishop Reynolds, in what is called 'the Assembly's Annotations,' and afterwards reprinted separately (London, 1669). It is impossible to enumerate in our brief space the commentaries on this book which now began to issue from the press. The most important for the biblical student are the commentaries of Desvoeux (London, 1760); Mendelssohn, translated by Preston (Cambridge, 1853); Rosenmüller (*Scholæ in Vet. Test.*, p. 9, vol. ii.); Knobel (Leipzig, 1836); Herzfeld (Brunswick, 1838); Ewald (Göttingen, 1837); Noyes (Boston and London, 1846); Cahen (*La Bible*, tom. xvi., Paris, 1848); Hitzig (*Exeget. Handb.*, vii., Leipzig, 1847); Heiligstedt's continuation of Maurer (Leipzig, 1848); Stuart

(New York, 1851); Philippson (*Die Israelitische Bibel*, vol. iii., Leipzig, 1854); Elster (Göttingen, 1855); Vaihinger (Stuttgart, 1858); and Hengstenberg, translated into English in Clark's Foreign Theological Lib. (Edinburgh, 1860). For a further analysis of these commentaries, as well as for a more extensive treatment upon the points handled in this article, we must refer to our Historical and Critical Commentary on Ecclesiastes (Longman, 1861).—C. D. G.

ECCLESIASTICUS one of the most important and most esteemed of the Apocryphal books of the O. T.

1. *The title of the Book.*—The original Hebrew title of this book, according to the authority of the Jewish writings, and St. Jerome (*vide infra*, sec. 3) was **משלי ישוע בן סירה** *Proverbs, or more fully משלי ישוע בן סירה the Proverbs of Jesus, son of Sira*, which was abbreviated according to a very common practice, into **בן סירה** *Ben Sira, סיראך Sirach*, which we find in a few later writers, evidently originated from a desire to imitate the Greek *Σιράχ*. Hence all the quotations made from this book in the Talmud and Midrashim are under these titles. (Comp. Mishna, Iadaim, iii. 15; Chagiga, 15; Midrash Rabba, 6, b.; Tanchuma, 69, a, etc. etc.) The Greek MSS. and Fathers, however, as well as the prologue to this book, and the printed editions of the Sept., designate it *Σοφία Ἰησοῦ υἱοῦ Σι (εἰ, η) ραχ, The wisdom of Jesus, the son of Sirach*, or by way of abbreviation, *Σοφία Σιράχ, The wisdom of Sirach*, or *σοφία ἡ πανάρετος*, or simply *ἡ πανάρετος, The book of all virtues*, because of the excellency and diversity of the wisdom it propounds, with which

the Syriac **ܟܬܒܬܐ ܕܝܫܘܥ ܒܢ ܫܝܪܐ** agrees. The name *Ecclesiasticus*, by which it has been called in the Latin Church ever since the second half of the fourth century, and which has been retained in many versions of the Reformers (*e.g.*, the Zurich Bible, Coverdale, the Geneva version, the Bishops' Bible, and the auth. version) is derived from the *old Latin version*, adopted by St. Jerome in the Vulg., and is explained to mean *church-reading book*. The appellation *libri ecclesiastici* was given by the ancients to those books which were read in the churches for edification, to distinguish them from *libri canonici*; and as this book was especially esteemed and read more generally for ecclesiastical purposes, it was κατ' ἔξοχὴν called *Ecclesiasticus*. Calmet, however, is of opinion (*Preface*) that this name was given to it because of its resemblance to *Ecclesiastes*. But as this title is very vague it is rightly rejected by Luther, and almost all modern critics.

2. *The Design and Method of the Book.*—The design of this book is to propound the true nature of wisdom, and to set forth the religious and social duties which she teaches us to follow through all the varied stages and vicissitudes of this life; thus teaching the practical end of man's existence by reviewing life in all its different bearings and aspects.

In addition to the fact that no Palestinian production, whether inspired or uninspired, can be reduced to a logically developed treatise according to Aristotelian rules, there are difficulties in tracing the plan of this book, arising from the peculiar circumstances of the author as well as from the work itself. Ben Sira brings to the execution of his plan the varied experience of a studious and practical

life, and in his great anxiety not to omit any useful lesson which he has gathered, he passes on, after the manner of an *Eastern* logic, from the nature of heavenly wisdom to her godly teachings, from temptation in its varied forms to filial duties; he discloses before the eyes of his readers the inward workings of the heart and mind, he depicts all the passions and aspirations, all the virtues and vices, all the duties towards God and man in proverbs and apothegms, in sayings which have been the property of the nation for ages, and in maxims and parables of his own creation, with a rapidity and suddenness of transition which even an Eastern mind finds it at times difficult to follow. Add to this that the original Hebrew is lost, that the Greek translation is very obscure, that it has been mutilated for dogmatic purposes, and that some sections are transposed beyond the hope of readjustment, and the difficulty of displaying satisfactorily the method or plan of this book will at once be apparent, and the differences of opinion respecting it will be no matter of surprise. Believing Fritzsche's development of the plan of Ben Sira to be the most satisfactory we have no hesitation in adopting it. The book, according to this painstaking and learned critic, is divisible into *seven* parts or sections, as follows:—

Section I., comprising chaps. i.–xvi. 21, describes the nature of wisdom, gives encouragements to submit to it, as well as directions for conducting ourselves in harmony with its teachings.

II.—xvi. 22–xxiii. 17—shews God in the creation, the position man occupies with regard to his Maker, gives directions how he is to conduct himself under different circumstances, and how to avoid sin.

III.—xxiv. 1–xxx. 24, xxxiii. 12–xxxvi. 16a, xxx. 25–27—describes wisdom and the law, and the writer's position to the former, gives proverbs, maxims, and admonitions about the conduct of men in a social point of view.

IV.—xxx. 28–xxxiii. 11, xxxvi. 16b–22—describes the wise and just conduct of men; the Lord and his people.

V.—xxxvi. 23–xxxix. 11—instructions and admonitions about social matters.

VI.—xxxix. 12–xli. 14—God's creation, and the position man occupies with regard to it.

VII.—xli. 15–l. 26—the praise of the Lord, how He had glorified himself in the works of nature, and in the celebrated ancestors of the Jewish people.

Whereupon follows an epilogue, chap. l. 27–29, in which the author gives his name, and declares those happy who will ponder over the contents of this book, and act according to it; as well as an appendix, chap. li. 1–30, praising the Lord for deliverance from danger, describing how the writer has successfully followed the paths of wisdom from his very youth, and calling upon the uneducated to get the precious treasures of wisdom.

3. *The unity of the Book.*—The peculiar difficulties connected both with the plan of the book, and the present deranged condition of its text pointed out in the preceding section, will have prepared the reader for the assertions made by some that there is no unity at all in the composition of this book, and that it is in fact a compilation of divers national sayings, from various sources, belonging to different

ages. Encouragement is sought for these assertions from the statement in the spurious prologue of this book *οὐ μόνον τὰ ἐτέρον τῶν πρὸ αὐτοῦ σωτηρῶν ἀνδρῶν ἀπαφθέγματα συνήγαγεν, ἀλλὰ καὶ αὐτὸς ἰδιὰ τὰ ἀπεφθέρξατο*, as well as from the remark of St. Jerome: *Quorum priorem [παραφρον] Jesu filii Sirach librum] Hebraicum reperi, non Ecclesiasticum ut apud Latinos, sed Parabolas prænnotatum, cui juncti erant Ecclesiastes et Canticum Canticorum, ut similitudinem Salomonis] non solum librorum numero, sed etiam materiarum genere cœquaret [Præf. in Libr. Solom.]*, which seems to imply that the Book of Ben Sira was intended to answer to all the three reputed works of Solomon. So also Luther. Eichhorn can see in it three different books: *the first* book consists of chaps. i.-xxiii., comprising desultory remarks upon life and morals, and is divisible into two sections, *viz., a, i.-ix., and b, x.-xxiii.*; *the second* book comprises xxiv.-xli. 14, begins with a vivid description of wisdom, whereupon follow remarks and maxims without any order; and *the third* book comprising xli. 15-l. 24, is the only portion of Sirach carefully worked out, and contains praise of God and the noble ancestors of the Hebrews (*Einleitung in d. Ap. 50, etc.*) Ewald again assures us that Ben Sira made two older works on Proverbs the basis of his book, so that his merit chiefly consists in arranging those works and supplementing them. The first of these two books originated in the fourth century before Christ, extends from chap. i. to xvi. 21, and contains the most simple proverbs, written with great calmness. The second book originated in the third century before Christ, extends from xvi. 22 to xxxvi. 22, and displays the excitement of passions as well as some penetrating observations, and has been greatly misplaced in its parts, which Ewald rearranges. The *third* book, which is the genuine work of Ben Sira, extends from xxxvi. 23 to li. 30, with the exception of the song of praise contained in xxxix. 12-35 which belongs to the author of the second work (*Geschichte d. V. Isr. iv. p. 300, etc.; Jahrb. iii., p. 131, etc.*) These must suffice as specimens of the opinions entertained by some respecting the unity of this book. Against this, however, is to be urged—1. That the difference in form and contents of some of the constituent parts by no means precludes the unity of the whole, seeing that the writer brought to the illustration of his design the experience of a long life, spent both in study and travelling. 2. That this is evidently the work of the author's life, and was written by him at different periods. 3. That the same design and spirit pervade the whole, as shewn in the foregoing section; and, 4. That the abruptness of some portions of it is to be traced to the Eastern style of composition, and more especially to the present de-ranked state of the Greek translation.

4. *The Author and Date of the Book.*—This is the only apocryphal book the author of which is known. The writer tells us himself that his name is *Jesus* (Ἰησοῦς, Ἰησοῦς, *i.e., Jeshua*), *the son of Sirach*, and that he is of *Jerusalem* (l. 27). So that we have here the production of a Palestinian Jew. This is also corroborated by the whole complexion of the work. We cannot pause to discuss the various speculations advanced about the personal character, acquirements and position of the author, for these we must refer to the article *Jesus son of Sirach*. That the book should have been

ascribed by the Latin Church to Solomon, notwithstanding this plain declaration of the book itself, the discreditable terms in which Solomon is spoken of, the reference to Solomon's successors, to prophets and other great men who lived before and after the Babylonish captivity, the mention of the twelve minor prophets (xlix. 10), the citation from the prophet Malachi (comp. xlviii. 10, with Mal. iv. 6), and the description of the high-priest Simon (chap. l.), only shews what the Fathers can do.

The age of the book has been, and still is, a subject of great controversy. The life-like description of the high-priest Simon contained in chap. l., which indicates that the writer had seen this high functionary officiate in the temple, would have been sufficient to determine beyond dispute the date of this book, but for the fact that there were two high-priests of the same name, *viz., Simon, son of Onias, surnamed the Just, or the Pious, who lived about 370 300 B.C. [SIMON THE PIOUS]; and Simon II., son of Onias, who lived in the reign of Ptolemy Philopator, 217-195 B.C. (3 Maccab. i. 2).* Some interpreters, therefore, are of opinion that Simon I. is described by Ben Sira, whilst others think that Simon II. is intended. The lives and acts of these two pontiffs, however, as well as the esteem in which they were respectively held by the people, as recorded in their national literature, must shew to which of these two high-priests the description of Ben Sira is applicable. 1. The encomiums shew beyond doubt that one of Israel's *most renowned* high-priests is described; whereas Simon II. was so little distinguished that Josephus cannot relate a single good thing about him. 2. Ben Sira characterises him as *the deliverer of his people from destruction*; whereas in the time of Simon II. no deliverance of either the people or the temple was necessary. 3. In the time of Simon II., Hellenism, the great enemy of Judaism, which was represented by the sons of Tobias, had made great progress; and if Ben Sira had written about this time, we should have had some censures from this pious poet of these thoughtless and godless innovations; whereas there is no allusion to these throughout the whole of this book. This appears surpassing strange, when it is borne in mind that Simon II. himself sided with these faithless sons of Tobias, as Josephus distinctly declares (*Antiq. xii. 4. 11*). 4. It is utterly impossible that such a man as Simon II. should be described in such extraordinary terms in the catalogue of national benefactors; and that Simon I., the personification of goodness, nobility, and grandeur, whom the nation crowned with the title, *the Just, the Pious*, should be passed over with silence; and 5. No Jew, on reading so sublime a description of the high-priest, would ever think, with his national traditions before him, of applying it to any one else but *the Simon*, unless he were *distinctly told* that it was intended for another Simon. These considerations, therefore, shew that Ben Sira's life-like description refers to Simon I., and that the author was his contemporary. Now, as Simon I. died about 300 B.C., Ben Sira must have written his work about 290-280, as chap. l. implies that this high-priest was dead. See also *infra*, sec. 8.

5. *The Original Language of the Book.*—The translator of this book into Greek most distinctly declares, in his preface, that it was written in Hebrew, and St. Jerome assures us that he had

seen the Hebrew original (*vide supra*, sec. 3). That, by the term Ἑβραϊστῖ, is meant *Hebrew*, and not *Aramean*, is evident from the numerous quotations made from this book both in the Talmud and the Midrashim—comp.

Almost all of these quotations are in *Hebrew*, though the works in which they are found are in *Aramean*; thus shewing beyond doubt that the book of Ben Sira was written in genuine Hebrew. Besides, some of the blunders in the Greek can only be accounted for from the fact that the original was Hebrew. Thus, for example, in xxiv. 25, we read, 'He maketh knowledge to come forth as light, as Gihon in the days of vintage,' where the parallelism Γησων = גִּיחֹן (Gen. ii.

13), whereby *the Nile* was designated in later times, which the Sept. also understands by שִׁיחֹר (Jer. ii. 18), shews that ὡς φῶς in the first hemistich, originated from the translator's mistaking the Hebrew כִּיאור, like a stream, for באור, like light. Comp. also xlix. 9, which is most unintelligible in the Greek, through the translator's mistaking the Hebrew בועם בורם. Bishop Lowth, indeed, went so far as to assert that the translator 'seems to have numbered the words, and exactly to have preserved their order, so that, were it literally and accurately to be retranslated, I have very little doubt that, for the most part, the original diction would be recovered.' The learned prelate has actually retranslated chap. xxiv. into Hebrew (*Hebrew Poet. Lect.* xxiv. Oxford ed., 1821, p. 254). This retranslation is also printed by Fritzsche,

who has added some corrections of his own, and who also gives a translation of chap. l.

6. *The Greek and other translations of this book.*—The Greek translation of this book, incorporated in the Sept., was made by the grandson of the author (ὁ πάππος μου Ἰησοῦς), who tells us that he came from Palestine into Egypt in his thirty-eighth year, 'in the reign of Euergetes' (ἐν τῷ ὀγδόῳ καὶ τριακοστῷ ἔτει ἐπὶ τοῦ Εὐεργέτου βασιλέως). But there were two kings who have borne this name—Euergetes I., son and successor of Ptolemy II., Philadelphus, B.C. 247-222; and Euergetes II., i. e., Ptolemy VII., known by the nickname Pthicon, the brother of Ptolemy VI, B.C. 145-116; and the question is, which of these two is meant? Now, Ben Sira, as we have seen, wrote about 290-280 B.C., when an old man, and if we take ὁ πάππος μου τὸ mean *great-grandfather*, a sense which it frequently has, and that the translator was born after the death of his illustrious ancestor, his arrival in Egypt in his thirty-eighth year would be *circa* 230 B.C., i. e., in the reign of Euergetes I. The date of the author of this book, therefore, shews which Euergetes the translator meant.

The present state of this translation, however, is very deplorable; the text as well as the MSS. are greatly disfigured by numerous interpolations, omissions, and transpositions. The *old Latin* version which St. Jerome adopted in the Vulgate without correcting it, was made from this Greek translation, and besides being barbarous in style, is also greatly mutilated, and in many instances cannot be harmonized with its original. The Syriac alone is made direct from the Hebrew, and contains a quotation made by Jose ben Jochanan about 150 B.C. (comp. Aboth. i. 5 with Ben Sira ix. 12), which the secondary versions have not, because it was dropped from the Greek. Notwithstanding the ill treatment, and the changes which this version has been subjected to, it is still one of the best auxiliaries for the restoration of the old text. The Arabic seems to have been made from the Syriac; whilst the old English version of Coverdale, as usual, follows the Zurich Bible and the Vulgate [COVERDALE], the Bishops' Bible again copies Coverdale; the Geneva version, as is often the case, departs from the other English version for the better. The present A. V. chiefly follows the Complutensian edition of the Greek and the Latin Vulgate.

8. *The Canonicity of the Book.*—Though this book has been quoted in the Jewish Church as early as 150 and 100 B.C., by Jose b. Jochanan (Aboth. i. 5), and Simon b. Shetach (Jer. Nazir. v. 3), and references to it are dispersed through the Talmud and Midrashim (*vide sup.* sec. 5), yet the Talmud and Midrashim declare most distinctly that it is not canonical. Thus Thos. Jadamim, c. ii. says, ספר בר סירא וכל ספרים שנכתבו מכאן, *the book of Ben Sira, and all the books written from its time and afterwards, are not canonical.* We also learn from this remark that Ben Sira is *the oldest* of all apocryphal books, thus confirming the date assigned to it in sec. 4. Again, the declaration made by R. Akiba, that he who studies uncanonical books will have no portion in the world to come (עקיבא אומר) 'ר החינונים בספרים החינונים או הקורא בהם, *Mishna Sanhed. x. 1*), is explained by the Jer. Talmud to mean כגון סיפרי בנן סירא, *the books of Ben Sira and Ben*

Luanah. So also the Midrash on Coheleth xii.

12, remarks, כל המכניס בתוך ביתו יותר מכ"ד ספרים מהומוה הוא מכניס בביתו כגון בן סירא וספר תנ"ך, *whosoever introduces into his house more than the 24 books (i.e., the Sacred Scriptures, see Art. CANON), as, for instance, the books of Ben Sirā and Ben Tighlah, brings confusion into his house.* Accordingly, Ben Sirā is not included in the Canon of Melito, Origen, Cyril, Laodicea, Hilary, Rufinus, etc.; and though St. Augustine, like the Talmud and the Midrashim, constantly quotes it, yet he also, like the ancient Jewish authorities, distinctly says that it is not in the Hebrew Canon (*De Civit.* xviii. 20). So also St. Jerome (*Prolog. in Lib. Solom.*)

9. *The Literature on this Book.*—Camerarius, *Sententia et Sapientia Siriacida*, Lips. 1570; De Rossi, *Meor Enaim, Inve Bina*, c. ii. p. 29; Bartolucci, *Bibliotheca Magna Rabbinica*, i. p. 678, etc.; Drusius, *Ecclesiasticus, etc.*, Franck. 1596; Linde, *Glaubens- und-Sittenlehre Jesu des Sohns Sirach*, Leipz. 1782, 2d ed. 1795; also by the same author, *Sententia Jesu Sir. Græc. textum ad fidem Codd. et Verss. emend. illust.*, Gedani, 1795; Eichhorn, *Einleitung in d. Apokr. Schriften d. A. T.*, p. 28, etc.; Ben Zeb, *Choshmeth Jeshua Ben Sirā*, last edition, Vienna, 1844; Arnald, *Critical Commentary upon the Apocryphal Books*, etc.; Zuntz, *Gottesdienstlichen Vorlesungen*, p. 100, etc.; Delitzsch, *Zur Geschichte der jüdischen Poesie*, Leipz. 1836, pp. 20, 204, etc.; Duke's *Rabbinische Blumenlese*, Leipzig, 1844, pp. 24-32, 67-84; Bretschneider, *Liber Jesu Siriacida, Græce, ad fidem Codd. et Verss. emend. et Perpet. Comm. illust.*, Ratisbonæ, 1806; Ewald, *Geschichte d. Volkes Israel*, iv. p. 298, etc.; Jahrbuch, iii. 125, etc.; Davidson, *The Text of the Old Testament Considered*, p. 1024, etc.; Geiger, *Zeitschrift der Deutschen Morgenländischen Gesellschaft*, xii. 536, etc.; and especially the very masterly commentary of Fritzsche, *Kurzgefasstes Exeg. Handbuch z. d. Apokryphen des Alten Testaments*, part. v., Leipzig, 1859. See also articles JESUS THE SON OF SIRACH, and SIMON.—C. D. G.

ECDIPPA. [ACHZIB.]

ECK, JOHN, properly JOHANN MAIER VON ECK, was born at Eck, a village of Suabia, 13th Nov. 1486, and died at Ingolstadt, where he was professor of theology, 8th Feb. 1543. The keen antagonist of Luther on the field of polemical theology, he sought to rival him also in the department of biblical literature. He issued a translation of the Bible, 'nach dem Texte in der Heil. Kirche gebraucht, auf hochdeutsch verdolmetscht,' Ingolstadt, 1537, fol., of which he executed the O. T. and Emser the N. T. To this work not much value is attached. Eck follows the Vulgate, and sometimes borrows from Luther. He was, however, a respectable Hebrew scholar, and but for party reasons might have translated the O. T. from the original. One of his earlier works is a Translation of and Commentary on the Prophet Haggai, in which the Hebrew and Greek texts are inserted, Salingiaci, 1538. In the dedication of this work he says of himself, 'plus viginti annis in lingua sancta sum versatus.' The book is of no great value, but it gives one the impression that its author was a man of considerable learning as well as polemical power. The pervading spirit is bigoted

and bitter in the extreme. The work is a beautiful specimen of early printing, and is now very rare.—W. L. A.

ECKERMANN, JACOB CHRIST. RUD, D.D. and professor of theology and church law at Kiel, was born 6th Sept. 1754, and died 6th May 1836. He was the author of a commentary of some note on the N. T., under the title of *Erklärung aller dunkeln Stellen des N. T.*, 3 vols. 8vo, Kiel, 1806-8. He published also a metrical translation of Joel, with a commentary, Leipz. 1786. His miscellaneous writings have been collected in 6 vols. 8vo of *Theolog. Beiträge*, Altona, 1790-99, and in two additional vols. of *Vermischte Schriften*, Ibid. 1799, 1800.—W. L. A.

ECLIPSE. It has been supposed that such expressions as 'I will cause the sun to go down at noon, and I will darken the earth in the clear day' (Am. viii. 9; comp. Jer. xv. 9), 'And it shall come to pass in that day that the light shall not be clear nor dark' (Zech. xiv. 6), 'The sun and the moon shall be dark' (Joel ii. 10; iii. 15), contain allusions to eclipses of the sun and moon. This is possible, and in some of the instances probable. The passages, however, are highly figurative, and the language they present may simply be used to convey vigorously the sentiment of the prophet without having been suggested by any physical phenomenon. All attempts to refer the allusions in these passages to eclipses historically recorded are futile. The darkness at the crucifixion has often been ascribed to an eclipse, but without reason. [DARKNESS; EARTHQUAKE].—W. L. A.

ED (עַד), a word supplied in the A. V. (Josh. xxii. 24), on the authority of the Arab. and Syr. versions, but which does not appear in the Hebrew text except in a few codices, in most of which it precedes לְמוֹכָה, and in one follows it with the omission of the second עַד, evident indications of a mere connection. The LXX. and the Chald. accord with the received text of the Heb., and the Vulg. is not decided. The passage may be rendered, 'The sons of Reuben and the sons of Gad called the altar, A witness is this between us that Jehovah is God,' *i. e.*, they inscribed this on it; or it may be rendered, 'gave a name to it, for (said they) it is a witness,' etc. (comp. Knobel and Maurer *in loc.*)—W. L. A.

EDAR, TOWER OF (מִנְדֵּל עַד), Sept., Cod. Alex., *πύργος Γαδέρ*), a place at which Jacob first pitched his tent after the death of Rachel (Gen. xxxv. 21). It seems to have been near Bethlehem; Jerome says (*De locc. Heb.* s. v. Bethlehem) it was distant from that place about 1000 paces. He says it means *turris gregis*, and finds in the name a prophetic anticipation of the announcement to the shepherds of the birth of Christ. It may have been the place called afterwards Eder.—W. L. A.

EDEN (עֵדֶן). [PARADISE.]

EDEN (עֵדֶן), Sept. 'Εδέμ), a place mentioned along with Haran, and Canneh, and Sheba, as supplying Tyre with cloths and embroidered garments (Ezek. xxvii. 23). It is supposed to be the place now called Aden, on the southern coast of Arabia, where Haran and Canneh also were. [BETHEDEN].—†

EDOM. [ESAU.]

EDOMITES. [IDUMÆA.]

EDREI (עֲדְרַי; Sept. 'Edraelv), one of the ancient capitals of Bashan, and the residence of Og, the last of its giant kings (Deut. i. 4; Josh. xii. 4). Beside it Og assembled his forces to oppose the Israelites, and there his army was defeated, and he himself slain (Deut. iii. 1). Edrei, with the other cities of Bashan then fell into the hands of the Israelites (ver. 10), and was allotted to the half tribe of Manasseh (Josh. xiii. 12, 31). It is doubtful whether it was ever occupied by the conquerors, at least for any lengthened period, as there is not a single reference to it in their subsequent history. Its singular position may probably account for this.

There are two ancient towns in Bashan which now claim the honour of being the representatives of Edrei. The one is called *Edhra* (عَدْرَا), and is situated on the south-west angle of the rocky district of Lejah, the Argob of the Hebrews, and the Trachonitis of the Greeks. The other is called *Dera* (دَرَا), and stands in a shallow wady in the open plain of Hauran, about fourteen miles south of Edhra. Most modern geographers have assumed, apparently without much investigation, that Dera marks the real site of Edrei (Reland, *Pal.*, p. 547; Ritter, *Pal. und Syr.* ii. 834; Burckhardt and Leake, in *Travels in Syria*, pp. 12, and 241). The writer has been led to form a different opinion, and it may be necessary to state the grounds for it.

1. The name *Edrei*, which signifies 'strength,' and the fact that it was the capital of an ancient and warlike nation, naturally lead to the belief that it was a very strong city. Ancient cities were always, when possible, built on the tops of hills, or in rocky fastnesses, so as to be easily defended. Edhra stands on a ridge of jagged rocks, and is so encompassed with cliffs and defiles as to be almost inaccessible. Dera, on the contrary, is in the open plain, and has no traces of old fortifications (G. Robinson, *Travels in Palestine*, ii. 168).

2. Dera has neither well nor fountain to attract ancient colonists to an undefended site. Its supply of water was brought by an aqueduct from a great distance (Ritter, *Pal. und Syr.* ii. 834).

3. The ruins of Edhra are more ancient, more important, and much more extensive than those of Dera. None of the buildings in the latter seem older than the Roman period (Dr. Smith in Robinson's *B. R.* iii. app. 152, 1st ed.)

The identification of Dera and Edrei can be traced back to Eusebius. He says Edrei is now called Adara (Ἀδάρᾰ), and is a noted city of Arabia, twenty-four miles from Bostra (*Onomast.* s. v. *Esdrai*). In another place he gives the distance at twenty-five miles (Id. s. v. *Astaroth*). Adara is laid down in the Peutinger Tables as here indicated (Reland, *Pal.*) There can be no doubt that the city thus referred to is the modern Dera; but the statement of Eusebius is not sufficient to counterbalance the other evidence in favour of Edhra. Dera was probably better known to him as lying on a great road leading to the metropolis of the province; and the similarity in name gave

rise to the error which has since been propagated.

The ruins of Edhra are among the most extensive in Hauran. The site is a strange one. It is a rocky promontory projecting from the Lejah (TRACHONITIS), having an elevation of some thirty feet above the plain which spreads out beyond it smooth as a sea, and of unrivalled fertility. The ruins are nearly three miles in circuit, and have a strange wild look, rising up in black shattered masses, from the midst of black rocks. A number of the ancient houses still remain, though half buried beneath heaps of more modern ruins. Their walls, roofs, and doors are all of stone; they are low, massive, and simple in plan; and they bear the marks of the most remote antiquity. Some of them are doubtless as old as the time of the Re-phaim; and they are thus specimens of primeval architecture such as no other country could produce. At a later period Edhra was adorned with many public edifices, now mostly in ruins. A large church still stands at the northern end of the town. A Greek inscription over the door informs us that it was originally a heathen temple, was converted into a church, and dedicated to St. George in A.D. 516. There are the walls of another church of St. Elias; and, in the centre of the town, a cloistered quadrangle, which appears to have been at first attached to a *forum*, and afterwards to a cathedral. On the public buildings and private houses are many Greek inscriptions. Some were copied by Burckhardt, and some by the writer of this article. These shew that Edhra was a most important place from the time of the Roman conquest; and that it, and not Dera, was the episcopal city referred to by Epiphanius, and in the *Notitie Ecclesiastica*, as ranking next to Bostra (Reland, *Pal.* pp. 219, 223, 548; St. Paul's *Geogr. Sac.* p. 295). It was still a strong place at the time of the Crusades (*Gesta Dei per Francos*, pp. 895, 896, 1031); and was one of the capitals of Hauran in the days of Abulfeda (*Tabula Syr.*, p. 97). When visited by the writer in 1854 it contained about fifty families, a few of which were Christian, and worshipped in the old church of St. George. An account of the ruins will be found in the writer's *Damascus*, ii. 219; *Handbook for S. and P.* 532; Burckhardt's *Syria*, 57 sq.; Ritter, *ut supra*.

2. A town in the mountains of Naphtali, near Kedesh (Josh. xix. 37). About three miles south of the ruins of Kedesh is a conical hill called *Khuraibeh*, 'the ruin,' which was anciently occupied by a small fortified town. This may perhaps mark the site of Edrei. (*Handbook for S. and P.* 442.)—J. L. P.

EDUCATION. As this subject is intimately connected with the question of *schools* and mode of *instruction*, which cannot be well dealt with separately, we propose to discuss historically these three topics in the present article.

1. *Education from the Exodus of Egypt to the Return from Babylon.*—Being under a theocracy, and engaged almost exclusively in pastoral and agricultural pursuits, it was most important that the Hebrews, in the early stages of their existence, should educate their youth in a pre-eminently religious, practical, and simple manner. The parents upon whom the education of the children at first devolved, were therefore strictly enjoined to instruct their off-

spring in the precepts of the Law, in the fear of God (Deut. iv. 9, 10; xxxi. 13; xxxii. 46), and in the symbols which represented the dealings of Providence with their nation in past days, and which were evidently designed to excite the curiosity of the children, and to elicit inquiry; thus furnishing the parents with pictorial illustrations to facilitate the education of those committed to their care (Exod. xii. 26, 27; xiii. 8, 14, 15; Deut. vi. 8, 9, 20, etc.) This work of education was not to be put off for certain occasions, but was to be prosecuted at all times; no opportunity was to be lost, the father was enjoined in sitting down with his family at the table, at home, abroad, before retiring in the evening, and after getting up in the morning, to train his children in the nurture and admonition of the Lord (Deut. vi. 7). The law of God powerfully supported the authority of parents in this task by the injunction of filial obedience contained in the Decalogue, as well as by the heavy punishment inflicted upon refractory children (Exod. xx. 12; xxi. 15; Lev. xx. 9; Deut. xxi. 18-21). Still the rigour of parental authority was not to be the sole operative power in the education of children. Parents are reminded that their example may lead their children to happiness or misery (Exod. xx. 5, 6; Deut. iv. 10; v. 9; xxx. 19; xxxii. 46, 47). The force of example in the education of children is most beautifully described in the praise of a royal mother who, with 'the law of love upon her tongue,' instilled noble sentiments into the heart of her children (Prov. xxxi. 1-9, 25); and such loving words are represented as producing an indelible impression in the picture of a son who, with pious gratitude, dwells upon the wholesome lessons which his father imparted to him in early youth (*ibid.* iv. 3, etc.) Parents are, moreover, advised not to adopt the same indiscriminate process of teaching with all children, but to

adapt their instruction to every youth (על פי ררכו) according to his age and inclination, so that he may abide thereby (*ibid.* xxii. 6).

That *reading* and *writing* must have formed part of education from the very settlement in Palestine is evident from the fact that the Israelites were commanded to *write* the precepts of the law upon the door-posts and gates of their respective houses [MEZUZA], in order to be continually reminded of their obligations to their Creator (Deut. vi. 9; xx. 20); they were, moreover, enjoined to write the injunctions upon great stones (באור הטב) 'very plainly,' immediately upon their crossing the Jordan (Deut. xxvii. 2-8) so that they might easily be read by every Israelite. Now these admonitions unquestionably presuppose that the people at large could read plain writing; that the deciphering of these memorials was a religious duty, and that it must therefore have formed an essential part in the strictly religious education of children. Besides, the manner in which some parts of the sacred oracles were written clearly indicates that the inspired writers reckoned upon the ability of the people to read. Thus, the frequent play upon words, as for instance, in Gen. vi. 8, where 'Noah found favour,' is obtained by a transposition of the letters in the name נח into הן; Gen. xxxviii. 7, where 'Er . . . was wicked,' is obtained by a transposition of the letters in the name ער into רע; the alphabetical portions of the O. T. (Ps. ix., x., xxv., xxxiv., xxxviii., cxi., cxii., cxix., cxlv.; Prov.

xxxi. 10, etc.; the Lament.) which were intended to assist the memory and mark the gradation of ideas; the substitution of ששך for ככל (Jer. xxv.

26; li. 4), לִבְקָמִי for כְּשֵׁרִים (*ibid.* li. 1), by taking the letters of the alphabet in their reverse order, would have been utterly useless and most unintelligible had not the people for whom they were intended been able to read. If we bear in mind that the understanding of the sacred oracles was not the peculiar prerogative of the priestly caste, but was enjoined upon every Israelite, it becomes self-evident that the knowledge of reading and writing which, as we have seen, is so inseparable from the understanding of the Scriptures, must have formed a prominent part in the education of children whose sole training was the understanding of the Scriptures. For the same reason *arithmetic* must have been taught; as the days of the week, the months, the festivals, etc., were not designated by proper names, but by *numerals*. The numbers occurring in the O. T. reach to hundreds of thousands, and we have, moreover, instances of *addition* (Num. i. 22, etc.; xxvi. 7, etc.), *subtraction* (Lev. xxv. 27; xxviii. 18; Num. iii. 19, 43 with 46), *multiplication* (Lev. v. 8; xxvii. 16-18; Num. iii. 46-50) and *division* (Lev. xxv. 27-50). In fact, every art or science which occurs or is alluded to in the O. T., and upon the understanding of which depended the understanding of the Scriptures, must to some extent have formed a part of the strictly religious Jewish education.

We have already seen that the education of the children devolved upon the parents. They were the *teachers* in ordinary cases. This natural duty must have been a pleasant task, a welcome occupation, and a pastime to a people who led a rural life, and whose Sabbaths and festivals freed them from labour a *sixth* part of the year [FESTIVALS]. In these leisure hours the parents who were strictly forbidden to engage in any secular work were in constant contact with their children; and the many symbols, rites, and ceremonies on those occasions were used by them as so many illustrated narratives of the dealings of God. We need, therefore, not wonder that the name *school* does not occur in the Bible previous to the Babylonish captivity,* before the Jews were entangled in foreign affairs, before commercial transactions with other nations and other matters had taken so many of the people away from their homes and deprived their children of their natural teachers.

But though there were no national or elementary schools before the exile, there were cases in which professional teachers had to be resorted to; e.g., when the high position or official duties of the parents rendered parental teaching impossible, or when the parents were in any way incapacitated, when the child's abilities to learn surpassed the father's capabilities to teach, or where the son was preparing himself for a vocation different from that of his father. For such exceptional cases teachers existed from a very early period. Bating the proper name הנוך, *Enoch*, which denotes *teacher*, and

* The traditional opinion that by שבת החכמי, 2 Sam. xxiii. 8, is meant a sort of *academy* (the Midrash, the Chaldee Paraphrase, Kimchi, etc.), or that דלתתי, Prov. viii. 34, denotes בית המדרש (vide Rashi *in loco*) is purely gratuitous.

occurs already in Gen. iv. 17, and Enoch ii., the son of Jared (Gen. v. 21) whom tradition celebrates as the *teacher* of several sciences [ENOCH], we find that Bezaleel and Aholiab were qualified by God as *teachers* (וְהוֹרֹת נְתַן בְּלָבוֹ) in certain departments; the Psalmist speaks of his having had many *teachers* (מְבַלְמֵדֵי הַשְּׂבָלִית) (cix. 99); both teachers and pupils are mentioned in connection with the Temple choir (1 Chron. xv. 22; xxv. 8), and the prophets who, by virtue of their superior piety, high attainments, large acquaintance with the political affairs of the world, delivered public lectures on the festivals (2 Kings iv. 22, 23) instructed young men who aspired to a better education in order to fit themselves for public service (1 Sam. x. 5, 10, etc.; 2 Kings ii. 3, etc.; iv. 38, etc.; vi. 1, etc.). As for the so-called *school* of prophets, no such term occurs in the O. T.

2. *Education from the return from Babylon to the close of the Talmud.*—A new epoch in the education of the Jews began with their return from Babylon. In the captivity, the exiled Jews had to a great extent forgotten their vernacular Hebrew, and they became incompetent to understand their sacred oracles. Ezra, the restorer of the Law, as he is called, found it therefore necessary, immediately on their return to Jerusalem, to gather around him those who were skilled in the Law, and with their assistance trained a number of public teachers. The less distinguished of these teachers went into the provincial towns of Judæa, gathered disciples, and formed synagogues; whilst the more accomplished of them remained in Jerusalem, became members of the *Great Synagogue*, and collected large numbers of young men, whom they instructed in all things appertaining to the Law, in the prophets, and in the sayings of the sages of old (Ecclus. ii. 9-11; Mishna, Aboth. i. 1). Scrolls were given to children, upon which were written passages of Scripture, such as *Shema* (i. e., Deut. vi. 4), or the *Hallel* (i. e., Ps. cxiv.-cxviii., cxxxvi.), the history of the creation to the deluge (Gen. i.-viii. 1), or Lev. i. 18 (comp. Jer. Megilla, iii. 1; Gittin, 60, a; Soferim, v. 9). The course of study pursued in the metropolis was more extensive (Prolog. to Ecclus., and Ecclus. xxxviii. 24, etc.; xxxix. 1, etc.), that of provincial towns more limited, whilst the education of the small and more remote places or villages almost exclusively depended upon what the inhabitants learned when they came up to Jerusalem to celebrate the festivals, and was therefore very insignificant. Hence the phrase, עַם הָאָרֶץ, *country people*, came to denote the *uneducated*, the *illiterate*; just as *paganus*, or *pagan*, a countryman or villager, is for a similar reason used for *heathen*; whilst *urbanus*, *urbane*, or an *inhabitant of a city*, denotes an *educated man*.

The schools now began to increase in importance, and the intercourse of the Jews with the Babylonians, the Persians, and the Greeks, widened their notions of education, and made them study foreign languages and literature, and Hebraize their philosophy (Eccl. xii. 12). The Essenes, who found it necessary to separate themselves from the nation because of their foreign innovations [ESSENES], also devoted themselves to the education of the children; but their instruction was confined to the divine law and to morals (Joseph. *Bell. Jud.* xi. 8. 12). Simon b. Shetach, 80

B. C., has the merit of having introduced superior schools into every large provincial town, and ordained that all the youths from the age of sixteen should visit them (Kethuboth, Jer. vii. 11), introducing Government education. So popular did these schools become, that whilst in the pre-exile period the very name of schools did not exist, we now find in a very short time no less than *eleven*

different expressions for school, e. g., אֵילִיּוֹם =

ἄλσος, or אֵילִיּוֹם = λέως (Midrash Coh. 91); אֶסְכּוּלָא, or אֶסְכּוּלָי = σχολή (Midrash Shir Hashir, 15, a); or *בֵּית מוֹדֵרְשָׁא*, or more frequently *בֵּית הַמּוֹדֵרְשׁ* (Jebam. 24, b; Aboth. v. 14); *בֵּית*

אוֹלָפֵן, *house of learning* (Jonath. Exod. xxxiii. 7); *בֵּית הַסֵּפֶר*, *the house of books* (Midrash Echa, 70, b); *בֵּית הַסּוֹפֵר*, *the house of the teacher* (*ibid.* 77, b); *בֵּית רַבֵּן*, *the house of the master* (Baba

Bathra, 21, a); *בֵּית הַלְמוּד*, *the house of instruction* (Gittin, 58, a); *יִשְׁבִּיבָה*, or *כּוּחִיבָתָא*, *the seat*, i. e., where the disciples sat at the feet of their master; *כֶּרֶם*, *the vineyard* (Rashi on Jebam. 42, b); and *סֻדְרָא*, *an array*, where the disciples were arrayed according to their seniority and acquirements (Chulin, 173, b). The etymologies of some of these words, and the signification of the others, give us, in a very striking manner, the progressive history of Jewish education, and tell us what foreign elements were introduced into Jewish pedagogy. Some idea may be formed of the deep root juvenile education had struck in the hearts of the Jews from the following declaration in the Talmud:—'The world is preserved by the breath of the children in the schools.' 'A town in which there is no school must perish.' 'Jerusalem was destroyed because the education of children was neglected' (Sabbath 119, 6).

As the national education of this period is that which the apostles and the first disciples of Christ received, and as this must be of the utmost importance and interest to Christians of the present day, we shall now briefly state what the Talmud and the Midrashim consider to constitute the proper education of a respectable Jew, and give their notions of schools and the mode of instruction. We must begin with the schools. A school or teacher was required for every five and twenty children; when a community had only forty children they might have one master and an assistant (Baba Bathra, 21, a). Schools must neither be established in the most densely crowded parts of the town (Pesachim, 112, a), nor near a river which has to be crossed by an insecure bridge (Baba Bathra, 21), so as not to endanger the health or lives of the children. The proper age for a boy to go to school is six years (Kethuboth, 50, a); before that time the father must instruct his son. Thus it is related, that R. Chija b. Abba would never eat his breakfast before he had repeated with his son the lesson which he gave him on the previous day, and taught him at least one new verse (Kiddush, 30, a). At the age of five a boy had to study the Bible, at ten the Mishna, and at fifteen the Talmud (Aboth. v. 21). Great care was taken that the books from which instruction was imparted should be correctly written (Pesachim, 112, a), and that the lessons taught, especially from the Bible, should be in harmony with the capacities and inclinations of the children (Aboda Zara, 19, a; Berach. 63, a), practical (Kiddush. 40, b),

few at a time, but weighty (Vajikra Rabba, ciii.) The parents never ceased to watch that their children should be in the class at the proper time. We are told that Rabba b. Huna never partook of his breakfast till he had taken his son to school (Kiddush. 30, a). Josephus therefore did not at all exaggerate, when, writing against Apion, he said, 'our principal care of all is, to educate our children' (Cont. Apion, i. 12).

Besides these elementary schools, which were chiefly intended for popular education, there were also superior colleges, at first confined to Jerusalem, under the management of the presidents and vice-presidents of the Sanhedrin, the *Sopherim*, or 'scribes,' and 'doctors,' as they are called in the N. T., and members of the Sanhedrin, who made it one of their principal objects to train young men destined to become the teachers and judges of Israel, and the bearers of 'the traditions of the fathers' (Aboth. i. 1). Gradually these academies were multiplied in the metropolis, and spread over all the countries where the Jews resided. Akbara, Lydda, Ushach, Sepphoris, Tiberias, Iabne, Nares, Nahardea, Machuza, Selki, Shakan-Zib (El-Sib), Pumbadita, Sora, and Alexandria, in the process of time became distinguished for their seats of learning. The following are the presidents and vice-presidents of the colleges, who were the depositories of the traditions of the fathers, and the supreme arbiters in the sphere of morals and education, together with the most distinguished masters and disciples under each presidency, both in Palestine and Babylon, to the close of the Talmud, in their chronological order:—

THE TANAIM EPOCH.	B. C.
SIMON the Just or Pious	- - -300
ANTIGONUS of Soho	- - -200-170

PALESTINE.

GAMALIEL II. of Jabne b. Simon II. and Eleazar b. Azzariah, who was for a little time president in the place of Gamaliel. Here are to be mentioned Eliezer b. Hyrkanus, brother-in-law of Gamaliel, and founder of the school at Lydda, which continued the only seat of learning in Southern Judæa for several centuries; Josuah b. Chananja, who established a school at Bekiim, in the valley between Jabne and Lydda; Ismael b. Eliesa, the founder of the school known by the name *Be-R. Ismael*; Aquila, the translator of the Bible, R. Ilai, R. Chalifia, Bar-Cochba, the false Messiah.

A. D.
80-116

SIMON II., b. Gamaliel II., and R. Nathan, vice-president, author of the Mishna or Tosifita, which goes by his name, and of a commentary on Aboth.

BABYLON.

Nahardea, the centre of learning since the Babylonian exile, and the seat of the Rector-General of all the Babylonian colleges. It was destroyed through the adventurer Papa b. Nazar, in the year 259 A. D.

R. Chanina, nephew of R. Josuah, formed a college in Nachor-Pacor, in the neighbourhood of Nahardea, of which he became president; and

		B. C.

b	{ JEHOShUAH b. Perachja, and NATAI of Arabela - - -	140-110
c	{ SIMON b. Shetach, their pupil, and JEHUDAH b. Tabai - - -	110-65
d	{ SHEMAJA, and ABTALION* - - - - -	65-30
	HILLEL I., the Great, the Baby- lonian, in whose family the Presi- dency became hereditary for fifteen generations (A. D. 10-415). He was first with MENACHEM, and then with SHAMMAI, who founded a separate school - - - E. C. 30-10 A. D. The former was designated the <i>school of Hillel</i> , which had eighty disciples, called (זקני בית הלל) <i>the elders of the house of Hillel</i> , amongst whom were Jonathan ben Uziel the Targumist, Dossa b. Harchinas, Jonathan his brother, and Jochanan b. Zakkai; whilst the latter was denominated the <i>school of Shammai</i> , the immediate disciples or elders of which (זקני בית שמי) were Baba b. Buta, Dotai of Stome, and Zadok, the originator of the Zealots.	A. D. 10-30 30-50 50-70 68-80
	SIMON b. Hillel I. - - -	10-30
	GAMALIEL I. b. Simon I., called <i>Ha-Zaken the elder</i> , the teacher of the apostle Paul - - -	30-50
	SIMON II. b. Gamaliel I. - - -	50-70
	JOCHANAN b. Zakkai, † founder of the school of Jabne or Jamina. ‡	68-80

* Graetz is of opinion that Shammai and Abtalion had the presidency only to B. C. 37; that between this year and Hillel's becoming president six years and six months intervened, and that the *Bene Bethra* (בני בתירא), which he does not take to be *patronymic*, but regards as *gentilic*, denoting inhabitants of Bethyra, were presidents (comp. Frankel, Monatschrift, 1852, p. 112, etc.)

† He lived upwards of a hundred years, survived

four presidents—viz., Hillel I., Simon I., Gamaliel I., and Simon II.; and also exerted himself in behalf of the deposed president Gamaliel II., in whose place R. Jochanan was elected, and officiated a few years, but whose reinstalment he at last brought about, so that he was actually the contemporary of five presidents.

‡ A town near the coast of the Mediterranean Sea, between Joppa and the once Philistian town Ashdod.

PALESTINE—Continued.

The distinguished men of this presidency are, R. Judah b. Hai of Ushah; R. Jose b. Chalafta, of Sepphoris, author of the history called *Seder Olam*; R. Jochanan, of Alexandria; R. Simon b. Jochai of Galilee, the reputed originator of the Kabala, and author of the far-famed *Zohar*. . . 140-163

JEHUDAH I., the Holy, Ha-Nasi, b. Simon III., editor of the Mishna, and called *Rabbi*. His celebrated disciples, who also became heads of schools, were called *semi-Tanaim*, and perfected their master's work, the Mishna; these were R. Janai, whose school was at Akbara; R. Chija = Achija, Ushaja the elder, surnamed 'the father of the Mishna,' and Abba Areka, surnamed *Rab*, the founder of the school at Pumbadita. . . 163-193

GAMALIEL III. b. Jehudah I., in whose presidency the college was transferred from Jabne to Tiberias. . . 193-220

THE AMORAIM EPOCH.

JEHUDAH II. b. Simon III., also called *Rabbi*, the teacher of Origen. The teachers of this period were, R. Chaninah, the most distinguished disciple of Jehudah I., who founded a school at Sepphoris; R. Simlai, the celebrated Haggadist, who reduced the law of Moses to 613 commandments (תרי"ג מצוות); R. Jose of Maon; R. Chag-gai, R. Jehudah b. Nachmani, etc. . . 220-270

Tiberias. . . . A.D. 270-300

GAMALIEL IV. b. Jehudah II. . . 270-300

HILLEL II. b. Gamaliel IV. introduced the new calendar, and is said by Epiphanius to have embraced Christianity. The distinguished teachers of this period were R. Jona, R. Jose, and Tanchuma, b. Abba, the renowned Haggadist, and reputed author of the Midrash Tanchuma. . . 330-365

BABYLON—Continued.

R. Nechanja or Achija was vice-president. A.D. 138-140

R. Shila was the Rector-General at Nahardea; R. Nathan, the last *Tana*, and R. Chija, were both educated here. Abba Areka, who also was a student here, and afterwards went to Palestine to finish his studies under Jehudah I., brought with him on his first return to Babylon (189 A.D.) the complete Mishna of his master. *circa* 140-190

Samuel the astronomer, also called Mar-Samuel, Arioch, and Jarchini, succeeded R. Shila as rector of the college at Nahardea. 190-247

ABBA AREKA, surnamed *Rab*, having returned to his native place a second time, founded a school at Sora, which maintained its celebrity for nearly 800 years, and which attracted about 1200 students in the lifetime of its founder. He was the president of it twenty-eight years. 219-247

SAMUEL JARCHINI, rector of the college at Nahardea, is elected rector-general of all the schools in Babylon. 247-257

R. HANA became rector-general; he had only 800 students, as, during his rectorate, R. Jehudah b. Jecheskel founded a school at Pumbadita, and R. Chasda founded another school at Sora, which attracted many of his disciples. Nahardea is destroyed (259); the students emigrate into the neighbourhood of the Tigris, and found a school. 257-297

PUMBADITA.

R. JEHUDAH b. Jesheskel, founder of the school at Pumbadita, is elected rector-general of all the colleges, and officiates two years. 297-299

CHASDA of Kafri, founder and rector of the school at Sora, is elected rector-general. 299-309

RABBA b. Nachmani, who succeeded Chasda, revived the college to such a degree that he obtained 1200 students. 309-330

JOSEPH b. Chija the blind. He translated the prophets of the O. T. into Chaldee. 330-333

ABAJI b. Cajlil, surnamed Nachmani, the nephew of Rabba, succeeded R. Joseph the blind. 333-338

RABBA b. Joseph, b. Chama, who founded the school at Machuza, was elected rector after Abaji. 338-352

NACHMAN b. Isac held the rectorate four years. 352-356

Tiberias—Continued.

GAMALIEL V. b. Hillel II.	A. D.
The teachers of this period were R. Jeremiah, R. Jacob b. Abun, etc. etc.	
JEHUDAH IV. b. Gamaliel V.	365-385 385-400
Gamaliel the last (בַּתְרַאָה)	
b. Jehudah IV.	400-425

Sora—Continued.

ASHI b. Simai, surnamed Rabban (<i>our teacher</i>), resuscitated the college of Sora, and was its rector 52 years, during which time seven rectors died in Pumbedita. Ashi immortalized his name by collecting the Babylonian Talmud	A. D.	372-417
R. JEMAR, or <i>Mar-Jemar</i> , contracted Maremar, succeeded R. Ashi as rector of the college, and officiated about 5 years.		427-432
R. Idi b. Abin, a disciple of R. Ashi, officiated as rector for 20 years.		432-452
R. NACHMAN b. Huna		452-455
MAR bar R. Ashi, who continued collecting the Talmud, which his father began.		455-468
RABBA TUSFAN. Sora, where one of the oldest Jewish universities stood, was now destroyed by the Persian king Firuz.		468-474
RABINA II., who, with R. Jose and his colleagues, completed the Talmud.		468-540

PUMBADITA—Continued.

R. CHAMA of Nahardea, Nachmani's successor, held the rectorate 10 years.	A. D.	356-377
R. ZEBID b. Ushaja.		377-385
R. DIMI b. Chanina of Nahardea.		385-388
RAFREH b. Papa.		388-400
R. KAHANA. The celebrated men of this period were Mar-Sutra, Fluna b. Nathon, etc.		400-411
MAR-SUTRA.		411-414
R. ASHA b. Raba.		414-419
R. Gebiha of Be-Katil.		419-433
REFREH II.		433-443
R. RECHAMAI.		443-456
R. SAMA b. Raba.		456-471
R. JOSI.		471-520
R. Samuel b. Abahu.		

At first the organization of these schools or colleges was very simple. Besides the president or rector, who was the chief teacher, and an assistant, there were no offices or ranks. Gradually, however, superior and subordinate ranks involuntarily developed themselves, and ultimately assumed the following form. The college which met during certain months of the year, and was generally called *Methiba* (מְתִיבָא), *seat of learning*, was presided over by the chief Rabbi, who was called *Resh-Methiba* (רֵאשׁ מְתִיבָא), and was elected by the school. Next to this *Resh-Methiba* or rector came the *Resh-Kalla* (רֵאשׁ כְּלָלָה), *the chief of the assembly*, whose office it was to expound or simplify to the students during the first three weeks of the session the theme upon which the rector had determined to lecture. In later times there were seven *Rashe-Kalloth* (רֵאשׁי כְּלָלוֹת), such interpreters composed of the associates (חֲבֵרִים) and members of the Sanhedrin, varying in rank. The president or teacher occupied a raised seat, the interpreters sat next to the rector on lower seats, whilst the disciples sat below them, at the feet of their teachers (Acts xii. 3).

The *mode* or manner in which instruction was communicated was chiefly catechetical. After the master had delivered his dicta or theme, the disciples in turn asked different questions (Luke ii. 46), which he frequently answered by parables or counter questions, a line of conduct also pursued by Christ in accordance with the custom of the time (comp. Matt. xxii. 17-22; Luke xx. 2-4, etc.) Sometimes the teacher introduced the subject by simply asking a question connected with the theme he proposed to propound, the replies given by the different disciples constituted the discussion, which the master at last terminated by declaring which of the answers was the most appropriate. Thus R. Jochanan b. Zakkai (B.C. 30) on one occasion wanted to inform his disciples what was the most desirable thing for man to get; he then asked

them, 'What is the best thing for man to possess?' One replied, 'a kind nature;' another, 'a good companion;' another, 'a good neighbour;' another, 'the power to foresee consequences;' whilst R. Eleazer said, 'a good heart.' Whereupon R. Jochanan remarked, 'I prefer R. Eleazer's answer to yours, for in it all your answers are comprehended' (Aboth. ii. 9). Who is not reminded thereby of the questions put by the Saviour to his disciples in Mark vii. 27-30?

Allegories, riddles, stories, etc., formed another channel whereby instruction was communicated in these schools. The oppressive heat of the Eastern climate, which was especially felt in the crowded college, where, as we have seen, 1200 disciples were sometimes present, tended to make the students drowsy when a hard subject was discussed. The wise teacher, therefore, when he perceived that the attention began to flag, at once introduced a merry anecdote, or a monstrous story, or propounded a ludicrous riddle, which immediately aroused the disciples, and enabled the master to go on with his theme. Hence the abundance of both sublime and ridiculous parables and stories dispersed throughout the Talmud and Midrashim, which record these lectures; and hence also the parabolic mode of teaching adopted by our Saviour.

The *extent* of instruction, or what constituted education in these schools, can hardly be defined. An unbiassed reader will see from a most cursory glance at any of the discussions recorded in the Talmud, that all manner of subjects were brought forward in these colleges. Theology, philosophy, jurisprudence, astronomy, astrology, medicine, botany, geography, arithmetic, architecture, were all themes which alternately occupied the attention of masters and disciples. In fact the Talmud, which has preserved the topics discussed in the colleges, is an encyclopædia of all the sciences of that time, and shews that in many departments of science these Jewish teachers have anticipated

modern discoveries. It would require far more space than the limits of this article allow to quote instances in confirmation of this; we can, therefore, only refer the reader to the treatises quoted below.

Besides the abstruse theological and scientific subjects, *etiquette* occupied a prominent part in the lectures of the college, and was regarded as forming an essential part of education. The most minute directions are given as to the behaviour of students towards their parents, their teachers, their superiors in age or rank. Every one met in the street must be saluted (Aboth. iv. 10); not to respond to a salutation is characterised as committing a robbery (Berach. 6, b). An ordinary man is to be saluted with the words, 'Peace be with thee'; a teacher, 'Peace be with thee, my teacher and my master!' (Rashi Berach. 27, b); and a king, 'Peace be with thee, my king! peace!' (Gittin, 62, a). Salutations in the house of prayer are not allowed (Derech Eretz, 10). One must rise before a learned man (Kethuboth, 103, b), and before the hoary head, even if he be a non-Israelite (Kiddush, 33, b). When three persons walk together, the superior is to walk in the middle (Erub. 54, b); the teacher must always be on the right of the pupil in walking (Joma, 37, a). One must not leave a friend without asking his permission (Derech Eretz, 2); when leaving one's teacher, the disciple must say, 'I am dismissed;' whereupon the response is, 'Depart in peace' (Berach. 64, a). Never enter a house suddenly and without notice (Keth. 62, b); nor sit down before the superior has seated himself (Jerusal. Keth. 25); nor lean in the company of superiors (Derech Eretz, sec. vi.) 'Seven things are seen in the conduct of an educated man, and seven in the behaviour of an uneducated person. 1. An educated man will be quiet in the presence of one more educated than himself; 2. Will not interrupt any one speaking; 3. Will not give a hasty reply; 4. Will ask appropriate questions; 5. Will give suitable answers; 6. Will answer the first thing first, and the last thing last; and 7. Will candidly say when he does not know anything. The reverse of these things will be seen in the uneducated' (Aboth. v. 10).

Another most essential part of education was the learning of a *trade*. Thus R. Gamaliel declares, כל תורה שאין עמה מלאכה סופה בטלה וגוררת עון, *learning; no matter of what kind, if unaccompanied by a trade, ends in nothing and leads to sin* (Aboth. ii. 2). R. Judah b. Ilai, called 'the wise,' 'the first orator,' had a trade, and used to say, 'labour honours the labourer' (Nedarim, 49, b). R. Ismael, the great astronomer and powerful opponent of Gamaliel II., was a *needle-maker* (Jer. Berach. iv. 1); R. Jose b. Chalafat of Sepphoris was a *tanner* (Sabbath, 49, b). These Rabbins, like the Apostle Paul, gloried in the fact that they could maintain themselves, and teach independently of payment, and hence took a pride in their respective trades which were attached to their names, viz., *Rabbi Jochanan, the shoemaker* (ר' יוחנן הכנפדר); *Rabbi Simon, the weaver* (ר' שמעון שזורי); *Rabbi Joseph, the carpenter* (ר' יוסף הנונר). This will account for the apparent anomaly that the apostle Paul, a thorough student, should have been a *tent-maker*.

Though female education was necessarily limited,

owing to the position which women occupied in the East, yet it must not be supposed that it was altogether neglected. The fact that mothers had to take part in the education of their children would, of itself, shew that their own education must have been attended to. We are, however, not confined to this inference. The 31st chapter of Proverbs gives us a description of what was the education of a woman and a housewife in the O. T. In the Talmud we find the daughters of R. Samuel were even first-rate students of the *Halacha* (Kethuboth, 23, a; Jer. *ibid.* ii. 6). R. Jochanan b. Napucha not only urges the study of Greek as a necessary part of a man's education, but recommends it also for women as a desirable accomplishment (Jerusal. Sota, towards the end). To shew the desirableness of uniting with Hebrew the study of Greek, this celebrated rabbi, in accordance with the ancient practice, illustrates it by a passage of Scripture (Gen. ix. 23):—'Because the two sons of Noah, Shem and Japheth, unitedly covered the nakedness of their father with one garment; Shem (representing the Jews) obtained the fringed garment, the *Taliith*; Japheth (representing the Greeks) got the philosopher's garment, i.e., *Pallium*,' which ought to be united again (Midrash Rabba, Gen. xxxvi.) Heme R. Abuha was not only himself a consummate Greek scholar, but had his daughter instructed in this classical language, since he regarded it as necessary to a good female education, and quoted R. Jochanan as an authority upon this subject (Jerusal. Sabbath, iii. 1; Sota, towards the end).

Literature.—The best literature upon this subject is the Talmud and Midrashim, but, as these are not generally accessible, we must mention the masterly works of Zunz, *Die Gottesdienstlichen Vorträge der Juden*, Berlin, 1846; Frankel, *Der Gerichtliche Beweis*, Berlin, 1832; Monatschrift, i. 509, etc.; Wunderbar, *Biblical-Talmudische Medicin*, Riga and Leipzig, 1850-60; Lewysohn, *Die Zoologie des Talmuds*, Frankfurt-am-Main, 1858; Graetz, *Geschichte der Juden*, vols. iii. and iv.; *Ben-Chananja*, vol. i. 417, 460, 512; vol. ii. 66, 167, 210, 258; vol. iii. 539.—C. D. G.

EDWARDS, JOHN (1637-1716). He was of St. John's College, Cambridge, and became minister of Trinity Church in that city in 1664, and vicar of St. Peter's, Colchester, in 1676. He was a most voluminous writer. Of his biblical works, the following are the most valuable:—*Discourse concerning the authority, stile, and perfection of the books of the O. and N. T.* With a continued illustration of difficult texts, 3 vols. 8vo, Lond. 1693; *Enquiry into Four Remarkable Texts of the N. T.* Camb. 1692; *Further Enquiry into Remarkable Texts of the O. and N. T.* Lond. 1694; *Exercitations, Critical, Philosophical, Historical, Theological, on several Important Places of the O. and N. T.* Lond. 1702. In all Edwards' writings there are the marks of an acute and vigorous mind. 'He must be no ordinary scholar,' says Orme (*Bibl. Bib.*, p. 163), 'who does not find instruction in them.'—W. L. A.

EDWARDS, THOMAS, was born at Coventry in 1729, and died at Nuneaton, of which he was vicar, in Dec. 1785. He wrote *Prologomena in Libros V. T. poeticos*, Cantab. 1762, in which he defended Hare's views of Hebrew versification,

sometimes with ingenuity, but seldom satisfactorily (Orme). He is the author also of a *Translation of the Psalms*, Lond. 1755, and of a *Dissertation* designed to shew that the various readings in the texts of Scripture do not affect its divine authority. Cantab. 1798.—W. L. A.

EGHEL (עֶגְלָה), the proper Hebrew name for calf, of which the feminine is *Egh' lah*, usually rendered *heifer* in the A. V. (Gen. xv. 9; Deut. xxi. 3, 4, 6; Judg. xiv. 18; 1 Sam. xvi. 2; Jer. l. 11; Hos. x. 11), sometimes *young cow* (Is. vii. 21). The Eghel is called בֶּן בָּקָר (Lev. ix. 2; 'young calf,' A. V.) Maimonides says that 'wherever עֶגְלָה is used, it denotes a bull of a year old' (*De Sacrif.* c. 1, sec. xiv., quoted by Bochart, *Hieroz.* ii. 28); but as the feminine is used to denote an animal three years old (Gen. xv. 9), and one fit for putting to the plough (Judg. xiv. 18), it is probable that Eghel had also the same extent of application. In the cases, however, where it is actually used in the Bible, it is always the young calf that is intended. Various derivations of the word עֶגְלָה have been suggested. Bochart derives it from עוגל, 'rotundus quia præ cæteris pecudibus formæ est maxime teretis præcipue cum saginatur;' Simonis traces it to עגל, in the sense of *spring, leap, bound* (comp. Ps. xxix. 6), and of this Fürst approves (*H. W. B.*, in loc.); Gesenius prefers deriving it from a word retained in the Ethiopic, denoting *fœtus, embryo*, hence the young of animals; and others deduce it from עגל, in the sense of to break through, hence to be born, hence that which is born. For calf-worship, see MOSCHOLATRY.—W. L. A.

EGLAH (עֶגְלָהּ), one of David's wives, mother of Ithream. She was with David in Hebron (2 Sam. iii. 5; 1 Chron. iii. 3).

EGLAIM (עֶגְלַיִם; Sept. Ἀγαλείμ). A place named only in Is. xv. 8, where it is referred to as on the boundary of Moab. It is supposed by some (Hitzig, Knobel, etc.) to be the same as *En-Eglaim* (Ezek. xlvii. 10). Gesenius and Von Raumer follow the Onomasticon in identifying it with *Agallim*, a place eight Roman miles to the south of Areopolis, and probably that mentioned by Josephus under the name of Ἀγαλα (*Antiq.* xiv. 1. 4); but this lies too far within the boundaries of Moab to answer the conditions of the passage in Isaiah. En-Eglaim, at the southern extremity of the Dead Sea, would be on the border of Moab.—W. L. A.

EGLON (עֶגְלוֹן; Sept. Ἐγλώμ), a king of Moab, who, assisted by the Ammonites and Amalekites, subdued the Israelites beyond the Jordan, and the southern tribes on this side the river, and made Jericho the seat, or one of the seats, of his government. This subjection to a power always present must have been more galling to the Israelites than any they had previously suffered. It lasted eighteen years, when (B. C. 1428) they were delivered, through the instrumentality of Ehud, who slew the Moab-*ish* king (Judg. iii. 12-30).—J. K.

EGLON (עֶגְלוֹן; Sept. Ἐγλώμ), one of the fine

Canaanitish towns which formed the confederacy against the Gibeonites, under the king of Jerusalem (Josh. x. 3). It lay in the Shephelah or plain of Philistia, near Lachish (xv. 33, 39). After the victory at Gibeon, and the death of the five kings at Makkedah, Joshua captured in succession Lachish, *Eglon*, and other cities, along the southern border of Palestine (x. 34, sq.) In the Vatican text of the Septuagint the name Eglon is not found, Ὀδολλάμ being mostly substituted for it. The Alexandrine codex reads Ἐγλώμ in Josh. xii. 12, and xv. 39; and Ὀδολλάμ elsewhere. Eusebius and Jerome affirm that the two places were identical (*Onomast.* s. v. *Eglon*); but a comparison of Josh. xv. 35 and 39 proves that this is an error. The error probably originated in the careless manner in which the translators or copyists of the Septuagint wrote the proper names.

On the road from Eleutheropolis to Gaza, nine miles from the former and twelve from the latter, are the ruins of *Ajlan*, which mark the site of the ancient Eglon. The site is now completely desolate. The ruins are mere shapeless heaps of rubbish, strewn over a low, white mound. The absence of more imposing remains is easily accounted for. The private houses, like those of Damascus, were built of sun-dried bricks; and the temples and fortifications of the soft calcareous stone of the district, which soon crumbles away. A large mound of rubbish, strewn with stones and pieces of pottery, is all we can now expect to mark the sites of an ancient city in this plain. (Robinson, *B. R.* ii. 49; Thomson, *The Land and the Book*, 563.)—J. L. P.

EGOZ (עֶגֶז). This word occurs in the Song of

Solomon, vi. 11, 'I went into the garden of *nuts*,' where probably 'walnuts' are intended. The Hebrew name is evidently the same as the Persian

گوز *gouz*, which has been converted by the Arabs into جوز *jouz*, by a process common in the case of

many other words beginning with the interchangeable letters *gaf* and *jim*. In both languages these words, when they stand alone, signify the walnut, *gouz-bun* being the walnut-tree: when used in composition they may signify the nut of any other tree;—thus *jouz-i-bôa* is the nutmeg, *jouz-i-hindi* is the Indian or cocoa-nut, etc. So the Greeks employed κάρνον, and the Romans *nux*, to denote the walnut; which last remains in modern languages, as Ital. *noce*, Fr. *noix*, Span. *nuez*, and Ger. *nuss*. The walnut was, however, also called κάρνον βασιλικόν (Diosc. i. 179), royal nut, and also Περσικόν, or Persian, from having been so highly esteemed, and from having been introduced into Greece from Persia: the name *juglans* has been derived from Jovis, glans. That the walnut was highly esteemed in the East we learn from Abulpharagius, who states that Al Mahadi, the third caliph of the Abassides, 'sub juglande sub qua sedere solebat, sepultus est.' That it is found in Syria has been recorded by several travellers. Thevenot found it in the neighbourhood of Mount Sinai, and Belon says of a village not far from Lebanon, that it was 'bien ombragé d'ormeau et de noyers.' That it was planted at an early period

is well known, and might be easily proved from a variety of sources.

The walnut, or *Juglans regia* of botanists, belongs to the natural family of juglandææ, of which the species are found in North America and in Northern Asia. The walnut itself extends from Greece and Asia Minor over Lebanon and Persia, probably all along the Hindoo Khoosh to the Himalayas, and is abundant in Cashmere (*Him. Bot.* p. 342). The walnut-tree is well known as a lofty, wide-spreading tree, affording a grateful shade, and of which the leaves have an agreeable odour when

229. Walnut—*Juglans regia*.

bruised. It seems formerly to have been thought unwholesome to sit under its shade, but this appears to be incorrect. The flowers begin to open in April, and the fruit is ripe in September and October. The tree is much esteemed for the excellence of its wood; and the kernel of the nut is valued not only as an article of diet, but for the oil which it yields. Being thus known to, and highly valued by, the Greeks in early times, it is more than probable that, if not indigenous in Syria, it was introduced there at a still earlier period, and that therefore it may be alluded to in the above passage, more especially as Solomon has said, 'I made me gardens and orchards, and planted trees in them of all kind of fruits' (*Eccles. ii. 5*).—*J. F. R.*

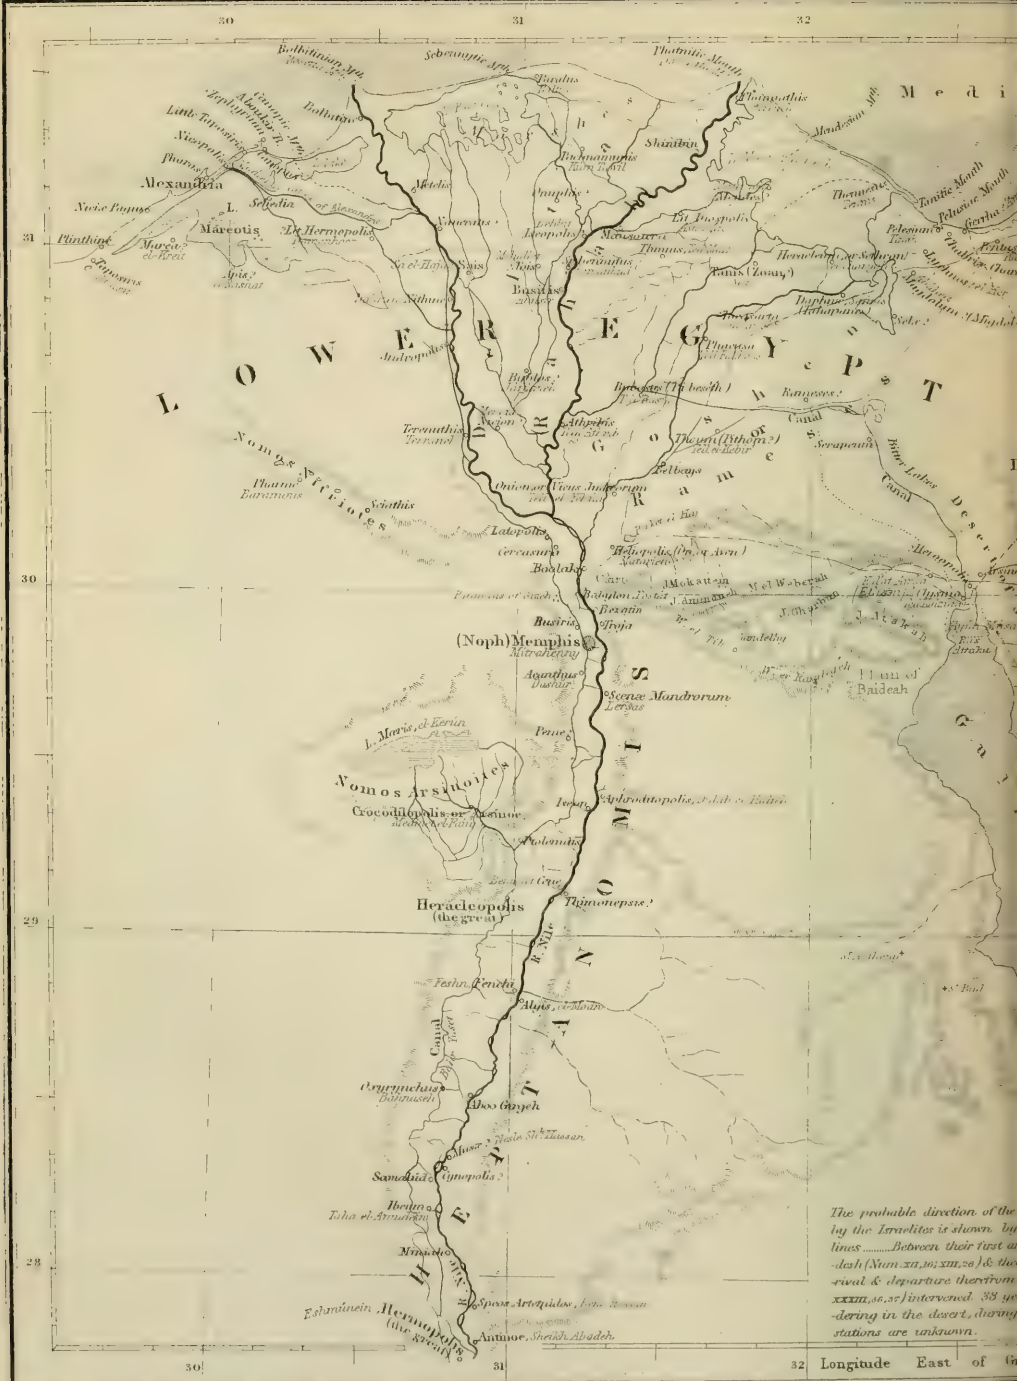

EGYPT.—The name by which Egypt is commonly known in the Bible appears in a dual form, **מִצְרַיִם**, perhaps with reference to the two great divisions of the country into Upper and Lower; or the part through which the Nile flows in one undivided stream, and that which is comprehended within the two branches it assumes a little below Cairo. The word **מִצְרַיִם**, occurring 2 Kings xix. 24, and Is. xxxvii. 25, which some render 'Egypt,' is better translated, as by the A. V., 'besieged places.' Nowhere is this word rendered by the A. V. 'Egypt;' perhaps, however, in Is. xix. 6, and Micah vii. 12, it may have that meaning. In Gen. x. 6, Mizraim is mentioned among the sons

of Ham; and in Ps. cv. 24, Egypt is called **אֶרֶץ חָמ**, 'the land of Ham.' In Ps. lxxviii. 51, mention is made of 'the tents of Ham;' and from this patriarch may be derived the hieroglyphic name of Egypt KEM, with which also are to be compared the Coptic forms **ΧΕΕΗ**, **ΧΗΕΙ** in the Memphitic dialect; **ΚΗΕΕ**, **ΚΗΕΗ** in the Theban; and **ΚΗΕΙ** in the Bashmuric. This name of Egypt, 'Chemi,' is possibly the origin of *alchemy*, *chemistry*. But it must also be observed, that in the ancient Egyptian language Kem or Khem signifies a dark red colour generally, and the chief character with which it is written is the tail of the crocodile, which varies from a slaty to a reddish brown. The Arabic term for the country, which is in use at the present day, is **مصر**,

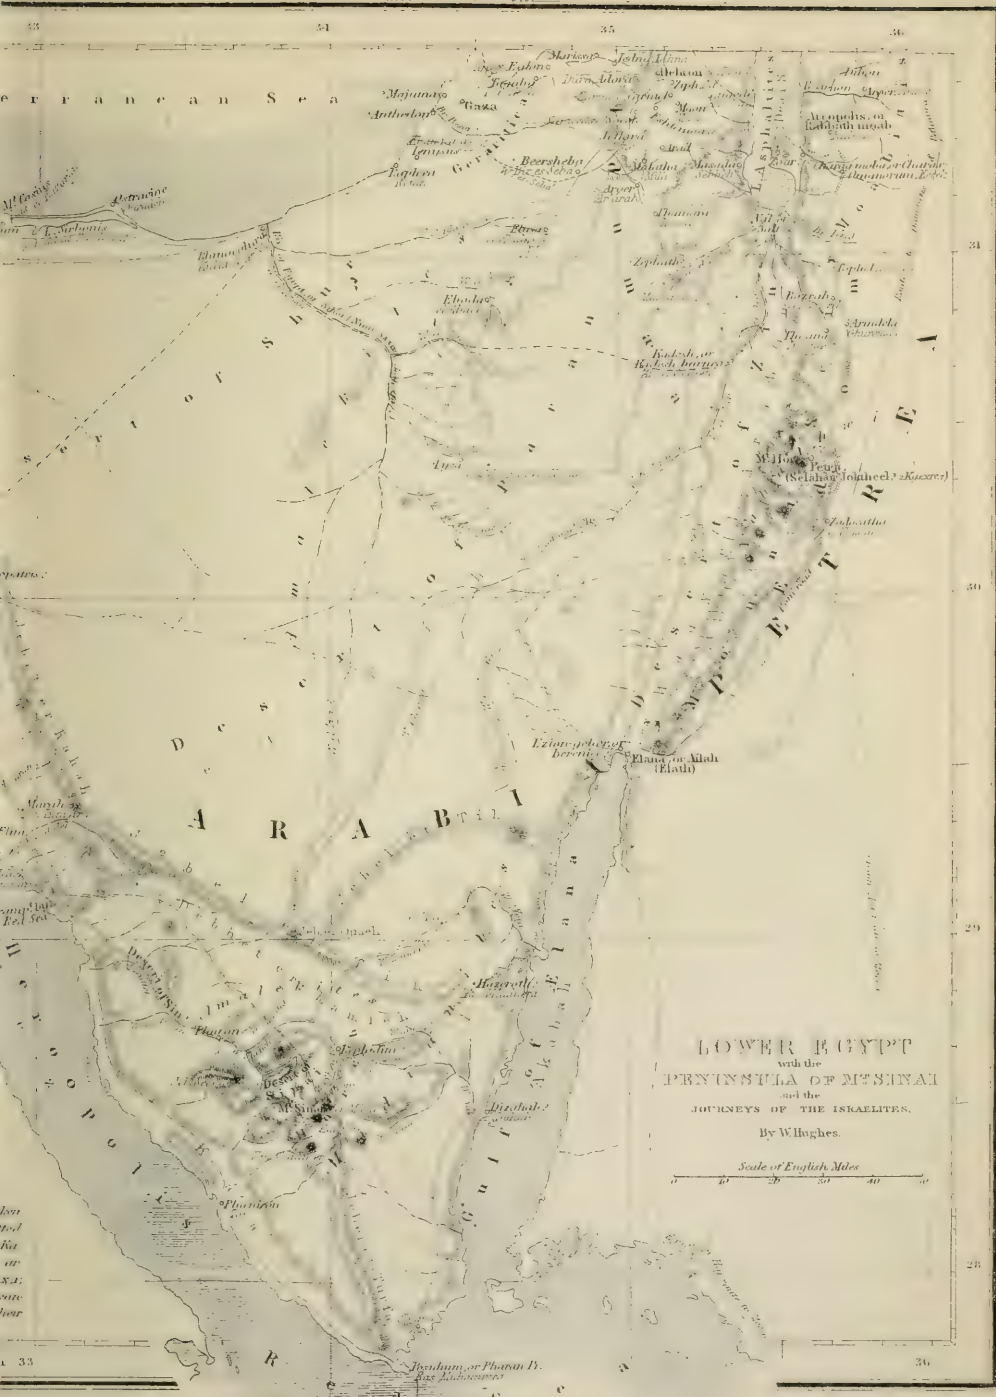

misr, which, according to some, means 'red mud.' Gesenius mentions a derivation of Mizraim from the Coptic **μετορο**, or 'kingdom,' which some have proposed with small probability. For *Αἴγυπτος*, he suggests the Sanskrit *águpta*, *munitus*, with as little. Better is that given by Mr. Poole—viz., *ata γυπτος*, the latter being a proper name perhaps equivalent to Coptos, the Coptic **ΚΕΠΤΟ**, and Arabic **قفت**, a town in

Upper Egypt. In hieroglyphics, Coptos is Keptor, etc. It is singular that among the sons of Mizraim are mentioned the Caphtorim, and in Jer. xlvii. 4, **אֶרֶץ כַּפְתּוֹר**, the habitation or country of Caphtor, which is very near *Αἴγυπτος*. Upper Egypt, it is supposed, was also known in Scripture by the name of Pathros (*Jer. xlv. 15*); in reality, Pathros and Caphtor were two districts, both probably of Upper Egypt. Rahab, **רַהַב**, also, is supposed to be a name of Egypt in the Bible; if so, it perhaps occurs as early as Job, xxvi. 12. According to M. Jacotin, Egypt contains 115,200 square geographical miles, of which not more than 9582 are ever watered or fertilized by the Nile, and of these only about 5626 are under cultivation.* The country lies between 31° 37' and 24° 1' N. lat., and 27° 13' and 34° 12' E. long. In the time of Ezekiel (*vide xxx. 6*), we find that the boundaries on the E. and S. were considered to be Migdol and Syene according to the marginal rendering, which is to be preferred. In the earliest times, the natural division of the country obtained—Upper Egypt, commenced above Memphis, comprising the narrow valley as far as the first cataract. Lower Egypt was the plain containing the Delta, the cultivated land on either side of it, and the few miles intervening between the point of the Delta and Memphis. The commencement of the Delta was not anciently so far north of Memphis as it is at present north of its site, owing to the deposits of the river in many centuries, and the decay of the Pelusiac Branch, now only a canal. Egypt, according to Ptolemy, was divided into 44 nomes; according to Pliny, into 46. There is no reference to these in the Bible;

* *Description de l'Égypte*, 2e edit., tom. xviii. 2., p. 101, seq.; calculated by Mr. Poole, *Enc. Brit.*, art. Egypt.

The probable direction of the Nile by the Irtvites is shown by the lines Between their first ascending (& the Nile) & their second (& the Nile) the interval is 33 years during in the desert, during stations are unknown.

but in Is. xix. 2, the LXX. render ממלכה by *vlavos*; at that time, however, there was probably more than one *kingdom*. At the time of the earlier Cæsars, the country was divided into the Delta, Heptanomis, and Thebais. Of these, the Heptanomis extended from the point of the Delta to the Thebaïca Phylace, and the Thebais from thence to the first cataract. About 400 A.D., Egypt was divided into four provinces, Augustamnica Prima and Secunda, and Ægyptus Prima and Secunda. The Heptanomis was called Arcadia, from the emperor Arcadius, and Upper Egypt was divided into Upper and Lower Thebais. The general appearance of Egypt is remarkably uniform. The Delta is a richly cultivated plain, varied only by the mounds of ancient cities and occasional groves of palms. Other trees are seldom met with. The valley in Upper Egypt is also richly cultivated. It is, however, very narrow, and shut in by low hills, rarely higher than 300 feet, which have the appearance of cliffs from the river, and are not often steep. They, in fact, form the border of the desert on either side, and the valley seems to have been, as it were, cut out of a table-land of rock. The valley is rarely more than twelve miles across. The bright green of the fields, the reddish brown or dull green colour of the great river, the tints of the bare yellow rocks, and the deep blue of the sky, always form a pleasant view, and often one of great beauty. The climate is very equable, and to those who can bear great heat, also healthy; indeed, in the opinion of some, the climate of Egypt is one of the finest in the world (Cf. allusions to Egypt in Gen. xiii. 10; Deut. xi. 10, 11; Zech. xiv. 18). There are, however, unwholesome tracts of salt marsh which are to be avoided. Rain seldom falls except on the coast of the Mediterranean. At Thebes a storm will occur, perhaps, not oftener than once in four years. The rock-formations of the valley of the Nile are limestone until a little above Thebes, where sandstone prevails. At the first cataract the peculiar red granite, anciently known by the name of syenite, from Syene, bursts through the sandstone in the bed of the Nile, forming numerous islands, and causing the rapids. From the time at which the great Pyramid was built to the Persian invasion, or a period, according to moderate chronology, of nearly 2000 years, Egypt was more densely populated and more extensively cultivated than at the present day. Under the Romans, even, it was one of their most productive provinces, and the granary of the world. For the two regions of Egypt there were two different crowns—that of Upper Egypt was white; that of Lower Egypt, red; together, they composed what was called the Pschent. The sovereign of Upper Egypt was called Suten, *king*; of Lower Egypt, Shebt or *bee*; as ruling over the whole country he was called Suten-shebt. Upper Egypt appears to have ranked below Lower Egypt, and in the Pschent the crown of the former is uppermost. The first sign in the hieroglyph which is read Suten, is a bent reed, which perhaps suggested the comparison of Pharaoh to a broken reed in Scripture.

The Nile.—Three terms are applied to the Nile in Scripture. It is called נַהַל מִצְרַיִם, or, ‘the river of Egypt’ (Gen. xv. 18, etc.). The word יַאֲר, or יַאֲרִי, is applied to it Ex. ii. 3, etc. This is

probably the Coptic $\alpha\epsilon\rho\sigma\omicron$. In Jer. ii. 18, the Nile is called שְׁהוֹר, which is derived from שָׁהַר, to be black, and means turbid or black. The words נַהַל מִצְרַיִם have been thought also to mean

the Nile, in which case נַהַל will be a proper name, and the phrase will be ‘the Nile of Egypt.’ It seems unlikely, however, that the Nile should be

so specified, and if נַהַל is not a proper name, the words will read, the ‘brook or torrent of Egypt,’ supposed to be a mountain stream, usually dry, on the borders of Egypt and Palestine, near the modern El-Areesh (Numb. xxxiv. 5; Josh. xiii. 3, etc.) Some have thought that נַהַל is the origin of the word Nile; others have been anxious to find it in the Sanskrit *Nila*, which means dark blue. The Indus is called Nil áb, or ‘the blue river;’ the Sutlej also is known as ‘the blue river.’ It is to be observed that the Low Nile was painted blue by the ancient Egyptians. The river is turbid and reddish throughout the year, and turns green about the time when the signs of rising commence, but not long after becomes red and very turbid. The Coptic word is $\iota\omicron\epsilon\epsilon$, ‘sea,’ which corresponds to the Arab name for it, *bahr*, properly, sea; thus Nahum iii. 3, ‘Populous No (Thebes), whose rampart was the sea.’ The hieroglyphic name is Hapi, *abyss*, or Hapi-mou, *abyss of waters*. At Khartoom, 160 miles north of Sennâr, the Nile becomes divided into two rivers, called Bahr el-Abiad, and Bahr el-Azrak, or the white and blue river, the former flowing from the west, the latter from the east. The blue river is the smaller of these, but it possesses the same fertilizing qualities as the Nile, and is of the same colour. The sources of this river were discovered by Bruce; those of the white river are still undiscovered. There is good reason to suppose that it flows from mountains south of the Equator. Most ancient writers mention seven mouths of the Nile; beginning from the east—1, Pelusiæ or Bubastite; 2, Saitic or Tanitic; 3, Mendesian; 4, Bucolic or Phatmetic (now of Damietta); 5, Sebennytic; 6, Bolbitine (now of Rosetta); 7, Canopic or Heracleotic, cf. ‘He shall smite it in the seven streams’ (Is. xi. 15), if the Nile be meant: two streams only are now navigable throughout their extent, and these Herodotus says were originally canals. Some speak of even more than seven.

Chronology.—It is quite impossible to give anything more than a very summary account of Egyptian chronology and history here, and yet it is equally difficult to pass it by without notice of any kind. It appears that from very early times the Egyptians were in the habit of dividing the year into three seasons, each containing four months. It has been supposed that they had a tropical year from this division, which evidently follows natural phenomena. The Egyptians had what is called the *vague* year, which consisted of 12 months of 30 days, or 360 days, to which they added after the twelfth month five epagomenæ or intercalary days. This year was in use as early as about 1500 B.C., and was not abandoned till it was made a Julian year by Augustus, B.C. 24. Another year used by the ancient Egyptians for astronomical and religious purposes, was called the Canicular or Sothic year. It began on the 20th July, or the day of the

heliacal rising of Sothis or Sirius, *i.e.*, when Sothis rose about one hour before the sun, and consisted of 365½ days. Various cycles of time were in use among the Egyptians. It is supposed that they had a tropical cycle of 1500 years, or thereabouts, but as to its commencement great difference of opinion obtains. The Sothic cycle was a period of 1460 Sothic or Julian, and 1461 Vague years, and its commencement was marked by an heliacal rising of Sothis on the first day of the Vague year. A cycle of this kind was known to have commenced July 20, 1322 B.C., when it is probable the period was instituted.

History.—All that we knew of Egyptian history prior to the Persian invasion was (until the hieroglyphics were deciphered) contained in the fragments of Manetho, which have survived the ravages of time. Manetho was an Egyptian priest of the age of Ptolemy I agus, who wrote a work on the history of Egypt, and is said to have pointed out and corrected many errors in the narrative of Herodotus. Fragments of this work have been preserved by Julius Africanus and Eusebius, but little more is contained in them than the names of various kings who are arranged in thirty or thirty-one dynasties, extending from the first mortal sovereign of Egypt till the subjugation of the country by Darius Ochus or the conquest by Alexander.* It may readily be imagined that so many dynasties of kings must have required a very prolonged series of years in which to flourish, and it was this fact that so long caused the fragments of Manetho to be received with discredit by scholars. Late years, however, have put us in possession of so many results obtained from the monuments that we are able to form a better judgment of the trustworthiness of Manetho. And in proportion as we have become acquainted with these results, has our respect for the native historian increased. It is certain that very many of the names preserved by him have been found on the monuments of

Egypt, and far more corroboration has thus been afforded than could have been anticipated. Still there remained the chronological difficulty of the thirty dynasties to be explained: owing, however, to the ingenuity of Mr. Lane and his nephew, Mr. Stuart Poole, much has been done to remove it. A suggestion, first made some thirty years ago by Mr. Lane and adopted and worked out by his nephew, has shewn us that many of these dynasties were not successive but contemporaneous. In numerous instances the kings of Manetho did not succeed one another, but ruled together over different parts of Egypt. Thus, while one dynasty was ruling at Memphis, another would be flourishing at Thebes. This contemporaneousness applies mainly to the first seventeen dynasties. Under the eighteenth dynasty, Egypt was an undivided kingdom, and nearly all of the subsequent dynasties were consecutive. It may be well to mention here another theory of arrangement which has been adopted by Bunsen and his followers, who formed their system of chronology upon a date preserved by Syncellus, and attributed by him to Manetho, but, in all probability, the invention of some person bearing his name, and called the Pseudo-Manetho. This date ascribes a duration of 3555 years to the thirty dynasties, and Bunsen lends himself entirely to the scheme of chronology which he bases on this number, and which necessarily claims for the Egyptian monarchy a very high antiquity. The date of Menes, the first king therefore, according to Bunsen, is earlier by several centuries than that which we are disposed to prefer as more consistent with the Bible narrative, and less opposed to abstract probability. Dr. Lepsius, indeed, demands a considerably higher epoch than ever Bunsen himself. This extravagant chronology, however, seems to be contradicted by positive monumental evidence. The scheme of dynasties, according to the arrangement of Mr. Poole, is as follows:—

I. Thinites 2717	Menes.	III. Memphites.					
II. 2470		IV. 2440	V. Elephantinites. 2440				
	VII. 1800	VI. 2200	IX. Hermonthites. 2200		XI. Diospolites. 2200		Shepherds.
	VIII. 1800				XII. 2080	XIV. Xoites. 2080	XV. and XVI. 2080
			X. 1750		XIII. 1920		XVII. 1680
					XVIII. 1525		

Menes, the first mortal king of Egypt, according to Manetho, Herodotus, Eratosthenes, and Diodorus, and preceded, according to the first, by gods, heroes, and Manes (?), *vékes*, is accepted on all hands as an historical personage. His hieroglyphic name reads Menee, and is the first on the list of the Rameseum of El-Kurneh. It is also met with in the hieratic of the Turin Papyrus of Kings. Strong reasons are given by Mr. Stuart Poole for fixing the date of his accession at B.C. 2717 (*Horæ Egyptiacæ*, 94-98). As one step in his argument involves a very ingenious elucidation of a well known statement of Herodotus, we cannot forbear to mention it. Herodotus says, that, in the interval from the first king to Sethon, the priest of Hephæstus, the priests told him that ‘the sun had four times moved from his wonted course, twice rising where he now sets, and twice setting where he

now rises.’ Upon this Mr. Poole remarks: ‘It is evident that the priests told Herodotus that great periods had elapsed since the time of Menes, the first king, and that, in the interval from his reign to that of Sethon, the solar risings of stars—that is to say, their manifestations had twice fallen on those days of the vague year on which their settings fell in their time, and *vice versâ*; and that the historian, by a natural mistake, supposed they spoke of the sun itself.’ Menes appears to have been a Thinite king, of the city of This, near Abydus, in Upper Egypt. Herodotus ascribes the building of the city of Memphis to him, while Manetho says that he made a foreign expedition and acquired renown, and that eventually he was killed by a hippopotamus. Menes, after a long reign, was succeeded by his son Athothis, who was the second king of the first dynasty. Manetho says that he built the palace at Memphis, that he was a physician, and left anatomical books; all of these statements

* Josephus preserves two historical fragments.

implying that even at this early period the Egyptians were in a high state of civilization. About the time of Athothis, the 3d dynasty is supposed, according to the scheme we think most reasonable, to have commenced, and Memphis to have become independent, giving its name to five dynasties of kings, 3d, 4th, 6th, 7th, and 8th. The first Thinite dynasty probably lasted about two centuries and a half. Of the 2d very little has reached us; under one of the kings it was determined that women could hold the sovereign power; in the time of another it was fabled, says Manetho, that the Nile flowed mixed with honey for the space of eleven days. The duration of this dynasty was probably between 300 and 400 years, and it seems to have come to a close at the time of the shepherd invasion. The 3d (Memphite) dynasty, after having lasted about 200 years, was succeeded by the 4th, one of the most famous of the lines which ruled in Egypt; while the 5th dynasty of Elephantine kings arose at the same time. This was emphatically the period of the pyramids, the earliest of which was probably the northern pyramid of Aboo-Seer, supposed to have been the tomb of Soris or Shura, the head of the 4th dynasty. He was succeeded by two kings of the name of Suphis, the first of whom, the Cheops of Herodotus, the Khufu of the monuments, was probably the builder of the great pyramid. On these wondrous monuments we find traces at that remote period of the advanced state of civilization of later ages. The cursive character scrawled on the stones by the masons proves that writing had been long in common use. Many of the blocks brought from Syene are built together in the pyramids of Geezeh in a manner unrivalled at any period. The same manners and customs are portrayed on them as on the later monuments. The same boats are used, the same costume of the priests, the same trades, such as glass-blowing and cabinet-making. At the beginning of the 4th dynasty, moreover, the peninsula of Sinai was in the possession of the Egyptians, and its copper mines were worked by them. The duration of this dynasty probably exceeded two centuries, and it was followed by the 6th. The 5th dynasty of Elephantines, as aforesaid, began the same time as the 4th. The names of several of its kings occur in the necropolis of Memphis. The most important of them is Sefres, the Shafra or Khafra of the monuments, the Chephren of Herodotus and Khephren of Diodorus. This dynasty lasted nearly 600 years. Its last sovereign, Unas, is shewn by an inscription to have been contemporary with Assa, the fifth king of the 15th dynasty of shepherds ruling at Memphis. Of the 6th dynasty, which lasted about 150 years, the two most famous sovereigns are Phiops or Papa and Queen Nitocris. The former is said to have ruled for a hundred years. With the latter the dynasty closed; for at this period Lower Egypt was invaded by the Shepherds, who entered the country from the north-east, about 700 years after Menes, and eventually drove the Memphites from the throne. Of the 7th and 8th dynasties nothing is known with certainty; they probably followed the 15th. To the former of them, one version of Manetho assigns a duration of seventy days, and 150 years to the latter. The 9th dynasty of Heracleopolites, or more properly of Hermonthites, as Sir G. Wilkinson has suggested (Rawlinson's *Herod.* ii. 348), arose while the 6th

was in power. Little is known of either the 9th or 10th dynasties, which together may have lasted nearly 600 years, ending at the time of the great Shepherd war of expulsion, which resulted in the overthrow of all the royal lines except the Diospolite or Theban. With the 11th dynasty commenced the Diospolite kingdom, which subsequently attained to greater power than any other. Amenemha I. was the last and most famous king of this dynasty, and during part of his reign he was co-regent of Osirtasen or Sesertesen I., head of the 12th. An epoch is marked in Egyptian history by the commencement of this dynasty since the Shepherd rule, which lasted for 500 years, is coeval with it. The three Sesertesens flourished in this dynasty, the last of whom is probably the Sesostris of Manetho. It began about Abraham's time, or somewhat earlier. In ancient sculptures in Nubia we find kings of the 18th dynasty worshipping Sesertesen III. as a god, and this is the only case of the kind. There is reason for dating his reign about B.C. 1986. The third Sesertesen was succeeded by Amenemha III., supposed to be the Mæris of Herodotus, who built the labyrinth. After the reigns of two other sovereigns, this dynasty came to a close, having lasted about 160 years. It was followed by the 13th, which lasted some 400 years from B.C. 1920. The kings of this dynasty were of little power, and probably tributary to the Shepherds. The Diospolites, indeed, did not recover their prosperity till the beginning of the 18th dynasty. The 14th, or Xoite dynasty, seems to have risen with, or during the 12th. It was named from Xoïs, a town of Lower Egypt, in the northern part of the Delta. It may have lasted for nearly 500 years, and probably terminated during the great Shepherd war. The 15th, 16th, and 17th dynasties, are those of the Shepherds. Who these foreigners were who are said to have subdued Egypt without a battle, is a question of great uncertainty. Their name is called *Hycsôs* by Manetho, which is variously interpreted to mean shepherd kings,* or foreign shepherds. They have been pronounced to have been Assyrians, Scythians, Æthiopians, Phœnicians, and Arabs. The kings of the 15th dynasty were the greatest of the foreign rulers. Salatis was the first king of it, and Assa the last but one has already been mentioned as contemporary with Unas of the 5th dynasty. The kings of the 16th and 17th dynasties are very obscure. Mr. Poole says there are strong reasons for supposing that the kings of the 16th were of a different race from those of the 15th, and that they may have been Assyrians. Having held possession of Egypt 511, or according to the longest date, 625 years, the Shepherds were driven out by Ames, or Amosis, the first king of the 18th dynasty; and the whole country was then united under one king, who rightly claimed the title of lord of the two regions, or of Upper and Lower Egypt. With the 18th dynasty, about B.C. 1525, a new period of Egyptian history commences,

* There is great doubt as to the time of the shepherd invasion. If they were in Egypt 500 years, they must probably have come at the beginning of, or before the 12th dynasty. If they are put after that dynasty, their period must be shortened.

both as regards the numerous materials for reconstructing it, and also its great importance. No great monuments remain of Ames the first king, but from various inscriptions we are warranted in supposing that he was a powerful king. During his reign we first find mention of the horse, and as it is often called by the Semitic name *sîs*, it seems probable that it was introduced from Asia, and possibly by the Shepherd kings. If so, they may have been indebted to the strength of their cavalry for their easy conquest of Egypt. It is certain, that while other animals are frequently depicted on the monuments, neither in the tombs near the pyramids, nor at Benee-Hasan, is there any appearance of the horse, and yet, subsequently, Egypt became the great dépôt for these animals; inasmuch that, in the time of Solomon, they were regularly imported for him, and for 'all the kings of the Hittites, and for the kings of Syria;' and when Israel was invaded by Sennacherib, it was on Egypt that they were said to put their trust for chariots and for horsemen. Amenoph I., the next king, was sufficiently powerful to make conquests in Ethiopia and in Asia. In his time we find that the Egyptians had adopted the five intercalary days, as well as the twelve hours of day and night. True arches, not 'arches of approaching stones,' also are found at Thebes, bearing his name on the bricks, and were in common use in his time. Some of the more ancient chambers in the temple of Amen-ra, or El-Karnak, at Thebes, were built by him. In the reign of his successor, Thothmes I., the arms of Egypt were carried into Mesopotamia, or the land of 'Naharayn;' by some, Naharayn is identified with the Nairi, a people south-west of Armenia. Libya also was subject to his sway, while a monument of his reign is still remaining in one of the two obelisks of red granite which he set up at El Karnak, or Thebes. The name of Thothmes II. is found as far south as Napata, or Gebel Berkel, in Ethiopia. With him and Thothmes III. was associated a queen, Amen-numt, who seems to have received more honour than either. She is thought to have been a Semiramis, that name, like Sesostris, probably designating more than one individual. Thothmes III. was one of the most remarkable of the Pharaohs. He carried his arms as far as Nineveh, and received a large tribute from Asiatic nations over whom he had triumphed. This was a common mode of acknowledging the supremacy of a conqueror, and by no means implied that the territory was surrendered to him; on the contrary, he may only have defeated the *army* of the nation, and that beyond its own frontier. The *Punt*, a people of Arabia, the *Kufa*, supposed to be of Cyprus, and the *Ruten*, a people of the Euphrates or Tigris, thus confessed the power of Thothmes; and the monuments at Thebes are rich in delineations of the elephants and bears, camelopards and asses, the ebony, ivory, gold, and silver, which they brought for tribute. Very beautiful specimens of ancient Egyptian painting belong to the time of this king; indeed, his reign, with that of Thothmes II. preceding it, and those of Amenoph II., Thothmes IV. (whose name is borne by the sphinx at the Pyramids), and Amenoph III. following it, may be considered as comprising the best period of Egyptian art; all the earlier time shewing a gradual improvement, and all the later a gradual declension. In the reign of Thothmes IV., accord-

ing to Manetho, the Shepherds took their final departure. The conquests of Amenoph III. were also very extensive; traces of his power are found in various parts of Ethiopia. From his features, he seems to have been partly of Ethiopian origin. His long reign of nearly forty years was marked by the construction of magnificent temples. Of these, the greatest were two at Thebes; one on the west bank, of which little remains but the two great colossi that stood on each side of the approach to it, and one of which is known as the vocal Memnon. He likewise built, on the opposite bank, the great temple, now called that of El-Uksor, which Rameses II. afterwards much enlarged. The tomb of this king yet remains at Thebes. For a period of about thirty years after the reign of Amenoph III., Egypt was disturbed by the rule of stranger kings, who abandoned the national religion, and introduced a pure sun-worship. It is not known from whence they came, but they were regarded by the Egyptians as usurpers, and the monuments of them are defaced or ruined by those who overthrew them. Sir G. Wilkinson supposes that Amenoph III. may have belonged to their race; but if so, we must date the commencement of their rule from the end of his reign, as then began that change of the state religion which was the great peculiarity of the foreign domination. How or when the sun-worshippers were destroyed or expelled from Egypt, does not appear. Horus, or Har-em-heb, who succeeded them, was probably the prince by whom they were overthrown. He was a son of Amenoph III., and continued the line of Diospolite sovereigns. The records of his reign are not important; but the sculptures at Silsilis commemorate a successful expedition against the negroes. Horus was succeeded by Rameses I., with whom commences the 19th dynasty, about B.C. 1324. His tomb at Thebes marks the new dynasty, by being in a different locality from that of Amenoph III., and being the first in the valley thenceforward set apart as the cemetery of the Theban kings. After a short and unimportant reign, he was succeeded by his son Sethe I. He is known by the magnificent hypostyle hall in the great temple of El-Karnak, which he built, and on the outside of the north wall of which are sculptured the achievements of his arms. His tomb, cruelly defaced by travellers, is the most beautiful in the Valley of the Kings, and shews that his reign must have been a long one, as the sepulchre of an Egyptian king was commenced about the time of his accession, and thus indicated the length of his reign. He conquered the Kheta, or Hittites, and took their stronghold Ketesh, now held to be Emesa, on or near the Orontes. His son Rameses II., who was probably for some time associated with him in the throne, became the most illustrious of the ancient kings of Egypt. It is he who is generally intended by the Sesostris of classic writers. He built the temple which is erroneously called the Memnonium, but properly the Rameuseum of El-Kurneh, on the western bank of the Nile, one of the most beautiful of Egyptian monuments, and a great part of that of El-Uksor, on the opposite bank, as well as additions to that of El-Karnak. Throughout Egypt and Nubia, are similar memorials of the power of Rameses II., one of the most remarkable of which is the great rock-temple of Abou Simbel, not far north of the second cataract. The temple of Ptah, at Memphis, was also adorned

by this Pharaoh, and its site is chiefly marked by a very beautiful colossal statue of him, fallen on its face, and partly mutilated, belonging to this country, but left there to be burnt for lime by the Turks. Numerous monuments celebrate his wars with the Kheta, whom he reduced to tribute, and with many other nations. He was succeeded by Menepthah. The head of the 20th dynasty, perhaps, was Sethee II., who was probably the son of Menepthah. The monuments tell us little of him or of his successor Merer-ra, who was followed by his son Rameses III., who may have been head of the 20th dynasty. With that sovereign the glories of the Theban line revived, and a series of great victories by land and sea raised Egypt to the place which it had held under Rameses II. He built the temple of Medeenet-Haboo, on the western bank at Thebes, the walls of which are covered with scenes representing his exploits. Among his vanquished enemies were a nation whom Mr. Poole connects with the Cherethim of Scripture, and identifies with the Cretans; and the Pelesatu, or the Philistines. Several kings, bearing the name of Rameses, succeeded this monarch, but their tombs alone remain. At the close of the reign of the last Rameses the supreme power fell into the hands of a ruler of the 21st dynasty, and of military Pontiffs, of whom, however, but few records remain. It was during the reign of a king of this age that 'Hadad, being yet a little child, fled from the slaughter of the Edomites by David, and took refuge, together with 'certain Edomites of his father's servants,' at the court of Pharaoh, who 'gave him to wife the sister of his own wife, the sister of Tahpenes the Queen,' 1 Kings xi. 17-19. The 22d dynasty was of Bubastite kings; the name of one of them has been found among the sculptured remains of the temples of Bubastis, they were probably not of unmixed Egyptian origin, and may have been partly of Assyrian or Babylonian race. The first king was Sheshonk I., the contemporary of Solomon, and in his reign it was that 'Jeroboam arose and fled into Egypt unto Shishak King of Egypt, and was in Egypt until the death of Solomon,' 1 Kings xi. 40. In the 5th year of Rehoboam, Sheshonk invaded Judæa with an army of which it is said 'the people were without number that came with him out of Egypt, the Lubims, the Sukkiims, and the Ethiopians'—and that having taken the 'fenced cities' of Judah, he 'came up against Jerusalem, and took away the treasures of the house of the Lord, and the treasures of the king's house,' and 'the shields of gold which Solomon had made.' The record of this campaign, says Sir G. Wilkinson, 'which still remains on the outside of the great temple of Karnak, bears an additional interest from the name of *Yuda-Melchi* (kingdom of Judah), first discovered by Champollion in the long list of captured districts and towns put up by Sheshonk to commemorate his success.' The next king, Osorkon I., is supposed by some to have been the Zerah whom Asa defeated (2 Chron. xiv. 9); but, according to others, Zerah was a king of Asiatic Ethiopia; of the other kings of this dynasty we know scarcely more than the names. It was followed by the 23d dynasty of Tanite kings, so called from Tanis, the Zoan of Scripture. They appear to have been of the same race as their predecessors. Bocchoris the Wise, a Saite, celebrated as a lawgiver, was the only king of the 24th dynasty. He is said to have been burnt alive

by Sabaco the Ethiopian, the first king of the 25th or Ethiopian dynasty. It is not certain which of the Sabacos—Shebek, or his successor Shebetok—corresponded to the So or Seva of the Bible, who made a treaty with Hoshea, which, as it involved a refusal of his tribute to Shalmaneser, caused the taking of Samaria, and the captivity of the ten tribes. The last king of this dynasty was Tirhakah, or Tehrak, who advanced against Senacherib to support Hezekiah, King of Judah. It does not appear whether he met the Assyrian army, but it seems certain that its miraculous destruction occurred before any engagement had been fought between the rival forces. Perhaps Tirhakah availed himself of this opportunity to restore the supremacy of Egypt west of the Euphrates. With him the 25th dynasty closed. It was succeeded by the 26th, of Saite kings. The first sovereign of importance was Psammetichus, or Psametik I., who, according to Herodotus, had previously been one of a dodecarchy which had ruled Egypt. Rawlinson finds in Assyrian history traces of a dodecarchy before Psammetichus. This portion of the history is obscure. Psammetichus carried on a war in Palestine, and is said to have taken Ashdod or Azotus, *i.e.*, according to Wilkinson, Shedeed 'the strong,' after a siege of 29 years. It was probably held by an Assyrian garrison, for a Tartan, or general of the Assyrian king, had captured it apparently when garrisoned by Egyptians and Ethiopians in the preceding century, *Is. xx.* Psammetichus was succeeded by his son Neku, the Pharaoh-Necho of Scripture; in the year B.C. 610. In his first year he advanced to Palestine, marching along the sea-coast on his way to Carchemish on the Euphrates, and was met by Josiah, king of Judah, whom he slew at Megiddo. Neku was probably successful in his enterprise, and on his return deposed Jehoahaz, the son of Josiah, and set up Jehoiakim in his stead. He apparently wished by this expedition to strike a blow at the failing power of the Assyrians, whose capital was shortly after taken by the combined forces of the Babylonians and Medes. The army, however, which was stationed on the Euphrates by Neku met with a signal disaster three years afterwards, being routed by Nebuchadnezzar at Carchemish (*Jer. xlv. 2*). The king of Babylon seems to have followed up his success, as we are told, *2 Kings xxiv. 7*, that 'the king of Egypt came not again any more out of his land, for the king of Babylon had taken from the river of Egypt unto the river Euphrates all that pertained to the king of Egypt.' Neku either commenced a canal to connect the Nile and the Red Sea, or else attempted to clear one previously cut by Rameses II.; in either case the work was not completed. The next sovereign of note was Uahphrah, called Pharaoh-Hopra in the Bible, and, by Herodotus, Apries. He took Gaza and Sidon, and defeated the king of Tyre in a sea-fight. He also worsted the Cyprians. Having thus restored the power of Egypt, he succoured Zedekiah, king of Judah, and when Jerusalem was besieged, obliged the Chaldeans to retire (*Jer. xxxvii. 5, 7, 11*). He was so elated by these successes, that he thought 'not even a God could overthrow him.' In *Ezek. xxxix. 3*, he is called 'the great dragon (*i.e.*, crocodile?) that lieth in the midst of his rivers, which hath said my river is mine own, and I have made it for myself.' At last, however, Amasis, who had been crowned in a military revolt, took him prisoner and strangled

him, so that the words of Jeremiah were fulfilled, 'I will give Pharaoh-Hophra, king of Egypt, into the hand of his enemies, and into the hand of them that seek his life,' Jer. xlv. 30. There seems little doubt that at the time of this rebellion, and probably in conjunction with the advance of Amasis, Egypt was invaded and desolated by Nebuchadnezzar. The remarkable prophecies, however, in Ezekiel xxix.—xxxi. may refer for the most part to the invasion of Cambyses, and also to the revolt of Inarus under Artaxerxes. Amasis or Aah-mes reigned nearly 50 years; he was succeeded by his son Psammenitus, held to be the Psametik III. of the monuments B.C. 525. Shortly after his accession this king was attacked by Cambyses, who took Pelusium, or 'Sin, the strength of Egypt,' and Memphis, and subsequently put Psammenitus to death. With Cambyses began the 27th dynasty of Persians, and Egypt became a Persian province, governed by a satrap. The conduct of Darius Hystaspis to the Egyptians was favourable, and he caused the temples to be adorned with additional sculptures. The large temple in the Great Oasis

230.

was principally built by him, and in it is found his name, with the same honorary titles as the ancient kings. [In hieroglyphics the king's name is always written in an oval or cartouch, thus:—This reads Shura or Soris.] Before the death of Darius, however, the Egyptians rebelled, but were again subdued by Xerxes, who made his brother Achæmenes governor of the country. Under Artaxerxes Longimanus they again revolted, as above referred to, and in the 10th year of Darius Nothus contrived to throw off the Persian yoke, when Amyrtæus the Saite became the sole king of the 28th dynasty. After having ruled 6 years, he was succeeded by the first king of the 29th or Mendesian dynasty. Of the four kings comprising it little is known, and the dates are uncertain. It was followed by the last, or 30th dynasty of Sebennety kings. The first of these was Nectanebo, or Nekht-har-heb, who successfully defended his country against the Persians, had leisure to adorn the temples, and was probably the last Pharaoh who erected an obelisk. His son, Teos or Tachos, was the victim of a revolt, from which he took refuge in the Persian court, where he died, while his nephew Nectanebo II., or Nekht-nebf, shared the throne as the last native king of Egypt. For some time he successfully opposed the Persians, but eventually succumbed to Artaxerxes Ochus, about B.C. 350, when Egypt once more became a Persian province. 'From that time till our own day,' says Mr. Poole, 'a period of 22 centuries, no native ruler has sat on the throne of Egypt, in striking fulfilment of the prophecy 'There shall be no more a prince of the land of Egypt,' Ezek. xxx. 13.'

Country, etc.—We shall not attempt to pursue the history of Egypt further, since under the Ptolemies and thenceforth it becomes of classical rather than of Biblical interest, but some description of the country and its monuments may now be acceptable. The northern coast of Egypt is low and barren, presenting no features of interest, and affording no indication of the character of the country which it bounds. It is a barrier generally of sand-hills, but sometimes of rock, for the most part destitute of

vegetation, except a few wild and stunted date palms. Immediately behind are desolate marshy tracts of extensive salt-lakes, and then the fertile country, consisting of a wide plain intersected by the two branches of the Nile and by many canals, of which some were anciently branches of the river, and having a soil of great richness, though in this particular it is excelled by the valley above. The deserts which enclose the plain on either side are rocky tracts of very slight elevation, having their surface overspread with sand, pebbles, and débris. Of the towns on the northern coast the most western is Alexandria or El-Iskendereyeh, founded B.C. 332, by Alexander the Great, who gave it the form of a Macedonian chlamys or mantle. Proceeding eastward, the first place of importance is Er-Rasheed or Rosetta, on the west bank of the branch of the Nile named after this town. In ascending the Rosetta branch the first spot of interest is the site of the ancient Saïs, on the eastern bank, marked by lofty mounds and the remains of massive walls of crude brick. It was one of the oldest cities of Egypt, and gave its name to the kings of the 26th dynasty. The goddess Neith, supposed to be the origin of Athene, was the local divinity, and in her honour an annual festival was held at Saïs, to which pilgrims resorted from all parts of Egypt. On the eastern side of the other branch of the Nile, to which it gives its name, stands the town Dimyât or Damietta, a strong place in the time of the Crusades, and then regarded as the key of Egypt. It has now about 28,000 inhabitants. To the eastward of Damietta is the site of Pelusium, the Sin of Scripture, and the ancient key of Egypt, towards Palestine. No important remains have been found here. Between this site and the Damietta branch are the mounds of Tanis or Zoan, the famous Avaris of the Shepherds, with considerable remains of the great temple, of which the most remarkable are several fallen obelisks, some of them broken. This temple was as ancient as the time of the 12th dynasty, and was beautified by Rameses II. Tanis was on the eastern bank of the Tanitic branch of the Nile, now called the canal of El-Moïzz. A little south of the modern point of the Delta, on the eastern bank of the river, is the site of the ancient Heliopolis, or On, marked by a solitary obelisk, and the ruins of a massive brick wall. The obelisk bears the name of Sese-stesen I., the head of the 12th dynasty. At a short distance south of Heliopolis stands the modern capital, Cairo or El-Kâhîreh. The ancient city of Memphis, founded by Menes, stood on the western bank of the Nile, about ten miles above Cairo. The kings and people who dwell there chose the nearest part of the desert as their burial-place, and built tombs on its rocky edge or excavated them in its sides. The kings raised pyramids, round which their subjects were buried in smaller sepulchres. The site of Memphis is marked by mounds in the cultivated tract. A few blocks of stone and a fine colossus of Rameses II. are all that remains of the great temple of Ptah, the local deity. There is not space here for a detailed account of the pyramids, suffice it to say that the present perpendicular height of the great pyramid is 450 ft. 9 in., and its present base 746 ft. It is about 30 ft. lower than it was originally, much of the exterior having been worn off by age and man's violence. Like all the other pyramids it faces the cardinal points. The surface

presents a series of great steps, though when first built it was cased, and smooth, and polished. The platform on the summit is about 32 ft. square. The pyramid is almost entirely solid, containing only a few chambers, so small as not to be worthy of consideration in calculating its contents. It was built by Khufa (Cheops), or Shufu (Suphis). The second pyramid stands at a short distance south-west of the great pyramid, and is not of much smaller dimensions. It is chiefly remarkable for a great part of its casing having been preserved. It was built by Khafra or Shafra (Chephren), a king of the same period. The third pyramid is much smaller than either of the other two, though it is constructed in a more costly manner. It was built by Mycerinus or Mencheres, the fourth ruler of the 4th dynasty. Near the three pyramids are six smaller ones, three of them are near the east side of the great pyramid, and three on the south side of the third pyramid. They are supposed to be the tombs of near relatives of the kings who founded the great pyramid. To the east of the second pyramid is the great sphinx, 188 feet in length, hewn out of a natural eminence in the solid rock, some defects of which are supplied by a partial stone casing, the legs being likewise added. In the tract between the pyramids of Sakkarah and Aboo-Seer are the remains of the Serapeum, and the burial-place of the bulls Apis, both discovered by M. Mariette. They are inclosed by a great wall, having been connected, for the Serapeum was the temple of Apis. The tomb is a great subterranean gallery, whence smaller passages branch off, and contains many sarcophagi in which the bulls were entombed. Serapis was a form of Osiris, his name being Osir-hapi or Osiris Apis. In ascending the river we arrive at the ancient Ahnas, supposed by some to be the Hanes of Isaiah, and about sixty miles above Cairo, at Benee-Suweyf, the port of the province of the Feiyoum. In this province are supposed to be the remains of the famous Labyrinth of Mœris, probably Amen-em-ha III., and not far off, also, may be traced the site of the Lake Mœris, near the ancient Arsinoe or Croiodilopolis, now represented by Medeenet-el-Feiyoum. The next objects of peculiar interest are the grottoes of Benee-Hasan, which are monuments of the 12th dynasty, dating about 2000 B.C. Here are found two columns of an order which is believed to be the prototype of the Doric. On the walls of the tombs are depicted scenes of hunting, fishing, agriculture, etc. There is also an interesting representation of the arrival of certain foreigners, supposed to be Joseph's brethren; at least illustrative of their arrival. In the town of Asyoot, higher up the river, is seen the representative of the ancient Lycopolis. It was an important place 3500 years ago, and has thus outlived Thebes and Memphis, Tanis and Pelusium. Further on, a few miles south-west of Girga, on the border of the Libyan desert, is the site of the sacred city of Abydus, a reputed burial-place of Osiris, near which, also, must have been situated the very ancient city of This, which gave its name to the 1st and 2d dynasties. About forty miles from Abydus, though nearly in the same latitude, is the village of Denderah, famous for the remains of the temple of Athor, the Egyptian Venus, who presided over the town of Tentyra, the capital of the Tentyrite nome. This temple dates from the

time of the earlier Cæsars, and the names of the last Cleopatra and Cæsarion her son, are found in it. About twenty miles higher than Denderah, and on the western bank of the Nile, are the ruins of Thebes, the No-Amon of the Bible. In the hieroglyphic inscriptions the name of this place is written Ap-t, or with the article prefixed T-ap, and Amen-ha, the abode of Amen. The Copts

write the former name **Τανε**, which becomes, in the Memphitic dialect, **Θαβα**, and thus ex-

plains the origin of the Greek *Θήβαι*. The time of its foundation is unknown, but remains have been found which are ascribed to the close of the 11th dynasty, and it probably dates from the commencement of that first Diospolite line of kings. Under the 18th and two following dynasties it attained its highest prosperity, and to this period its greatest monuments belong. The following description of this celebrated locality by Mr. Poole will be read with interest:—"The monuments of Thebes, exclusive of its sepulchral grottoes, occupy a space on both sides of the river, of which the extreme length from north to south is about two miles, and the extreme breadth from east to west about four. The city was on the eastern bank, where is the great temple or rather collection of temples, called after El-Karnak, a modern village near by. The temple of El-Karnak is about half a mile from the river, in a cultivated tract. More than a mile to the south-west is the temple of El-Uksur on the bank of the Nile. On the western bank was the suburb bearing the name Memnonia. The desert near the northernmost of the temples on this side almost reaches the river, but soon recedes, leaving a fertile plain generally more than a mile in breadth. Along the edge of the desert, besides the small temple just mentioned as the northernmost, are the Rameseum of El-Kurneh, and that of Medeenet-Habou less than a mile farther to the south-west, and between them, but within the cultivated land, the remains of the Amenophium, with its two gigantic seated colossi. Behind these edifices rises the mountain which here attains a height of about 1200 feet. It gradually recedes in a south-westerly direction, and is separated from the cultivated tract by a strip of desert in which are numerous tombs, partly excavated in two isolated hills, and two small temples. A tortuous valley, which commences not far from the northernmost of the temples on this bank, leads to those valleys in which are excavated the wonderful tombs of the kings near the highest part of the mountain which towers above them in bold and picturesque forms." EGYPT, *Encyclopædia Britannica*, p. 506. At the entrance to the temple of El-Uksur stood two very fine obelisks of red granite, one of which is now in the centre of the Place de la Concorde. There is also a portal with wings 200 feet in width, covered with sculptures of the highest interest, illustrating the time of Rameses II. Within is a magnificent avenue of 14 columns, having capitals of the bell-shaped flowers of the papyrus. They are sixty feet high and elegantly sculptured. These are of the time of Amenoph III. On a south portal of the great temple of El-Karnak is a list of countries subdued by Sheshonk I. or Shishak, the head of the 22d dynasty. Among the names is that of the kingdom of Judah as before mentioned. The great hypostyle hall in this temple is the most magnificent

work of its class in Egypt. Its length is 170 feet, its width 320; it is supported by 134 columns, the loftiest of which are nearly 70 feet in height and about 12 in diameter, and the rest more than 40 feet in height and about 9 in diameter. The great columns, 12 in number, form an avenue through the midst of the court from the entrance, and the others are arranged in rows very near together on each side. There is a transverse avenue made by two rows of the smaller columns being placed further apart than the rest. This great hall is, therefore, crowded with columns, and the effect is surpassingly grand. The forest of pillars seems interminable in whatever direction one looks, producing a result unequalled in any other Egyptian temple. This great hall was the work of Sethe I., the head of the 19th dynasty, who came to the throne cir. B.C. 1340, and it was sculptured partly in his reign and partly in that of his son and successor, Rameses II. It is impossible here to enter further into a description of this magnificent temple. The reader is referred to the numerous accounts given of it elsewhere. The Ramesseum remains to be briefly noticed. This temple on the edge of the desert is perhaps the most beautiful ruin in Egypt as Karnak is the grandest. It also records the glories of Rameses II., of whom there is in one of its courts a colossal statue hewn out of a single block of red granite, supposed to weigh nearly 900 tons, and transported thither from the quarries of Syene. This temple is also noted for containing the celebrated astronomical ceiling, one of the most precious records of ancient Egyptian science. Not the least interesting among the monuments of Thebes are the tombs of the kings. The sepulchres are 20 or 21 in number. Nineteen are sculptured, and are the mausolea of kings, of a queen with her consort, and of a prince, all of the 18th, 19th, and 20th dynasties. The paintings and sculptures are almost wholly of a religious character, referring chiefly to the future state. Standing on the resting-places of kings and warriors who figured in the history of Egypt while the world was yet young, and long before the age of others whom we are accustomed to consider heroes of antiquity, it seems as though death itself were immortalized; and proudly indeed may those ancient Pharaohs, who laboured so earnestly to preserve their memory on earth, look down upon the paltry efforts of later aspirants, and their slender claims to be regarded as either ancient or immortal. About twenty miles further south is the village of Adfoo, representing the town called by the Greeks Apollinopolis Magna, where is still found in a comparatively perfect state a temple of the Ptolemaic period. Above Adfoo, at Gebel-es-Silsileh, the mountains on either side, which have for some time confined the valley to a narrow space, reach the river, and contract its course; and higher still, about 30 miles, is the town of Aswan, which represents the ancient Syene, and stands among the palm trees on the eastern bank opposite to the island of Elephantine. The bed of the river above this place is obstructed by numerous rocks and islands of granite, which form the rapids called the first cataract. During the inundation boats are enabled, by a strong northerly wind to pass this cataract without aid, and in fact at other times the principal rapid has only a fall of five or six feet, and that not perpendicular. The roaring of the troubled stream,

and the red granite islands and rocks which stud its surface, give the approach a wild picturesqueness till we reach the open stream, less than two miles further, and the beautiful island of Philæ suddenly rises before our eyes, completely realizing one's highest idea of a sacred place of ancient Egypt. It is very small, only a quarter of a mile long and 500 feet broad, and contains monuments of the time of the Ptolemies. In the desert west of the Nile are situate the great and little wahs (oases), and the valley of the Natron lakes, containing four Coptic monasteries, the remains of the famous anchorite settlement of Nitria, recently noted for the discovery of various Syrian MSS. In the eastern desert the chief town of importance is Es-Suweys or Suez, the ancient Arsinoë, which gives its name to the western gulf of the Red Sea.

Religion.—Herodotus states that the Egyptians had three orders of gods—the first, second, and third—whereof the first was the most ancient. *Num, Nu, or Kneph*, was one of the most important of the gods, corresponding to the 'soul' of the universe, to whom was ascribed the creation of gods, men, and the natural world. He is represented as a man with the head of a ram and curved horns. The chief god of Thebes was *Amen*, or *Amen Ra*, or *Amen Ra Khem*, also worshipped in the great oasis, and sometimes portrayed under the form of Kneph. He was the Jupiter Ammon of the classics. The goddess *Mut*; or 'the mother,' is the companion of Amen, and is represented as a female wearing the crowns of Upper and Lower Egypt, and the vulture head-dress of a queen. *Khem* was the god by whom the productiveness of nature was symbolised. His name reminds us of the patriarch Ham. The Greeks identified him with Pan, and called Chemmis, a city in the Thebais, where he was worshipped, Panopolis. He is accompanied by a tree or a flower on the sculptures, which may have been, as supposed by Mr. Poole, the asherah or sacred grove spoken of in the Bible. *Ptah* was the god of Memphis, and worshipped there under the form of a pigmy or child; but as his temples have been destroyed little is known of his worship.* The goddess *Neit* or *Neith* is often associated with Ptah. She was the patron deity of Sais in the Delta; and the Greeks say that Cecrops, leading a colony from thence to Athens, introduced her worship into Greece, where she was called Athene. This name may be derived from the Egyptian, if we suppose the latter to have been sometimes called Thenei, with the article prefixed like the name of Thebes. She is represented as a female with the crown of Lower Egypt on her head. *Ra*, or the sun, was worshipped at Heliopolis. His common figure is that of a man with a hawk's head, on which is placed the solar disk and the royal asp. *Thoth* was the god of science and letters, and was worshipped at Hermopolis Magna. His usual form is that of a man with the head of an ibis surmounted by a crescent. Bast was called Bubastis by the Greeks, who identified her with Artemis. She is represented as a lion or cat-headed female with the globe of the sun on her head. There is a similar goddess called

* His name is now proved to be the same as the word 'open;' and, therefore, the root is equivalent to the Heb. פתח.

Pasht. *Athor* was the daughter of Ra, and corresponded to the Aphrodite of the Greeks; the town of Tentyra or Denderah was under her protection. *Shu* represented solar or physical light, and *Ma-t* or *Thma* (Themis) moral light, truth, or justice. *Sebak* was a son of Ra. He has a crocodile's head. *Osiris* is the most remarkable personage in the Egyptian Pantheon. His form is that of a mummied figure holding the crook and flail, and wearing the crown of Upper Egypt, generally with an ostrich feather on each side. He was regarded as the personification of moral good. He is related to have been on earth instructing mankind in useful arts, to have been slain by his adversary Typhon (Set or Seth), by whom he was cut in pieces; to have been bewailed by his wife and sister Isis; to have been embalmed; to have risen again, and to have become the judge of the dead, among whom the righteous were called by his name, and received his form:—a wonderful fore-feeling of the Gospel narrative, and most likely symbolising the strife between good and evil. *Isis* was the sister and spouse of Osiris, worshipped at Abydos, and the island of Philæ. *Horus* was their son. *Apep*, Apophis of the Greeks, an enormous serpent, was the only representative of moral evil. The worship of animals is said to have been introduced by the second king of the second dynasty, when the bull Apis at Memphis, and Mnevis at Heliopolis, and the Mendesian goat, were called gods. The cat was sacred to Pasht, the ibis to Thoth, the crocodile to Sebak, the scarabeus to Ptah and a solar god Atum. In their worship of the gods, sacrifices of animals, fruit, and vegetables were used, as well as libations of wine and incense. No decided instance of a human sacrifice has been found. A future life and the immortality of the soul were taught by the priests. After death a man was brought before Osiris; his heart weighed against the feather of truth. He was questioned by 42 assessors as to whether he had committed 42 sins about which they inquired. If guiltless he took the form of Osiris, apparently after long series of transformations and many ordeals, and entered into bliss, dwelling among the gods in perpetual day on the banks of the celestial Nile. If guilty he was often changed into the form of some base animal, and consigned to a fiery place of punishment and perpetual night. From this abstract it may be seen that the Egyptian religion is to be referred to various sources. There is a trace of some primæval revelation in it. There is a strong Sabæan element,

231.

and it is remarkable that the verb to adore is expressed by the symbol of a man in a posture of worship with a star. There is also much of cosmic religion or nature worship in its higher and lower

forms apparent in it. It is, however, to be observed, that this subject is not yet understood as we may hope to understand it.

The Exodus.—With respect to the much vexed question as to the date of the Exodus, it will perhaps be advisable to mention the various opinions which have been held. Sir Gardiner Wilkinson, *Anc. Egypt.* i. 42, supposes Joseph to have arrived in Egypt during the 12th dynasty, in the reign of Osirtasen or Sesertesen I. The 'new king who knew not Joseph' he takes to be Ames, or Amosis, the first of the 18th dynasty, and finally believes the Exodus to have occurred under Thothmes III. He thinks the change of dynasty under Ames the Diopoltite very likely to have been accompanied by that enmity and oppression which are attributed to the 'king who knew not Joseph.' The Israelites, on their first arrival, may have obtained a grant of land from the Egyptians, on condition of certain services being performed by them and their descendants. As long as the Memphite dynasty lasted this compact would be respected, but when the Thebans came to the throne it would not improbably be broken, while the service would be still required, and would rapidly be changed into bondage. Sir G. Wilkinson places the Exodus in the fourth year of Thothmes III., whom he supposes to have survived the destruction of his army in the Red Sea, on the ground of there being, as he perhaps somewhat rashly observes, no authority in the writings of Moses for believing that Pharaoh was himself drowned. The next view is that of the present Duke of Northumberland, also given in the 1st vol. of *Anc. Egyptians*, p. 77; he supposes the 'new king who knew not Joseph' to have been Rameses I., and that the Pharaoh of the Exodus was Menephtah, Ptahmen, or Ptahmenoph, son of Rameses II., the last king of the 18th dynasty; cogent reasons are advanced in support of this view, which are accepted by Bunsen and Lepsius, and may be seen as above. The third opinion is that of Mr. Stuart Poole, who believes that Joseph's Pharaoh was Assa, or Assis, the fifth king of the 15th dynasty of Shepherds, and that the Exodus occurred under later Shepherds. He considers it more likely that a race of foreign kings than one of pure Egyptians should have been the patrons of the Israelites in the time of Joseph. He thus places the Exodus as high as 1652 B.C. See his argument in Smith's *Dictionary of the Bible*. Such are the various theories on this disputed and perhaps unascertainable point. We believe that the preponderance of evidence is now considered to be in favour of the latest date for the Exodus, or about 1300 B.C. The French Egyptologist, M. Chabas, has recently found a name, apparently of foreign captives, employed by the Egyptians in building and quarrying under the 19th and later dynasties. This name he reads Aperui, and shews that it may reasonably correspond with עֲפֵרִי, the Hebrews, but this people is found as late as Rameses IV., probably B.C. cir. 1200, certainly after 1300, and this necessitates the supposition that if the Hebrews are meant, some must have been left at the Exodus or some of the 'mixed multitude.' In this case the earlier occurrence under the 19th dynasty proves nothing.

It is hoped that the following chronological summary of names and events will be found useful:—

Dynasty.	Date B.C.	Name of King.	Event.
I.	3643 Bunsen. 2717 Poole.	Menes.	Memphis built.
IV.	...	Shura.	Pyramids.
XII.	...	Diospolites.	The Osirtasens and Amenemhas.
XV.	} Shep-herds.		
XVI.			
XVII.			
XVIII.			
	1650 B. 1520 P.	Amosis, 1st king.	The horse first mentioned.
		Amenoph I. Thothmes I. II. III.	The last probably Joseph's Pharaoh.
		Amenoph II. Thothmes IV. Amenoph III.	The Sphinx erected by him. El-Uksur. Vocal Memnon.
XIX.	1324.	Rameses I. Sethee I.	War with Khita, etc. Great hall of Karnak.
		Rameses II. Meneptah.	Rameum. Red Sea canal. Sesostris?
		Sethee II.	Exodus.
XX.	1232.	Rameses III.	Medinet Habou. Khairtana = Cretans?
XXI.	...	Military Pontiffs and Lower Egyptian kings.	
XXII.	990.	Sheshonk I.	Shishak, Solomon.
		Osorkon I. II. Sheshonk II. Osorkon III. Sheshonk III. Sheshonk IV.	The latter perhaps Zerah.
XXIII.	} Partly con-temporary.	} Bocchoris the Wise, of Sais.	
XXIV.			
XXV.			
XXVI.			
	664.	Sabaco = So? Tehrak = Tirhakah. Psammetichus. Neco. Psammis. Apries = Hophra.	
XXVII.	525.	Amasis.	
XXX.	380.	Cambyses and Persians. Nectanebo I.	

The principal *prophecies* relating to Egypt are as follows:—Is. xix. ; Jer. xliii. 8-13, xlv. 30, xlvi. ; Ezek. xxix.—xxxii., inclusive. In the course of what has been said several allusions have been made to portions of these prophecies—we cannot pretend to investigate them all, but it may be observed that the main reference in them seems to be to the period extending from the times of Nebuchadnezzar to those of the Persians, though it is not easy to elucidate them to any great extent from the history furnished by the monuments. Nebuchadnezzar appears to have invaded Egypt during the reign of Apries, and Sir G. Wilkinson thinks that the story of Amasis' rebellion was invented or used to conceal the fact that Pharaoh-Hophra was deposed by the Babylonians. It is not improbable that Amasis came to the throne by their intervention. The 40 years' desolation of Egypt, Ezek. xxix. 10, is a point of great difficulty, and for the illustration or interpretation of this, as well as others, we must be content to wait. Mr. Poole

thinks it may refer to the condition of the country under Inaros.

Language.—The language of the ancient Egyptians was entirely unknown until the discoveries made by Dr. Young from the celebrated Rosetta stone, now preserved in the British Museum. This stone is a slab of black marble which was found by the French in August 1799, among the ruins of Fort St. Julien, on the western bank, and near the mouth of the Rosetta branch of the Nile. It contains a decree in three different kinds of writing, referring to the coronation of Ptolemy V. (Epiphanes), and is supposed to have been sculptured cir. B.C. 195. As part of the inscription is in Greek, it was easily deciphered, and was found to state that the decree was ordered to be written in Sacred, Enchorial, and Greek characters. Thence, by carefully comparing the three inscriptions, a key was obtained to the interpretation of the mysterious hieroglyphics. The language which they express closely resembles that

which was afterwards called Coptic when the people had become Christians. It is monosyllabic in its roots, and abounds in vowels. There were at least two dialects of it—spoken respectively in Upper and Lower Egypt. The Coptic has three, viz., the Memphitic, that of Lower Egypt; the Sahidic or Theban, that of Upper Egypt, and the Bashmuri, perhaps spoken in the oases,* and therefore to be considered provincial. The Coptic is a language which stands very much by itself, and is not readily to be assigned to any one of the great families of languages. It somewhat resembles the Semitic in its grammar, but not at all in its vocabulary.

Botany.—Egypt is a country without timber. There is scarcely a grove to be seen excepting of date-palms. The commonest trees are acacias, sycamore fig-trees, and mulberry trees. The most beautiful are the date-palm and banana trees. The lowest branches of the palm are cut off every year, and on this account the ancient Egyptians adopted the palm as a symbol of the year. When it is allowed to grow wild, its ragged branches reach to the ground, and it has a much less beautiful appearance. The Theban palm is a very different tree, growing in two great stems, each of which divides into many branches. The weeping willow, myrtle, elm, and cypress grow under cultivation, and the tamarisk abounds everywhere. The commonest fruit is dates. The Feiyoom is celebrated for its grapes, from which the market of Cairo is chiefly supplied. The vines are trailed on trellis-work in the form of avenues in the gardens of Cairo. An Egyptian garden is said to be like a miniature Egypt, being intersected by numerous small channels filled by a water-wheel. The water is thus spread over the garden, which is divided into many square compartments, bordered with ridges of earth. Besides dates and grapes, figs, pomegranates, apricots, peaches, oranges, citrons, lemons, limes, olives, and various kinds of melons are met with. The cactus, bearing the Indian fig, is extremely common, and forms the hedges of gardens and plantations. The flowers are the rose, jasmín, narcissus, lily, oleander, chrysanthemum, convolvulus, geranium, dahlia, basil, the hinné plant or Egyptian privet, the helianthus, and the violet. The vegetables, for which the Israelites longed in the desert are very common, and of various kinds. The principal are peas, beans, vetches, lentils (of which pottage is made that is the common food of the Nile boatmen), lupins, mallows, spinach, leeks, onions, garlic, celery, parsley, chicory, cress, radishes, carrots, turnips, lettuce, cabbage, fennel, gourds, cucumbers, tomatas, caraway, coriander, cumin, and aniseed. The commonest field-produce is wheat, barley, millet, maize, rice, oats, clover, the sugar cane, cotton, and two species of the tobacco plant. The sugar-cane is much cultivated, and excellent sugar is made from it. There are fields of roses in the Feiyoom which supply the market with rose-water. Madder, woad, indigo, hemp, and flax are also grown. The lotus, which was richly prized for its flowers by the ancient Egyptians, is not now common, and the byblus or

papyrus (*Cyperus Papyrus*) has entirely disappeared.*

Zoology.—The absence of jungle or forest prepares us for a paucity of beasts of prey as well as of birds of beautiful plumage. The camel† thrives better in the dry climate of Egypt than elsewhere out of his native deserts. It has but one hump, and has erroneously been called the dromedary, which is merely a swift camel, being to the common camel what a saddle-horse is to a cart-horse. Camel's flesh is eaten by the peasants and desert Arabs. The Copts consider it unlawful food. It is singular that no representation of the camel is found in the sculptures and paintings of the monuments. In Gen. xii. 16, Ex. ix. 3, camels are mentioned as belonging to the Pharaohs. Mr. Poole thinks that the Shepherds were dominant at the time referred to, and that the camel, from its probable connection with them, was omitted on the monuments as a beast of ill omen. In old times the horses of Egypt were famous, though the Egyptian 'cavalry' probably consisted of chariots. The modern horses are of an indifferent breed. The ass in Egypt is of a very superior kind, tall, handsome, docile, and swift. Buffaloes are common, and not wild. Sheep and goats abound, and the flesh of the former is the ordinary butchers' meat. The dogs are half wild, being considered unclean by the Muslims, and therefore neglected. Cats are as numerous, but more favoured. The wolf, fox, jackal, and hyæna, the wild cat, weasel, ichneumon, jerboa, and hare, are also found. Antelopes, wild asses, and wild boars inhabit the deserts on either side of the Nile. The hippopotamus is not now found below the first cataract, and rarely below the second; judging from the monuments, it was once common in Egypt. The crocodile, also, has retreated in like manner, and is seldom seen till the traveller is many miles above Cairo. From the name of the island Elephantine, which has the same meaning in hieroglyphics as in Greek, it is probable that at an early period elephants were found in Upper Egypt, though at present they are not seen north of Abyssinia. Vultures, eagles, falcons, and kites abound. Quails migrate to Egypt in great numbers. Serpents and snakes are very common, including the deadly cerastes and the cobra di capello. The dangerous scorpion is frequently met with. Beetles of various kinds are found, including that which was accounted sacred, the scarabeus. The locust is not often though occasionally seen in Egypt. Bees and silkworms are kept, but the honey is not so good as our own, and the silk is inferior to that of Syria.

Ancient Inhabitants and their Customs.—It has now been ascertained that the ancient Egyptians were more nearly allied to the Caucasian than to the negro type. Their faces appear to have been oval in shape, and narrower in the men than in the

* Sir G. Wilkinson and Mr. Poole quote, in allusion to this fact, the words of Is. xix. 7, 'The paper reeds by the brooks . . . shall wither, be driven away, and be no more.' It is, however, by no means certain that the word means *paper reeds*.

† It is often said that the Arabs call the camel 'the ship of the desert.' This is a mistake; it is the ship which is called after the camel, *markab* from *Rakaba*, 'to ride.' [See art. CAMEL.]

* The word oasis is merely a Greek modification of the local term *wáh*, which is probably Coptic in its origin.

women. The forehead was well-shaped, but small and retiring; the eyes were almond-shaped and mostly black; the hair was long, crisp, and generally black; the skin of the men was dark brown, chiefly from exposure; that of the women was olive-coloured or even lighter. The Egyptians, for the most part, were accustomed to shave their heads, indeed, except among the soldiers, the practice was probably almost universal. They generally wore skull caps. Otherwise they wore their own hair, or wigs falling to the shoulders in numerous curls, or done up in the form of a bag. They also shaved their faces; kings, however, and other great personages, had beards about three inches long and one inch broad, which were plaited. The crown of Upper Egypt was a short cap, with a tall point behind, which was worn over the other. The king often had the figure of an asp, the emblem of royalty, tied just above his forehead.* The common royal dress was a kilt which reached to the ankles; over it was worn a shirt, coming down to the knees, with wide sleeves, as far as the elbows; both these were generally of fine white linen. Sandals were worn on the feet, and on the person, armlets, bracelets, and necklaces. The upper and middle classes usually went bare-foot; in other respects their dress was much the same as that of the king's, but of course inferior in costliness. The priests sometimes wore a leopard's skin tied over the shoulders, or like a shirt with the forelegs for the sleeves. The queen had a particular head-dress, which was in the form of a vulture with expanded wings. The beak projected over the forehead, the wings fell on either side, and the tail hung down behind. She sometimes wore the uræus or asp. The royal princes were distinguished by a side-lock of hair elaborately plaited. The women wore their hair curled or plaited, reaching about halfway from the shoulders to the waist.

It is hardly needful to observe that the ancient Egyptians had attained to high degrees of civilization and mental culture. This is evidenced by many facts. For instance, the variation of the compass may even now be ascertained by observing the lateral direction of the pyramids, on account of their being placed so accurately north and south. This argues considerable acquaintance with astronomy. Again, we know that they were familiar with the duodecimal, as well as the decimal, scale of notation, and must, therefore, have made some progress in the study of mathematics. There is proof that the art of painting upon plaster and panel was practised by them more than 2000 years before Christ; and the sculptures furnish representations of inkstands that contained two colours, black and red; the latter being introduced at the beginning of a subject, and for the division of certain sentences, shewing this custom to be as old as that of holding the pen behind the ear, which is often portrayed in the paintings of the tombs. Alabaster was a material much used for vases, and

as ointment was generally kept in an alabaster box, the Greeks and Romans applied the name *alabasteron* to all vases made for that purpose, and one of them found at Thebes, and now in the museum at Alnwick Castle, contains some ointment perfectly preserved, though from the Queen's name in the hieroglyphics it must be more than 3000 years old. In architecture they were very successful, as the magnificent temples yet remaining bear evident witness, though in ruins. The Doric order is supposed to have been derived from columns found at Eenee-Hasan, and the arch is at least as old as the 16th century B.C. In medical science,* we know from the evidence furnished by mummies † found at Thebes, that the art of stopping teeth with gold, and probably cement, was known to the ancient Egyptians, and Cuvier found incontestible proof that the fractured bone of an ibis had been set by them while the bird was alive. Their knowledge of glass-blowing has been alluded to, and a glass bead inscribed with the name of a queen of the 18th dynasty, proves it to be as old as 3200 years ago. The Egyptians were in the habit of eating much bread at table, and fancy rolls or seed cakes were in abundance at every feast. Those who could afford it ate wheat bread, the poor alone being content with a coarser kind made of doora flour or millet. They ate with their fingers, though they occasionally used spoons. The table was sometimes covered with a cloth, and in great entertainments among the rich each guest was furnished with a napkin. They sat upon a carpet or mat upon the ground, or else on stools or chairs round the table, and did not recline at meat like the Greeks and Romans. They were particularly fond of music and dancing. The most austere and scrupulous priest could not give a feast without a good band of musicians and dancers, as well as plenty of wine, costly perfumes and ointments, and a profusion of lotus and other flowers. Tumblers, jugglers, and various persons skilled in feats of agility, were hired for the occasion, and the guests played at games of chance, at *mora*, and the game of *latrunculi*, resembling draughts. The latter was the favourite game of all ranks, and Rameses III. is more than once represented playing it in the palace at Thebes. The number of pieces for playing the game is not exactly known. They were of different colours on the opposite sides of the board, and were not flat as with us, but about an inch and a half or two inches high, and were moved like chessmen, with the thumb and finger. Sacred music was much used in Egypt, and the harp, lyre, flute, tambourine, cymbals, etc., were admitted in divers religious services of which music constituted an important element. Sacred dancing was also

* They were celebrated as physicians (cf. Jer. xlvi. 11). 'O Virgin! daughter of Egypt, in vain shalt thou use many medicines' (Hom. *Od.* iv. 229). Herodotus says—'Cyrus and Darius sent to Egypt for doctors.' Pliny ascribes to them *post-mortem* examinations (xix. 5). Herod. mentions that each physician treated a single disorder, and, no more; their accoucheurs were women (cf. Exod. i. 15). Animal-doctors also are depicted on the monuments healing quadrupeds and birds.

† It may be interesting to mention that the word 'mummy' is derived from the Persian *mūm*, 'wax.' Some, however, believe it to be an Egyptian word.

* Hence is derived the term basilisk, *Βασιλικός*, as applied to the asp, it being the royal emblem, so *uræus*, from *ouro*, 'king,' in Coptic. Sir G. Wilkinson thinks that the story of Cleopatra and the asp may have originated in this use of the emblem; her statue carried in the triumph of Augustus would have an asp on it (Rawlinson's *Herod.* ii. 123, n.)

common in religious ceremonies, as it seems to have been among the Jews (Ps. cxlix. 3). Moses found the children of Israel dancing before the golden calf (Ex. xxxii. 19), in imitation probably of rites they had often witnessed in Egypt. The dinner hour was usually the middle of the day, as Joseph's brethren dined with him at noon. The fine linen of Egypt was greatly celebrated; and that this was not without cause is proved by a piece found near Memphis and by the paintings (cf. Gen. xli. 42; 2 Chron. i. 16, etc.) The looms of Egypt were also famed for their fine cotton and woollen fabrics, and many of these were worked with patterns in brilliant colours, sometimes being wrought with the needle, sometimes woven in the piece. Some of the stripes were of gold thread, alternating with red ones as a border. Specimens of their embroidery are to be seen in the Louvre, and the many dresses painted on the monuments of the 18th century shew that the most varied patterns were used by the Egyptians more than 3000 years ago, as they were subsequently by the Babylonians, who became noted for their needle-work. Sir G. Wilkinson states that the secret of dyeing cloths of various colours by means of mordents was known to the Egyptians, as proved by the manner in which Pliny has described the process, though he does not seem to have understood it. They were equally fond of variety of patterns on the walls and ceilings of their houses and tombs, and some of the oldest ceilings shew that the chevron, the chequer, the scroll, and the guilloche, though ascribed to the Greeks, were adopted in Egypt more than 2000 years before our era. A gradual progress may be observed in their choice of fancy ornament. Beginning with simple imitations of real objects, as the lotus and other flowers, they adopted, by degrees, conventional representations of them, or purely imaginary devices; and it is remarkable that the oldest Greek and Etruscan vases have a similarly close imitation of the lotus and other real objects. The same patterns common on Greek vases had long before been introduced on those in Egypt; while ceilings are covered with them, and the vases themselves had often the same elegant forms we admire in the *cilix* and others afterwards made in Greece. They were of gold and silver, engraved and embossed; those made of porcelain were rich in colour, and some of the former were inlaid or studded with precious stones, or enamelled in brilliant colours. Among their most beautiful achievements in the art of glass-blowing were their richly-coloured bottles with waving lines and their small inlaid mosaics. In these last, the fineness of the work is so great that it must have required a strong magnifying power to put the parts together, especially the more minute details, such as feathers, the hair, etc. 'They were composed,' says Sir G. Wilkinson, 'of the finest threads or rods of glass (attenuated by drawing them when heated to a great length), which, having been selected according to their colour, were placed upright side by side, as in an ordinary mosaic, in sufficient number to form a portion of the intended picture. Others were then added until the whole had been composed; and when they had all been cemented together by a proper heat, the work was completed. Slices were then sawn off transversely, as in our Tunbridge ware; and each section presented the same picture on its upper and under

side.' The more wealthy Egyptians had their large town houses and spacious villas, in which the flower-garden and pleasure-grounds were not the least prominent features. Avenues of trees shaded the walks, and a great abundance of violets, roses, and other flowers, was always to be had, even in winter, owing to the nature of their climate and the skill of their gardeners. A part also was assigned to vines and fruit-trees, the former were trained on trelliswork, the latter were standards. It is a curious fact that they were in the habit of employing monkeys, trained for the purpose, to climb the upper branches of the sycamore trees, and to gather the figs from them. The houses generally consisted of a ground floor and one upper storey; few were higher. They were often placed round an open court, in the centre of which was a fountain or small garden. Large houses had sometimes a porch with a flight of steps before the street door, over which latter was painted the name of the owner. The wealthy landed proprietors were *grandses* of the priestly and military classes (Mr. Birch and M. Ampère may be said to have proved the non-existence of castes, in the *Indian sense*, in Egypt); but those who tended cattle were looked down upon by the rest of the community. 'Every shepherd was an abomination to the Egyptians,' both from his occupation and from the memory of the Shepherd kings who had oppressed Egypt.* This contempt is often shewn in the paintings, by their being drawn unshaven, and squalid, and dressed in the same covering of mats that were thrown over the beasts they tended. None would intermarry with swineherds. It was the custom for the men to milk, as it is still among some Arab tribes, who think it disgraceful for a woman to milk any animal. Potters were very numerous, and the wheel, the baking of cups, and the other processes of their art were prominent on the monuments. It is singular, as affording illustration of Scripture language, that the same idea of fashioning the clay was also applied to man's formation; and the gods Ptah and Num, the creative agencies, are represented sitting at the potter's wheel turning the clay for the human creation.

The Egyptians were familiar with the use of iron from a very remote period, and their skill in the manufacture of bronze was celebrated. They were acquainted also with the use of the forceps, the blow-pipe, the bellows, the syringe, and the siphon. Leather was sometimes used for writing purposes, but more frequently paper made from the papyrus, which grew in the marsh-lands of the Delta. The mode of making it was by cutting the pith into thin slices lengthwise, which being laid on a table were covered with similar layers at right angles, and the two sets being glued together and kept under pressure a proper time formed a sheet. The dried flower heads of the papyrus have been found in the tombs. As illustrating Scripture, it may be mentioned that the gods are sometimes represented

in the tombs holding the *Tau* or sign of life () which was adopted by some of the early Christians

* It is curious that while, according to Manetho, Hyksos is compounded of Hyk, *king*, and sos *shepherd*, in Coptic ϣϣϣ means *dedecus, opprobrium*, 'abomination.'

in lieu of the cross, and is mentioned by Ezek. ix. 4, 6, as the 'mark (Tau) set upon the foreheads of the men' who were to be preserved alive. Christian inscriptions at the great oasis are headed by this symbol; it has been found on Christian monuments at Rome.

Egyptian edicts seem to have been issued in the form of a *firman* or written order; and from the word used by Pharaoh in granting power to Joseph ('According to thy word shall all my people be ruled;'^{*} Hebrew *kiss*, Gen. xli. 40, alluding evidently to the custom of kissing a *firman*), we may infer that the people who received that order adopted the usual eastern mode of acknowledging their obedience to the Sovereign. And besides the custom of kissing the signature attached to these documents, the people were doubtless expected to 'bow the knee,' Gen. xli. 43,^{*} in the presence of the monarch and chiefs of the nation, or even to prostrate themselves before them. The sculptures represent them thus bowing with the hand stretched out towards the knee.

The account of brick-making in Exod. v. 7-19 is illustrated in a remarkable degree by a painting in a tomb at Thebes, in which the hardness of the work, the tale of bricks, the straw, and the native taskmasters set over foreign workmen, are vividly portrayed. The making of bricks was a monopoly of the crown, which accounts for the Jews and other captives being employed in such numbers to make bricks for the Pharaohs.

Certain injunctions of the Mosaic law appear to be framed with particular reference to Egyptian practices, e.g., the fact of false witness being forbidden by a distinct and separate commandment becomes the more significant when we bear in mind the number of witnesses required by the Egyptian law for the execution of the most trifling contract. As many as sixteen names are appended to one for the sale of a part of certain properties, amounting only to 400 pieces of brass. It appears that bulls only, and not heifers, were killed by the Egyptians in sacrifice. Cf. with this the law of the Israelites, Num. xix. 2, commanding them to 'bring a red heifer, without spot, wherein was no blemish.' It was on this account that Moses proposed to go 'three days' journey into the desert,' lest the Egyptians should be enraged at seeing the Israelites sacrifice a heifer (Exod. viii. 26); and by this very opposite choice of a victim they were made unequivocally to denounce and to separate themselves from the rites of Egypt. The Egyptian common name for Heliopolis was AN,[†] from which was derived the Hebrew On or Aon, pointed in Ez. xxx. 17, Aven, and translated by Bethshemesh, Jer. xliii. 13. So also the Pi-beseth of the same place in Ezekiel, is from the Egyptian article Pi, prefixed to Bast, the name of the goddess there worshipped, and is equivalent to Bubastis, a city named after her, supposed to correspond to the Grecian Artemis. The Tahpanhes of Scripture, Jer. xliii. 8, Ezek. xxx. 18, was perhaps a place called Daphnæ, sixteen miles from Pelusium. Enough has pro-

bably been said to shew how much light is thrown on the Bible history by the monuments of ancient Egypt. If it occasions surprise that the details of that history, such as the marvels connected with the Exodus, etc., are not corroborated by them, it must be borne in mind that they are in no way impugned by them, and that it is not the object of any people to record their misfortunes on sculpture or painting; witness, for example, the picture-gallery at Versailles. It may also be observed that if the Israelitish sojourn fell during the Shepherd domination, it is precisely this period of which next to no monuments are found.

The writer is under great obligations to the article on Egypt in the *Encyclopædia Britannica*, 8th edit., of which the parts treating of the ancient history and the description of the country are by Mr. Stuart Poole, and those on the modern history and modern inhabitants by Mr. Stanley Poole. He is also greatly indebted to the valuable papers and notes on Egyptian antiquities, in the 2d vol. of Rawlinson's *Herodotus*. Sir G. Wilkinson, *Ancient Egyptians; Popular Account of Ditto; The Egyptians in the time of the Pharaohs; Modern Egypt and Thebes; Handbook for Egypt*; Bunsen, *Ægyptens Stelle*; Hengstenberg, *Ægypt, and the Books of Moses*; Kenrick's *Ancient Egypt*; R. S. Poole, *Horæ Ægyptiacæ*, etc., etc. See also an excellent little book by two ladies, *Early Egyptian History for the Young*, London, 1861.—S. L.

EGYPT, PLAGUES OF. In the 7th, 8th, 9th, 10th, and 12th chapters of Exodus, we have an account of a series of inflictions brought upon the Egyptians through the instrumentality of Moses and Aaron, for the purpose of constraining the ruling Pharaoh to allow the Israelites to leave his country, and escape from the bondage under which they had long been held there. These inflictions were ten in number, and are commonly spoken of as 'the plagues of Egypt.' We propose briefly to describe them in order, and then to offer some observations of a general kind on the narrative as a whole.

I. Moses having given the Pharaoh, in compliance with his own request, a sign of his divine commission, and consequent right to demand the liberation of the Israelites in the name of God; and the Pharaoh, in despite of this, having refused his demand, God commanded him to appear before the monarch as he walked by the side of the Nile, and threaten him, in case of his persisting in his refusal, with a judgment by which the waters of the river should be turned into blood. This was the first of the plagues; for the Pharaoh having hardened his heart against the divine threatening, Aaron, at the command of Moses, 'smote the waters that were in the river . . . and all the waters that were in the river were turned into blood.' In the first instance this was probably confined to the waters of the Nile, else where could the magicians have found water on which to try their art, as we are told they did? But as the king continued in his obduracy, the plague spread until the judgment fell on 'their streams, upon their rivers, and upon their ponds, and upon all their pools of water,' and even on the water which they had in the artificial reservoirs and cisterns connected with their houses. There was thus (as is proleptically stated in ver. 21) 'blood throughout all the land of Egypt.' In consequence of this the fish in the

^{*} It is somewhat remarkable that the Arabs at this day use the same word here attributed to Pharaoh (abrek) when requiring a camel to kneel and receive its load.

[†] The sacred name was HA-RA, 'the city of the sun,' with which compare the Heres of Is. xix. 18.

river died, and the water became putrid, so that no one could drink it; and the Egyptians, to whom the waters of the Nile are especially delicious (see Hammar, *Observations*, iii. 564, etc.), were forced to turn from it with loathing. It would appear, however, that the water, when filtered through the earth on the bank of the river, was restored to its salubrity, for the Egyptians, by digging round about the river, were able to supply themselves with water they could drink. This plague lasted for seven days, after which the water returned to its former state (Ezek. vii. 10-25). An interval having elapsed, Moses was again commissioned to demand the liberation of the people, and, in case of the monarch's refusing, to threaten to smite all his borders with frogs. Aaron was accordingly instructed to 'stretch forth his rod over the streams, over the rivers, and over the ponds,' and having done so, 'the frogs came up and covered the land of Egypt.' This miracle also was imitated by the magicians; they 'did so by their enchantments.' This probably served, as before, to confirm the Pharaoh in his obduracy; but to him and his people the visitation itself seems to have been peculiarly distressing; so much so that he was constrained to humble himself before Moses and ask him to 'entreat the Lord to take away the frogs,' and promised to let the people go (viii. 1-8). The species of reptile which was made the instrument of this infliction is probably the small frog of Egypt called by the natives *dofda*, the *rana Mosaica* of Seetzen (*Reisen*, iii. 245, 350, etc.) [TSEPARDEA.]

In compliance with the request of Moses God removed the frogs from the dwellings of the Egyptians. But as the king, when he saw there was respite, again hardened his heart, and refused to let the people go, God sent on him a third plague, that of **בְּנִים**, rendered in the A. V. 'lice.' Aaron, in obedience to the divine command, smote the dust of the earth, and it became lice in man and in beast throughout all the land of Egypt. The magicians tried to rival this also but could not, and were compelled to acknowledge that 'this was the finger of God.' The rendering in the A. V. is supported by many high authorities, Bochart among the rest; but the majority of more recent scholars follow the LXX. and the Vulg., which translate **בְּנִים** by *σνίφες* and *scinīphes*, and regard the insect in question as a species of gnat or mosquito. [KINNIM.]

The next plague was that of the **עֲרָב**, which the LXX. render by *κυνόμυια*, or *dog-fly*, while others make it the *scarabeus*, and others, with the A. V., a *swarm of flies* (from **עֲרָב** to *mix*) [AROB]. The last has as much in its favour as any of the others, and all travellers concur in attesting that even now one of the greatest pests of Egypt is the multitude of flies which at certain seasons infest the country, and torment both man and beast. By the invasion of this insect the land was corrupted, *i.e.*, what before was pleasant and useful was spoiled, and became noisome (comp. Barhebr. *Chron. Syr.* p. 343); and the Pharaoh was again brought to promise the liberation of the Israelites, and entreat the offices of Moses to plead with God for the removal of the plague (viii. 20-28).

The removal of the infliction was the signal for the monarch's recall of his promise, and his relapsing into his former obduracy. A fifth plague was therefore sent on his land, that of a virulent pestilence (**דָּבָר**),

by which the cattle of the Egyptians were destroyed, while those of the Israelites escaped. On this, the Pharaoh, hardened by his repeated acts of resistance to the divine will and judgments, seems to have looked with a feeling almost of indifference, and Moses was consequently commanded to inflict a severe personal affliction upon the Pharaoh and his people; he was 'to take handfuls of ashes of the furnace, and sprinkle it toward the heaven in the sight of Pharaoh,' and as the result of this there came 'a boil, breaking forth with blains, upon man and upon beast,' and affecting even the magicians, so that they 'could not stand before Moses' (ix. 8-12). The boil (**שֵׁהֶעֱנָן** *sheheen*) was a scab or pustule, which might or might not break out into an ulcerous sore (Lev. xiii. 18, ff.) With this, in one of its worst forms, Job was afflicted (ii. 7), and by this Hezekiah was brought to the verge of life (2 Kings xx. 7; Is. xxxviii. 21); it was an eruption of a very painful kind, accompanied with a burning itch, and tending to produce a permanent state of foul and wasting disease. One species of it which seized upon the legs and knees, and was regarded as incurable, was peculiar to Egypt, and was hence called 'the botch of Egypt' (Deut. xxviii. 27, 35). In the case before us this eruption had a tendency to break out into larger swellings (**אֲנֵבֵעַרְתָּ**, from **בֹּעַ**, *to boil up, to swell*), and became probably the disease called elephantiasis, a disease said to be peculiar to Egypt (Winer, *R. W. B.* s. v. *Aussatz*), or the black leprosy, a disease which also affects cattle under the name of *melandria* (Jahn, *Archæol.* Th. I. i. 381, ff.) It was something evidently more severe and deadly than the endemic Nile-fever, or eruption which visits Egypt periodically about the time of the overflowing of the Nile, and with which some writers would identify it.

When this painful visitation was withdrawn, the Pharaoh was found still obdurate and fixed in his resolution not to let the people go. An impression, however, seems to have been made on some of the people, for we read that before inflicting another plague God gave warning of it to the nation, and the effect of this was to make it apparent that whilst some treated the warning with indifference, there were others who feared the Lord, and took the means suggested for the protection of their servants and cattle from the threatened judgment. This consisted in a fearful storm of hail, accompanied with thunder and lightning, such as had never before been witnessed in that land, and by which immense destruction, both of vegetable produce and animal life, was produced. In Goshen, however, where the Israelites were, the storm was not felt; in it 'was there no hail.' This was the first of a series of severer and more appalling visitations than those which had preceded; God was now about to send *all* his plagues upon the heart of the Pharaoh, that he might know that there is none like Jehovah in all the earth (ix. 14), *i.e.*, He would now by the terror of his judgments compel that submission which the less awful inflictions previously sent had failed to effect (ix. 13-26).

Appalled by the awful scene before him, and throughout his land, the Pharaoh once more promised submission to the command of God if the visitation were withdrawn. But no sooner had this taken place than his heart was again hardened, and he again refused to let the people go. This brought on him and his people the eighth plague, that of locusts. The prospect of this fearful inflict-

tion [ARBEH] alarmed the servants of the Pharaoh, and they suggested a compromise with Moses, proposing that the *men* should be allowed to go with him to offer sacrifice to Jehovah in the wilderness, while by retaining the females they made sure of the men's returning to their servitude. This proposal, when communicated to Moses by the king, was indignantly rejected, and both parties separated in anger. Then came the threatened infliction; Moses stretched his rod over the land of Egypt, and 'the Lord brought an east wind upon the land all that day and all that night, and when it was morning the east wind brought the locusts.' This was so terrible an infliction that the Pharaoh was bowed before it; he 'called for Moses and Aaron in haste, and he said I have sinned against the Lord your God, and against you; now therefore forgive, I pray thee, my sin only this once, and entreat the Lord your God that He take away from me this death only.' His request was complied with, and the locusts were removed; but only to give the king another opportunity of shewing how insincere was his penitence, and how obdurate his heart. This brought on him the ninth plague, that of darkness. This darkness, which was of the intensest kind, lasted three days, and spread over the whole land of Egypt, with the exception of the part inhabited by the Israelites. Moses was again summoned before the king, but no agreement was come to between them, and they again parted in anger, to see each other no more (Exod. x.) Then came the final infliction on Egypt, the death of the first-born throughout the land, 'from the first-born of Pharaoh that sat on the throne, unto the first-born of the captive that was in the dungeon, and all the first-born of cattle.' This appalling visitation broke the yoke of Israel; the Egyptians literally 'thrust away' the people whom they had so long kept in cruel bondage.

II. i. In proceeding to offer a few observations of a general nature on this series of inflictions, we start with the observation that they were of a miraculous character. As such, the historian obviously intends us to regard them, and they are elsewhere spoken of as the 'wonders' (מוֹפְתִים) which God wrought in the land of Ham (Ps. cv. 27), as his miracles (נִפְלְאוֹתַיִם) in Egypt (Ps. cvi. 7), as his signs and prodigies (אֲמוֹת וּמוֹפְתִים) which he sent into the midst of Egypt (Ps. cxxxv. 9), etc. It is only under this aspect that we can accept the narrative as historical. It is true that many of them appear to have been of the same kind with phenomena natural to the country; but this cannot be said of all of them; and in the case of those of which it can be said, the presence of the supernatural is seen not only in the unparalleled degree to which the infliction reached, but still more in the complete command which was exercised by Moses as the agent of Jehovah over the coming and going of the visitation. The exemption of the Israelites from the general calamity is also clearly assigned to the miraculous. The only alternative, therefore, allowed to us, is to reject the whole narrative as mythic, or to accept it as miraculous. The attempts made by Eichhorn and the older rationalists, to give natural explanations of these plagues, only exhibit the deplorable expedients to which an unsound hypothesis may compel able men to resort.

ii. Of the deeds performed by Moses some were imitated by the magicians of the Pharaoh. To ac-

count for this, various hypotheses have been resorted to. 1. It has been supposed that they were enabled to do this by diabolic aid. But this assumes the position that men can enter into agreement or compact with evil spirits so as to receive their aid—a position which has never been proved, and consequently cannot be legitimately assumed to explain an actual phenomenon. This hypothesis assumes also that evil spirits can work miracles, a position no less gratuitous and improbable. 2. It has been maintained that the magicians were aided by God to do what they did; that they were instruments in his hand, as was the witch who raised Samuel, and were probably as much surprised at their own success as she was; and that God thus employed them probably to shew in the most decisive manner that the agency at work was His, and that it was just as he gave the power or withheld it that the miracle was performed. For this hypothesis there is much to be said. At the same time it is open to objection, for—1. Whilst Moses distinctly asserts that it was by Divine power that he and Aaron wrought, he never hints, even in the most distant way, that it was by this that the magicians succeeded in their attempts; and 2. It is expressly said, on the contrary, that what they did they did by means of their 'enchantments.' The word

here used (לֹחַט) means a secret art, hence magical arts, enchantments, and may be properly used to designate the covert tricks or juggling artifices by which practisers of legerdemain impose upon others. This leads us to the 3d hypothesis, which is, that the achievements of the magicians were merely clever tricks by which they imposed upon the people, and tended to confirm the Pharaoh in his obduracy. This hypothesis has in its favour the fact that the magicians of Egypt, and of the East generally, have always, down to our own day, possessed an unparalleled and almost incredible dexterity in artificial magic (see Lane's *Modern Egyptians*, p. 352, ff.) It is to be borne in mind, also, that in the cases before us these magicians were allowed time to *prepare* themselves, and to go through those introductory *processes*, by means of which jugglers mainly succeed in cheating the beholders; and, moreover, it is important to keep in view that they performed before witnesses who were interested in believing in their success. Above all, in the three feats in which they succeeded, there was really nothing but what the jugglers of the present day could easily do. The jugglers of India will, for a few pence, do tricks with serpents far more wonderful than making them rigid so as to resemble staves; and any juggler could make water in a basin or a tank resemble blood, or, when the country was already swarming with frogs, could cover some place that had been cleared for the purpose, with these reptiles, as if he had suddenly produced them. The performances of these magicians are really below par as compared with those which may be witnessed in the room of any travelling conjuror among ourselves. Let it be noted, also, that they failed as soon as they were required to perform the miracle on the instant, as in the case of the plague of lice, for their attempts to imitate which no time was allowed; and as a consequence of this it is emphatically said, 'they could not.' When to all this it is added that they were impotent not only to remove the infliction, but even to exempt themselves

from it, there seems abundant reason for concluding that these magicians attained to nothing beyond the performance of a few successful tricks (Scot *Congregational Lecture*, p. 210-226; Wardlaw *On Miracles*, p. 231, ff.)

iii. It has been asked, What period of time was occupied in the infliction of these successive plagues? In answer to this, some contend for a year; but they have no better reason for this than that it enables them to compare the plagues with certain natural phenomenon, occurring at fixed seasons of the year in Egypt. This has been done with considerable ingenuity, though not without some rather violent straining in particular cases; but without some better reason than this we should not feel justified in accepting a hypothesis which the general tone of the narrative does not suggest. Each plague, according to the historian, lasted only for a short time; and unless we suppose an interval of several weeks between each, a few months would afford sufficient time for the happening of the whole.

iv. A more important inquiry respects the *design* of these inflictions. That their ultimate design was the effecting of the liberation of the Israelites from their cruel bondage lies on the surface of the narrative; but with this, there may, and probably were other ends contemplated. We may suppose—1. That God designed to produce an effect on the mind of Moses himself, tending to educate and discipline him for the great work on which he was about to enter, the conduct and rule of the people during their passage through the wilderness. For such a task, great fortitude and implicit confidence in the power and majesty of Jehovah were required; and as Moses, timid at first, and ready to retire on the first rebuff, gradually acquired courage and determination as the manifestations of God's power in the chastisements inflicted on the Pharaoh and his land proceeded, it is very probable that the series of inflictions of which he was the instrument, were designed to confirm him in faith, obedience, and confidence, and so fit him for his great work. 2. We may suppose that a salutary effect was intended to be produced on the minds of the Israelites, the mass of whom had, under their long protracted debasement, sunk low in religious and intellectual life. The marvellous manner in which God interposed for their deliverance, and the mighty power by which He brought them forth, could not but arouse them to thought, and elevate and quicken their religious emotions. 3. It appears that a salutary religious effect was produced on many of the Egyptians themselves, as is evidenced by the multitudes who united themselves to the Israelites when they made their escape; and also on the surrounding nations, as is attested by Jethro, the father-in-law of Moses (Exod. xviii. 10, 11). We may presume, therefore, that this also was part of the design of these inflictions, especially as we find God expressly declaring to Moses that these judgments were intended to make the Egyptians know that He was God (Exod. vii. 5). 4. But these ends were included in the great end of demonstrating the vanity of those idols in which the Egyptians trusted. 'Against all the gods of Egypt,' said the Lord to Moses, 'I will execute judgment: I am Jehovah' (Exod. xii. 12). On these idols, God would pour contempt; and in connection with this, it is noticeable that nearly every miracle performed by Moses, had relation to some

object of idolatrous worship among the Egyptians. The devouring of the serpents by the serpent into which the rod of Moses had been turned, was directed against the serpent-worship of Egypt; the turning of the water into blood, was an assault on their sacred river the Nile; the plague of the frogs, the gnats, the flies or scarabei, all tended to bring objects of idolatrous worship among the Egyptians into contempt; the murrain on the cattle was directed against their Apis-worship; the plague of boils, brought on by the casting of ashes from the altar into the air, a rite which they followed to arrest evil, shewed how God could reverse their omens, and make what they used for good to turn to evil; the hail and storm plague was directed against their worship of the elements or of deities supposed to preside over them; the plague of locusts shewed that this great scourge which they were accustomed to trace to the wrath of their deities was entirely in the power of Jehovah; the plague of darkness poured contempt on their worship of the sun-god; and the death of the first-born wound up this terrible series, by shewing that in the hand of Jehovah alone was the life of all his creatures. A mighty and memorable lesson was thus read out before both Egyptians and Israelites, which could not but have its effect in weakening among the former the attachment of many to their idols, and confirming the latter in their reverence for Jehovah as the only true God. (Stackhouse, *Hist. of the Bible*; Bryant, *Observations on the plagues inflicted on the Egyptians*, Lond. 1794; Eichhorn, *De Egypti anno mirabili*, in the *Comment. Soc. Reg. Scient. Göttingen. Recentior.*, vol. iv. 45; Rosenmüller, *Scholia*, in loc.; Knobel, *in loc.*; Hengstenberg, *Egypt and the Books of Moses*; Winer, *R. W. B.*, art. Moses.)—W. L. A.

EGYPTIAN VERSIONS. After the death of Alexander the Great, the Greeks multiplied in Egypt, and obtained important places of trust near the throne of the Ptolemies. The Greek language accordingly began to diffuse itself from the court among the people; so that the proper language of the country was either forced to adapt itself to the Greek, both in construction and in the adoption of new words; or was entirely supplanted. In this way originated the Coptic, compounded of the old Egyptian and the Greek. There is a version in the dialect of Lower Egypt usually called the *Coptic*, or, better, the *Memphitic* version; and there is another in the dialect of Upper Egypt, termed the *Sahidic*, and sometimes the *Thebaic*.

1. The *Memphitic* version of the Bible.—The O. T. in this version was made from the Septuagint and not the original Hebrew. It would appear from Münter (*Specim. verss. Dan. Copt.*, Romæ, 1786) that the original was the Hesychnian recension of the LXX. then current in the country. There is little doubt that all the O. T. books were translated, though many of them have not yet been discovered. The Pentateuch was published by Wilkins (Lond. 1731, 4to) and by Fallet (Paris, 1854, *et seq.*); the Psalms at Rome (1744 and 1749) by the Propaganda Society. In 1837, Ideler published the Psalter more correctly; and in 1844 the best critical edition, by Schwartz, appeared. The twelve minor prophets were published by Tattam, Oxon, 1836, 8vo; and the major prophets by the same, 1852. Bardelli published Daniel (Pisa, 1849). A few small pieces of other

books were printed at different times by Mingarelli, Quatremere, and Münter. The N. T., made from the original Greek, was published by Wilkins, at Oxford, with a Latin translation, A. D. 1716. In 1846 a new and more correct edition was begun by Schwartz, and continued, but in a different manner, after his death by Bötticher (1852, etc.) In 1848-52 the Society for Promoting Christian Knowledge published the N. T. in Memphitic and Arabic, 2 vols. fol. The text was revised by Lieder. Its readings, as may be inferred from the place where it was made, coincide with the Alexandrine family, and deserve the attention of the critic. Unfortunately the version is not yet correctly edited. It belongs perhaps to the third century.

2. The *Thebaic*.—This version was also made from the Greek, both in the O. and N. T., and probably in the second century. Only some fragments of the O. T. part have been printed by Münter, Mingarelli, and Zoega. In the N. T. it agrees generally, though not uniformly, with the Alexandrine family. Not a few readings, however, are peculiar; and some harmonise with the Latin versions. Fragments of it have been published by Mingarelli, Giorgi, Münter, and Ford.

3. The *Bashmuric* or *Ammonian*.—Only some fragments of such a version in the O. and N. T. have been published, and very little is known concerning it. Scholars are not agreed as to the nature of the dialect in which it is written; some thinking that it does not deserve the name of a dialect; while others regard the Bashmuric as a kind of intermediate dialect between those spoken in Upper and Lower Egypt. Hug and De Wette are inclined to believe that it is merely the version of Upper Egypt transferred into the idiom of the particular place where the Bashmuric was spoken. The origin of this version belongs to the third or fourth century.—S. D.

EHI (עִי; Sept. 'Αγγίς). One of the sons of Benjamin, and chief of one of the clans or septs of that tribe (Gen. xli. 21). In Num. xxvi. 38 he is called Ahiram, which probably is the full name. It is doubtful whether the same person is intended by Huram, 1 Chron. viii. 5, or Ehud, in the next verse.—W. L. A.

EHUD (עִהּ; Sept. 'Αώδ), of the tribe of Benjamin, one of the 'Judges' of Israel, or rather of that part of Israel which he delivered from the dominion of the Moabites by the assassination of their king Eglon. These were the tribes beyond the Jordan, and the southern tribes on this side the river. Ehud obtained access to Eglon as the bearer of tribute from the subjugated tribes, and being left-handed, or rather ambidextrous, he was enabled to use with a sure and fatal aim a dagger concealed under a part of his dress, where it was unsuspected, because it would there have been useless to a person employing his right hand. The Israelites continued to enjoy for eighty years the independence obtained through this deed of Ehud (Judg. iii. 15-30).—J. K.

EICHHORN, JOHANN GOTTFRIED, was born 16th October 1752, at Dorenzimmern, and died at Göttingen, 25th June 1827. He was successively rector of the Gymnasium at Ordruft in the Grand Duchy of Gotha, professor of Oriental

languages at Jena, and professor of the same at Göttingen. He was a man of extensive and varied culture, of a vivid and versatile genius, possessed of immense powers of application, and capable of employing these powers with success in various departments of literature. His fertile ingenuity often betrayed him into untenable hypotheses, which, though plausibly defended by him, have tended considerably to detract from his permanent reputation and influence. His writings are very numerous; they are chiefly in the department of ancient history, literary history, and Biblical literature. In this last branch his works are:—*Einleitung in das Alte Testament*, 3 vols. 8vo, Leipz. 1780-83, best edition, Gött. 1820-24, 5 vols.; *Einleit. in die Apocryph. Schriften des A. T.*, Gött. 1795; *Einleit. in das N. T.*, Gött. 2 vols. 1804-10, best edition, Leipz. 1820-27, 5 vols.; *Commentarius in Apocalypsin Johannis*, 2 vols. Gött. 1791; *Die Hebr. Propheten*, 3 vols. Gött. 1816-20. To this branch, also, belong his *Repertorium für Bibl. und Morgenländische Literatur*, 18 vols. Leipz. 1777-86; and his *Allgemeine Bibliothek der Biblischen Literatur*, 10 vols. Leipz. 1787-1801. As a theologian, Eichhorn belonged to the rationalist school, and may be regarded as one of its most influential leaders. His works on Biblical Introduction produced a great effect, both on the treatment of that subject, and on the views of his countrymen in regard to the questions coming under it. Nothing so painstaking, so copious, so exact, or so systematic, had before appeared on the subject; and to this day his works remain the most valuable repertory of facts to which the student can betake himself. It is when Eichhorn resorts to hypotheses that he becomes misleading; and yet it would be unfair to say that even by this he has not contributed largely to the advance of Biblical science. His inquiry into the origin of the three synoptic gospels is a most elaborate piece of investigation; and though his conclusion has met with but few to adopt it, there can be no doubt that the interest his inquiry excited has tended much to advance the question at issue towards a satisfactory solution. His discussion of the canon of the O. T., though containing some peculiar and untenable views, is still of great value to the student. The only books of the N. T. whose genuineness he calls in question are Jude, 2 Peter, and the Pastoral epistles; respecting these last, he was the first to suggest that, though not written by Paul, Pauline ideas lie at their basis. As an exegete, Eichhorn's great defect is his want of spiritual sympathy with the sacred writers, and the consequently purely literary and superficial character of his exegesis. The æsthetic element in the prophetic writings he fully appreciates, but their religious and theocratic elements he almost wholly misses, while of their relation to Christianity he seems to know nothing. Had the Bible not been a divine book, Eichhorn's writings on it might have occupied the same place of authority as all will concede to his *Geschichte der Literatur von ihren anfänge bis auf die neuesten zeiten*, and his other works on literary history; but as it is, his works on Scripture only afford another illustration, among many, how incompetent are mere genius and scholarship to do justice to them, apart from that teaching of the Spirit by which alone the things that are 'spiritually discerned' can be apprehended.—W. L. A.

EKRON (עקרֹן; Sept. Ἀκκρων), one of the royal cities of the Philistines. Its situation is pointed out with considerable minuteness in Scripture. It is described as lying on the northern border of Philistia (Josh. xiii. 3), and of the territory allotted to Judah (xv. 11). It stood on the plain between Bethshemesh and Jabneel (*Id.*) Jerome locates it on the east of the road leading from Azotus (Ashdod) to Jamnia (Jabneel, *Onomast.* s. v. *Accaron*). From these notices we can have no difficulty in identifying it with the modern village of Akîr. Akîr stands on the southern slope of a low, bleak ridge or swell which separates the plain of Philistia from Sharon. It contains about fifty mud houses; and has not a vestige of antiquity except two large and deep wells, and some stone water-troughs. Wady Surar, which lies below it, and the great plain beyond, are rich and fertile; yet the higher ground around the village and northward has a barren aspect, and may perhaps have suggested the name (*Ekron*, 'wasteness'). The houses are built on the accumulated rubbish of past ages; and like their predecessors, if left desolate for a few years, they would crumble to dust (Robinson, *B. R.* ii. 227; Van de Velde, ii. 168; *Handbook for S. and P.* 275).

Ekron was within the territory of Judah; but was one of the cities allotted to Dan (Josh. xix. 43). The most interesting event in its history was the sending of the ark to Bethshemesh. A new cart was made, and two milch kine yoked to it, and then left to choose their own path; 'and they took the straight way to the way of Bethshemesh;' the position of which can be seen in a gorge of the distant mountains eastward (1 Sam. v.) The deity worshipped at Ekron was called Baal-zebub; and we may conclude from the story of Ahaziah that his oracle had a great reputation even among the degenerate Israelites (2 Kings i.) The doom of Ekron was predicted by the prophets in connection with the other cities of Philistia; and Ekron is now 'rooted up'—every trace of royalty, riches, and power is gone (Amos i. 8; Zeph. ii. 4). It appears, however, never to have been completely deserted. It was a large village in the days of Jerome; and also in the age of the crusades (*Onomast.* ut sup.; *Gesta Dei per Francos*, p. 404).—J. L. P.

ELAH (אֵלָה; Sept. Ἠλά). 1. One of the dukes of Edom (Gen. xxxvi. 41; 1 Chron. i. 52). 2. The father of one of Solomon's officers for providing for his household (1 Kings iv. 18). 3. A son of Caleb, son of Jephunneh (1 Chron. iv. 15); 4. A son of Uzzi, a Benjamite (1 Chron. ix. 8). 5. Son of Baasha, king of Israel. After a reign of two years (B.C. 930-929) he was assassinated while drunk, and all his kinsfolk and friends cut off, by Zimri, 'the captain of half his chariots.' He was the last king of Baasha's line, and by this catastrophe the predictions of the prophet Jehu were accomplished (1 Kings xvi. 6-14). 6. Father of Hoshea, last king of Israel (2 Kings xv. 30; xvii. 1).

ELAH (אֵלָה; Sept. κοιλὰς τῆς δρυὸς, and Ἠλά). 'The valley of Elah' is only mentioned as the scene of David's combat with Goliath (1 Sam. xvii. 2, 19; xxi. 9). *Elah* signifies a 'terebinth tree,' and is so rendered in the Sept. and Vulg.

versions of 1 Sam. xvii. 19. There can be little doubt, however, that the word is used as a proper name, though most probably arising from some remarkable terebinth which grew in the valley. The valley is now called *Wady-es-Sumpt*. ('Acacia valley'), because it abounds in acacias. It is a remarkable fact, and tends to throw light on the origin of the ancient name, that one of the largest terebinths in Palestine may be seen in a branch of the valley only a few miles distant from the scene of the battle. It was noticed by Dr. Robinson (*B. R.*, ii. 21), and has since been visited by the writer (*Handbook for S. and P.* 280.)

An old ecclesiastical tradition affirms that Wady Beit Hanina, eight miles north of Jerusalem, is the Elah of Scripture; but it so happens that the incidental references in Scripture afford sufficient data to prove that this is altogether erroneous (*Kitto's Pictorial Palestine*, 121). 'The Philistines gathered together at Shochoh, which belongeth to Judah, and pitched between Shochoh and Azekah' (1 Sam. xvii. 1). Wady Beit Hanina is in Benjamin; and Shochoh and Azekah were on the borders of the Shephelah, or plain of Philistia, some twelve miles south-west of Jerusalem (Josh. xv. 33, 35). The sites of both are now known, and serve not only to identify the valley, but to mark the exact scene of the battle. Wady es-Sumpt runs in a north-westerly direction from the mountains of Judah, through the low hills at their base, into the plain of Philistia, which it enters a little north of the site of Gath. The ruins of Shochoh, now called *Shuweikeh*, cover a natural terrace on the left bank of the valley; and Azekah appears to have stood on a conical hill some two miles distant on the same bank. Between there, on the slope of the ridge, the Philistines encamped; and opposite them on the right bank were the Israelites. The distance between the armies was about a mile; and the vale beneath is flat and rich. Through the centre winds a torrent bed, the banks fringed with shrubbery of acacia, and the bottom covered with rounded 'smooth stones.' The ridges on each side rise to the height of about 500 feet, and have a steep uniform slope, so that the armies ranged along them could see the combat in the valley. The Philistines when defeated fled down the valley towards Gath and Ekron (*Handbook for S. and P.* 249; Robinson, *B. R.* ii. 21 sq.)—J. L. P.

ELAM (עִלָּם; Sept. Ἠλάμ), the oldest son of Shem (Gen. x. 22), who, like the other early patriarchs, was the founder of a nation, and gave his name to the country which they colonized (xiv. 1) The position of Elam is defined by Daniel. It lay along the river Ulai, the modern Karûn (Layard, *Nineveh and Babylon*, 146; Loftus, *Chaldaea and Susiana*, 424, sq.); and Shushan (now *Shush*), one of the most powerful and magnificent cities of the primeval world, was its capital (Dan. viii. 2; SHUSHAN). The name Elam occurs in the cuneiform inscriptions found on the bulls in Sennacherib's palace at Nineveh. The country was also called *Nuwaki*, as we learn from the monuments of Khorsabad and Bisutum (Layard, *N. and B.*, 452).

The extent and boundaries of ancient Elam cannot now be ascertained. Rosenmüller says it had Persis on the east, Babylonia on the west, Media on the north, and the Persian Gulf on the south (*Biblical Geography*, i. 188). Rawlinson's description is substantially the same. 'Susiana, the

Elam of Scripture, was bounded on the north by Assyria, on the east by the Zagros mountains and the river *Tab* (Oroatis), on the south by the Persian Gulf, and on the west by the Tigris.' It was thus about 300 miles long, and averaged about 90 wide (Herodotus, i. 570). This may apply to the Greek province of Elymais or Susiana, but is not strictly accurate as regards the Elam of early biblical history. The name Elam appears to have been given at a very early period, perhaps somewhat indefinitely, to the country lying along the northern shore of the Persian Gulf, and extending westward into Arabia, and northward into the mountains of Luristan. It thus embraced a considerable portion of what was afterwards consolidated into the Persian empire under Cyrus. The king of Elam seems to have been in the time of Abraham one of the most powerful monarchs of Western Asia. He received tribute from the richest cities of Canaan, while the rulers of Ellasar (Chaldæa), and Shinar (Babylonia), were either subject to his authority, or in close alliance with him (Gen. xiv. 4). When the Assyrian empire rose to such a pitch of power, Elam remained in a great measure unnoticed, though still a distinct and important kingdom (Is. xxi. 2; xxii. 6). The warlike monarchs of Babylon subsequently extended their conquests over all the neighbouring nations (BABYLON); but that great empire fell in its turn under the power of the Medo-Persians, who subdued nearly all Western Asia (Esther i.; Dan. v. and vi.; Ezra iv. 9). The power of Elam was thus broken; it became a mere province, and its chief city Shushan, or Susa, was made one of the capitals of the Persian empire (Dan. viii. 2). These historic facts illustrate the prophecy of Jeremiah (xlix. 35-39), 'and upon Elam will I bring the four winds from the four quarters of heaven, and I will scatter them towards all these winds.' The situation of the country exposed it to the invasions of Assyrians, Medes, and Babylonians; and it suffered from each in succession before it was finally embodied in the Persian empire. Then another part of the prophecy was also singularly fulfilled: 'I will set my throne in Elam, and I will destroy from thence the king and princes.' The present state of the Persian empire, in which Elam is included, may be a fulfilment of the concluding words of the passage: 'But it shall come to pass in the latter days, that I will bring again the captivity of Elam' (Vaux, *Nineveh and Persepolis*, 85, sq.)

Herodotus gives the name Cissia to the province of which Susa was the capital (iii. 91); Strabo distinguishes between Susiana and the country of the Elymæans. The latter he extends northwards among the Zagros mountains (xi. p. 361; xv. p. 503; xvi. p. 507). Pliny says Susiana is separated from Elymais by the river Eulaeus; and that the latter province extends from that river to the confines of Persis (*Hist. Nat.* vi. 27). Ptolemy locates Elymais on the coast of the Persian Gulf, and regards it as part only of Susiana (*Geogr.* vi. 3). According to Josephus the Elymæans were the progenitors of the Persians (*Antiq.* i. 6. 4); and Strabo refers to some of their scattered tribes as far north as the Caspian Sea. From these various notices, and from the incidental allusions in Scripture, we may conclude that there was a little province on the east of the Lower Tigris called Elymais; but that the Elymæans as a people were anciently spread over, and ruled a much wider

district, to which their name was often attached. They were a warlike people, trained to arms, and especially skilled in the use of the bow (Is. xxi. 2; Jer. xlix. 35); they roamed abroad like the Bedawin, and like them, too, were addicted to plunder (Strabo, xi. p. 361). Josephus mentions a town called Elymais, which contained a famous temple dedicated to Diana, and rich in gifts and votive offerings (*Antiq.* xii. 9. 1); Appian says it was dedicated to Venus (Bochart, *Opp.* i. 70, sq.). Antiochus Epiphanes attempted to plunder it, but was repulsed (1 Maccab. vi.). It is a remarkable fact that little images of the goddess, whose Assyrian name is Anaitis, were discovered by Loftus in the mounds of Susa (Loftus, p. 379). The Elamites who were in Jerusalem at the feast of Pentecost were probably descendants of the captive tribes who had settled in Elam (Acts ii. 9).

The fullest account of Elam, its physical geography, ruins, and history, is given in Loftus' *Chaldæa and Susiana*. The southern part of the country is flat, and towards the shore of the Gulf marshy and desolate. In the north the mountain ranges of Backhtiari and Luristan rise gradually from the plain in a series of calcareous terraces, intersected by ravines of singular wildness and grandeur. Among these mountains are the sources of the Ulai (Loftus, pp. 308, 347, sq.). The chief towns of Elymais are now Shuster ('little *Shush*') and Dizful; but the greater part of the country is overrun by nomad Arabs.—J. L. P.

ELASAH (עֲלָסָא), 'Ελεσάν Vat.; 'Ελεσάρ Alex.; *Elasa*). The son of Shaphan, one of the bearers of a letter from the prophet Jeremiah to the captive Jews in Babylon, Jer. xxix. 3 (Jer. xxxvi. 3, Sept.)

2. (Ἠλασά.) One of the sons of Pashur mentioned in the list of priests who had married Gentile wives, and were required by Ezra to put them away (Ezra x. 18, 22).—J. E. R.

ELATH (עֲלָת), termed in the Sept. *Αλων*; in Joseph. (*Antiq.* viii. 6. 4) *Αλωνίη*; in Jerome, *Ailath*; by the Greeks and Romans, 'Ελάνα. It is now called Ailah. These several names are only variations of the original Hebrew word. It was a city of Idumæa, having a port on the eastern arm or gulf of the Red Sea, which thence received the name of Sinus Elaniticus (Gulf of Akaba). According to Eusebius, it was ten miles east from Petra. It lies at the extremity of the valley of Elghor, which runs at the bottom of two parallel ranges of hills, north and south, through Arabia Petræa, from the Dead Sea to the northern parts of the Elanitic Gulf.

The first time that it is mentioned in the Scriptures is in Deut. ii. 8, where, in speaking of the journey of the Israelites towards the Promised Land, these words occur—'When we passed by from our brethren the children of Esau, which dwelt in Seir, through the way of the plain from Elath, and from Eziongeber.' These two places are mentioned together again in 1 Kings ix. 26, in such a manner as to shew that Elath was more ancient than Eziongeber, and was of so much repute as to be used for indicating the locality of other places; the passage also fixes the spot where Elath itself was to be found: 'and King Solomon made a navy of ships in Eziongeber, which is beside Elath, on the shore (Num. xxxiii. 35) of the

Red Sea, in the land of Edom.' The use which David made of the vicinity of Elath shews that the country was at that time in his possession. Accordingly, in 2 Sam. viii. 14, we learn that he had previously made himself master of Idumæa, and garrisoned its strongholds with his own troops. Under his successor, Joram (2 Kings viii. 20), the Idumæans revolted from Judah, and elected a king over themselves. Joram thereupon assembled his forces, 'and all the chariots with him,' and, falling on the Idumæans by night, succeeded in defeating and scattering their army. The Hebrews, however, could not prevail, but 'Edom revolted from under the hand of Judah unto this day;' thus exemplifying the striking language employed (Gen. xxvii. 40) by Isaac—'by the sword shalt thou live, and shalt serve thy brother: and it shall come to pass, when thou shalt have the dominion, that thou shalt break his yoke from off thy neck.' From 2 Kings xiv. 22, however, it appears that Uzziah recovered Elath, and, having so repaired and adorned the city as to be said to have built, that is rebuilt, it, he made it a part of his dominions. This connection was not of long continuance; for in ch. xvi. ver. 6 of the same book, we find the Syrian king Rezin interposing, who captured Elath, drove out the Jews, and annexed the place to his Syrian kingdom, and 'the Syrians came to Elath, and dwelt there unto this day.' At a later period it fell under the power of the Romans, and was for a time guarded by the tenth legion, forming part of Palæstina Tertia (Jerome, *Onom.* s. v. *Ailath*; Strabo, xxi. 4. 4; Reland, p. 556). It subsequently became the residence of a Christian bishop. Bishops of Elath were at the council of Chalcedon (A.D. 451), and that of Constantinople (A.D. 536). At the council of Chalcedon, Beryllus thus wrote his designation as bishop, Ἀρχὴ τῆς Παλαιστίνης ἑπίσκοπος. In the days of its prosperity it was much distinguished for commerce, which continued to flourish under the auspices of Christianity. In the sixth century it was spoken of by Procopius as being inhabited by Jews subject to the Roman dominion (*De Bell. Pers.* i. 19). In A.D. 630, the Christian communities of Arabia Petræa found it expedient to submit to Mohammed, when John, the Christian governor of Ailah, became bound to pay an annual tribute of 300 gold-pieces (Abulfeda, *Ann.* i. 171). Henceforward, till the present century, Ailah lay in the darkness of Islamism. It is merely mentioned by the supposed Ibn Haukal, perhaps in the eleventh century; and, after the middle of the twelfth, Edrisi describes it as a small town frequented by the Arabs, who were now its masters, and forming an important point in the route between Cairo and Medina. In A.D. 1116, King Baldwin of Jerusalem took possession of it. Again it was wrested from the hands of the Christians by Saladin I., A.D. 1167, and never again fully recovered by them; although the reckless Rainald of Chatillon, in A.D. 1182, seized, and for a time held, the town. In Abulfeda's day, and before A.D. 1300, it was already deserted. He says, 'In our day it is a fortress, to which a governor is sent from Egypt. It had a small castle in the sea, but this is now abandoned, and the governor removed to the fortress on the shore.' Such as Ailah was in the days of Abulfeda, is Akaba now. Mounds of rubbish alone mark the site of the town, while a fortress, occupied by a governor and a small garrison under the Pasha of Egypt, serves to keep the

neighbouring tribes of the desert in awe, and to minister to the wants and protection of the annual Egyptian Haj, or pilgrim caravan. This place has always been an important station upon the route of the Egyptian Haj. Such is the importance of this caravan of pilgrims from Cairo to Mecca, both in a religious and political point of view, that the rulers of Egypt from the earliest period have given it convoy and protection. For this purpose a line of fortresses similar to that of Akaba has been established at intervals along the route, with wells of water and supplies of provisions (Robinson's *Biblical Researches*, vol. i. p. 250).

The first Frank who visited this place in modern times, was Ripell, in 1822. Laborde (*Journey through Arabia Petræa*, London, 1836) was well received by the garrison and inhabitants of the castle of Akaba, of which he has given a view (vol. i. p. 116). The fortress, he states, is built on a regular plan, and is in a pretty good condition, though within several good habitations have been suffered to fall to decay. It has only two guns fit for service.—J. R. B.

EL-BALCHI, CHAVILA, so called after his native town Balchi (אֵל בַּלְכִי), in Bactria, a celebrated rationalistic philosopher, commentator, and grammarian, who flourished about 880 A.D. He published a translation of the Pentateuch into Arabic, with an elaborate commentary, which created as much excitement in the East as Voltaire's attacks upon the Bible created in Europe. And if we had not been convinced that the French infidel was ignorant of Hebrew and Arabic, we should have been tempted to believe that he copied the Jewish rationalist. El-Balchi's commentary has not as yet come to light, but Ibn Ezra, with other expositors, constantly quotes extracts from it, and refutes them in a most masterly manner.

El-Balchi's grand work, however, in which he intended to explain away all revelation, and to reduce the miracles of the Bible to mere poetical figures of speech and hyperboles, is *The book of Animadversions* (סֵפֶר שְׁעֵנוֹת), consisting of two hundred arguments against the inspiration of the Scriptures and revealed religion. This production, too, is still hid in some libraries; but copious quotations from it are dispersed through the biblical commentaries of the greatest Jewish philologists, who endeavour to refute them. We abstain from giving specimens from this work, because the arguments which El-Balchi uses are exactly the same as those which the Deists of the 17th century advanced, and which are urged by the neologists and rationalists of the present day. El-Balchi's works rapidly circulated in Persia, Babylon, and Egypt, and became the favourite studies in the Jewish schools. Such was their fearful popularity, and such the baneful influence which they exercised over the minds of young students, that Saadia, Salomon ben Jeroham, Ibn Ezra, and the most distinguished Jewish commentators, were constrained formally to refute them. We dwell upon this point because the exegetical productions of these learned interpreters, abounding as they do with quotations from and allusions to El-Balchi and his associates, will sometimes hardly be understood by the biblical student, unless he bears in mind this rationalistic fraternity. By way of contempt some writers, according to an Eastern conceit, have transposed the letters כ and ב in the

name אל בלבי, and thus obtained the opprobrious nickname הכלבי, *the dog*. The identity of these names must be borne in mind by the student of Jewish exegesis.—C. D. G.

ELDAD and MEDAD (אֵלְדָד וּמֵדָד); Sept. Ἐλδὰδ καὶ Μωδὰδ), two of the seventy elders appointed by Moses to assist him in the government of the people. Although not present with the others at the door of the tabernacle, they were equally filled with the divine spirit, and began to 'prophesy' in the camp. Joshua thinking this irregular, requested Moses to forbid them, and received an answer eminently characteristic of the great law-giver:—'Enviest thou for my sake? Would to God that all the Lord's people were prophets, and that the Lord would put his spirit upon them' (Num. xi. 24-29).

ELDAD, BEN MALCHI, of Southern Arabia, or as some will have it, of Media, also called Eldad Ha-Dani, Abu-Dāni, and Daud Ha-Dani, that is, of the tribe of Dan, a very celebrated Jewish traveller and philologist who flourished about 830-890 A. D. For the sake of those Biblical students who speculate on unfulfilled prophecy and the whereabouts of the ten tribes, as well as to shew the state of the Hebrew text of the Scriptures at that time, we subjoin a summary of Eldad's famous work.

He embarked with another Israelite (about 860 A. D.) on the other side of the river Cush (מַעְבַּר לְנַהֲרֵי כוּשׁ), when they were suddenly wrecked in the middle of the night, but saved themselves by clinging to a board which drifted them on the shores of a cannibal country. His companion being in good condition was immediately devoured, but he being ill and lean was spared. Provisionally a foreign troop came upon these cannibals, killed many, and captured some, and he was taken with the prisoners. After remaining four years with his captors, who were fire worshippers, he was at last bought by a Jewish merchant of the tribe of Issachar, who took him home; and thus Eldad came to the territory of this tribe, which lies among the mountains or borders of Media and Persia. The tribe of Issachar are very peaceful, and only dispute about the import of the Bible. They are engaged in agricultural pursuits, have large flocks, but no weapons of war; they are exceedingly honest, are governed by a judge whose name is Nahashon, and speak both Hebrew and Persian.

The tribe of Zebulun live on the other side of the mountains of Paran (פָּרָן), extending to Armenia, and reaching to the river Euphrates. They are engaged in business; whilst the tribe of Reuben occupy the other side of the mountains. These two tribes live in brotherly love, speak Hebrew and Persian, have the Bible, the Mishna, the Talmud, and the Agadah; they read the Scriptures every Sabbath in Hebrew, and expound in Persian. The tribe of Ephraim, and half the tribe of Manasseh, live in Arabia, not far from Mecca, are warlike, and subsist on plunder. The tribe of Simeon and the other half of Manasseh live in Chorazin, six months' journey from Jerusalem, are the most numerous of all, exact tribute from twenty-five states, as well as from some Mohammedans. 'The tribes of Judah and Benjamin are you who are dispersed through the Roman, Greek, and Mo-

ammedan dominions, and we are the tribe of Dan.'

Now the tribe of Dan at first lived in the land of Israel, and being the most warlike were urged to fight against the sons of Judah, when Jeroboam, son of Nebat, sinned and divided the house of David; whereupon they chose to quit the country rather than participate in the fratricidal war; they then emigrated to Cush (כוּשׁ), conquered this fertile country, whose inhabitants would not suffer them to settle down peacefully, made the aborigines tributary, lived with them many years, and multiplied exceedingly. The tribes of Reuben, Gad, and half of Manasseh, whom Sennacherib took as captives after his first conquest, were led to Halla, Habar, the river Gozan and Media; whilst the tribes of Asher and Naphtali, who were taken by him after the second conquest, were brought to Cush (כוּשׁ). These four tribes live now in ancient Havila, where the gold is. They regularly make war every year upon the seven neighbouring nations, have plenty of gold, silver, precious stones, and flocks. They cultivate the land, which abounds in fertile corn fields and vineyards; they have a king whose name is Uziel ben Michael, of the tribe of Asher, and a prince whose name is Elizaphon, of the tribe of Dan; their banner is white, upon which is written in black, 'Hear, O Israel, the Lord our God is one God.' The valiant men of each of these four tribes in their turn guard the frontiers three months, fight the battles, and divide the spoil with the others, whilst those who are unable to take up arms are engaged in studying the Scriptures. The tribe of Levi,* too, were miraculously guided into the land of Havila. They are, however, separated from the other tribes, and protected from all hostile nations by the river *Sambation* or *Sabbation*, which surrounds their territory, and flows violently with stones and sand all the six days of the week, so that no one can cross it. On the Sabbath, however, the river is quiet and resting,† but is enclosed in a dense fog, and is thereby rendered unnavigable. Their land is exceedingly fruitful; there are two harvests in the year, the flocks too are very productive, there are no wild beasts there, the people are all Levites, there are

* The chosen ones of this tribe the Jewish tradition calls *Ben Moshe* (בְּנֵי מֹשֶׁה), because they did not worship the golden calf, responded to the call of Moses, siding with him against those who worshipped the image. They are said to be the Levites who hung their harps upon the willows of the Euphrates, and would not sing the song of Zion in a strange land, and who, when compelled to play by the Chaldeans, bit off their fingers. For this faithfulness tradition says God rewarded them in the manner described by Eldad.

† Hence its name *Sambation*, i. e., *Sabbatic river*, the river that rests on the Sabbath. Josephus already believed in it, though the story was not so embellished in his time (*De Bell. Jud.* vii. 5. 1); and allusion is also made to it in 4 Esdras xiii. 40, etc. The Chaldee paraphrase of Jonathan distinctly mentions it on Exod. xxxiv. 10; the Talmud, too, and the Midrashim speak of it repeatedly; comp. Sanhedrin lxxv. 6; *ibid.* Jerus. x. 6; Bereshit Rabbā, chaps. ii., lxxii.; Jalkut on the prophets, sec. 331; and Pliny, *Nat. Hist.* xxxi. 11. Dean Trench has made a beautiful poem of this Jewish tradition.

no grades of society, no servants amongst them; they have the Bible, the Mishna, the Talmud, and the Agadah; but their Talmud is in Hebrew, and they trace their laws direct to Moses. They do not know the sages or the Rabbins, since these lived in the time of the second temple, when this tribe was no more in Judæa; they speak nothing but Hebrew, they never use an oath, and live from 100 to 120 years, and are engaged in cultivating the land; they are seen by none, except by those brethren of the four neighbouring tribes; they generally go to the same spots on the two opposite shores of the river, and talk across the water about their mutual affairs.

That which is most of interest to the Biblical critic, in connection with this story, is the reply of the Gaon or Rector of the academy at Sora to the inquiry of the Jews at Kairwan, to whom Eldad related all this, and who felt perplexed by his assertion that the Talmud which the other tribes possessed was different from theirs. Mar-Zemash b. Chajim, the Rector (889-898 A.D.), after stating to the Kairwan Jews that he knew Eldad from the highest authorities, and that they were to believe without hesitation the description of the Hebrew speaking tribes, goes on to say 'Marvel not at the differences which Eldad told you exists between the oral traditions of those tribes and yours, since the very text of the Bible which is written down, and is plain, differs in Babylon from the text of Palestine in the orthography, divisions of chapters and verses, the Massora, and other points, how much more easily will differences arise in the oral law, which is very profound?' This shews us most unquestionably that the text of the Hebrew Scriptures was not definitely settled in the ninth century [BEN-ASHER]. Eldad is quoted as an authority on lingual difficulties by the greatest Hebrew grammarians and lexicographers (Ibn Ganach, Ibn Coreish, Kimchi, etc.) Whatever we may think of his lucubrations on the ten tribes, be it remembered that the greatest Jewish writers of his time and afterwards implicitly believed these stories and many others far more marvellous about their lost brethren. Graetz, is, therefore, too severe upon Eldad.

The above epitome of Eldad's account has been made from the two different recensions of his work published by Dr. Adolph Jellinek in the *Beth-Ha-Midrash*, vol. ii. p. 102, etc., and vol. iii. p. 6, etc., Leipzig, 1853-1855. Comp. Bartolocci, *Bibliotheca Magna Rabbinnica*, vol. i. 101-130; Fürst, *Bibliotheca Judaica*, i. p. 30, etc.; Steinschneider, *Catal. Libl. Heb. in Bibl. Bodleiana*, col. 923-925; and Graetz, *Geschichte der Juden*, vol. v. 288-294; 522-529.—C. D. G.

ELDER (זֶנֶן; Sept. *πρεσβύτερος*), literally, one of the older men, and because, in ancient times, older persons would naturally be selected to hold public offices, out of regard to their presumed superiority in knowledge and experience, the term came to be used as the designation for the office itself, borne by an individual, of whatever age. Such is the origin of the words *γερονσία* (a council of elders), *senatus*, *alderman*, etc. But the term 'elder' appears to be also expressive of respect and reverence in general, as *signore*, *seigneur*, *señor*, etc. The word occurs in this sense in Gen. i. 7, 'Joseph went up to bury his father, and with him went up all the servants of Pharaoh, the elders of

his house, and all the elders of the land of Egypt;' Sept. *πρεσβύτεροι*, Vulg. *senes*. These elders of Egypt were, probably, the various state-officers. The elders of Israel, of whom such frequent mention is made, may have been, in early times, the lineal descendants of the patriarchs (Exod. xii. 21). To the elders Moses was directed to open his commission (Exod. iii. 16), *τὴν γερονσίαν τῶν υἱῶν Ἰσραὴλ*; Aq. reads *τοὺς πρεσβύτας*. They accompanied Moses in his first interview with Pharaoh, as the representatives of the Hebrew nation (ver. 18); through them Moses issued his communications and commands to the whole people (Exod. xix. 7; Deut. xxxi. 9); they were his immediate attendants in all the great transactions in the wilderness (Exod. xvii. 5); seventy of their number were selected to attend Moses, Aaron, Nadab, and Abihu, at the giving of the law (Exod. xxiv.) on which occasion (ver. 11) they are called the *nobles*

(זִנְיָא) of the children of Israel, who did eat and drink before God, in ratification of the covenant, as representatives of the nation. In Num. xi. 16, 17, we meet with the appointment of seventy elders to bear the burden of the people along with Moses; these were selected by Moses out of the whole number of the elders, and are described as being, already, officers over the children of Israel. It is the opinion of Michaelis, that this council, chosen to assist Moses, should not be confounded with the Sanhedrim, which, he thinks, was not instituted till after the return from the Babylonish captivity. [SANHEDRIM]. He observes that these seventy elders were not chosen to be *judges* of the people, who had already more than 60,000 judges. He also argues that the election of seventy additional *judges* would have done but little towards suppressing the rebellion which led Moses to adopt this proceeding; but that it seems more likely to have been his intention to form a supreme senate to take a share in the government, consisting of the most respectable persons, either for family or merit, which would materially support his power and influence among the people in general; would unite large and powerful families, and give an air of aristocracy to his government, which had hitherto been deemed too monarchical. He further infers that this council was not permanent, not being once alluded to from the death of Moses till the Babylonish captivity; that Moses did not fill up the vacancies occasioned by deaths, and that it ceased altogether in the wilderness. After the settlement in Canaan the elders seem to have been the administrators of the laws in all the cities (Deut. xix. 12; xxi. 3, 6, 19; xxii. 15, 16, 18). The continuance of the office may be traced during the time of the judges (Judg. ii. 7); during that of Samuel (1 Sam. xvi. 4); under Saul (1 Sam. xxx. 26); and David (1 Chron. xxi. 16). The elders of Israel are mentioned during the captivity (Ezra x. 14), consisting either of those who had sustained that office in their own land, or were permitted by the Babylonians to exercise it still among their countrymen. We meet with them again at the restoration (Ezra v. 5), and by them the Temple was rebuilt (vi. 14). After the restoration and during the time of the Maccabees, the Sanhedrim, according to Michaelis, was instituted, being first mentioned under Hyrcanus II. (Joseph. *Antiq.* xiv. 9. 3); but elders are still referred to in 1 Maccab. vii. 33. Among the members of the Sanhedrim

were the *πρεσβύτεροι*. Thus we find *ὁ ἀρχιερεὺς*, or more frequently *ἀρχιερεὺς καὶ οἱ γραμματεῖς καὶ οἱ πρεσβύτεροι*, also 'chief priests and elders,' 'elders and scribes,' and various other collocations. Like the scribes, they obtained their seat in the Sanhedrim by election, or nomination from the executive authority. The word elder, with many other Jewish terms, was introduced into the Christian church. In the latter it is the title of inferior ministers, who were appointed overseers *among* not *over* the flock; Gr. *ἐν ᾧ*, Vulg. 'in quo' (Acts xx. 17, 28; Tit. i. 5, 7; 1 Pet. v. 1-5). The term is applied even to the apostles (2 John; 3 John). So also *πρεσβυτέρων* certainly includes even St. Paul himself (comp. 1 Tim. iv. 14 and 2 Tim. i. 6). Still the apostles are distinguished from the elders elsewhere (Acts xv. 6). The elder was constituted by an apostle or some one invested with apostolic authority* (Acts xiv. 23; see also the epistles to Timothy and Titus). The elders preached, confuted gainsayers (Tit. i. 9), and visited the sick (James v. 14). The word elders is sometimes used in the sense of ancients, ancestors, predecessors, like the word *ἀρχαῖοι* (Matt. v. 21; Heb. xi. 2). It is used symbolically (Rev. iv. 4, etc.) The term *πρεσβύτερος* is plainly the origin of our word 'priest'; Saxon, *preoster* and *preste*, then *priest*; High and Low Dutch, *priester*; French, *prestre* and *pretre*; Ital., *prete*; Span., *presbytero* (Jahn, *Biblisches Archäol.*, sec. 244; Mede's *Works*, fol. p. 27; Gesenius, *Wörterbuch*, s. v.)—J. F. D.

ELEALEH (עֲלֵאֵלָה; Sept. Ἐλεαλή). A town of the Mishor, or high plateau of Moab, east of the Jordan. It is situated a mile north-east of Heshbon (*Onomast.* s. v.), on the summit of a conical hill commanding a wide extent of country. Hence its name, *El-Aleh*, which may be rendered 'God's height.' Its ruins still bear a name similar in sound, though somewhat different in import—*El'āl* (عَلال) 'the height.' The city was once strongly fortified; and the remains of the old wall can be traced. Within all is ruin and desolation. 'Among the ruins are a number of large cisterns, fragments of walls, and the foundations of houses; but nothing worth particular notice' (Burckhardt, *Travels in Syria*, 365).

Elealeh was rebuilt and occupied by the Reubenites on the approach of the Israelites to Palestine (Num. xxxii. 37). It lay close to the border of Reuben and Gad (Josh. xiii. 26). On the decline of Jewish power, Elealeh, with the whole Mishor, fell into the hands of the Moabites, and is thus included in the woes pronounced by Isaiah on Moab (xvi. 9); 'I will water thee with my tears, O Heshbon, and Elealeh; for the alarm is fallen upon thy summer fruits, and for thy harvest is fallen.' Elealeh was still a large village in the time of Jerome (*Onomast.* s. v.); but now it is in ruins, and the whole surrounding plain is desolate. The statements of all travellers who have visited it shew how fully the prophetic curses have been executed (Irby and Mangles, 1st ed. p. 471; Burckhardt; Ritter, *Pal. and Syr.* ii. 1172; G. Robinson's *Palest. and Syr.* ii. 180, sq.)—J. L. P.

ELEASA (Ἐλεασά Vat.; Ἀλασά Alex.; *Laisa*) (1 Maccab. ix. 5). The place where Judas Maccabæus was defeated by Bacchides, and lost his life. In Josephus the place is said to have been Bethzetno

(Βηθζηθώ; *Antiq.* xii. 11. 1). But elsewhere (*De Bell. Jud.* i. 1. 6) he states that Judas lost his life in a battle with the generals of Antiochus Eupator at Adasa, which Grotius and Reland suppose to be the same as Alasa.—J. E. R.

ELEAZAR (אֵלְעָזָר, *God the Helper*; Sept. Ἐλεάζαρ). This was an exceedingly common name among the Hebrews, being borne by a considerable number of persons in Scripture (as well as in the Apocrypha and Josephus), of whom the principal are the following.

1. ELEAZAR, the son of Aaron (Exod. vi. 23, 25), who acted in his father's lifetime as chief of the tribe of Levi (Num. iii. 32), and at his death succeeded him in the high-priesthood (Num. xx. 25, sq.) His pontificate was contemporary with the military government of Joshua, whom he appears to have survived. A perfectly good understanding seems at all times to have subsisted between Eleazar and Joshua, as we constantly trace that co-operation and mutual support which the circumstances of the time and of the nation rendered so necessary. Eleazar is supposed to have lived twenty-five years after the passage of the Jordan, and the book of Joshua concludes with a notice of his death and burial.

2. ELEAZAR, who was set apart to attend upon the ark while it remained under the roof of his father Abinadab (1 Sam. vii. 1).

3. ELEAZAR, one of the three most eminent of David's heroes, who 'fought till his hand was weary' in maintaining with David and the other two a daring stand against the Philistines after 'the men of Israel had gone away.' He was also one of the same three when they broke through the Philistine host, to gratify David's longing for a drink of water from the well of his native Bethlehem (2 Sam. xxiii. 9, 10, 13).

4. ELEAZAR, the fourth of the Maccabæan brothers, sons of the priest Mattathias (1 Maccab. ii. 5). He was crushed to death by the fall of an elephant which he stabbed under the belly in the belief that it bore the king, Antiochus Eupator (1 Maccab. vi. 43-46).

5. ELEAZAR, an aged and venerable scribe who, 'as became his age, and the excellency of his ancient years, and the honour of his grey head,' chose rather to submit to the most cruel torments than conform to the polluting enactments of Antiochus Epiphanes (2 Maccab. vii. 18-31).

ELECTA or ECLECTA (Ἐκλεκτή). According to Grotius, Wetstein, and some other critics, this word is used as a proper name in the address of John's second epistle, 'Ὁ Πρεσβύτερος Ἐκλεκτῆς, κυρία'—*The Presbyter to the Lady Electa.* This meaning is advocated by Bishop Middleton in his treatise on the *Doctrine of the Greek Article* (2d ed. Cambridge, 1828, pp. 626-629). He adduces in support of it several epistolary inscriptions from Basil, in which the name precedes, and the rank or condition in life is subjoined, such as *Εὐσταθίῳ λατρῷ—Λεοντίῳ σοφιστῇ—Βασπορίῳ ἐπισκόπῳ—Μαγνημιανῷ κήμητι*: none of these, however, are purely honorary titles. To meet the objection that the sister of the person addressed is also called *Eclecta* in ver. 13, he suggests that the words *τῆς Ἐκλεκτῆς* are a gloss, explanatory of *σοῦ*. But this is mere conjecture, unsupported by a single manuscript; and such a gloss, if occasioned (as Bishop

Middleton supposes) by the return to the singular number, would more naturally have been inserted after *oe*, in which position, however unnecessary, it would at least produce no ambiguity. Some writers, both ancient and modern, have adopted a mystical interpretation, though contrary to the *usus loquendi*, and to all apostolic usage, and supposed with Jerome that the term ἐκκλησίη referred to the church in general, or with Cassiodorus, to some particular congregation. The last named writer (b. A.D. 470, d. 562), in his *Complexiones in Epistolas*, etc. (Lond. 1722, p. 136), says, 'Johannes—electæ domine scribit ecclesie, filiisque ejus, quas sacro fonte genuerat.' Clemens Alexandrinus, in a fragment of his *Adumbrationes*, attempts to combine the literal and the mystical meanings—'Scripta vero est ad quamdam Babyloniam Electam nomine, significat autem electionem ecclesie sancte' (*Opera*, ed. Klotz. iv. p. 66). The A. V. translates the words in question 'the elect lady,' an interpretation approved by Castalio, Beza, Mill, Wolf, Le Clerc, and Macknight. Most modern critics, however, Schleusner and Breitschneider in their *Lexicons*, Bourger (1763), Vater (1824), Goeschen (1832), and Tischendorf (1841), in their editions of the N. T., Neander (*History of the Planting of the Christian Church*, vol. ii. p. 71, Eng. transl.), De Wette (*Lehrbuch*, p. 339), and Lücke (*Commentary on the Epistles of St. John*, pp. 314-320, Eng. transl.), agree with the Syriac and Arabic Versions in making Κυρία a proper name, and render the words 'to the elect Cyria.' Lardner has given a copious account of critical opinions in his *History of the Apostles and Evangelists*, c. xx.; *Works*, vi. 284-288.—J. E. R.

ELEPH is the rendering in the A. V. and the Vulgate of אֵלֶפֶת, the name (with its prepositive art.) of one of the second group of cities which fell within the tribe of Benjamin; it occurs in Josh. xviii. 28. The LXX. version unites the preceding זֵלָה (*Zela*) with this name of *Eleph*, under the compound form Σηλαλέφ.* But in that case there would be one wanting in the fourteen† cities assigned to this group. From the occasional use of אֵלֶפֶת in the *bucolic* sense of 'ox,' it has been conjectured that 'Eleph and its villages' was a pastoral district. The extremely frequent *numerical* sense, however, of אֵלֶפֶת, a thousand, points rather to the *populousness* of these towns which lay in the neighbourhood of Jebus or Jerusalem. Schultens (*Prov. Solom.* ii. 17), refers to the Arabic ألف, *conjunctio*, in

illustration of both the *numerical* and the *domestic* sense of the Hebrew root. (See further Meier, *Hebr. W. w. b.* p. 379). Simon, in his *Onomasticon* (p. 141), refers to the name of the Cilician town Μυπλανδρος in illustration, and to Deut. i. 11, Ps. xci. 7, etc., for an indefinite use of אֵלֶפֶת, to designate a *great multitude*. Fürst, in his *Hebräisches Wörterb.* (i. 91, 98), finds in Zech. ix. 7 another mention of our town Eleph, under the form אֵלֶפֶת אֶרְצָה; which, like *Jebusi*, he makes a frontier city belonging to Benjamin and Judah. He quotes from *Jephet* (or *Jefet ben Ali*), a Jewish commentator who lived at Jerusalem in the 10th century, a statement that the words of Josh. xviii. 28, אֵלֶפֶת הַיְבוּסִי, are in fact the designation of but a single city—or still less, apparently, than even that, for he further quotes Jefet as saying that in his time a *ward* of Jerusalem bore that aggregate name, in which was the sepulchre of Zechariah. We reject this view as not only doing violence to the distinct enumeration of the group of cities given in Josh. xviii. 28, but as disturbing the sense of the passage in Zech. ix. 7 (see Hengstenberg, *Christol.* iii. [Clark] 392-394). The phrase אֵלֶפֶת בְּיַהוּדָה (*tribe-prince in Judah*), used by the prophet in this passage, is by him repeated twice (see Zech. xii. 5, 6). In the Pentateuch and 1 Chron. the same noun, אֵלֶפֶת, in the plural, designates the chieftains or 'dukes' of Edom.

For some valuable remarks on the phrase, as indicating the *genuineness* of the passages in Zechariah, see also Hengstenberg, iv. 67, note. No modern traveller has identified the site of Eleph.—P. H.

ELEPHANT (ἐλέφας) occurs only in 1 Maccab. vi. 34, etc. Bochart imagined שְׁנַהַבִּים *shenhabbim* to be a contraction of שְׁנַהַבִּים אֵלֶפֶת *shenhabbim*, because *alikhaban* is one of the Arabic names of the elephant; and thence inferred that *shin* denoting *tooth*, the remaining part of the word, *habbim* or *habbehim*, was in Hebrew, like *khaban* in Arabic, to be referred to elephant. However this may be, all the nations of the south and west of Asia have for many ages generally used the word *fil*, *fael*, *phael*, *phil*, פִּיל; for we find it in the Chaldee, Syriac, Persian, Arabic, and Turkish, extending to the east far beyond the Ganges, where, nevertheless, in the indigenous tongues *ani*, *waranam*, and *hatti* are existing names.

The animals of this genus consist at present of two very distinct species, one a native of Southern Asia, once spread considerably to the westward of the Upper Indus, and the other occupying southern and middle Africa to the edge of the great Sahara. In a fossil state there are, besides, six more species clearly distinguished. The elephant is the largest of all terrestrial animals, sometimes reaching to above eleven feet of vertical height at the shoulders, and weighing from five to seven thousand pounds; he is of a black or slaty-ash colour, and almost destitute of hair. The head, which is proportionably large, is provided with two broad pendulous ears, particularly in those of the African species, which are occasionally six feet in length. This species has also two molar teeth on each side of the jaw, both

* This is the reading of the *Cod. Alex.*, which, in the enumeration of all the names of this group, approximates nearly to the Masoretic forms: the *Vatican* readings deviate widely therefrom. Instead of Σηλαλέφ the latter text has Σεληκά. This is unaccountable: the same must be said of the Peschito גִּבְרָא (*Gebira*), which stands in the place of *Eleph*.

† The LXX. however assigns, consistently, only thirteen (δεκατρεῖς) cities to this group. Eusebius and Jerome (in their *Onomasticon*) mention *Sela* (Σελά, φυλῆς Βενιαμιν) as distinct from *Eleph*, which is separately marked by Eusebius as a city of Benjamin.

above and below, and only three toe-nails on each of the hind feet; whereas the Asiatic species is provided with only one tooth on each side above

232. Asiatic Elephant.

and below; and though both have tusks or defences, the last mentioned has them confined solely to the males; they are never of more than seventy pounds weight, often much less, and in some breeds even totally wanting; while in the African both sexes are armed with tusks, and in the males they have been known seven feet in length, and weighing above 150 pounds each. The forehead of the African is low; that of the Asiatic high; in both the eyes are comparatively small, with a malevolent expression, and on the temples are pores which exude a viscous humour; the tail is long, hanging nearly to the heels, and distichous at the end. But the most remarkable organ of the elephant, that which equally enables the animal to reach the ground and to grasp branches of trees at a considerable height, is the proboscis or trunk; a cylindrical elastic instrument, in ordinary condition reaching nearly down to the ground, but contractile to two-thirds of its usual length, and extensible to one-third beyond it; provided with nearly 4000 muscles crossing each other in such a manner that the proboscis is flexible in every direction, and so abundantly supplied with nerves as to render the organ one of the most delicate in nature. Within is the double canal of the nostrils, and at the terminal opening a finger-like process, with which the animal can take up very minute objects and grasp others, even to a writing-pen, and mark paper with it. By means of the proboscis, the elephant has a power of suction capable of raising nearly 200 pounds weight; and with this instrument he gathers food from trees and from the earth, draws up drink to squirt it down his throat, draws corks, unties small knots, and performs numberless other minute operations; and, if necessary, tears down branches of trees more than five inches in diameter with no less dexterity than strength. The gait of an elephant is an enormous stride, performed with his high and ponderous legs, and sufficiently rapid to require smart galloping on horseback to outstrip him.

Elephants are peaceable towards all inoffensive animals; sociable among themselves, and ready to help each other; gregarious in grassy plains; but more inclined to frequent densely-wooded moun-

tain glens: at times not unwilling to visit the more arid wastes, but fond of rivers and pools, where they wallow in mud and water among reeds and under the shade of trees. They are most assuredly more sagacious than observers, who, from a few visits to menageries, compare them with dogs, are able to appreciate; for on this question we must take into account, on the one hand, the physical advantages of the proboscis added to the individual experience gained by an animal slow in growth, and of a longevity exceeding a century; but still placed in contact with man after a birth free in every sense, where his powers expand without human education; while on the other hand dogs are the offspring of an immense number of generations, all fashioned to the will of a master, and consequently with innate dispositions to acquire a certain education. In Griffith's *Cuvier* are found several anecdotes, some of them from the personal observations of the present writer; and referring to them, we shall add only a single one here, related by the late Captain Hobson, R.N., as observed by himself at Travancore, where several of these animals were employed in stacking teak timber balk. They had scarcely any human aid or direction, but each beam being successively noosed and slung, they dragged it to the stack, raised one end up, contrived to shove it forward, nicely watching when, being poised by its own weight, the lower end would rise, and then, placing their foreheads against the butt end, they pushed it even on the stack; the sling they unfastened and carried back to have it fitted again! In a wild state no other animal has the sagacity to break off a leafy branch, hold it as a fan, and use it as a brush to drive away flies.

The Asiatic species, carrying the head higher, has more dignity of appearance, and is believed to have more sagacity and courage than the African; which, however, is not inferior in weight or bulk, and has never been in the hands of such experienced managers as the Indian mohauts are, who have acquired such deep knowledge of the character of these beasts that they make them submit to almost incredible operations; such, for example, as suffering patiently the extraction of a decayed part of a tooth, a kind of chisel and mallet being the instruments used for the purpose. This was witnessed by a medical officer, a near relative of the present writer. Elephants walk under water as long as the end of the proboscis can remain above the surface; but when in greater depth, they float with the head and back only about a foot beneath it. In this manner they swim across the broadest streams, and guide themselves by the sense of smelling till they reach footing to look about them and land. They are steady, assiduous workers in many laborious tasks, often using discretion when they require some dexterity and attention in the performance. Good-will is all man can trust to in directing them, for correction cannot be enforced beyond their patience; but flattery, good treatment, kind words, promises, and rewards, even to the wear of finery, have the desired effect. In history they appear most conspicuous as formidable elements of battle. From the remotest ages they were trained for war by the nations of India, and by their aid they no doubt acquired and long held possession of several regions of High Asia westward of the Indus. They are noticed in the ancient Mahabarata. Ac-

cording to Sauti the relative force of elephants in an akshaushini, or great army corps, was one to each chariot of war, three horsemen, and five foot-soldiers, or rather archers, mounted on the animal's back within a defensible houdah—in the west denominated a castle. Thus one armed elephant, one chariot, and three horsemen, formed a patti or squad of at most eleven men, and if there were other bodies of infantry in the army they are unnoticed. This enumeration is sufficient to shew that in India, which furnished the elephants and the model of arming them, there were only four or five archers with or without the mohaut or driver, and that, consequently, when the successors of Alexander introduced them in their wars in Syria, Greece, and even Italy, they could not be enumerated more than perhaps momentarily with one or two additional persons before a charge; for the weight carried by a war-elephant is less than that of one used for burthen, which seldom equals two thousand pounds. In order to ascend his back when suddenly required, the animal will hold out one of his hind legs horizontally, allowing a person to step upon it until he has grasped the crupper and crept up. In the West, where they were considered for a time of great importance, no doubt the squad or escort of each animal was more considerable than in the East, and may have amounted to thirty-two foot-soldiers; the number given, by some mistake, as if actually mounted, in I Maccab. vi. 37.

Although red colours are offensive to many animals, it may be observed that the use of mulberry juice or grapes must have been intended as an excitement to their taste, for they are all fond of fruit. Wine, so as to cause an approach to intoxication, would render them ungovernable, and more dangerous than when in a state of fear. They do not require stimulants to urge them on in a modern battle, with all its flashes of fire, smoke, and explosion; and red colours usually employed for their trappings produce more of a satisfactory feeling than rage. Judicious and long-continued training is the only good remedy against sudden surprises caused by objects not yet examined by their acutely judging senses, or connected with former scenes of danger, which are alone apt to make them turn. It is likely that the disciplined steadiness of well-armed ranks frightened them by their novelty more than the shouts of Macedonian thousands, which must have been feeble in the ears of elephants accustomed to the roar of hundreds of thousands of Indians. It is probable that the Carthaginians made the experiment of training African elephants in imitation of Ptolemy Philadelphus: they are noticed in their army only in the first Punic war; and, from what appears of the mode of managing them, there is reason to believe, as already noticed, that they were never so thoroughly subdued as the Indian elephants.—C. H. S.

ELEUTHEROPOLIS (Ἐλευθεροπόλις), an important town of southern Palestine. It is frequently mentioned by Eusebius as a central and well-known point from which the directions and distances of other towns were reckoned (*Onomast. s.v. Esthemo, Sephela, Jermus*, etc.; *Reland, Pal. p. 410, 411*). Jerome says, 'Omnis australis regio Idumæorum de Eleutheropoli usque ad Petrum et Ailam in Specubus habitatiunculas habet,' etc.

(*Comm. in Obad. i*.) It appears from these and many other notices that Eleutheropolis was the capital of a large province during the fourth and fifth centuries of our era. It was also an episcopal city of *Palastina Prima* (*S. Paulo, Geogr. Sac.*, p. 306; *Notitie Ecclesiasticae*, p. 6). Its site remained unknown for many centuries, though defined by several ancient writers with much minuteness. It was identified by Dr. Robinson. Eusebius states that the plain of Shepheleh extends from Eleutheropolis westward and northward (*Onomast. s. v. Sephela*); and hence it must have stood at the south-western base of the mountains of Judah. He also states that Bethshemesh was ten miles distant from it, on the road to Nicopolis; and Jedna, six miles on the road to Hebron; and Sochoh, nine miles on the road to Jerusalem. All these places are now known, and the lines of road being traced and the distances measured, we find that the site indicated is *Beit Jibrin* (Robinson, *B. R. ii. 58*). In the *Acta Sanctorum Martyrum*, published by Assemani in Syriac, Greek, and Latin, Peter Abselama the martyr is said to have been born at Anea, which lay, according to the Syriac version, in the district of *Beth Gubrin*, while both the Greek and Latin read in the district of *Eleutheropolis* (*Id.*, p. 66). This establishes the identity of Beth Gubrin and Eleutheropolis. Josephus mentions a town in this neighbourhood called Betaris, which some copies read *Βίρυβρις*, and it appears to be the same place (*Bell. Jud. iv. 8. 1*). Under the name *Betogabra* (*Βατογάβρα*), it is enumerated by Ptolemy among the cities of Palestine (v. 16), and it is also laid down in the Peutinger tables (*Reland, Pal. p. 421*). The name *Eleutheropolis* first appears on coins of this city inscribed to Julia Donna, the wife of Septimius Severus, in A.D. 202-3. The emperor had been in Syria about that time, and had conferred important privileges on various cities, among which was Betogabris, which appears to have been then called *Eleutheropolis*, 'Free city' (Robinson, *B. R. ii. 60*). For a few centuries the Greek name supplanted the Aramaic; but 150 years after the Saracenic conquest, this city was destroyed, and the Greek name disappeared. The Aramaic was immediately revived (*Reland, Pal. 222, 227; Gesta Dei per Francos*, 1044). In the 12th century the Crusaders found it in ruins, and called by the Arabs Bethgebrim (doubtless a Frank corruption of *Beit Jibrin*). They built a strong fortress on the old foundations, to guard against the incursions of the Muslims. After the battle of Hattin it fell into the hands of Saladin, but was retaken by Richard of England. It was finally captured by Bibars, and remained in possession of the Saracens until its ruin in the 16th century (See Robinson, *B. R. ii. 28*; and authorities cited there).

The modern village of Beit Jibrin contains between two and three hundred inhabitants, and is situated in a little nook or glen in the side of a long green valley, which is shut in by low ridges of limestone, partially covered with dark copse. The ancient ruins are scattered around it, and are of considerable extent. The principal one is a large irregular inclosure, formerly surrounded by a massive wall, still in part standing, and containing the remains of the Crusaders' castle. In the castle are portions of the walls and of the groined roof and clustered columns of an old chapel. An Arabic inscription over the castle-gate bears the

date A. H. 958 = A. D. 1551—probably the time when it was last repaired. A short distance eastward are other massive ruins, and a deep well; while about a mile up the valley are the picturesque remains of the church of St. Anne (*Handbook for S. and P.*, 256, sq.)

The limestone ridges which enclose the valley south of Eleutheropolis are almost filled with caverns and excavations, rivalling in extent and interest the catacombs of Rome and Malta. They are altogether different in character from the rock-tombs of Jerusalem and the grottos of Petra. They were examined and described by Dr. Robinson, and they have since been more fully explored by the writer. They occur in large groups, like subterranean villages, on both sides of the valley. 'Besides domes,' says Dr. Robinson, 'there are here also long arched rooms, with the walls in general cut quite smooth. One of these was nearly 100 feet in length; having along its sides, about ten feet from the floor, a line of ornamental work like a cornice. These apartments are all lighted by openings from above. The entrance to the whole range of caverns was by a broad arched passage of some elevation, and we were surprised at the taste and skill displayed in the workmanship.' Such is one group. About a mile from the town, opposite the church of St. Anne, is another, still more remarkable. They occupy the whole interior of a little conical hill of soft cretaceous rock. These are also well described by Robinson. 'Lighting several candles, we entered by a narrow and difficult passage, and found ourselves in a dark labyrinth of galleries and apartments, all cut from the solid rock. Here were some dome-shaped chambers; others were extensive rooms, with roofs supported by columns of the same rock left in excavating; and all were connected with each other by passages apparently without order or plan. Several other apartments were still more singular. These were also in the form of tall domes, 20 feet or more in diameter, and from 20 to 30 high; they were entered by a door near the top, from which a staircase cut in the rock wound down around the wall to the bottom.'

The origin and object of these singular excavations are easily ascertained. During the Babylonish captivity the Edomites overran and occupied the whole of southern Palestine, which is hence called by Josephus, Idumæa. Jerome calls the Idumæans Horites, and says they dwelt within the region of Eleutheropolis (*Comm. in Obad. i.*) The original inhabitants of Edom were *Horites*, that is *Trogodytes*, 'dwellers in caves.' The descendants of Esau adopted the habits of their predecessors, and when they took possession of southern Palestine excavated rock dwellings wherever practicable (Robinson, *B. R.* ii. 68; Van de Velde, ii. 147, sq.)—J. L. P.

ELHANAN [ELCHANAN, ELEHANAN], אֱלְחָנָן, 'God-favoured'; LXX. Ἐλεανάν; Vulg. *Adeodatus* [cf. חַנְנִיָּהּ, חַנְנָאֵל, *Iovannis, phoen.* חַנְנָאֵל, Hannibal]; one of David's heroes, further described in 2 Sam. xxi. 19, as בֶּן יַעֲרִי אוֹרְגִים בֵּית הַלְחִמִי, 'the son of *Jaare Oregim*, a Bethlehemitite' [LXX. *νῖδς Ἀριωργίμ*; Vulg.

Filius Saltús Polymitarius; Syr. ܟܝܡܢܘܪ ܡܠܟܐ, son of *Malaph*, a weaver; Arab. Ver.

ܝܒܢ ܡܠܟܐ, son of *Malaph*], and as having slain

'Goliath the Gittite, the staff of whose spear was to David himself. In the parallel passage (1 Chron. xx. 5), however, Elhanan is designated as the son of 'יעֹר' (Keri, יַעֲרִי) *Jair*, and as having slain 'Lachmi [Lehemite], the brother of Goliath the Gittite, whose spear staff was like a weaver's beam.'

These discrepancies have at all times engaged the attention of Biblical investigators, and many and widely divergent have been their attempts to reconcile them. The Midrash, followed by Jerome, Targum Jonathan, Jizchaki (Rashi), etc., identifies Elhanan with David, explaining the difficult 'Jaare Oregim' in various fanciful ways. David's mother, so one version runs, was habitually *weaving veils* (*Oregim*) for the tabernacle in the sanctuary (*Hagadistic: Jaar, Jaar Lebanon*) at *Beth Lehem*, and on the principle 'measure for measure' (מִדָּה כִּנְגַד מִדָּה), the Divine retribution brought the merits of *her* weaver's beam to bear against the impious Philistine, whose spear resembled a weaver's beam. Another of these quaint interpretations, which, by the way, influenced the early patristic writings to a hitherto undreamed of extent, is, that David was called *Jaare Oregim*, because he was the loftiest tree in the towering *forest* (*Jaar*) of the *weavers* (*Oregim*) of the Halacha, i.e., the Sanhedrin, who brought the most difficult legal questions before him, that he might weave their decisions (Jalk. ad. loc.,

שְׁהִיְתָה מְעֵלָה הַלְכָה לִפְנֵינוּ וְהוּא אוֹרְגָה).

A sober exegesis, however, could not but at once reject an identity between Elhanan and David established on grounds like these, and no other way of explaining the divergences remained than to assume a corruption in one or more of the texts. The exact place and amount of the corruptions, however, no less than the restoration of the proper reading itself, are moot points still. Abrahanel, instead of אֱלְחָנָן בֵּית הַלְחִמִי אֵת נַ', 'the Bethlehemitite [slew] Goliath' (Acc.), proposed to read אֵת נַ' הַלְחִמִי אֵת הַלְחִמִי [Elhanan slew] 'Lachmi [Acc.], the brother of Goliath'; thus emending Samuel from Chron., and leaving, by the alteration of three letters, David the uncontested victor of Goliath, whose brother was killed by Elhanan. The A.V. likewise adopts the reading from Chron., but, leaving Elhanan's epithet 'Bethlehemitite' unchanged, inserts, 'the brother of' between 'Bethlehemitite' and 'Goliath,' so that the one difficulty of David's contested feat is solved. Piscator, however, followed by Kennicott—who proved the former's suggestion almost to evidence (*State of Hebrew Texts*, p. 79, seq.)—Gesenius, Movers, Ewald, Bertheau, Thienius, and, in fact, nearly the whole body of modern critics, go much further. They alter the strange reading יַעֲרִי (Jaare) of Sam., into the more common יַעֲרִי (Jair) of Chron.—an emendation advocated already by Kimchi*—and

* Less felicitous, however, is Kimchi's suggestion that אֵת נְלִיתָּ might mean 'him who was with'

strike out the inexplicable *Oregim* after it; accounting for its presence by assuming that the copyist, after he had written the \aleph יעור [יעיר] (Jair) of the original reading, mistook this letter for the other \aleph of the word \aleph נור (Menor) at the end of the verse, which, in the codex from which he copied, stood exactly underneath it, and unconsciously went on with the word אורניג (Oregim), following in the line below;—without, however, striking out this superfluous word when he became aware of his error. But while on these two emendations modern critics are almost unanimous, they disagree considerably with respect to the ensuing words of the two texts. The majority (Movers, Thenius, Winer, etc., among them) read (with Abrabanel and the A.V., who, however, retain the 'Oregim') אחי, 'the brother of,' instead of את, 'the' (Acc.), after 'Lachmi,' 'Halachmi,' or 'Bethlehemite.' But they carry (like Kennicott) their emendations so far as to make the *whole* passage in Sam. agree with Chron., from which, they say, the former has been taken and subsequently corrupted: first unconsciously, then consciously, in order that some sense might be brought into a passage which had become utterly unintelligible through the blunders of successive copyists. These critics thus likewise arrive at the conclusion that the Elhanan of both passages slew Lachmi, and David slew Goliath; and it can certainly not be denied that the narrative of David's exploit in 1 Sam. xvii. carries a great deal of historical truth on its face, and that altogether this solution seems the easiest and most satisfactory. Others, however,—and Gesenius, Ewald, Bertheau, among them,—hold that in reality it was Elhanan who slew Goliath, and that his contest formed the ground-work of the much-later written and either entirely fictitious or highly-coloured tale of David's encounter with some 'nameless' Philistine. Gesenius, it is true, confesses not to know '*ubi latet mendum*,' while Ewald (Bertheau) makes eclectic emendations in all the three passages. But even setting aside the difference of the localities in which the two fights are reported to have taken place (Valley of Elah and Gob), and the wide periods and momentous events which lie between them, and which seem to preclude all possibility of one story being mixed up with the other; or one of the principal arguments for assuming Goliath to be the name later bestowed on David's foe, viz., that in 2 Sam. xxi. 19, he is called Goliath the Gittite, while in 1 Sam. xvii. 5, he is named 'the Philistine' only, does not seem at all tenable, considering that he is introduced in the former place, where David's deed is narrated, both as 'Goliath, from Gath' (xvii. 4)—one of the principal five cities of the Philistines;—as 'Goliath, the Philistine, from Gath' (xvii. 23) (= *the Gittite*); and as '*the Philistine*' (of that name and place). Nor can we at all see what induced Jizchaki, who takes Elhanan and David to be one person (see above), to make that same distinction between 'Goliath, the Philistine,' and 'Goliath, the Gittite;' a distinction which would certainly rather form an argument against his theory.

The name Elhanan occurs further as that of

Goliath, viz., the Bethlehemite, or Lachmi of Chron.; since it would then needs follow from the context that David slew *both*; and Kimchi distinctly declares himself 'unable to see why David should be Elhanan.'

'the son of Dodo' (2 Sam. xxiii. 24, and 1 Chron. xi. 26), but while in Samuel he is called one of David's 'thirty' (שלושים, *sheloshim*)—thirty-seven heroes being enumerated—he fills the same place in the list given in the parallel passage of Chron. as one of the 'valiant men' (שלישי, *shalishim*); so that there is reason to assume a corruption of the passage in Samuel.

There is another slight variation between the two readings. The \aleph *locale* before Beth Lehem is omitted in Sam., but is found in Chron.—This Elhanan has also been identified with the above Elhanan, principally on account of their both being natives of Beth Lehem. Some critics have supposed that the 'Beth Lehemite' in 2 Sam. xxi. 19, and the 'Lachmi' of 1 Chron. xx. 5, have crept into those passages from this; but on these points we cannot further enlarge here.—E. D.

ELI (עֵלִי, *raised up*; Sept. Ἠλὶ), high-priest of the Jews when the ark was in Shiloh (1 Sam. i. 3, 9). He was the first high-priest of the line of Ithamar, Aaron's youngest son. This is deduced from 1 Chron. xxiv. 3-6 (comp. Joseph. *Antiq.* v. 9. 1). It also appears from the omission of the names of Eli and his immediate successors in the enumeration of the high-priests of Eleazar's line in 1 Chron. vi. 4-6. What occasioned this remarkable transfer is not known—most probably the incapacity or minority of the then sole representative of the elder line; for it is very evident that it was no unauthorised usurpation on the part of Eli (1 Sam. ii. 27, 28). Eli also acted as regent or civil judge of Israel after the death of Samson. This function, indeed, seems to have been intended, by the theocratical constitution, to devolve upon the high-priest by virtue of his office, in the absence of any person specially appointed by the Divine King, to deliver and govern Israel. He is said to have judged Israel forty years (1 Sam. iv. 18): the Septuagint makes it twenty; and chronologers are divided on the matter. But the probability seems to be that the forty years comprehend the whole period of his administration as high-priest and judge, including, in the first half, the twenty years in which Samson is said to have judged Israel (Judg. xvi. 31), when some of his civil functions in southern Palestine may have been in abeyance. As Eli died at the age of ninety-eight (1 Sam. iv. 15), the forty years must have commenced when he was fifty-eight years old.

Eli seems to have been a religious man; and the only fault recorded of him was an excessive easiness of temper, most unbefitting the high responsibilities of his official character. His sons, Hophni and Phinehas, whom he invested with authority, misconducted themselves so outrageously as to excite deep disgust among the people, and render the services of the tabernacle odious in their eyes. Of this misconduct Eli was aware, but contented himself with mild and ineffectual remonstrances, where his station required severe and vigorous action. For this neglect the judgment of God was at length denounced upon his house, through the young Samuel, who, under peculiar circumstances [SAMUEL], had been attached from childhood to his person (1 Sam. ii. 29; iii. 18). Some years passed without any apparent fulfilment of this denunciation—but it came at length in one terrible crash, by which the old man's heart was broken.

The Philistines had gained the upper hand over Israel, and the ark of God was taken to the field, in the confidence of victory and safety from its presence. But in the battle which followed, the ark itself was taken by the Philistines, and the two sons of Eli, who were in attendance upon it, were slain. The high-priest, then blind with age, sat by the way-side at Shiloh, awaiting tidings from the war, 'for his heart trembled for the ark of God.' A man of Benjamin, with his clothes rent, and with earth upon his head, brought the fatal news: and Eli heard that Israel was defeated—that his sons were slain—that the ark of God was taken—at which last word he fell heavily from his seat, and died (1 Sam. iv.)

The ultimate doom upon Eli's house was accomplished when Solomon removed Abiathar (the last high-priest of this line) from his office, and restored the line of Eleazar in the person of Zadok [ABIATHAR].—J. K.

ELIAB (אֱלִיָּאב; Sept. Ἐλιάβ). 1. The son of Helon, prince of the tribe of Zebulun during the passage through the wilderness (Num. i. 9; ii. 7; vii. 24, etc.) 2. The son of Pallu and father of Dathan and Abiram (Num. xxvi. 8, 9; Deut. xi. 6). 3. The eldest son of Jesse and brother of David (1 Sam. xvi. 6; xvii. 13, 28; 1 Chron. ii. 13), whose daughter, or more probably grand-daughter, Abihail, was married to Rehoboam (2 Chron. xi. 18). 4. A Levite who was one in the second rank of those appointed to conduct the music of the sanctuary in the time of David, and whose part was to play on the psaltery (1 Chron. xv. 18, 20; xvi. 5). Three more besides, having this name, are mentioned (1 Chron. vi. 19 [27]; xii. 9; Judith viii. 1).—W. L. A.

ELIADA (אֱלִיאָדָה, a compound of אֱלֹהִים, *God*, and יָדַע, *to know* ['Deus cognovit,' according to Simonis, *Onomast.* p. 488. 'Whom God knoweth,' Gesenius, *Lex.* (Robinson) s. v.; so Fürst, *Hebr. Wort.* i. 92]). This name occurs as—

1. One of the younger sons of David, born to him in Jerusalem; the child (as it would seem) of one of his wives, and not of a concubine; in 2 Sam. v. 16 [LXX. Ἐליδαέ; Vulg. *Elioda*]; 1 Chron. iii. 8 [LXX. Ἐλιαδά; Alex. Ἐλιαδέ; Vulg. *Eliada*]. In 1 Chron. xiv. 7 the name appears in the form of בַּעֲלִיאָדָה ['Beeliada,' A. V.; *Baaliada*, Vulg.], q. d. *Dominus cognovit, Whom the Lord knoweth* (see Simonis, *Onomasticon*, s. v., p. 460; בעל being the Syriac form of בעל, *Lord*). This curious reading of the Masoretic text is not, however, indisputable: De Rossi's *Cod.* 186, *primâ manu*, reads אֱלִיאָדָה, the LXX. Ἐλιαδέ, and the Peschito ܐܠܝܘܕܐ (*Eliadaa*). On the strength of these authorities De Rossi (after Dathius, *Lib. Hist. V. T.* p. 654), pronounces in favour of assimilating this passage to the other two, and refers to the improbability of David's using the names אֱלֹהִים and בעל promiscuously (see De Rossi's *Var. Lect. V. T. Hebraica* iv.; also BEELIADA). We must not, however, in the interest of careful criticism, too hastily succumb to arguments of this kind. As to MSS., the four or five, which Kennicott adduces,

all support* the common text of 1 Chron. xiv. 7; the authority of the LXX. is neutralised by the *Codd. Alex. and Frid. August.*, the former of which has Βαλλιαδά, and the latter Βαλεγδαέ, evidently corroborating the Masoretic text; as does the Vulg. *Baaliada*. As to the difficulty of David's using a name which contained בעל for one of its elements, it is at least very doubtful whether that word, which literally means *master, proprietor, husband*, and is often used in the earlier scriptures inoffensively (see Gesenius, *Thes.* 224), in David's time had acquired the bad sense, which *Baal*-worship in Israel afterwards imparted to it. It is much to the present point, that in this very chapter (ver. 11), David does not object to employ the word בעל in the name *Baal-perazim*, in commemoration of a victory vouchsafed to him by the Lord (see 2 Sam. v. 20, where the naming of the place is ascribed to David himself). It is possible that this appellation of his son might itself have had reference to that signal victory.

2. The father of Rezon, who fled from the service of Hadadzezer, king of Zobah, and became a captain of Syrian marauders, and ultimately king of the country. The name is given as *Eliadah*, with the final ה, in 1 Kings xi. 23; but it is identical with No. 1 in the LXX.,† Vulg., and Peschito.

3. One of the two *Benjaminite* commanders (field-marshal perhaps) in the magnificent army of Jehoshaphat; besides whom there were three 'captains of thousands' of *Judah*. Eliada, whose name in the original and the versions is the same as Nos. 1. and 2., is described specially (all the five being mentioned with characteristic differences), as 'a mighty man of valour,' נַבְדֹּר חַיִל; while his division of the Benjaminite quota of the grand army consisted of the light-armed forces, 'armed men with bow and shield' (2 Chron. xvii. 17), in contradistinction to the heavy-armed troops of Jehozabad. Jehoshaphat's army of the two tribes alone approached within a little of David's conscription under the undivided kingdom (comp. 2 Sam. xxiv. 9 with 2 Chron. xvii. 14-18): the result is described in 2 Chron. xvii. 10. Eliada's troops alone amounted to 200,000 men (see Bertheau, *on Chronicles* [Clark], vol. ii. p. 385).—P. H.

ELIADAH. [ELIADA, 2.]

ELIAKIM (אֱלִיאִקִּים, *whom God hath lifted up*; Sept. Ἐλιακιμ and Ἐλιακειμ). 1. Son of Helkiah and Prefect of the palace, or minister of the royal house—'over the house,'—under Hezekiah (Is. xxxvi. 3). There is no solid reason for regarding him as a priest, or for rendering על-הבית by *prepositus templi*, after the Vulgate, which would require על-הבית יהוה. The meaning of his name was

* And the more remarkably, from the 'variety in identity' which they curiously display; two reading בעל-יריע as separate words; and one reading merely בעל without any adjunct; and another varying the second letter, but retaining the word באֱלִיריע.

† For the mutilated state of the Sept. text here, see Tischendorf's *Sept.* i. 430; and Keil's *Commentary on Kings* [Clark], i. 197, 198.

fulfilled in his history; as he was raised by God to the high position he occupied, instead of Shebna, who was removed for misconduct, according to Isaiah's prophecy, and was made 'a father to the inhabitants of Jerusalem,' and had 'the key of the house of David' laid 'upon his shoulder,' Is. xxii. 15, 25. He thus became a type of Christ (Rev. iii. 7). He was one of the three persons sent by Hezekiah to treat with Rabshakeh (2 Kings xviii. 18; Is. xxxvi. 3), and afterwards to consult Isaiah as to Rabshekah's blasphemous message.

2. A son of Josiah, whom Pharaoh Necho set upon the throne instead of his brother Jehoahaz (the people's choice) changing his name to Jehoia-kim (יהויקים), whom *Jehovah hath lifted up*; 2 Kings xxiii. 31-34. This change is significant of his dependance and loss of liberty, as heathen kings were accustomed to give new names to those who entered their service (Gen. xli. 45; Ezra v. 14; Dan. i. 7), usually after their gods. In this case, as the new name is Israelitish, it is probable that Pharaoh Necho gave it at the request of Eliakim himself, whom Hengstenberg supposes to have been influenced by a desire to place his name in closer connection with the promise (2 Sam. vii. 12), where not El but Jehovah is the promiser; and to have done this out of opposition to the sentence of the prophets respecting the impending fall of the house of David (*Christol.* ii. 401, Eng. Trans.) There exists the most striking contrast between his beautiful name and his miserable fate. The Lord, instead of raising him up, will cast him down to the lowest depth. Not even an honourable burial is to be bestowed upon him. Unwept, his carcase 'was to be cast without the gates of Jerusalem, and buried with the burial of an ass' (Jer. xxxii. 18, 19).

3. A priest of the returned captives who took part in the dedication of the walls of Jerusalem (Neh. xii. 41).

4. Son of Abiud and father of Azor, in the genealogical line of Jesus (Matt. i. 13).

5. Father of Jonan, and son of Melea, in the second genealogical table of Jesus (Luke iii. 30, 31).—I. J.

ELIAM (אליאם; Sept. Ἐλιαμ), the father of Bathsheba, the wife of David (2 Sam. xi. 2) [BATH-SHEBA]. It is probable, as tradition asserts, that this Eliam is the same who is mentioned 2 Sam. xxiii. 34, as the son of Ahithophel.—W. L. A.

ELIAS. [ELIAH.]

ELIAS LEVITA (properly ELIA HA-LEVI BEN ASCHER, ASCHKENASI, *i. e.*, the German) was born about the year 1470, at Neustadt, on the Aisch, near Nuremberg. So much of his life was spent in Italy, that certain writers (*e. g.*, Bartolucci, *Biblioth. Rabbin.* i. 135, and Basnage, *Histoire des Juifs*, vol. v., p. 2025) make him an Italian, with Padua for his birth-place. (For a correction of this error see Wolfii *Bibliotheca Hebraea*, i. 153, note). On the expulsion of the Jews from his native country he removed to Venice, where he entered on his career as an enlightened teacher of Hebrew, which he prosecuted with much success afterwards at Padua (from 1504 to 1509); after a short sojourn at Venice, whither he retired on the sacking of Padua, he removed to Rome (in 1514), where Cardinal Egidio and several illustrious pupils attended his instructions. After some years of hap-

piness and prosperity, under the patronage of the Cardinal, he was driven from Rome at the sacking of the city in 1527, under Charles V., with the loss of everything. Venice again became his home, where he published some of his most valuable writings, until 1540, in which year he accepted an invitation from Paul Fagius to take up his residence at Isny, in Swabia, and assist him in the publication of Hebrew books. On the removal of his friend from Isny, Elias withdrew once more to Venice, where he ended his eventful life in 1549, two years after his last resort to the city which had so often been his refuge. His frequent intercourse and great courtesy at Rome and elsewhere with his Christian pupils, added to the unusual liberality of his opinions, excited much jealousy among his Jewish brethren, but in the preface to his great work he defends himself against his alleged apostasy from the religion of his forefathers. (For Alsted's strong assertion that he died a Christian, see Wolfii *Bibl. Hebr.* i. 161, and for Bartolucci's strong regret that he continued in Judaism, see his *Bibl. Rabbin.* i. 137.) The prevalent character of Elias Levita's literary labours is well indicated by the name which distinguishes him among the Jews—*הַמְדַרְקֵן*, *the Grammarian* (see Buxtorf, *Lex. Rabbin.* 570, *s. v.*), and the appellation which he seems to have given himself in allusion to one of his characteristic works on Grammar, *הַבְּחֵר*, 'the student' (according to Buxtorf, *Lex. s. v.*); or 'the master' according to Steinschneider, *Catal. Hebr. Bodl.* p. 934). His chief works are but indirectly related to Biblical science; in this relation, however, they are very important, because of the author's profound knowledge of Hebrew, and his enlightened views of its grammar and philology. Simon (*Histoire Crit. du Vieux Test.*, p. 177) speaks of him in the highest terms of praise, as, 'sans doute le plus sçavant Critique des Juifs, qu'il a tous surpassés dans l'art de la Grammaire.' Similarly Jos. Scaliger (*Epist.* 62) commends him as the greatest Hebrew scholar of the age, 'unicum hujus ævi Criticum et Aristarchum.' Nor did his own people begrudge him equal praise; R. Asaria di Rossi, in his *Meor Enajim*, lix. p. 179, calls him *הַמְדַרְקֵן הגדול*, 'the great grammarian,' and this in spite of his strong objection to some of E. Levita's literary opinions. Munster, Fagius, and other theologians of that period owed their Hebrew learning in a great degree to Elias Levita. His works which are most immediately related to biblical science are—

1. *פִּירוּשׁ אֵיּוֹב*, or *Exposition of the Book of Job* [in verse], a small oblong 12mo volume, published at Venice, 1544. That E. Levita was its author, and not editor only (as Wolf, *Bibl.* iii. 101, would have it), is demonstrated by Steinschneider (*Catal.* 939, 940). 2. *תְּלִים בְּלֵא*. A literal translation of the Psalms into German, Venice, 1545. See Wolfii *B. H.* iii. 101. Steinschneider, 942. Fürst, *Bibl. Judaica*, ii. 241). 3. *תְּלִים עַם פִּירוּשׁ*. *The Psalms, with the Commentary of R. D. Kimchi*, with the revision and correction of our author; Isny, 1542. (See Fürst, *Bibl. Jud.* ii. 242). 4. *תַּרְגּוּם מִתְּלֵי דְשְׁלֹמֹה*. *Targum of the Proverbs of Solomon*, an edition with explanatory notes; Isny,

1541. (Fürst, *l. c.*) 5. An epistle to Seb. Munster, published with Kimchi's *Comment. on Amos*; Basle, 1531. (See Wolfii *Biblioth.* iii. 101; Steinschneider, page 937.) 6. A translation of the *Pentateuch* into German has been attributed to Elias Levita, but Steinschneider mentions it as an *opus suppositivum* (*Catal.* 942).

Our author's philological works, marked by a freshness and independence of judgment, as well as deep and accurate knowledge, which had been seldom, if ever, united in a Hebrew critic before, gave him a reputation which his name has sustained ever since. The chief are—

1. **מִסְרַת הַמּוֹסְרָת**, *Traditio traditionis*, is an elaborate treatise on the criticism of the Hebrew Scriptures. Among the many interesting topics discussed in it, the question of the vowel points attracted special notice, owing to the author's assertion of their modern origin. He was the first (Bartolucci, i. 141) to give prominence to the opinion which has since been adopted by most of the learned, whether British or foreign, that the Hebrew points were invented about 500 years after Christ, by the Masoretic doctors of the school of Tiberias, in order to indicate and fix the genuine pronunciation of the sacred language. R. Asaria de Rossi opposed him strenuously, maintaining the old belief that the vowel points, as well as the Hebrew letters, were known to Moses; and Buxtorf in his *Tiberias* borrowed much from him, but modified his conclusions. The Latin translation by Seb. Munster,* of much of the **מִסְרַת הַמּוֹסְרָת** gave great currency to its opinions among the reformers and theologians of the 16th century. The controversy was sustained with great learning by such men as Capellus and Morinus on one side, and Calovius and the Buxtorfs on the other. (For a short sketch of the subject, and the modifications it has received from more recent scholars, see Hävernicks's *Introd. to the O. T.* [Clark] sec. 55, pp. 266-269.) 2. **טוֹב מִעַם**.

(A title fancifully taken from ver. 66 of Ps. cxix.) [The book of] 'good judgment,' a treatise in eight sections on the *Hebrew accents*. An abridged translation in Latin was published in 1539 by Munster. 3. **כִּפְר הַבְּחִיר**. *The choice treatise, or the Master's treatise*; a Hebrew Grammar drawn up for his pupils at Rome, and dedicated to Cardinal Egidio, 1518. It was shortly afterwards translated by Seb. Munster, under the title **הַרְקִינָה**, *The Grammar*.

Several editions were published of this work, and many adaptations, especially that of Jean Campagne, Paris, 1539. 4. He was the author of other grammatical treatises, including 'Scholia' on the two works of R. Moses Kimchi [the *Petach Debara*, and the *Mahalach*], and his **פְּרָקֵי אֱלִיָּהוּ**, *The chapters of Elias*—dissertations, in which he analyses the structure of the Hebrew language from its letters upwards, through its verbal forms and relations, rhythmic laws, etc. (For an analysis, see Bartolucci, i. 138, 139.) 5. Our author was

* There is a complete translation of the three *Prefaces* into Latin, in the *Dissertationes variae* of J. A. M. Nagelius, published 1757-1771 (Steinschneider, 2031), and a German version of the entire work, with notes by Semler, Halle, 1772. (Fürst, *Bibl. Jud.* ii. 241.)

also an industrious and intelligent labourer in the field of *Lexicography*. His chief works under this head are **מְתוּרְגָמָן**, *i. e.*, *Dictionary*. In Wolfii *Bibl. Hebr.* i. 157, 158, and Bartolucci, i. 137, the title given to this work is 'Lexicon Chaldaicum, Targumicum, Talmudicum et Rabbinicum'; Isny, 1541. This work, which seems to have been less a dictionary of Biblical Hebrew than of the Targums and the Talmud, was afterwards edited with the preface translated into Latin by Paul Fagius. Under the root **מִשָּׁח**, a collection of all the passages in which the Targumists had used the sacred word *Messiah* **מְשִׁיחַ**, was carefully made; this portion was separately published by G. Genebrard in a Latin version in the year 1572. 6. The treatise **הַתְּשִׁבִי**, 'Tishbite,' is a sort of sequel to Hebrew lexicons. It notices 712 Hebrew, Chaldaic, Arabic, Greek, and Latin words which had escaped the notice of preceding compilers of dictionaries. In the quaint title we have a specimen of the author's humour in selecting a designation, *Tishbi*, which, while numerically composing the 712 he has to indicate, contains also an allusion to his name, *Elijah* or *Elias* (1 Kings xvii. 1). Paul Fagius published a Latin translation of this work likewise, at Isny, 1541. A reprint at Berlin, 1833, by Moses Koerner. 7. **שְׂמוֹת דְּבָרִים**, *Nomina rerum*, a nomenclator of Hebrew words in Hebrew-German; P. Fagius added a Latin version (Isny, 1542), and Drusus the elder a Greek vocabulary, which his son augmented, editing the work in alphabetical order, and arranged in columns, printed several times at Frankfurt in the 17th century. 8. His valuable notes on the *Liber Radicum* of R. David Kimchi must not be omitted from this list; **נְמוּקֵים** **לְפִי שְׂרָשִׁימַי**, 'glosses [or explanatory notes] on the book of [Hebrew] roots, etc.' Gesenius, in his preface to *Biesenthal* and *Lebrecht's* edition of this work (Berlin, 1847), says that it abounds in excellent explanations of Biblical words and passages—'hic liber per multas vocabulorum locorumque biblicorum explicationes continet his, quæ nunc placere solent, preferendas, atque dignissimas quæ ab oblivione vindicentur.'

R. Simon in his *Histoire Critique du Vieux Test.*, c. xxxi. p. 177, thus explains the characteristic of this learned Rabbi, which has inspired so great a confidence in his writings:—'On peut dire, que cet homme seul parmi les Juifs a été capable de ne se laisser point préoccuper, et de ne point croire simplement à l'autorité de ses Docteurs. Il a examiné les choses en elles-mêmes, et sans suivre les préjugés des autres Juifs, il a parlé des diverses Leçons du Texte Hebreu, des points et des accents avec beaucoup de liberté . . . [and in p. 539 he sums up], En un mot, c'est celui de tous les Rabbins qui ait été le moins superstitieux et qui merite le plus d'être leu.' (Besides the works of reference already mentioned, use has been made in this art. of Gabr. Groddeck's *De Scriptoribus Rabbinicis* [in D. Millii *Catal. Rabbin.*] and Neudecker's *Elias Levita* in Herzog's *Real Encycl.*)—P. H.

ELIASAPH (אֱלִיָּאֵפֶן; Sept. Ἐλισάφ). 1. Son of Deuel, prince of the tribe of Gad, at the time of the census in the wilderness (Num. i. 14; ii. 14, etc.) 2. Son of Lael, chief of the family of the Gershonites at the same time (Num. iii. 24).—†.

ELIASHIB (אֱלִישִׁבַּי; Sept. Ἐλιασεβών, Ἐλιασβί, Ἐλιασάβ, Ἐλιούβ, Ἐλιασίφ), the name of several persons mentioned in Scripture (1 Chron. iii. 24; xxiv. 12; Ezra x. 24, 27, 36; Neh. iii. 1, 20, 21). The last of these, who is mentioned also in Ezra x. 6, was high-priest at the time of the rebuilding of Jerusalem, and took an active part in that work. He was related in some way to Tobiah the Ammonite, for whom, during the absence of Nehemiah, he prepared a chamber in the courts of the house of the Lord, a proceeding which filled Nehemiah with grief, and which he promptly contravened by dispossessing Tobiah, and after clearing the chamber, restoring it to its proper use (Neh. xiii. 4-9).—W. L. A.

ELIEL (אֱלִיֵּל; Sept. Ἐλιήλ). 1. One of the heads of the house of Manasseh, of the half tribe which remained on the east of the Jordan (1 Chron. v. 24). 2. The son of Toah, of the family of the Kohathites (1 Chron. vi. 19 [A. V. 34]). He is probably the same as Elihu, the great-grandfather of Samuel (1 Sam. i. 1). 3. A chief of the tribe of Benjamin (Sept. Ἐλιήλ, 1 Chron. viii. 20). 4. Another Benjamite chief (Sept. Ἐλιήλ, 1 Chron. viii. 22). 5. The Mahavite, one of the valiant men of David's army (Sept. Alex. Ἐλιήλ, 1 Chron. xi. 46). 6. Another of the same body (Sept. Δαλιήλ, Alex. Ἀλιήλ, xi. 47). 7. One of the Gadites who joined David in the wilderness (Sept. Ἐλιάβ, xii. 11). 8. The chief of the sons of Hebron, of the Kohathites (xv. 9, 11). 9. One of the overseers under Cononiah, appointed by Hezekiah to take charge of the offerings and the tithes dedicated in the temple (2 Chron. xxxi. 13).—W. L. A.

ELIEZER. This is the same name as Eleazar—whence came the abbreviated Lazar or Lazarus of the N. T. It is proper to note this here, because the parable which describes Lazarus in Abraham's bosom (Luke xvi. 23) has been supposed to contain a latent allusion to the name of Eliezer, whom, before the birth of Ishmael and Isaac, Abraham regarded as his heir. The passage of Scripture in which the name of Eliezer occurs is one of some difficulty. Abraham, being promised a son, says:—'I go childless, and the steward of my house is this Eliezer of Damascus. . . . Behold, to me thou hast given no seed: and, lo, one born in mine house is mine heir' (Gen. xv. 2, 3). Part of the difficulty is caused by the translation, and part by the prevalence of notions gathered from external sources, and not warranted by the original text. The common notion is that Eliezer was Abraham's house-born slave, adopted as his heir, and meanwhile his chief and confidential servant, and the same who was afterwards sent into Mesopotamia to seek a wife for Isaac. This last point we may dismiss with the remark, that there is not the least evidence that 'the elder servant of his house' (Gen. xxiv. 2), 'whom Abraham charged with this mission, was the same as Eliezer: and our attention may therefore be confined to the verses which have been quoted.

It is obvious that the third verse is not properly a sequel to the second, but a repetition of the statement contained in the second; and, being thus regarded as parallel passages, the two may be used to explain each other.

'Eliezer of Damascus,' or 'Damascene-Eliezer,' is the subject of both verses. The obvious mean-

ing is, that Eliezer was born in Damascus: and how is this compatible with the notion of his being Abraham's house-born slave, seeing that Abraham's household never was at Damascus? It is true that there is a tradition, quoted by Josephus from Nicolaus of Damascus (*Antiq. i. 7. 4*), that Abraham 'reigned in Damascus;' but the tradition was probably founded on this very passage, and has no claim on our belief.

The expression, 'the steward of mine house,' in ver. 2, will explain the sense of 'one born in mine house is mine heir,' in ver. 3. The first phrase, literally translated, is 'the son of possession of my house,' *i. e.*, one who shall possess my house, my property, after my death; and is therefore exactly the same as the phrase in the next verse, 'the son of my house (paraphrased by 'one born in mine house') is mine heir.' This removes every objection to Eliezer's being of Damascus, and enables us to dispense with the tradition; for it is no longer necessary to suppose that Eliezer was a house-born slave, or a servant at all; and leaves it more probable that he was some near relative whom Abraham regarded as his heir-at-law. In this case Abraham obviously means to say, 'Behold, to me thou hast given no children, and not the son of my loins, but the son of my house (*i. e.*, of my family—the son whom my house gives me—the heir-at-law) is mine heir.' It is by no means certain that this 'Eliezer' was present in Abraham's camp at all: and we, of course, cannot know in what degree he stood related to Abraham, or under what circumstances he was born at, or belonged to, Damascus. It is possible that he lived there at the very time when Abraham thus spoke of him, and that he is hence called 'Eliezer of Damascus.'

This view, that Eliezer was actually Abraham's near relative and heir-at-law, removes another difficulty, which has always occasioned some embarrassment, and which arises from the fact, that while he speaks of Eliezer as his heir, his nephew Lot was in his neighbourhood, and had been, until lately, the companion of his wanderings. If Eliezer was Abraham's servant, it might well occasion surprise that he should speak of him and not of Lot as his heir: but this surprise ceases when we regard Eliezer as also a relative, and if so, a nearer relative than Lot, although not, like Lot, the companion of his journeys. Some have supposed that Lot and Eliezer were, in fact, the same person; and this would be an excellent explanation if the Scriptures afforded sufficient grounds for it.

2. The second of the two sons born to Moses while an exile in the land of Midian (Exod. xviii. 4). Eliezer had a son called Rebadiah (1 Chron. xxiii. 17).—J. K.

ELIHU (אֱלִיחֻ; *God-Jehovah*; Sept. Ἐλιούς).

One of Job's friends, described as 'The son of Barachel, a Buzite, of the kindred of Ram' (Job xxxii. 2). This is usually understood to imply that he was descended from Buz, the son of Abraham's brother Nahor, from whose family the city called Buz (Jer. xxv. 23) also took its name. The Chaldee paraphrase asserts Elihu to have been a relation of Abraham. Elihu's name does not appear among those of the friends who came in the first instance to console with Job, nor is his presence indicated till the debate between the afflicted man and his three friends had been brought to a conclusion. Then, finding there was no answer to Job's last

speech, he comes forward with considerable modesty, which he loses as he proceeds, to remark on the debate, and to deliver his own opinion on the points at issue. The character and scope of his orations are described elsewhere [JOB, BOOK OF]. It appears from the manner in which Elihu introduces himself, that he was by much the youngest of the party; and it is evident that he had been present from the commencement of the discussion, to which he had paid very close attention. This would suggest that the debate between Job and his friends was carried on in the presence of a deeply-interested auditory, among which was this Elihu, who could not forbear from interfering when the controversy appeared to have reached an unsatisfactory conclusion.—J. K.

ELIJAH (אֵלִיָּהוּ, *God-Jehovah*; Sept. Ἡλιού).

This wonder-working prophet is introduced to our notice like another Melchizedek (Gen. xiv. 18; Heb. vii. 3), without any mention of his father or mother, or of the beginning of his days—as if he had dropt out of that cloudy chariot which, after his work was done on earth, conveyed him back to heaven. From this silence of Scripture as to his parentage and birth, much vain speculation has arisen. Some of the Rabbins have supposed that he was *Phineas*, the grandson of Aaron; whilst others have thought that he was an *angel*, who, for the purpose of reforming wicked king Ahab and his ungodly subjects, assumed the form of a man. Some suppose that Elijah is called a Tishbite from Tishbeh, a city beyond the Jordan. Others suppose that Tishbite means *converter* or *reformer*, deriving it from the Hebrew radical שׁוּב. The very first sentence that the prophet utters is a direful denunciation against Ahab, and this he supports by a solemn oath, ‘As the Lord God of Israel liveth, before whom I stand, there shall not be dew or rain these years (*i.e.*, three and a half years, Luke iv. 25; James v. 17), but according to my word’ (1 Kings xvii. 1). Before, however, he spoke thus, it would seem that he had been warning this most wicked king as to the fatal consequences which must result both to himself and his people, from the iniquitous course he was then pursuing; and this may account for the apparent abruptness with which he opens his commission.

We can imagine Ahab and Jezebel being greatly incensed against Elijah for having foretold and prayed that such calamities might befall them. For some time they might attribute the drought under which the nation suffered to natural causes, and not to the interposition of the prophet; and, therefore, however they might despise him as a vain enthusiast, they would not proceed immediately to punish him. When, however, they saw the denunciation of Elijah taking effect far more extensively than had been anticipated, they would naturally seek to wreak their vengeance upon him as the cause of their sufferings. But we do not find him taking one step for his own preservation till the God whom he served said, ‘Get thee hence, and turn thee eastward, and hide thyself by the brook Cherith, that is before Jordan, and it shall be that thou shalt drink of the brook, and I have commanded the ravens to feed thee there’ (1 Kings xvii. 3, 4). Other and better means of protection from the impending danger might seem open to him, but, regardless of these, he hastened to obey the divine mandate, and ‘went and dwelt by the

brook Cherith that is before Jordan’ (1 Kings xvii. 5) [CHERITH].

Some commentators, availing themselves of the fact that עֲרָבִים *arabim*, which we translate *ravens*, means, as Ezek. xxvii. 27, *merchants*, have tried to explain away the miraculous character of God’s preservation of his servant at Cherith. Others again have thought that the original signifies *Arabians*, as in 2 Chron. xxi. 16; Neh. iv. 7, where the like word is used, or possibly the inhabitants of the city Arabah, near Beth-shan (Josh. xv. 6, and xviii. 18, etc.) In the face of such opinions as these, we still believe that ravens and not men were the instruments which God on this occasion employed to carry needful food to his exiled and persecuted servant, and in this He would give us a manifest proof of His sovereignty over all creatures. But it has been inquired, how could these birds obtain food of a proper kind, and of a sufficient quantity, to supply the daily wants of the prophet? The answer to this inquiry is very simple. We cannot tell. It is enough for us to know that God engaged to make a provision for him, and that He failed not to fulfil His engagement. We need not to speculate, as some have done, as to whether this supply was taken from Ahab’s or Jehoshaphat’s table, or from that of one of the seven thousand of Israel who had not bowed the knee to Baal.

A fresh trial now awaits this servant of God (B.C. 909), and in the manner in which he bears it we see the strength of his faith. For one year, as some suppose, God had miraculously provided for his bodily wants at Cherith, but the brook which heretofore had afforded him the needful refreshment there became dried up. Encouraged by past experience of his heavenly Father’s care of him, the prophet still waited patiently till He said, ‘Arise (1 Kings xvii. 9), get thee to Zarephath, which belongeth to Zidon, and dwell there; behold, I have commanded a widow woman there to sustain thee.’ He then at once set out on the journey, and now, arrived at Zarephath, he in the arrangement of God’s providence met, as he entered its gate, the very woman who was deputed to give him immediate support. But his faith is again put to a sore test, for he found her engaged in a way which was well calculated to discourage all his hopes; she was gathering sticks, for the purpose, as she assured him, of cooking the last meal, and now that the famine prevailed there as it did in Israel she saw nothing before her and her only son but starvation and death. How then could the prophet ask for, and how could she think of giving, a part of her last morsel? The same Divine Spirit inspired him to assure her that she and her child should be even miraculously provided for during the continuance of the famine, and also influenced her heart to receive, without doubting, the assurance! The kindness of this widow in baking the first cake for Elijah was well requited with a prophet’s reward (Matt. x. 41, 42); she afforded one meal to him, and God afforded many to her (see 1 Kings xvii. 16). But uninterrupted prosperity will not do for even God’s most devoted servants. Possibly a feeling of self-righteousness might, through the deceitfulness of sin, have begun to enter their minds, seeing that whilst millions around them were now suffering and dying from want, they were made the special objects of God’s providential care. Accordingly, their heavenly

Father saw fit to visit them with a temporary calamity—a calamity as severely felt in some respects by the one as it was by the other. ‘And it came to pass that the son of the woman, the mistress of the house, fell sick; and his sickness was so sore that there was no breath left in him’ (1 Kings xvii. 17). Verse 18 contains the expostulation with the prophet of this bereaved widow; she rashly imputes the death to his presence. She seems to have thought within herself that, as God had shut up heaven from pouring down refreshing showers upon a guilty nation, in consequence of the prophet’s prayer, so she was now suffering from a similar cause. Elijah retaliates not, but calmly takes the dead child out of the mother’s bosom, and lays it on his own bed (verse 19), that there he may, in private, pray the more fervently for its restoration. Every epithet that the prophet poured forth on this occasion was big with meaning; his prayer was heard, and answered by the restoration of life to the child, and of gladness to the widow’s heart.

Since now, however, the long-protracted famine, with all its attendant horrors, failed to detach Ahab and his guilty people from their abominable idolatries, God mercifully gave them another opportunity of repenting and returning to Himself. For three years and six months (James v. 17), the destructive famine had spread its deadly influence over the whole nation of Israel. During this time the prophet was called upon passively to suffer God’s will; now he must once again resume the more active duties of life; he must make one great public effort more to reclaim his country from apostasy and ruin. According to the word of the Lord he returned to Israel; Ahab was yet alive, and unreformed; Jezebel, his impious consort, was still mad upon her idols; in a word, the prophets of Baal were prophesying lies, the priests were bearing rule by their means, and the people loved to have it so. Such was the state of things in Israel when Elijah once again stood before Ahab. Wishing not to tempt God by going unnecessarily into danger, he first presented himself to good Obadiah (1 Kings xviii. 7). This principal servant of Ahab was also a true servant of God, and on recognizing the prophet he treated him with honour and respect. Elijah requested him to announce to Ahab that he had returned. Obadiah, apparently stung by the unkindness of this request, replied, ‘What, have I sinned, that thou shouldst thus expose me to Ahab’s rage, who will certainly slay me for not apprehending thee, for whom he has so long and so anxiously sought in all lands, and in confederate countries, that they should not harbour a traitor whom he looks upon as the author of the famine,’ etc. Moreover, he would delicately intimate to Elijah how he had actually jeopardised his own life in securing that of one hundred of the Lord’s prophets, and whom he had fed at his own expense. Satisfied with Elijah’s reply to this touching appeal, wherein he removed all his fears about the Spirit’s carrying himself away (as 2 Kings ii. 11-16; Ezek. viii. 3; Acts viii. 39), he resolves to be the prophet’s messenger to Ahab. Intending to be revenged on him, or to inquire when rain might be expected, Ahab now came forth to meet Elijah; he at once charged him with troubling Israel, *i.e.*, with being the main cause of all the calamities which he and the nation had suffered. But Elijah flung back the charge upon himself, assigning the

real cause to be his own sin of idolatry. Regarding, however, his magisterial position, while he reproved his sin, he requests him to exercise his authority in summoning an assembly to Mount Carmel, that the controversy between them might be decided, whether the king or the prophet was Israel’s troubler. Whatever were the secret motives which induced Ahab to comply with this proposal, God directed the result. Elijah offered to decide this controversy between God and Baal, not by Scripture—for an appeal to its authority would have fallen powerless upon their *infidel minds*—but by a miracle from Heaven. As fire was the element over which Baal was supposed to preside, the prophet proposes (wishing to give them every advantage) that, two bullocks being slain, and laid each upon a distinct altar, the one for Baal, the other for Jehovah, whichever should be consumed by fire must proclaim whose the people of Israel were, and whom it was their duty to serve. The people consent to this proposal, because it may be they were not altogether ignorant how God had formerly answered by fire (Gen. iv. 4; Lev. ix. 24; Judg. vi. 21, xiii. 20; 1 Chron. xxi. 26; 2 Chron. vii. 1). Elijah will have summoned not only all the elders of Israel, but also the four hundred priests of Baal belonging to Jezebel’s court, and the four hundred and fifty who were dispersed over the kingdom. The former, however, did not attend, being perhaps glad to shelter themselves under the plea that Jezebel would not allow them to do so. Confident of success, because doubtless God had revealed the whole matter to him, he enters the lists of contest with the four hundred and fifty priests of Baal. Having reconstructed an altar which had once belonged to God, with twelve stones, as if to declare that the twelve tribes of Israel should again be united in the service of Jehovah, and having laid thereon his bullock, and filled the trench by which it was surrounded with large quantities of water, lest any suspicion of deceit might occur to any mind, the prophet gives place to the Baalites, allows them to make trial first. In vain did these deceived and deceiving men call from morning till evening upon Baal—in vain did they now mingle their own blood with that of the sacrifice, no answer was given, no fire descended.

Elijah having rebuked their folly and wickedness with the sharpest irony, and it being at last evident to all that their efforts to obtain the wished-for fire were vain, now, at the time of the evening sacrifice, offered up his prayer. The Baalites’ prayer was long, that of the prophet is short—charging God with the care of His covenant, of His truth, and of His glory—when, behold, ‘the fire came down, licked up the water, and consumed not only the bullock, but the very stones of the altar also.’ The effect of this on the mind of the people was what the prophet desired: acknowledging the awful presence of the Godhead, they exclaim, as with one voice, ‘the Lord He is God; the Lord He is God!’ Seizing the opportunity whilst the people’s hearts were warm with the fresh conviction of this miracle, he bade them take those juggling priests and kill them at Kishon, that their blood might help to fill that river which their idolatry had provoked God to empty by drought. All this Elijah might lawfully do at God’s direction, and under the sanction of His law (Deut. xiii. 5; xviii. 20). Ahab having now publicly vindicated God’s violated law by giving his royal sanction to

the execution of Baal's priests, Elijah informed him that he may go up to his tent on Carmel to take refreshment, for God will send the desired rain. In the meantime he prayed earnestly (Jas. v. 17, 18) for this blessing: God hears and answers: a little cloud arises out of the Mediterranean Sea, in sight of which the prophet now was, diffuses itself gradually over the entire face of the heavens, and now empties its refreshing waters upon the whole land of Israel! Here was another proof of the Divine mission of the prophet, from which, we should imagine, the whole nation must have profited; but subsequent events would seem to prove that the impression produced by these dealings of God was of a very partial and temporary character. Impressed with the hope that the report of God's miraculous actings at Carmel might not only reach the ear, but also penetrate, and soften, the hard heart of Jezebel; and anxious that the reformation of his country should spread in and about Jezreel also, Elijah, strengthened, as we are told, from on high, now accompanies Ahab thither on foot. How ill-founded the prophet's expectation was, subsequent events too painfully proved. Jezebel, instead of receiving Elijah obviously as the messenger of God for good to her nation, now secretly conceives and openly declares her fixed purpose to put him to death. The man whose prayer had raised the dead, had shut and opened Heaven, he who had been so wonderfully preserved by God at Cherith and Zarephath, and who dared to tax Ahab to his face with being Israel's troubler, is now so terrified by the knowledge of this vile woman's design that he fled into the wilderness and there longed for death—thus affording a practical evidence of what St. James says of him, that he was a man of like passions with us. His now altered state of mind would seem to have arisen out of an exaggerated expectation of what God designed to effect through the miracles exhibited to, and the judgments poured upon, this guilty nation. He seems to have thought that, as complete success did not crown the last great effort he had made to reform Israel, there could not be the slightest use in labouring for this end any longer. Alas! had he stood his ground at Jezreel, who can tell what effect this might have had even upon the mind of Jezebel, and, through her, upon the whole nation! But no; the great opportunity of usefulness is now lost, and he asks for death: still God will be gracious to him. He now, alone in the wilderness and at Mount Horeb, will at once touch his heart and correct his petulance by the ministration of His angel, and by a fearful exhibition of His Divine power. And having done this, revealing Himself in the gentle accents of a still voice, He announces to him that he must go and anoint Hazael king over Syria, Jehu king over Israel, and Elisha prophet in his own place, ere death can put a period to his labours. These persons shall revenge God's quarrels; one shall begin, another shall prosecute, and the third shall perfect the vengeance on Israel. When God had comforted His prophet by telling him of these three instruments he had in store to vindicate his own insulted honour, then he convinced him of his mistake in saying, 'I only am left alone,' etc., by the assurance that there were seven thousand in Israel who had not bowed the knee to Baal.

Leaving the cave of Horeb (B.C. 906), Elijah

now proceeded to the field where he found Elisha in the act of ploughing, and, without uttering a word, he cast his prophet's mantle over him, which was a symbol of his being clothed with God's spirit. The divine impression produced upon the mind of Elisha by this act of Elijah made him willing to leave all things and follow him.

For about six years from this calling of Elisha we find no notice in the sacred history of Elijah, till God sent him once again to pronounce sore judgments upon Ahab and Jezebel for the murder of unoffending Naboth (1 Kings xxi. 17, etc.) How he and his associate in the prophetic office employed themselves during this time we are not told. We may conceive, however, that they were much engaged in prayer for their country, and in imparting knowledge in the schools of the prophets, which were at Jericho and Beth-el. We need not dwell upon the complicated character of Ahab's wickedness (1 Kings xxi.), in winking at the murderous means whereby Jezebel procured for him the inalienable property of Naboth [AHAB; NABOTH]. When he seemed to be triumphing in the possession of his ill-obtained gain, Elijah stood before him, and threatened him in the name of the Lord (2 Kings ix. 21-26 inclusive), that God would retaliate blood for blood, and that not on himself only—'his seventy sons shall die, and (2 Kings x. 6) Jezebel shall become meat for dogs.' Fearing that these predictions would prove true, as those about the rain and fire had done, Ahab now assumed the manner of a penitent; and, though subsequent acts proved the insincerity of his repentance, yet God rewards his temporary abasement by a temporary arrest of judgment. We see, however, in after parts of this sacred history, how the judgments denounced against him, his abandoned consort, and children, took effect to the very letter.

Elijah again retires from the history till an act of blasphemy on the part of Ahaziah, the son and successor of Ahab, causes God to call him forth. Ahaziah met with an injury, and, fearing that it might be unto death, he, as if to prove himself worthy of being the son of idolatrous Ahab and Jezebel, sent to consult Baalzebub, the idol-god of Ekron; but the Angel of the Lord tells Elijah to go forth and meet the messengers of the king (2 Kings i. 3, 4), and assure them that he shall not recover. Suddenly reappearing before their master, he said unto them, 'Why are ye now turned back?' when they answered, 'There came a man up to meet us, and said unto us, Go, turn again unto the king that sent you, and say unto him, thus saith the Lord: is it not because there is no God in Israel that thou sendest to inquire of Baalzebub, the god of Ekron? Wherefore thou shalt not come down from that bed on which thou art gone up, but shalt surely die.' Conscience seems to have at once whispered to him that the man who dared to arrest his messengers with such a communication must be Elijah, the bold but unsuccessful reprover of his parents. Determined to chastise him for such an insult, he sent a captain and fifty armed men to bring him into his presence; but lo! at Elijah's word the fire descends from Heaven and consumes the whole band! Attributing this destruction of his men to some natural cause, he sent forth another company, on whom, though the same judgment fell, this impious king is not satisfied, till another and a similar effort is made to capture the prophet. The captain

of the third band implored mercy at the hands of the prophet, and mercy was granted. Descending at once from Carmel, he accompanies him to Ahaziah. Fearless of his wrath Elijah now repeats to the king himself what he had before said to his messengers, and agreeably thereto, the sacred narrative informs us that Ahaziah died.

The above was the last more public effort which the prophet made to reform Israel. His warfare being now accomplished on earth, God, whom he had so long and so faithfully served, will translate him in a chariot of fire to heaven. Conscious of this, he determines to spend his last moments in imparting divine instruction to, and pronouncing his last benediction upon, the students in the colleges of Beth-el and Jericho; accordingly, he made a circuit from Gilgal, near the Jordan, to Beth-el, and from thence to Jericho. Wishing either to be alone at the moment of being caught up to heaven; or, what is more probable, anxious to test the affection of Elisha (as Christ did that of Peter), he delicately intimates to him not to accompany him in this tour. But the faithful Elisha, to whom, as also to the schools of the prophets, God had revealed his purpose to remove Elijah, declares with an oath his fixed determination not to forsake his master now at the close of his earthly pilgrimage. Ere yet, however, the chariot of God descended for him, he asks what he should do for Elisha. The latter, feeling that, as the former's successor, he was, in a sense, his son, and, therefore, entitled to a double portion; or rather, conscious of the complicated and difficult duties which now awaited him, asks for a double portion of Elijah's spirit. Elijah, acknowledging the magnitude of the request, yet promises to grant it on the contingency of Elisha seeing him at the moment of his rapture. Possibly this contingency was placed before him in order to make him more on the watch, that the glorious departure of Elijah should not take place without his actually seeing it. Whilst standing on the other side of the Jordan, whose waters were miraculously parted for them to pass over on dry ground, and possibly engaged in discourse about anointing Hazael king over Syria, angels descended, as in a fiery chariot, and, in the sight of fifty of the sons of the prophets and Elisha, carried Elijah into heaven. Elisha, at this wonderful sight, cries out, like a bereaved child, 'My Father, my Father, the chariot of Israel and the horsemen thereof;' as if he had said, Alas! the strength and saviour of Israel is now departed! But no; God designed that the mantle which fell from Elijah as he ascended should now remain with Elisha as a pledge that the office and spirit of the former had now fallen upon himself.—J. W. D.

ELIM (אֵילִים; Sept. *Αλιμι*), the second station at which the Israelites encamped after the passage of the Red Sea. When they had sung their song of triumph over the host of Pharaoh, 'they went three days' journey into the wilderness of Shur, and found no water.' They then reached the station of Marah, whose waters were bitter; and afterwards proceeded to *Elim*, 'where were twelve wells of water (fountains, אֵינות), and threescore and ten palm-trees; and they encamped there by the waters' (Exod. xv. 27; Num. xxxiii. 8, 9). The route of the Israelites cannot be mistaken.

It lay along the desert plain on the eastern shore of the Red Sea. Elim must consequently have been in this plain, and not more than about fifty miles from the place of passage. With these data, and in a country where fountains are of such rare occurrence, it is not difficult to identify Elim. Near the south-eastern end of this plain, and not far from the base of Jebel Hummâm, the out-post of the great Sinai mountain-group, a charming vale, called *Wady Ghurundel*, intersects the line of route. It is fringed with trees and shrubbery, stunted palms, with their hairy trunks and dishevelled branches; tamarisks, their feathery leaves dripping with what the Arabs call manna; and the acacia, with its gray foliage and white blossoms (Stanley, *S. and P.* 69). Well might such a wady, in the midst of a bare and treeless waste, be called emphatically *Elim*, 'the trees.' Living fountains still exist in it. The principal one wells out at the foot of a sandstone rock, forming a pool of sparkling water, and sending out a tiny but perennial stream. This, in fact, is one of the chief watering-places in the peninsula of Sinai (Robinson, *B. R.* i. 68, *sq.*; Bartlett, *Forty days in the Desert*, p. 33, *sq.*) Wady Useit, some three miles nearer the mountains, is also a claimant for the title of Elim; but we can scarcely suppose that the thirsty host would pass Ghurundel; or that Moses, who knew the topography of the whole peninsula, would have failed to take advantage of it.—J. L. P.

ELIMELECH (אֵלְמֵלֵךְ, *God the King*; Sept. Ἐλιμέλεχ). A native of Bethlehem, husband of Naomi, and father by her of two sons, Mahlon and Chilion. In a time of scarcity he withdrew with his family into the land of Moab, where he died (Ruth i. 1-3). [NAOMI; RUTH.]

ELIOENAI. 1. Head of one of the families of the sons of Becher, Benjamin's second son (1 Chron. vii. 8). 2. A prince of the Simeonites (1 Chron. iv. 36). 3. A son of Neariah, Shemaiah's son (1 Chron. iii. 23, 24). 4. Seventh son of Meshemiah, one of the Korhite porters (1 Chron. xxvi. 3). 5. A priest in the time of Nehemiah (Neh. xii. 41). 6. One of the sons of Zattu (Ezra x. 27). 7. One of the sons of Hashum (Ezra x. 22).—S. D.

ELIPHAZ (אֵלִיפָז, *God the Strong*; Sept. Ἐλιφάσ). 1. A son of Esau and Adah (Gen. xxxvi. 10).

2. One of the three friends who came to condole with Job in his affliction, and who took part in that remarkable discussion which occupies the book of Job. He was of Teman in Idumæa; and as Eliphaz the son of Esau had a son called Teman, from whom the place took its name, there is reason to conclude that this Eliphaz was a descendant of the former Eliphaz. Some, indeed, even go so far as to suppose that the Eliphaz of Job was no other than the son of Esau. This view is of course confined to those who refer the age of Job to the time of the patriarchs.

Eliphaz is the first of the friends to take up the debate, in reply to Job's passionate complaints. The scope of his argument and the character of his oratory are described under another head [JOB, BOOK OF]. He appears to have been the oldest of the speakers, from which circumstance, or from

natural disposition, his language is more mild and sedate than that of any of the other speakers. He begins his orations with delicacy, and conducts his part of the argument with considerable address. His share in the controversy occupies chapters iv., v., xv., xxii.—J. K.

ELIPELET or ELIPHALET, אֵלִיפֶלֶט, or אֵלִיפֶלֶט (with a pause accent). 1. One of David's sons born to him in Jerusalem (2 Sam. v. 16; 1 Chron. iii. 6; xiv. 7). In the last passage the name is Elpalet. 2. Son of Ahasbai, one of David's mighty men (2 Sam. xxiii. 34). He is called Eliphai in 1 Chron. xi. 35. 3. One of the sons of Eshek, a descendant of Jonathan (1 Chron. viii. 39). 4. One of the sons of Adonikam in the time of Ezra (Ezra viii. 13). 5. One of the sons of Hashum in the time of Ezra (Ezra x. 33).—S. D.

ELISABETH (Ἐλισάβετ), wife of Zacharias, and mother of John the Baptist (Luke i. 5). The name in this precise shape does not occur in the O. T., where the names of few females are given. But it is a Hebrew name; the same, in fact, as Elisheba, which see.

ELISHA (אֵלִישָׁא, *God the deliverer*; Sept. Ἐλισαῖ). The manner, and the circumstances, in which Elisha was called to the prophetic office have been noticed in the article ELIJAH.

Anxious to enter at once upon the duties of his sacred office, Elisha determined to visit the schools of the prophets which were on the other side of the Jordan. Accordingly, returning to this river, and wishing that sensible evidence should be afforded, both to himself and others, of the spirit and power of his departed master resting upon him, he struck its waters with Elijah's mantle, when they parted asunder and opened a way for him to pass over on dry land. Witnessing this miraculous transaction, the fifty sons of the prophets, who had seen from the opposite side Elijah's ascension, and who were awaiting Elisha's return, now, with becoming reverence, acknowledged him their spiritual head.

These young prophets are not more full of reverence for Elisha than of zeal for Elijah; they saw the latter carried up in the air—they knew that this was not the first time of his miraculous removal. Imagining it therefore possible that the Spirit of God had cast him on some remote mountain or valley, they ask permission to go and seek him. Elisha, though fully aware that he was received up into glory, but yet fearful lest it should be conceived that he, from any unworthy motives, was not anxious to have him brought back, yielded to their request.

The divine authority by which Elisha became the successor of Elijah received further confirmation from the miracle whereby the bitter waters of Jericho were made sweet, and the place thereby rendered fit for the habitation of man (2 Kings ii. 19-22).

As the general visitor of the schools of the prophets, Elisha now passes on from Jericho to the college which was at Beth-el. Ere, however, he entered Beth-el, there met him from thence (2 Kings ii. 23, 24) little children, who, no doubt instigated by their idolatrous parents, tauntingly told him to ascend into heaven, as did his master

Elijah! There was in their expressions an admixture of rudeness, infidelity, and impiety. But the inhabitants of Beth-el were to know, from bitter experience, that to dishonour God's prophets was to dishonour himself; for Elisha was at the moment inspired to pronounce the judgment which at once took effect; God, who never wants for instruments to accomplish his purposes, caused two she-bears to emerge from a neighbouring wood, and destroy the young delinquents.

Jehoram, who reigned over Israel at this time, though not a *Baalite*, was yet addicted to the sin of Jeroboam; still he inherits the friendship of Jehoshaphat, the good king of Judæa, whose counsel, possibly, under God, had detached him from the more gross idolatry of his father Ahab. Wishing to see the now (B.C. 895) revolted king of Moab reduced to his wonted allegiance to Israel, Jehoshaphat determined to go up to battle against him, together with Jehoram, and his own tributary the king of Edom. These combined armies met together on the plains of Edom. Confident in their own powers they press onward against the enemy; but, not meeting him, another of a more formidable character started up before them. In the midst of the arid plains of Arabia Petræa they could find no water. Jehoram deplores the calamity into which they had fallen, but Jehoshaphat inquired for a prophet. On this, one of his courtiers said to Jehoram, 'Here is Elisha, the son of Shaphat, who poured water on the hands of Elijah.' No sooner were they made acquainted with the fact that Elisha was at hand than the three kings waited upon him. Elisha, feeling that it was nought but superstitious fear, joined to the influence of Jehoshaphat, which led Jehoram thus to consult him, now indignantly and tauntingly advises him to go for succour to the gods of his father Ahab and of his mother Jezebel. The reproved monarch was then led to acknowledge the impotency of those gods in whom he had trusted, and the power of that God whom he had neglected. Still the man of God, seeing the hollowness of Jehoram's humiliation, continues: 'As the Lord liveth, before whom I stand, surely were it not that I regard the presence of Jehoshaphat, the king of Judah, I would not look toward thee.' Having thus addressed Jehoram, Elisha desired a minstrel to be brought before him; and now, when his spirit is calmed by, perhaps, one of the songs of Zion, Jehovah approaches his prophet in the power of inspiration, as it is written, 'The hand of the Lord came upon him.' The minstrel ceases, and Elisha communicates the joyful intelligence that not only should water be miraculously supplied, but also that Moab should be overcome. 'Thus saith the Lord, make this valley full of ditches; ye shall not see wind, neither shall ye see the rain; yet that valley shall be filled with water that ye may drink.' Accordingly the next morning they realized the truth of this prediction. But the same water which preserves their lives becomes the source of destruction to their enemies. The Moabites, who had received intelligence of the advance of the allied army, were now assembled upon their frontiers. When the sun was up, and its rosy light first fell upon the water, their vanguard, beholding it at a distance, supposed it to be blood. Thus the notion was rapidly spread from one end to another that the kings were surely slain, having fallen out

amongst themselves. Hence there was a universal shout, 'Moab, to the spoil!' and they went forward confident of victory. But who can describe their consternation at beholding the Israelitish squadrons advancing to meet them sword in hand! At once they flee in the utmost panic and confusion; but in vain do they seek to defend themselves, God had decreed their punishment by, and subjugation to, Israel (2 Kings iii. 20, etc.)

The war having terminated in the signal overthrow of the revolters, Elisha, who had returned home, is again employed in ministering blessings. Another case arose to declare the peculiar character of his mission as messenger of mercy to man. The widow of a pious prophet presents herself before him (2 Kings iv.), informs him that her husband having died in debt, his creditors were about to sell her two only sons, which, by an extension of the law (Exod. xxi. 7, and Lev. xxv. 39), and by virtue of another (Exod. xxii. 3), they had the power to do; and against this hard-hearted act she implores the prophet's assistance. God will not, *without a cause*, depart from the general laws of his administration; Elisha therefore inquires how far she herself had the power to avert the threatened calamity. She replies that the only thing of which she was possessed was one pot of oil. By multiplying this, as did his predecessor Elijah in the case of the widow of Zarephath, he enabled her at once to pay off her debts, and thereby to preserve the liberty of her children (2 Kings iv. 1-7).

Having thus contemplated Elisha in the act of relieving the wants of a poor widow, we may with the more pleasure observe how, in the arrangement of God's providence, his own necessities were, in turn, supplied. In his visitations to the schools of the prophets it would seem that his journey lay through the city of Shunem, where lived a rich and godly woman. Wishing that he should take up, more than occasionally, his abode under her roof, she proposed to her husband to construct for him a chamber, where, far from the society of man, he might hold solitary and sweet communion with his God. The husband at once consented, and, the apartment being completed and fitted up in a way that shewed their proper conception of his feeling, the prophet becomes its occupant. Grateful for such disinterested kindness, Elisha delicately inquired of her if he could prefer her interest before the king or the captain of his host; for he must have had considerable influence at court, from the part he had taken in the late war. But the good woman declined the prophet's offer, by declaring that she would rather 'dwell among her own people,' and in the condition of life to which she had been accustomed. Still, to crown her domestic happiness, she lacked one thing—she had no child; and now, by reason of the age of her husband, she could not expect such a blessing. In answer, however, to the prayer of the prophet, and contrary to all her own conclusions, God causes her to conceive and bring forth a son (B.C. 891). This new pledge of their affection grows up till he is able to visit his fond father in the harvest-field, when all the hopes they had built up in him were overthrown by his being suddenly laid prostrate in death.

The bereaved mother, with exquisite tenderness towards the feelings of the father, concealed the

fact that the child was no more till she should see if it might please God, through Elisha, to restore him to life. She therefore hastens to Carmel, where she found the prophet, and informed him what had taken place. Conceiving probably that it was a case of mere suspended animation, or a swoon, the prophet sent Gehazi, his servant, to place his staff on the face of the child, in the hope that it might act as a stimulus to excite the animal motions. But the mother, conscious that he was actually departed, continued to entreat that he himself would come to the chamber of the dead. He did so, and found that the soul of the child had indeed fled from the earthly tenement. Natural means belong to man; those that are supernatural belong to God; we should do our part, and beg of God to do his. On this principle the prophet on this occasion acted. God blesses the means used, and answers the prayer presented by Elisha. The child is raised up and restored to the fond embrace of its grateful and rejoicing parents.

The next remarkable event in the history of Elisha was the miraculous healing of the incurable leprosy of the Syrian general Naaman, whereby the neighbouring nation had the opportunity of learning the beneficence of that God of Israel, whose judgments had often brought them very low. The particulars are given under another head. [NAAMAN.]

Soon after this transaction we find this man of God in Gilgal, miraculously neutralising the poison which had, by mistake, been mixed with the food of the prophets, and also feeding one hundred of them with twenty small loaves which had been sent for his own consumption (2 Kings iv. 38, etc.). In his tender regard to the wants of others, and in the miracles he wrought, how like he was to the Saviour of the world!

Notwithstanding the general profligacy of Israel, the schools of the prophets increased, B.C. 893. This was, doubtless, owing to the influence of Elisha. Accompanied by their master, a party of these young prophets, or theological students, came to the Jordan, and whilst one of them was 'felling a beam (for the purpose of constructing there a house) the axe-head fell into the water.' This accident was the more distressing because the axe was borrowed property. Elisha, however, soon relieved him by causing it miraculously to rise to the surface of the river.

The sacred record again leads us to contemplate the prophet's usefulness, not only in such individual points of view, but also in reference to his country at large. Does the king of Syria devise well-concerted schemes for the destruction of Israel? God inspires Elisha to detect and lay them open to Jehoram. Benhadad, on hearing that it was he that thus caused his hostile movements to be frustrated, sent an armed band to Dothan in order to bring him bound to Damascus. The prophet's servant, on seeing the host of the enemy which invested Dothan, was much alarmed, but by the prayer of Elisha God reveals to him the mighty company of angels which were set for their defence. Regardless of consequences, the prophet went forth to meet the hostile band: and having again prayed, God so blinded them that they could not recognise the object of their search. The prophet then promised to lead them to where they might see him with the natural eye. Trust-

ing to his guidance they followed on till they reached the centre of Samaria, when, the optical illusion being removed, Elisha stands in his recognised form before them! Who can tell their confusion and alarm at this moment? The king is for putting them all to death; but, through the interposition of him whom they had just before sought to destroy, they were honourably dismissed to their own country (B.C. 892). But a year had scarcely elapsed from this time when Benhadad, unmindful of Israel's kindness and forbearance, invests Samaria and reduces its inhabitants to such a state of starvation that an *ass's head*, a proscribed animal by the Levitical law, was sold for *four score pieces of silver*, and the fourth part of a cab—a quart or three pints—of dove's dung for five pieces of silver. [DOVE'S DUNG.] But this was not all. Parents were found, if not murdering, actually eating their deceased children. These very calamities Moses had foretold should come upon them if they forsook God (Deut. xxviii. 53-57). Still the king of Israel plunges deeper and deeper into sin, for he orders Elisha to be put to death, conceiving that it was his prayer which brought these sufferings upon himself and nation. But God forewarns him of his danger, and inspires him to predict to the wicked king that by to-morrow 'a measure of fine flour should be sold for a shekel, and two measures of barley for a shekel, in the gate of Samaria.' This assurance was not more comfortable than *incredible*; but when the lord on whose hand the king leaned expressed his disbelief, he was awfully rebuked by the assurance that he should see but not enjoy the benefit. The next night God caused the Syrians to hear the noise of chariots and horses; and conceiving that Jehoram had hired against them the kings of the Hittites and the king of Egypt, they fled from before the walls of Samaria—leaving their tents filled with gold and provisions—in the utmost panic and confusion. In this way did God, according to the word of Elisha, miraculously deliver the inhabitants of Samaria from a deadly enemy without, and from sore famine within, its walls: another prediction moreover was accomplished; for the distrustful lord was trampled to death by the famished people in rushing through the gate of the city to the forsaken tents of the Syrians (2 Kings vii.)

We are next led, in the order of the history, though *not in that of time*, to notice God's gracious care of the woman of Shunem. Having followed the advice of her kind friend Elisha, she resided in Philistia during the seven years' famine in Israel. On her return, however, she found that her paternal estate had been seized by others. She at once went to the king, who at the moment of her approach was talking with Gehazi as to Elisha having miraculously raised her son to life. This was a very providential coincidence in behalf of the Shunamite. The relation given by Gehazi was now corroborated by the woman herself. The king was duly affected, and gave immediate orders for the restoration of her land and all that it had yielded during her absence. We next find the prophet in Damascus, but are not told what led him thither (B.C. 885). Benhadad, the king, whose counsels he had so often frustrated, rejoiced to hear of his presence; and now, as if he had forgotten the attempt he once made upon his life, despatches a noble messenger, with a costly present, to consult him concerning his sickness and recovery. The

prophet replied that he should then die, though his indisposition was not of a deadly character. Seeing moreover, in prophetic vision, that the man Hazael, who now stood before him, should be king in Benhadad's stead; and that, as such, he would commit unheard-of cruelties upon his country, the prophet was moved to tears. How these painful anticipations of Elisha were realized the subsequent history of this man proved. Some twenty-three years had now elapsed since Elijah had prophesied the destruction of Ahab's guilty consort and family. But God's declared judgments are sure though delayed. Not only Ahab and Jezebel had been bloody and idolatrous, but Israel had become partakers in their crimes, and must share in the judgment. Elijah's complaint in the cave now received this late answer: 'Hazael shall plague Israel: Jehu shall plague the house of Ahab and Jezebel.' How fearfully these declared purposes of God took effect we may read in 2 Kings ix. and x.

For a considerable time after Elisha had sent to anoint Jehu king over Israel we find no mention of him in the sacred record. We have reason to suppose that he was utterly neglected by Jehu, Jehoahaz, and Joash, who resigned in succession. Neither the sanctity of his life nor the stupendous miracles he wrought had the effect of reforming the nation at large: much of the time of his latter years was, doubtless, spent in the schools of the prophets. At length, worn out by his public and private labours, and at the age of 90—during 60 of which he is supposed to have prophesied—he is called into eternity. Nor was the manner of his death inglorious; though he did not enter into rest as did Elijah (2 Kings xiii. 14, etc.). Amongst his weeping attendants was Joash, the king of Israel. He was probably stung with remorse for having so neglected to acknowledge his national worth; yet, though late, God does not suffer this public recognition of his aged and faithful servant to go unrequited. The spirit of prophecy again entering the dying Elisha, he informs Joash that he should prevail against the Syrians. Even after death God would put honour upon Elisha: a dead body having touched his bones came to life again! (2 Kings xiii. 21.)

Elisha was not less eminent than his predecessor Elijah. His miracles are various and stupendous, and, like those which were wrought by Christ, were on the whole of a *merciful* character. In this they were remarkably distinguished, in many instances, from the miracles of Elijah. In N. T. Elisha is Eliseus.—J. W. D.

ELISHAH (עִלְיָשָׁה; Sept. Ἐλισά), a son of Javan (Gen. x. 4), who seems to have given name to 'the isles of Elishah,' which are described as exporting fabrics of purple and scarlet to the markets of Tyre (Ezek. xxvii. 7). If the descendants of Javan peopled Greece, we may expect to find Elishah in some province of that country. The circumstance of the purple suits the Peloponnesus; for the fish affording the purple dye was caught at the mouth of the Eurotas, and the purple of Laconia was very celebrated. The name seems kindred to Elis, which, in a wider sense, was applied to the whole Peloponnesus; and some identify *Elishah* with *Hellas*. The uncertainty of all this speculation is most apparent: but it may be added that, if probable thus far, it is equally pro-

bable that the general name of 'the isles of Elishah' may also have been extended to the islands of the Ægean sea; a part of which may seem to have derived the name of Hellespont, sea of Hellas, from the same source.—J. K.

ELISHAMA (אֵלִישָׁמָא; Sept. Ἐλισαμά, Ἐλισαμαί). 1. Son of Ammihud, prince of the tribe of Ephraim at the census in the wilderness (Num. i. 10; ii. 18, etc.) He was the father of Nun, and the grandfather of Joshua (1 Chron. vii. 26). 2. One of David's sons, born to him in Jerusalem (2 Sam. v. 16; 1 Chron. iii. 8; xiv. 7); in ver. 6 of chap. iii. another Elishama appears among the sons of David, but as this is called Elishua in the other lists, it is probably a clerical error. 3. One of 'the seed royal,' and the grandfather of Ishmael who smote Gedaliah (2 Kings xxv. 25; Jer. xli. 1). Jewish tradition identifies him with the Elishama, son of Jekamiah mentioned 1 Chron. ii. 41 (Hieron. *Quæst. Heb.* in loc.) 4. Scribe to Jehoiakim (Jer. xxxvi. 12, 20, 21). 5. One of the Levites sent by Jehoshaphat through the cities of Judah to teach the people in the book of the law.—W. L. A.

ELISHEBA (אֵלִישֶׁבַע; Sept. Ἐλισαβέθ), the wife of Aaron (Exod. vi. 23); daughter of Amminadab and sister of Nahshon (Num. ii. 3).

ELISHUA (אֵלִישׁוּעַ; Sept. Ἐλισουέ, Ἐλισά; Alex. Ἐλισούς). One of David's sons born to him in Jerusalem (2 Sam. v. 15). [ELISHAMA.]

ELIUD (Ἐλιούδ), son of Achim, in the genealogy of our Lord (Matt. i. 15). This is the Grecised form of the Heb. אֵלִיהוּד, which, however, does not occur in the O. T.

ELIZAPHAN (אֵלִיצָפָן; Sept. Ἐλισαφάν). 1. A Levite chief of the house of the Kohathites at the time of the census in the wilderness (Num. iii. 30). His family is mentioned in the history of the times of David and Hezekiah (1 Chron. xv. 8; 2 Chron. xxix. 13). He is the same who is called Elzaphan in Exod. vi. 22, and Lev. x. 4, where it appears that he was cousin to Moses and Aaron, being the son of Uzziel, who was brother of Amram their father.—W. L. A.

ELKANAH (אֵלְקָנָה; LXX. Ἐλκανά; Vulg. *Elcana*), 'God-acquired' [cf. מְקַנְיָה; phœn. אֵלְקַנְיָעַל, etc.), a name of not unfrequent occurrence in the O. T., more especially among the descendants of Levi's second son, Kohath (Kehath).

1. A 'Son' of Korah, and founder of one of the 'Korahite families' (Exod. vi. 24). The apparent discrepancy between Elkanah's genealogy as given here, and that contained in 1 Chron. vi. 22, 23 (6, 7, in the Hebrew text); the former of which would make him the offspring of Korah himself, and brother of Ebiasaf (or Abiasaf), and Assir; while the latter makes him the son of Assir and the father of Ebiasaf, might be reconciled by assuming that בְּנֵי in Exod. does not mean 'sons' in the usual sense, but 'issue,' and that in reality the 'Assir, Elkanah, Ebiasaf' of both passages stand to each other in the relation of father, son, and grandson:—in which case, however, it would be rather strange to see the three

families of father, son, and grandson, mentioned as three distinct (surviving) families. Or, which seems more plausible, that Exod. does enumerate the sons of Korah: Assir, Elkanah, Ebiasaf, while in Chron. it is only intended to trace the pedigree of Samuel; and that the three names stand in the same order here by a curious but by no means uncommon coincidence. Assir, Korah's son, may have named his son after his own brother Elkanah, while upon his grandson was bestowed the name of his other brother Ebiasaf: just as we find the name of Elkanah constantly recurring in the several generations and branches of the family, or as Ebiasaf's son was again called Assir (in both genealogies, vi. 23 and vi. 37), after his great-grandfather. The Elkanah of Chron. vi. 23 would then be the nephew of the Elkanah of Exodus, whose own offspring is not given, whereas that of both his brothers (Ebiasaf's, vi. 37; Assir's, vi. 6), is enumerated for certain purposes. [KORAH.]

2. The father of Samuel the prophet. He is described (1 Sam. i. 1, ff.) as living at Ramathaim Zophim in the Mount Ephraim, and as being the 'son of Jeroham, son of Elihu, son of Tohu, son of Zuph, *Efrati*;' a genealogy which agrees in the main with the one given in the pedigree of Heman, 1 Chron. vi. 34, 35, but differs considerably from 1 Chron. vi. 27, ff. By both these lists of Chron., however, he is traced to Levi; a circumstance which has been thought by modern critics to stand in direct contradiction to the 'Ephrati' or 'Ephraimite' in Samuel, no less than to Elkanah's living in a place of Mount Ephraim, not enumerated among the Levitical towns. It has, therefore, been thought that the genealogies of Chron. were framed at a late period for the purpose of making Samuel, whom we see performing sacerdotal duties, a Levite by birth. But it has been forgotten, in the first place, that 'Ephrati' does not only mean a man of the tribe of Ephraim, but also a man of Ephrata, *i.e.*, Beth Lehem, where Elkanah's ancestors may have lived (cf. Ruth i. 2, 'Machlon and Chilion, *Ephratites* from Beth Lehem Jehuda; 1 Sam. xvii. 12, 'David, the son of the *Ephratite* from Beth-Lehem Jehuda.') Secondly, that the Levites were not by any means obliged to live in the forty-eight towns especially set aside for them, but were allowed to settle wherever they pleased (cf. Judg. xvii. 7, etc.) In fact, if a further proof of the authenticity of the independent lists in Chron. were needed, we should feel inclined to find it in the very discrepancies of some of the intermediate names, which point to the remote antiquity and genuineness of the former.

This Elkanah, who lived during the later years of Eli's high-priesthood, had, we are told, two wives, Hannah and Peninnah, the latter of whom he had probably married on account of the sterility of Hannah, 'whom he loved,' and to whom he doubled the presents which he was wont to give to his other wife, and 'all her sons and daughters' (their number is not stated), on the occasion of his annual sacrifice at Shiloh. Elkanah does not, at the time of the narrative at least, appear to have officiated as a Levite; either because he then perhaps had passed the age of fifty, when the Levitical duties ceased, or because the respective Mosaic ordinances had in some manner fallen into disuse, and were not restored to their pristine authority until David's time. This would

also solve the difficulty of Hannah's dedicating the son she might have 'to the Lord,—all his days;' a thing which, although incumbent upon her, was not customary at that time. Another way of explaining this her vow, might be, to assume that she referred to those early years of her son (up to five-and-twenty, according to Num. viii. 24, or up to thirty according to Num. iv. 3, 23, 30, 47), before his legal inauguration into the Levitical office. Little more is known of Elkanah. He appears to have been in easy circumstances, and of a pious and good-natured disposition. Hannah bore him three sons and two daughters after the birth of Samuel. Whether the 'Ephrati' refers to him or to his great-grandfather Zuph is a moot point. The Accent (a Tipchah, 'Rex' or principal sign of division) under Zuph, and the absence of the article (ה) in Ephrati, seem to indicate that it refers to the first name, viz., to Elkanah, and it has, indeed, by most versions been taken in this sense. The Midrash, followed by Targum Jonathan, makes Elkanah a prophet: 'מִן רִמְתַּיִם צוֹפִים, i.e., מִן מוֹתֵיִם צוֹפִים.' For 'from Ramathaim-Zophim' read 'Mathaim-Zophim'—'One of the two hundred Seers' (Jalk. ad loc.) מוֹתְמֵיִר נְבִיאִים, 'of the disciples of the prophets' (Jonathan).

'Korahites' of the same name are the following four:—

3. The father of Amasai and Achimoth (1 Chron. vi. 25). (The beginning of the following verse has evidently a corrupt reading.)

4. A son of Mathath (1 Chron. vi. 35), perhaps identical with the former.

5. A son of Joel (1 Chron. vi. 36).

6. One of the 'mighty men' who rallied round David at Ziklag before his assuming the crown (1 Chron. xii. 6).—

7. Another Levite, but of uncertain family; the father of Asa, dwelling in a village of the Netophathites (1 Chron. ix. 16).

8. A man in high office. 'Second to the king' at the court of Ahaz, the king of Judah (2 Chron. xxviii. 7). He fell in an encounter with the Israelites by the hands of Zichri, an Ephraimite.—E. D.

ELKOSH. The prophet Nahum is called an Elkoshite (אֶלְקוֹשִׁי), that is, a native of some place called Elkosh (Nahum i. 1). There was a village of this name in Galilee in the time of Jerome; but the prophet was more probably born of Jewish exiles at Elkosh or Alkush in Assyria, near Mosul. The Jews themselves believe that he was born and buried there; and Jewish pilgrims from all parts still visit his alleged tomb. On this Mr. Rich remarks, 'The Jews are generally to be trusted for local antiquities. Their pilgrimage to a spot is almost a sufficient test. The unbroken line of tradition which may have been handed down among them, and their pertinacious resistance of all innovation, especially in matters of religious belief, render their testimony very weighty in such matters' (*Residence in Koordistan*, p. 111). Alkosh is thirty-four miles north of Mosul (Nineveh), and is situated a little way up the side of a mountain, in the range to which it gives its name. It is entirely inhabited by Chaldee Christians, who have a convent higher up the mountains.—J. K.

ELLASAR (אֶלְאָסָר; Sept. Ἐλλάσαρ), a territory in Asia, whose king, Arioch, was one of the

four who invaded Canaan in the time of Abraham (Gen. xiv. 1). The association of this king with those of Elam and Shinar, indicates the region in which the kingdom should be sought; but nothing further is known of it, unless it be the same as Thelassar mentioned in 2 Kings xix. 12. [THELASSAR.]

ELLYS, SIR RICHARD, BART., of Wyham, Lincolnshire, a gentleman of scholarly habits and extensive intercourse with the learned men of his day. He was the great-grandson of the illustrious Hampden. From his intimacy with Dutch literati he is supposed to have studied in Holland. The Wetsteins dedicated to him their edition of Suicer's *Thesaurus*, Amst. 1728; Abr. Gronovius his edition of Aelian's *Var. Hist.*, Amst. 1731; and Horseley, his *Britannia Romana*. He was the friend and correspondent of Boston of Ettrick, whose *Tractatus Stigmatologicus* was dedicated to him by D. Millius [BOSTON], and in the appendix to Boston's *Memoirs* are several letters that passed between them. Ellys held at first with the Remonstrant party, but became afterwards a decided Calvinist; he was a Dissenter, and belonged to the congregation of Dr. Calamy, and afterwards to that of Thomas Bradbury. He sat in Parliament as member for Boston from 1715 to 1734; his death took place 21st Feb. 1743, and as he died *sine prole*, the baronetcy became extinct with him. His only work is entitled, *Fortuita Sacra; quibus subjicitur Comment. de Cymbalis Veterum*, 8vo, Roter. 1727. It contains dissertations on various passages of Scripture, written by the author for his own private use, but which his friends induced him to publish. These 'discover very considerable critical talents, and great acquaintance with the language of the Bible'—(Orme). His essay on the cymbals of the ancients shews his acquaintance with classical literature. In the dedication to him of Suicer's *Thesaurus* his scholarship is highly lauded.—W. L. A.

ELM. This occurs only Hosea iv. 13. [ALAH.]

ELNATHAN (אֶלְנָתָן; Sept. Ἐλλανασθάμ, Ἐλνάθαν, Νάθαν), the father of Nehushta, mother of Jehoiachin; distinguished as 'of Jerusalem' (2 Kings xxiv. 8). He was sent by Jehoiakim on an embassy to Egypt, to bring Urijah, who had fled thither to escape the wrath of the king (Jer. xxvi. 22). In xxxvi. 12, he is described as one of 'the princes.' He was one of those who in vain entreated the king not to destroy the roll containing Jeremiah's prophecy against Israel and Judah (ver. 25). Three others of this name are mentioned, Ezra viii. 16.—†

ELOHIM. [GOD.]

ELON. 1. (אֵילָן; Sept. Ἐλών, Αἰλῶν; Alex. Ἐλώμ), the father of one of Esau's wives (Gen. xxvi. 34; xxxvi. 2). [BASHEMATH].

2. (אֵילָן; Sept. Ἄλλων; Alex. Ἀσρών), the second son of Zebulon (Gen. xlvi. 14), from whom descended the family or clan of the Elonites (Num. xxvi. 26).

3. (אֵילָן; Sept. Αἰλῶν), one of the judges of Israel (Judg. xii. 11, 12). He was buried at Aijalon which was probably named after him, the

two words differing only in their vocalization. The Vulg. gives them both Aijalon.—W. L. A.

ELSLEY, REV. HENEAGE, M.A., chiefly known as the editor of a useful manual of 'Annotations on the four gospels, compiled and abridged for the use of students,' which was first published anonymously in 2 vols. 8vo, London, 1799. A second edition appeared with annotations on the Acts in 3 vols. 1812. This work, which has been commended by bishops Lloyd, Van Mildert, Sumner, and others, has passed through many editions, the last and best being that in one vol. 8vo, revised and corrected by R. Walker, M.A., of Lincoln College, Oxford, 1844. Elsey was educated at St. Peter's College, Cambridge, and was vicar of Burneston, near Bedale in Yorkshire. The manual is a compilation from Beza, Beausobre, Calmet, Le Clerc, Du Pin, Doddridge, Erasmus, Macknight, Grotius, Lightfoot, Whitby, and others, with critical and philological notes, and a valuable introduction.—S. L.

ELSNER, JAKOB, professor at the Joachim gymnasium, and second preacher at the Domkirche in Berlin, was born at Saalfeld in March 1692, and died 8th Oct. 1750. He is the author of *Observationes Sacræ in N. F. libros*, 2 vols., Ultraj. 1720-28, a work which illustrates the N. T. from the Greek classics, and which occupies a high place among such works. He published also *Der Brief an die Philipper in predigten erklärt*, 4to, 1741. After his death appeared *Commentarius in Evangelia Matthæi et Marci*, 3 vols. 4to, Zwoll. et Traj. ad Rhen., 1767-73.—W. L. A.

ELUL (אֱלוּל, Neh. vi. 15; Sept. Ἐλουλ; the Macedonian Γορπιαῖος) is the name of that month which was the sixth of the ecclesiastical, and twelfth of the civil, year of the Jews, and which began with the new moon of our September. Several unsatisfactory attempts have been made to find a Syro-Arabian etymology for the word. The most recent derivation, that of Benfey, deduces it, through many commutations and mutilations, from an original Zend form *haurvatât* (*Monatsnamen*, p. 126). According to the Megillat Taanith, the 17th day of this month was a public fast for the death of the spies who brought back a bad report of the land (Num. xiv. 37).—J. N.

ELYMAS (Ἐλύμας), an appellative commonly derived from the Arabic *علم* *Aliman* (*a wise man*), which Luke interprets by ὁ μάγος: it is applied to a Jew named Bar-Jesus, mentioned in Acts xiii. 6-11 (*v. Neander's Hist. of first planting of the Christian Church*, i. p. 125, Eng. transl.) A very different but less probable derivation of the word is given by Dr. Lightfoot in his Hebrew and Talmudical Exercitations on the Acts (*Works*, viii. p. 461), and in his *Sermon on Elymas the Sorcerer* (*Works*, vii. p. 104). Chrysostom observes, in reference to the blindness inflicted by the Apostle on Bar-Jesus, that the limiting clause '*for a season*,' shews that it was not intended so much for the punishment of the sorcerer as for the conversion of the deputy. *Εἰ γὰρ κολλάζοντος ἦν, διαπαντός ἂν αὐτὸν ἐποίησε τυφλόν, νῦν δὲ οὐ τοῦτο, ἀλλὰ πρὸς καιρὸν, ἵνα τὸν ἀνθρώπου κερδάσῃ.* Chrysost. in *Acta Apost. Homil.* xxviii.; *Opera*, tom. ix. p. 241.—J. E. R.

ELZEVIUS, THE. The real name of this family, who are supposed to have come originally from Liege or Louvain, was Elzevier. They were printers and booksellers at Utrecht, the Hague, Amsterdam, and Leyden, but especially at the two latter places. They were inferior in learning, and in their Greek and Hebrew works, to the Stephens, but surpassed them in the neatness, elegance, and delicacy of their small types. The distinguished members of this family flourished between 1592 and 1680. The name is first found on an edition of Eutropius, published in 1592 by Louis, who was a bookseller at Leyden. He was the first to mark the distinction between the vowels *i* and *u*, and the consonants *j* and *v*, though to do so had been recommended by others before him. He did not, however, distinguish these letters in capitals; this practice was introduced by Louis Zetzner of Strasburg. About 1617 Louis Elzevir retired from business, and was succeeded by his eldest son Matthew, who was born in 1565. The most famous members of the family were two sons of Matthew, Bonaventura and Abraham, who formed a partnership in printing at Leyden in 1626, which lasted till 1652. It was from their press that the elegant editions proceeded which rendered their family so celebrated. Their Virgil, Terence, and other Latin classics, as well as their New Testament, and Psalter adorned with red letters, are masterpieces of typography for accuracy and beauty. It is said that they employed women to correct their proofs as a means of insuring greater accuracy, as it was supposed that they would be less likely to introduce any arbitrary alteration of the text. Abraham and Bonaventura both died 1652. Their business was carried on by John the son of Abraham, and by Daniel the son of Bonaventura. At the death of John his widow continued the business. But Daniel, who left his cousin, in 1655 set up at Amsterdam, and died in 1680, leaving his business to the care of his widow. Daniel was the last of the Elzevirs who was noted as a printer. Descendants of the family still remain, and one of them was governor of Curaçoa in 1820. Several catalogues of the Elzevir works were put forth, but the last and best was that by Daniel in 1674. Brunet's *Manuel du Libraire*, contains a copious list of their works. The individual names of the Elzevirs do not appear on the title-pages of their books, but generally *Apud Elzevirios, Ex officinâ Elzeviriorum* or *Elzevirianâ*. The motto of the Batavian republic was also adopted, *Concordiâ res parvæ crescunt*; and in some editions the name Elzevir was symbolised by the design of a pile of wood burning, *Els* or *Elzen* in Dutch meaning alder, and *vuur*, fire.—S. L.

EMBALMING. Embalming is the art of preserving bodies by the use of medicaments. Two ancient kinds of embalming are mentioned in Scripture, the Egyptian and the Jewish.

1. Ancient Egyptian embalming is twice spoken of; Jacob and Joseph having died and been embalmed in Egypt. Before noticing what is said respecting them, we must speak of the Egyptian practice.

1. The feeling which led the Egyptians to embalm the dead probably sprang from their belief in the future reunion of the soul with the body. Such a reunion is distinctly spoken of in the Book of the Dead (Lepsius, *Todtenbuch*, ch. 89 and *passim*), and

obscure as is the subject, probably on account of the obscurity of the details of the Egyptian belief, the statements are sufficiently positive to make this general conclusion certain. This conviction would naturally make the Egyptians anxious to preserve the bodies of the dead, and would occasion the invention of their famous art of embalming, which was applied not only to men but also to the sacred animals. While tracing the art to this feeling, we might suppose that it was more readily received by a people which probably shared the mysterious reverence for the dead which characterizes a certain portion of our race, some nations of which practise or have practised a kind of embalming, without, as far as we can trace, any idea of the resurrection of the body.* But it must be observed that the art is confined to the ancient Egyptians and nations which may be supposed with probability to have borrowed it from them, save only the Guanches and the ancient Peruvians, and even their use of this custom, when we recollect the legend of the island Atlantis and the American picture-writing and pyramids, may indicate something more than a common descent.

The immediate origin of the Egyptian methods of embalming has been ingeniously conjectured to have been the discovery that bodies buried in the sand of Egypt were preserved by the natron with which it is impregnated.

During the period to which most of the mummies of certain date belong, which commences with the 18th dynasty and extends to the overthrow of paganism, various kinds of embalming were used, according to the outlay made by the relations of the deceased. But it is probable that in earlier times there was greater simplicity. The portion of a mummy found in the Third Pyramid, which was almost certainly that of a king (the size leaves no doubt as to the sex), or at least of some one of the blood royal, is in a very coarse cloth, so that it has been supposed to be the remains of an Arab workman left here when the pyramid was rifled, but incorrectly, as the mummy-spices are to be traced by sight and smell. Herodotus describes three methods of embalming, according to cost, beginning with the most costly (ii. 85-89), and Diodorus Siculus mentions the same number (i. 91); but as it is impossible to class all mummies that have been examined under some one of these, instead of discussing the passages we prefer giving the main results of modern examinations. Mr. Pettigrew, in his *History of Egyptian Mummies*, while acknowledging the faultiness of the statement of Herodotus yet mainly follows it, though quoting the scientific classification of M. Rouyer in the *Description de l'Égypte* (2d ed. vi. pp. 461-489). In his remarks on the different kinds of mummies, the former is evidently in want of materials for the description of any but the most costly, for he fully illustrates the first kind from known specimens; but in speaking of

the second, he cites only two, and of the third, not one, only alluding to the statements of modern travellers. He depends mainly upon the examinations of mummies brought to Europe, which are generally of the more costly kinds, which were painted with mythological subjects, or otherwise adorned, whereas M. Rouyer describes what he observed in Egypt itself. His classification is as follows:—

(1.) Mummies having an incision in the left flank for the removal of the viscera.

a. Prepared with balsamic matter.

b. Prepared with natron (salted).

(2.) Mummies without the ventral incision.

a. Salted and filled with bituminous matter less pure than that of the others, called pissasphaltus.

b. Salted and dried.

There are some exceptions to this classification, as when in a mummy prepared in a costly manner there is no ventral incision.

In the more costly kind of mummies the brain has been usually extracted through the nostrils by a skilful operation, and the head been either washed or filled with medicaments, of which remains have been found, as well as of insects, which were enclosed in the operation of embalming, and lived for some time in this strange prison.* In many cases, however, the brain was not removed at all, and yet the body very carefully and perfectly preserved (*History of Egyptian Mummies*, p. 56). An incision was generally made in the flank, through which the viscera were extracted, and having been prepared, were either placed in four vases, having the heads of the four genii of Amenti or Hades, sons of Osiris, or were wholly or partly replaced, in the latter case being sometimes enclosed in bandages. According to Herodotus the great cavities of the body were, after being cleansed, filled with aromatics, of which remains have been found in examples examined, and the body was steeped in a solution of natron, in which it remained for seventy days, but for no longer period. 'This,' Mr. Pettigrew observes, 'would appear to be precisely the time necessary for the operation of the alkali on the animal fibre' (*Ibid.*, p. 61). The body was then washed, and next, according to Herodotus, it was bandaged. Diodorus Siculus says, however, that it was prepared with oil of cedar and other things for thirty (*var.* forty) days or more, the passage being deficient in distinctness. Mr. Pettigrew supposes that in this stage 'the body must have been subjected to a very considerable degree of heat; for the resinous and aromatic substances have penetrated even into the innermost structure of the bones, an effect which could not have been produced without the aid of a high temperature, and which was absolutely necessary for the entire preservation of the body' (*Ibid.*, p. 62). M. Rouyer is of the same opinion.†

* 'From one skull more than 270 tolerably-perfect specimens were taken; and from the remaining fragments of others, probably double that number lived, propagated their species, and died, without ever seeing the light.'—*History*, pp. 54, 55, note.

† 'M. Rouyer, I find, also conceives that the bodies must have been put into stoves, or kept at a certain temperature in convenient vessels, to incorporate most intimately the resinous substances with the animal matter. . . . 'Cette opération, dont aucun historien n'a parlé, était sans doute la principale et la plus importante de l'embaumement.'—*Descr. de l'Égypte*, p. 471. (*History*, p. 62.)

* We must draw attention to the manner in which the Egyptian belief in this great doctrine confirms the supposition that many nations preserved some remains of a primæval revelation, and signally refutes the old calumny that the Law, which held out temporal rewards and punishments, was derived from the Egyptian religion, though we can quite understand that the Israelites knew a truth believed by all the Egyptians and not contradicted in the Law.

The surface of the body was in one example covered with 'a coating of the dust of woods and barks; nowhere less than one inch in thickness,' which 'had the smell of cinnamon or cassia' (*Ibid.*, pp. 62, 63). At the same stage plates of gold were sometimes applied to portions of the body, or even its whole surface. Before enwrapping, the body was always placed at full length, with no variety save in the position of the arms.

In mummies prepared in an inferior manner the brain does not appear to have been extracted, and the viscera seem to have been destroyed before withdrawal. Resinous and aromatic medicaments are supposed not to have been used. It is said by Herodotus that the intestines were filled with oil of cedar, and the body put in a solution of natron apparently for seventy days (*ταριχεύουσι τὰς προκειμένας ἡμέρας*—compare, of the costly mode, *ταριχεύουσι λίτρω, κρίναντες ἡμέρας ἐβδομήκοντα*, and the same of the cheapest). In confirmation of this statement, a mummy has been examined, of which 'the skin and bones alone remained, the flesh was entirely destroyed by the natrum' (*Hist.*, p. 69). The cheapest mummies are separated by M. Rouyer into those salted and filled with piss-asphaltus, and those that were only salted. In the former kind, the body is coated with this mineral pitch, which has so thoroughly penetrated it, that the two are not to be distinguished. He supposes that such mummies were submerged in liquid pitch. In Egypt they are the most common. The mummies simply salted are generally found in caves abounding in saline matters; and their preparation may be regarded as the rudest kind of embalming, practised either in very remote times or when the usual substances could not be obtained, or else when the decay of the Egyptian religion had brought embalming into neglect, perhaps on all these occasions, for such a simple mode of preservation may have been the oldest, and have never fallen into complete disuse. Both these kinds of mummies have been imperfectly described.

Our knowledge of the medicaments used in the preparation of mummies is as yet very incomplete. We cannot trust the statements of the Greek writers, nor are we always sure of the exact meaning of the terms they employ, and the chemical analysis of the substances discovered in the examination of mummies is anything but conclusive. The principal material in the more costly mummies appears to have been asphalt, either alone or mixed with a vegetable liquor, or so mixed with the addition of resinous and aromatic ingredients. Mr. Pettigrew supposes resinous matters were used as a kind of varnish for the body, and that pounded aromatics were sprinkled in the cavities within. The natron, in a solution of which the mummies were placed in every method, appears to have been a fixed alkali. It might be obtained from the Natron Lakes and like places in the Libyan desert. Wax has also been discovered.*

The embalming having been completed, the body was wrapped in bandages. There has been much difficulty as to the material: † but it seems

* See the whole chapter on the medicaments in Mr. Pettigrew's *History* (p. 75, *seqq.*) The author is in error where he cites as an ancient authority the modern Alexander ad Alexandro (*Ibid.*, p. 85, and note †).

† See the chapter on the bandages (*Ibid.*, p. 89,

certain that linen was invariably used. Though always long, they vary in this respect; and we know no authenticated instance of their exceeding 700 yards, though much greater measures are mentioned.* The width is also very various, but it is not generally more than seven or eight inches. The quantity of cloth used is best ascertained from the weight. The texture varies, in the cases of single mummies, the coarser material being always nearer to the body. The bandages are found to have been saturated with asphalt, resin, gum, or natron; but the asphalt has only been traced in those nearer the body: probably the saturation is due to the preparation of the mummies, and does not indicate any special preparation of the clothes. The beauty of the bandaging has been the subject of great admiration. The strips were very closely bound, and all directions were adopted that could carry out this object. Mr. Pettigrew is of opinion that they were certainly applied wet. Various amulets and personal ornaments are found upon mummies and in their wrappings; the former were thought to be of use to the soul in its wanderings, and they were placed with the body from the belief in the relation between the two after death. With these matters, and the other particulars of Egyptian mummies, we have little to do, as our object is to shew how far the Jewish burial-usages may have been derived from Egypt. The body in the cases of most of the richer mummies, when bandaged, has been covered with what has been termed by the French a *cartonage*, formed of layers of cloth, plastered with lime on the inside. The shape is that of a body of which the arms and legs are not distinguishable. In this shape every dead person who had, if we may believe Diodorus, been judged by a particular court to be worthy of the honour of burial, was considered to have the form of Osiris, and was called by his name. It seems more probable, however, that the tribunal spoken of was that of Amenti, 'the hidden,' the Egyptian Hades, and that the practice of embalming was universal. The *cartonage* of the more costly mummies is generally beautifully painted with subjects connected with Amenti. Mummies of this class are enclosed in one or even two wooden cases, either of sycamore, or, rarely, of cedar. The mummies of royal and very wealthy persons were placed in an outer stone case, within which there was a wooden case, and, probably, sometimes two such cases. †

seqq.; especially p. 91, note §). Mr. Pettigrew states as his conclusion: 'The bandages . . . we have seen, are principally composed of cotton, though occasionally of linen,' p. 95. Sir Gardner Wilkinson positively states the mummy-clothes to be linen (Rawlinson's *Herod.*, vol. ii. p. 142, n. 6). In the British Museum *Synopsis* and *Guide*, the Egyptian wrappers are said to be of linen, doubtless on Mr. Birch's authority.

* Mention is made of bandages, twenty, thirty, and even forty-six times round the body, but we cannot compute their length without more precise information, as they were very variously arranged.

† In the British Museum *Guide* the following account is given, no doubt on Mr. Birch's authority, which we insert, as it differs somewhat from ours. 'The more costly process was as follows:—The brain having been extracted, and the viscera removed through an opening cut in the left side with a stone, the body was, in earlier times, prepared

2. The records of the embalming of Jacob and Joseph are very brief. In the former case we read, 'And Joseph commanded his servants the physicians to embalm his father: and the physicians embalmed Israel. And forty days were fulfilled for him; for so are fulfilled the days of embalming: and the Egyptians mourned for him threescore and ten days' (Gen. l. 2, 3). Of Joseph we are only told that 'they embalmed him, and he was put in a coffin in Egypt' (ver. 26). The verb הִנְטָה, here rendered in the sense of embalming, signifies, 'he or it spiced or seasoned.' The phrase יָמֵי הַהֲנִיטִים we have rendered 'the days of embalming,' following Gesenius's translation of the second word (*Lex. s. v.*) The word אָרוֹן, though commonly meaning 'an ark or chest,' is evidently in the second quotation a coffin. It should be remarked, that in Joseph's case the embalming must have been thorough, as Moses at the Exodus carried his body into Canaan. The motive of embalming in these instances was evidently that the strong desire of these patriarchs to be buried in the Land of Promise might be complied with, although, had this not been so, respect would probably have led to the same result. That the physicians were employed by Joseph to embalm his father may mean no more than the usual embalmers, who must have had medical and surgical knowledge, but it is not unlikely that the kings and high officers were embalmed by household physicians. The periods of forty days for embalming, and seventy for mourning, are not easily reconciled with the statement of Herodotus, who specifies seventy days as the time that the body remained in natron. Perhaps the periods varied in different ages, or the forty days may not include the time of steeping in natron. Diodorus Siculus, who, having visited Egypt, is scarcely likely to have been in error in a matter necessarily well known, speaks of the anointing of the body at first with oil of cedar and other things for above thirty or forty days (ἐφ' ἡμέρας πλείους τῶν τριάκοντα; some MSS. τεσσαράκοντα). This period would correspond very well with the forty days mentioned in Genesis, which are literally 'the days of spicing,' and indicate that the latter denoted the most essential period of embalming. Or, if the same period as the seventy days of Herodotus be meant by Diodorus, then there would appear to have been a change. It may be worth noticing, that Herodotus, when first mentioning the steeping in natron, speaks of seventy days as the extreme time to which it might be lawfully prolonged (ἡμέρας ἑβδομηκοντα πλείνας δὲ τούτων οὐκ ἔστι ταριχέειν). This would seem

with salt and wax; in later times, steeped or boiled in bitumen; then wrapped round with bands of linen, sometimes 700 yards in length; various amulets being placed in different parts, and the whole covered with a linen shroud, and sometimes decorated with a network of porcelain bugles. It was then enclosed in a thin case formed of canvas, thickened with a coating of stucco, on which were painted figures of divinities and emblems of various kinds, as well as the names and titles of the deceased, and portions of the Ritual [or Book] of the Dead. The whole was then enclosed in a wooden coffin, and sometimes deposited in a stone sarcophagus,' pp. 94, 95.

to render it possible that the seventy days in the time of Herodotus was the period of mourning, as it was not to be exceeded in what appears to have been the longest operation of embalming. The division of the seventy days mentioned in Genesis into forty and thirty, may be suggested if we compare the thirty days' mourning for Moses and for Aaron, in which case the seventy days in this instance might mean until the end of seventy days. It is also to be remarked that Diodorus speaks of the time of mourning for a king being seventy-two days, apparently ending with the day of burial (i. 72). Joseph's coffin was perhaps a stone case, as his mummy was to be long kept ready for removal.

ii. It is not until long after the Exodus that we find any record of Jewish embalming, and then we have, in the O. T., but one distinct mention of the practice. This is in the case of King Asa, whose burial is thus related: 'And they buried him in his own sepulchres, which he had digged for himself in the city of David, and laid him in the bed [or rather 'coffin,' not 'bier'] which he had filled [or 'which was filled'] with perfumes and spices compounded by the apothecaries' art; and they made for him an exceeding great burning' (2 Chron. xvi. 14). The burning is mentioned of other kings of Judah. From this passage it seems that Asa had prepared a bed, probably a sarcophagus, filled with spices, and that spices were also burnt at his burial. In the accounts of our Saviour's burial the same or similar customs appear to be indicated, but fuller particulars are given. We read that Nicodemus 'brought a mixture of myrrh and aloes, about an hundred pound [weight].' The body they wound 'in linen clothes with the sweet spices, as the manner of the Jews is to prepare for burial' (John xix. 39, 40). St. Mark specifies that fine clothes were used (xv. 46), and mentions that the women who came to the sepulchre on the morning of the resurrection, 'had bought sweet spices, that they might come and anoint him' (xvi. 1). St. Luke relates that the women went to see the sepulchre, 'And they returned, and prepared sweet spices and ointments' (xxiii. 56). Immediately afterwards he speaks of their 'bringing the sweet spices which they had prepared' (xxiv. 1), on the second day after. Our Lord himself referred to the use of ointment in burial-ceremonies (πρὸς τὸ ἐνταφιάζειν) 'for the preparation for burial,' when He commended the piety of the woman who had anointed his head with 'very precious ointment' (Matt. xxvi. 6-13), and spoke in like manner in the similar case of Mary the sister of Lazarus (John xii. 3-8). The customs at this time would seem to have been to anoint the body and wrap it in fine linen, with spices and ointments in the folds, and afterwards to pour more ointment upon it, and perhaps also to burn spices. In the case of our Saviour the hurried burial and the following of the Sabbath may have caused an unusual delay. Ordinarily everything was probably completed at once.

Herodotus and Diodorus Siculus speak of the use of myrrh in Egyptian embalming, but we do not find any mention of aloes. The wrapping in fine linen is rather contrary to the Egyptian practice than like it, when we remember that the coarser mummy-bandages are those which immediately enfold the body, and would best correspond to the clothes used by the Jews.

The Jewish custom has therefore little in common with the Egyptian. It was, however, pro-

bably intended as a kind of embalming, although it is evident from what is mentioned in the case of Lazarus, who was regularly swathed (John xi. 44), that its effect was not preservation (ver. 39). It is probable that the sojourn in Egypt had left an impression that led to the use of spices and ointments, and that, like many harmless or useful practices thus derived, this was not forbidden. Those who endeavour to trace the Law to the Egyptian religion, may be reminded of the silence of the former as to burial-rites, and the extreme importance attached to them in the latter.—R. S. P.

EMERALD. [NOPHECH.]

EMERODS (עִמְרֹדִים, printed with the vowels belonging to מְחֹרִים which is invariably the kerif for it, perhaps euphemistically; meaning *tubercles, tuberculations*), the word used in the E. V. to denote the disease with which God threatens to punish the disobedient Israelites (Deut. xxviii. 27), and which He inflicted on the Philistines for their profanation of the ark (1 Sam. v. 6, 9, 12, 17; vi. 4, 5). 1. According to Josephus it is *dysentery*. 'At length God sent a very destructive disease upon the city and country of Ashdod, for they died of the dysentery or flux, that brought death upon them very suddenly; for before the soul could, as is usual in easy deaths, be well loosed from the body, they brought up their entrails, and vomited up what they had eaten,' etc. (*Antiq.* i. 1. 1). 2. *The bite of the Solpago* (So Jahn, *Heb. Antiq.* xii. 185, following Lichtenstein), a venomous kind of spiders, which 'bite men whenever they have an opportunity, especially in the fundament and verenda, and whose bite causes swellings fatal in their consequences.' It is these he supposes are meant by the *achbarim* (mice, E. V.), and which, being greatly multiplied, killed many persons. But the *apholim* were not inflicted by the *achbarim*; whose devastations were confined to the 'land,' 'which mar the land;' and the *achbar* is no species of spider, but rather the field mouse, especially the short-tailed species, whose ravages in cultivated lands are so destructive. [ACH-BAR.] 3. *Piles, bleeding piles, Ges. tumours, hemorrhoids*. Fürst (Heb. Concord.) 'tumores, tubera ani, mariscæ, Arab. Ghafalon.' A very painful disease, especially when inward, which often proves fatal. The Philistines, according to the custom of the heathen, presented to Jehovah golden images of the *emerods* and *achbarim* from which they suffered, as an expiation for their offence, that He might remove the plague.—I. J.

EMIM (אִמִּים; Sept. Ὀμιμοί and Ὀμμεῖν), the name of the aboriginal inhabitants of Shaveh-Kiriathaim, or the plateau of Moab (Gen. xiv. 5). The word is from אָמַ, 'to frighten,' and thus signifies 'terrors.' It has been questioned by some whether the names given to these primitive races, Anakim, Rephaim, Emim, etc., have reference to their courage and warlike character, or to their physical strength and stature (A. Clarke, *on Gen.* vi. 4). But an honest interpretation of the sacred text requires us to give the words the latter meaning. That there were great numbers of giants in Canaan in a remote age, and that many of them still existed at, and long subsequent to, the conquest of the country by the Israelites, does not admit of doubt. We read of Og,

king of Bashan, 'who remained of the remnant of the giants,' and whose huge bedstead was preserved in Rabbath-Ammon (Deut. iii. 11); of the Anakim, 'a people great and tall' (Deut. ix. 2), of whom the spies said, 'we were in our own sight as grasshoppers; and so we were in their sight' (Num. xiii. 33); of Goliath, 'whose height was six cubits and a span' (1 Sam. xvii. 4); and so of these *Emim*, 'a people great and tall as the Anakim; which also were accounted giants as the Anakim' (Deut. ii. 10, 11). Josephus also alludes to the race of giants who inhabited Canaan in early times, who had bodies so large, and countenances so entirely different from other men, that they were surprising to the sight, and terrible to the hearing. The bones of these men are shewn to this very day at Hebron (*Antiq.* v. 2, 3). It is worthy of note, too, that the traditions of most ancient nations contain references to a primeval race of giants. Homer celebrates—'Great Polypheme, of moreth an mortal might!' 'Odus and Ephialtio—'More fierce than giant, more than giants strong' (*Odys.* i. 91; xi. 375). In various parts of Syria the traditional tombs of the patriarchs are still shewn, and they are all of gigantic dimensions (Porter's *Damascus*, i. 264; ii. 278. See Calmet's *Dissertation on Giants*).

The Anakim, Rephaim, Zuzim, and Emim, were apparently different sections of one great tribe, or different names applied to the same people in different districts where they had settled. They were gradually exterminated by foreign invaders. The Emims were dispossessed by the Moabites (Deut. ii. 9-11). [GIANTS.]—J. L. P.

EMLYN, THOMAS, born at Stamford, 1663, was for several years minister of a Presbyterian congregation in Dublin, where he was shamefully persecuted on account of his Arian opinions. He died in London, 1743. The narrative of his imprisonment, written by himself, and an account of his life by his son, are given in his collected works (3 vols. 8vo, Lond. 1746). His contributions to Biblical literature consist of three pamphlets on the authenticity of 1 John v. 7. These were—1. *A Full Enquiry into the Original Authority of that Text*, 1 John v. 7, Lond. 1715, 8vo. 2. *An Answer to Mr. Martyn's Critical Dissertation on 1 John v. 7*, Lond. 1719, 8vo. 3. *A Reply to Mr. Martyn's Examination of the Answer to his Dissertation*, Lond. 1720, 8vo.—S. N.

EMMAUS (Ἐμμαῦς). We read in Luke xxiv. that on the day of our Lord's resurrection, two of the disciples went from Jerusalem to a village called *Emmaus*. Jesus appeared to them on the way, walked with them to the village, joined them in their evening meal, and then revealed himself unto them and vanished. It will be observed that though the distance of the village is stated (σταδίων ἑξήκοντα ἀπὸ Ἱερουσαλήμ), its direction is not given. Josephus mentions a place where the emperor Vespasian planted a colony of disbanded soldiers; he says 'it is called Emmaus, and is distant from Jerusalem sixty stadia' (*Bell. Jud.* vii. 6. 6). There can be little doubt that the two places are identical. This is all the information we possess regarding the scene of one of the most interesting events in Gospel history.

The site of Emmaus has given rise to considerable controversy. No place bearing this name now exists within the prescribed circle—'three-score furlongs,' 7½ Roman miles from Jerusalem.

There is an Emmaus (in Arabic *Amwas*) on the border of the plain of Sharon, at the base of the Judæan hills; it however is twenty-two miles from the city. Yet Dr. Robinson and others maintain that this is the Emmaus referred to by Luke. His reasons for this view are the following:—1. In a few ancient MSS. the word *ἐκάρων* is inserted before *ἐξήκοντα* in Luke xxiv. 13, thus making the distance of Emmaus 160 instead of 60 furlongs from Jerusalem. 2. Both Eusebius and Jerome are explicit in identifying the two. The latter says—'Emaus cujus Lucus meminit Evangelista, hæc est nunc Nicopolis insignis civitas Palestinæ' (*Onomast.* s. v.) All the ancient writers seem to agree with, or rather to follow them; and the same view continued general until the 14th century. 'This,' says Robinson, 'was not the voice of mere tradition; but the well considered judgment of men of learning and critical skill resident in the country, acquainted with the places in question, and occupied in investigating and describing the scriptural topography of the Holy Land' (*B. R.* iii. 148).

There is much weight in these remarks, and coming from such a source they are deserving of our most careful consideration. But the question just resolves itself into one of sacred criticism, in which diplomatic evidence alone must be our guide. Looking at the evidence for and against the reading *ἐκάρων*, on which the theory depends, no sound critic would for a moment hesitate to reject it as an interpolation. It is only supported by three Uncial MSS., and these not of high value (*I. K.* and *N.*); while all the others omit it (see Tischendorf, Lachmann, and Alford, *in loc.*) Robinson says—'This (*ἐκάρων*) may have been the current reading in the days of Eusebius and Jerome. There seems indeed to be a strong probability that it actually was so.' It is a sufficient answer to this statement, that Jerome's own version and the old Latin read '*sexaginta*' (Lachmann and Sabatier, *in loc.*) Neither Eusebius nor Jerome can be taken as a certain guide on all points of sacred geography; and their followers in succeeding centuries were but poor critics. It seems that in this, as in several other instances, ancient geographers, when they found a place bearing a scriptural name, assumed, without close investigation, that it was the scriptural city. The explicit statement of Josephus, cited above, confirms the words of Luke. He refers repeatedly in his writings to Emmaus or Nicopolis; and it appears to be only in order to distinguish this Emmaus from the other that he mentions its distance from Jerusalem (comp. *Bell. Jud.* ii. 5. 1; iii. 3. 5; iv. 8. 1; vii. 6. 6). It is also justly remarked by Reland (*Pal.* 758, *sq.*) that the distance of Nicopolis from Jerusalem is too great to agree with the Gospel narrative. We know not at what time the two disciples left Jerusalem; but it could not have been early in the day (ver. 22, *sq.*) They reached Emmaus in the evening (ver. 29.); they partook of the evening meal, which was usually served at sunset; and then, after Christ had made himself known to them, 'they rose up the same hour, and returned to Jerusalem, and found the eleven gathered together, and them that were with them' (ver. 33). The night could not have been as yet far advanced; and there would have been no time for a journey of twenty-two miles, which up those rugged mountains could scarcely have been accomplished in less than seven hours. The whole tenor of the narrative leads to the con-

clusion that the village was not more than the distance stated from Jerusalem.

A tradition, reaching back to the 14th century, fixes Emmaus at *Kubeibeh*, a small village about seven miles north-west of Jerusalem; but for this the only evidence is that its distance from the Holy City agrees with the statement of Luke (Maunde-ville in *Early Trav. in Palest.*, p. 175; Tobler, *Top.* ii. 540; Robinson, *B. R.* ii. 255). Mr. Williams considers Kuriet el-Enab to be the true site of Emmaus; but this opinion is as devoid of all reliable evidence as the former (*Journal of Philology*, iv. 262). Thomson appears to adopt the same view (*The Land and the Book*, 534). The real site of Emmaus has not yet been discovered.

2. *Emmaus* or *Nicopolis*. The position of this ancient city is defined by Jerome (ad *Dan.* viii.)—'Emaus quæ nunc Nicopolis . . . ubi incipunt montana Judææ consurgere.' The Jerusalem Itinerary places it twenty-two miles from Jerusalem, and ten from Lydda (*August. Itiner.*, ed. Hessel., p. 600). Its site is now occupied by the little village of *Amwas*, which lies on the western declivity of a rocky hill commanding the plain. It contains two copious fountains, one of which is doubtless that referred to by some old writers as possessing remarkable healing properties (Sozom. *H. E.*, v. 21; Robinson, *B. R.* iii. 146, and authorities there given). The only ruins of importance are those of a church a little south of the village.

Though not mentioned in the Bible, Emmaus is frequently referred to in Jewish history. Beside it Judas Maccabæus defeated Georgias the Syrian general (1 Maccab. iii. 40; iv. 3, *sq.*) It was afterwards fortified by Bacchides, under Antiochus Epiphanes, when engaged in war with the Jews (ix. 50). In the beginning of the third century, the city was rebuilt by the exertions of Julius Africanus, and called Nicopolis (Reland, *Pal.* p. 759), a name which it retained till after the wars of the Crusades (*Gesta Dei per Francos*, p. 743).

3. A place mentioned by Josephus. Speaking of Tiberias, he says—'There are warm baths at a little distance from it in a village named *Emmaus*' (*Antiq.* xvii. 2. 3); and he further states that the name Emmaus, 'if it be interpreted, may be rendered 'a warm bath' (*Bell. Jud.* iv. 1. 3). Dr. Robinson supposes this to be only a Greek form of the Hebrew *Hammath*, which has the same signification, and was the name of a town of Naphtali (*B. R.*, ii. 385). [HAMMATH.]—J. L. P.

EMMANUEL. [IMMANUEL.]

EMMERLING, CHRISTIAN AUGUST GOTT-FRIED, was born June 16, 1781, and died January 22, 1827. He was for some time preacher at St. Thomas's Church, Leipzig, and subsequently pastor of four village churches in the neighbourhood of that city. Amidst his other labours he gave considerable attention to the exegesis of the N. T., and in 1811 published a Latin translation of Keil's *Elements of Hermeneutics*. His principal work was a commentary on the Second Epistle to the Corinthians—*Pauli Epistola ad Corinthios posterior, græce, perpetuo commentario illustravit C. A. G. E.*, Lips. 1823. He had previously published two shorter works on certain passages in this epistle. These were—*De Paulo felicem institutionis suæ successum prædicante ejusque causas exponente*, 2 *Cor.* ii. 14-16, Lips. 1809; and *Succincta Tractatio loci Paulini*, 2 *Cor.* v. 1-20, Lips. 1816.—S. N.

EN, properly AIN, a word signifying 'fountain'; and hence entering into the composition of sundry local names, of which the following are the chief. [AIN.]

EN-DOR (עֵין דּוֹר, and עֵין דּוֹרָה; Sept. *Ἐνδὼρ* and *Ἐνδῶρ*), an ancient town of Issachar, but allotted, with a few others, to the half tribe of Manasseh (Josh. xvii. 11). It was one of those places out of which the Israelites were for a long period unable to drive the Canaanites. Endor is celebrated as the scene of Saul's singular interview with the witch. The details of that melancholy incident are well known (1 Sam. xxviii.). It is also mentioned by the Psalmist in connection with the victory over Sisera (Ps. lxxxiii. 10).

The situation of Endor is rightly described by Eusebius. He says it is 'in Jezreel' (that is, in the valley or plain of Jezreel or Esdraelon); four miles south of Tabor (*Onomast.* s. v. *Aendor*). In another place he states that it is near Nain (s. v. *Endor*). Endor is still a small village. It lies on the northern slope of a bleak ridge, now called Jebel ed-Duhy, but in Scripture 'the hill of Moreh' (Judg. vii. 1). It is four miles south of Tabor, and a mile and a half east of Nain. The plain of Esdraelon sweeps round the whole base of the ridge. From the fountain of Jezreel, where Saul was encamped, to Endor, is about seven miles. Endor contains some twenty miserable houses. The calcareous cliffs around are filled with rude caverns, and some of the modern habitations are formed of front walls shutting in these caves. One of the caves has a little fountain in it; the entrance is narrow between rugged rocks, and partly covered with a fig-tree. The writer, when standing in this wild and gloomy cave, could not but think how fit a residence it would be for the witch of Endor (*Handbook for S. and P.*, p. 358; Thomson, *The Land and the Book*, p. 445; *Van de Velde*, ii. 383).—J. L. P.

EN-EGLAIM (עֵין עִגְלַיִם, *calves' fountain*; Sept. *Ἐναγαλλεῖμ*), a town of Moab (Ezek. xlvii. 10), which Jerome places at the northern end of the Dead Sea, at the influx of the Jordan.—W. L. A.

EN-GANNIM (עֵין גַּנִּים; Sept. Alex. *Ἐνγαυλίμ*), a town of Palestine, allotted to the tribe of Issachar, and situated in the plain of Esdraelon (Josh. xix. 21). It was assigned out of that tribe to the Levites (xxi. 29). The same town appears to be called *Aenim* (עֵנִים) in 1 Chron. vi. 73. There can be little doubt that this is the *Ginnæ* which Josephus speaks of as situated in the great plain on the confines of Samaria (*Ant.* xx. 6. 1; *Bell. Jud.* iii. 3. 4). We can have no difficulty in identifying it with the modern town of Jenin. Jenin stands at the mouth of a picturesque glen which winds down into Esdraelon from the wooded hills of Ephraim. The town is high enough to overlook the broad plain, and low enough to have its houses encircled by its verdure. The hills rise steeply behind, dotted with bushes, and here and there clothed with the sombre foliage of the olive. Rich gardens, hedged with prickly pear, extend along their base; and a few palm trees give variety to the scene. The 'fountain,' from which the town took the first part of its Scripture name (*En*, עֵין), is in the hills a few hundred yards distant; and its abundant waters flow over and fertilize the 'gardens' (*Gannim*) from which the second and chief

part of the name is derived. The leading road from Jezreel and the north to Samaria and Jerusalem passes Jenin. This may illustrate the passage in 2 Kings ix. 27, where it is stated that Ahaziah, king of Judah, in escaping from Jehu at Jezreel, 'fled by the way of the garden-house;' that is, *Beth-Haggan*, as it is rightly rendered in the Sept. (בֵּית הַגָּן), which appears to be just another name for En-gannim. He was thus taking the straight road to Jerusalem (Stanley, *S. and P.* 342). Jenin contains above 2000 inhabitants, and is the capital of a large district (Robinson, *B. R.* ii. 315; *Handbook for S. and P.* 351).

2. A town of Judah, situated in the plain of Philistia at the western base of the mountains, and not far from Zanoah and Jarmuth (Josh. xv. 34). Its site has not been identified.—J. L. P.

EN-GEDI (עֵין גֵּדִי, *kids' fountain*; Sept. *Ἐνγαδδῖ*), a city of Judah, which gave its name to a part of the desert to which David withdrew for fear of Saul (Josh. xv. 62; 1 Sam. xxiv. 1-4). Its more ancient Hebrew name was Hazezon-tamar; and by that name it is mentioned before the destruction of Sodom, as being inhabited by the Amorites, and near the cities of the plain (Gen. xiv. 7). In 2 Chron. xx. 1, 2, bands of the Moabites and Ammonites are described as coming up against king Jehoshaphat, apparently round the south end of the Dead Sea, as far as En-gedi. And this, as we learn from Dr. Robinson, is the route taken by the Arabs in their marauding expeditions at the present day. According to Josephus, En-gedi lay upon the lake Asphaltites, and was celebrated for its beautiful palm-trees and opobalsum (*Antiq.* ix. 1. 2); while its vineyards are also mentioned in Sol. Song, i. 14. In the time of Eusebius and Jerome, En-gedi was still a large village on the shore of the Dead Sea. En-gedi has always, until recently, been sought at the north end of the Dead Sea. But Setzen recognised the ancient name in the Ain-jidy of the Arabs, and lays it down in his map at a point of the western shore, nearly equidistant from both extremities of the lake. This spot was visited by Dr. Robinson, and he confirms the identification. The site lies among the mountains which here confine the lake, a considerable way down the descent to its shore. Here is the beautiful fountain of Ain-jidy, bursting forth at once in a fine stream upon a sort of narrow terrace or shelf of the mountain, above 400 feet above the level of the lake. The stream rushes down the steep descent of the mountain below; and its course is hidden by a luxuriant thicket of trees and shrubs belonging to a more southern clime. Near this fountain are the remains of several buildings, apparently ancient; although the main site of the town seems to have been farther below. The whole of the descent below appears to have been once terraced for tillage and gardens; and near the foot are the ruins of a town, exhibiting nothing of particular interest, and built mostly of unhewn stones. This we may conclude to have been the town which took its name from the fountain (*Robinson*, ii. 209-216).

THE WILDERNESS OF EN-GEDI is doubtless the immediately neighbouring part of the wild region west of the Dead Sea, which must be traversed to reach its shores. It was here that David and his men lived among the 'rocks of the wild goats,' and where the former cut off the skirts of Saul's robe in

a cave (1 Sam. xxiv. 1-4). 'On all sides,' says Dr. Robinson, 'the country is full of caverns, which might then serve as lurking-places for David and his men, as they do for outlaws at the present day.' He adds that as he came in sight of the ravine of the Ghâr, a mountain-goat started up and bounded along the face of the rocks on the opposite side.—J. K.

EN-HADDAH (עֵין הַדָּהָד); Sept. Αἰμαρῆκ; Alex.

ἦν ἄδδα), one of the boundary marks of the tribe of Issachar (Josh. xix. 21). Van de Velde identifies it with the existing *Ain Hadû* or Apostles' fountain; but this is not probable.—W. L. A.

EN-HAKKORE (עֵין הַקּוֹרֵא); Sept. Πηγῆ τοῦ

ἐπικαλουμένου), the well or spring of him who called, i. e., upon God (Judg. xv. 19), so named because it sprang up, or was providentially discovered, when Samson, thirsty after the slaughter of a thousand Philistines with the jawbone of an ass, called on God for drink (ver. 18). Its position, any more than that of Lehi, in which it is said to be, is unknown, beyond the bare fact that it was somewhere in the western border of the tribe of Judah. Van de Velde's attempt to identify it is vain. It is to be regretted, however, that men of sense, with a view to disparage the book of Judges as mythical, should be found resuscitating the vulgar notion, the fruit of ignorance, that the well sprang up in the jawbone instead of the place called Lehi, after the instrument of Samson's exploit.—I. J.

EN-RIMMON. These words occur together, in the Masoretic text, in the following passages; (1) Josh. xv. 32; (2) xix. 7; (3) 1 Chron. iv. 32; (4) Neh. xi. 29. In (1) they appear as undoubtedly the names of *two* cities, both in the original and in the Vulg. (עֵין רִמּוֹן; *et Aën, et Remon*); the LXX., however, and the Peschito unite them into one name (Ἐρωμών; *Ein, Ramon*).

'*Irmon*,' Walton, but literally *עירמון* (עיר). In (2) the Hebrew words *עין רמון*, occurring without the conjunction, would leave it doubtful whether two cities or one were meant, but the clause, *four cities*, in the same verse, requires them to be regarded as separate places; the doubt is increased by the LXX., which not only amalgamates the places as before, Ἐρεμών,* but inserts *ἑαλχα* to make up the number four; but the Peschito now makes two distinct towns; *Ein, Ramin*,

literally *עין רמין* (עין); the Vulg. also has *Ain et Remmon*. In (3) both the original and the versions agree in mentioning the two places without the conjunction intervening (the LXX. *Alex.*, however, omits *ἦν*), but the structure of the verse in all of them requires that the two should be considered as separate cities. In (4) the opposite

occurs in the Hebrew and the Peschito; for both unmistakably unite the names as the designation of a single town (עֵין רִמּוֹן; *Ein, Ramon*).

et 'in In-Remon; A. V. 'And at En-Rimmon.') The Vulg. now drops the shorter name ('*Et in Remmon*'); the LXX. *Alex.* does the same (*καὶ ἐν [prep.] Ῥεμών*), the *Vatican* text has here an hiatus. Such is the textual variety connected with these two words, which designate one or two of the towns which were originally assigned to the tribe of Judah, and afterwards transferred to the tribe of Simeon (Josh. xix. 7, 9), and on the return from Babylon occupied by the children of Judah (Neh. xi. 29). The situation of these cities of Judah, comprising the first of the four groups, is described in Josh. xv. 21 as 'at the extremity of the tribe, on the borders of Edom toward the south, בְּנֶגְבָה.' With regard to En-Rimmon, the conjecture, which has received the sanction of Grotius (*in loc.*), Rosenmüller (*in loc.*), Knobel (*Exeg. H-buch z. A. T.*, *in loc.*), and Keil (on *Josh.* [Clark], p. 378), is a reasonable solution of the discrepancy—to the effect that the two places, which were evidently near each other (perhaps contiguous, by means of their 'villages,' which they possessed from first to last, comp. Josh. xv. 32 with Neh. xi. 29, 30), were united after the captivity, and considered as one town only.

Van de Velde (*Memoir*, p. 344), says expressly; 'we think this is the right solution of Neh. xi. 29; for *Ain* is probably identical with a site only 30' or 35' distance south of *Um er-Rammamin*, now called Tell-Khewelfeh, and opposite another ancient site, Tell Hora. Between the two Tells is a copious fountain filling a large ancient reservoir, which for miles around is the chief watering-place of the Bedawin population of this region. A city, at the base of which such a remarkable fountain existed, would well derive its name from 'the fountain,' and its vicinity to Rimmon would justify both its distinct enumeration and its collective appellation.' In his *Map of the Holy Land*, he places the supposed locality about eight miles north of Beersheba, and twenty-five south-west of Jerusalem. Winer (*Bibl. R. w. b.*, s. v. 'Rimmon,' ii. 331), identifies our town with that mentioned in Zech. xiv. 10, as 'South of Jerusalem,' and refers to Eusebius *Onomast.* (cited above in note). Probably it was also the same place as the *Ain*, one of the nine *Levitical* cities of the united tribe of Judah-Simeon, mentioned in Josh. xxi. 16. (Besides the works already named, see also Rab. I. Schwarz, *Descript. Geog. of Palestine*, p. 124; Von Raumer's *Palästina*, pp. 170, 219, 220; and Simonis *Onomast. V. T.*, pp. 226, 347).—P. H.

EN-ROGEL (עֵין רֹגֵל); Sept. Ῥωγῆλ). The

name means *Foot-fountain*, and is construed by the Targum into 'Fuller's Fountain,' because the fullers trod the clothes there with their feet. It was near Jerusalem, on the boundary-line between the tribes of Judah and Benjamin (Josh. xv. 7; xviii. 16; 2 Sam. xvii. 17; 1 Kings i. 9). It has been usually supposed the same as the Fountain of Siloam. But Dr. Robinson is more inclined to find it in what is called by Frank Christians the Well of Nehemiah, but by the native inhabitants the Well of Job (*Bir Eyâb*). There are only three

* This is the Vatican reading; the *Cod. Alex.* reads the names of *two* cities, *Ἄϊν καὶ Ῥεμών*. It is noticeable, that in their *Onomasticon*, Jerome mentions *Eremmon* as 'Vicus Judæorum prægrandis,' and Eusebius *Ἐρεμβών* as *κώμη Ἰουδαίων μεγίστη*, which they place in the south of Judæa, about 16 miles south of Eleutheropolis: Bonfretius, their annotator, identifies their town with our En-Rimmon. (Note, *in loc.*)

sources, or rather receptacles of living water, now accessible at Jerusalem, and this is one of them. It is situated just below the junction of the Valley of Hinnom with that of Jehoshaphat. It is a very deep well, of an irregular quadrilateral form, walled up with large square stones, terminating above in an arch on one side, and apparently of great antiquity. There is a small rude building over it, furnished with one or two large troughs or reservoirs of stone, which are kept partially filled for the convenience of the people. The well measures 125 feet in depth; 50 feet of which were, at the time of Dr. Robinson's visit (in the middle of April), nearly full of water. The water is sweet, but not very cold, and at the present day is drawn up by the hand. In the rainy season the well becomes quite full, and sometimes overflows at the mouth. Usually, however, the water runs off under the surface of the ground, and finds an outlet some forty yards below the well, whence it is said to flow for sixty or seventy days in winter; and the stream is sometimes large.—J. K.

EN-SHEMESH (עֵן שֶׁמֶשׁ) עֵן; Sept. ἡ πηγὴ τοῦ ἡλίου, and πηγὴ Βαυθαμαῦς). A 'fountain' (as the name implies), and perhaps also a village, on the northern border of Judah between Jerusalem and

Jericho, or more exactly, between the 'going up of Adummim' and En-Rogel (Josh. xv. 7; xviii. 17). It was, therefore, among the mountains in the wilderness. Fountains in this region are very rare. About a mile east of Bethany, on the road to Jericho, is a little fountain now called by natives *Ain el-Haud*, and by pilgrims and travellers 'the fountain of the apostles.' It is in the bottom of a deep and desolate glen. A Saracenic arch covers the stone trough into which the 'waters' (מֵי, Josh. xv. 7) flow; and a few ruins around it mark the site of an old village, or more probably a caravanserai, built in former days for the accommodation and security of travellers along this dreary and dangerous road (Luke x. 30, *sq.*) There can be little doubt that this is Enshemesh. It is the only fountain in the district, and it forms an important landmark for defining the boundaries of Judah and Benjamin (Tobler, *Topog. von Jerusalem*, ii. 400; *Handbook for S. and P.* 190).—J. L. P.

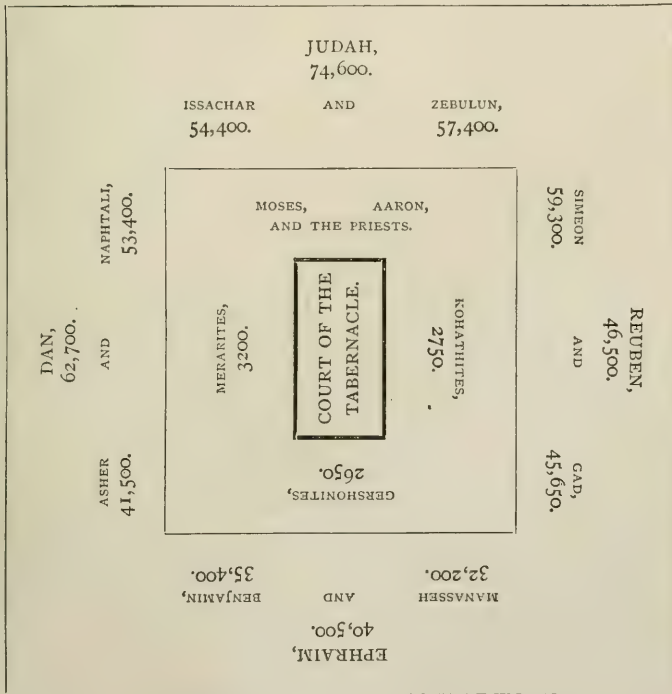

EN-TAPPUACH (עֵן-תַּפּוּחַ), *Citron* or *Apple-fountain*; Sept. πηγὴ Θαφθῶθ), a place on the boundary-line of Manasseh (Josh. xvii. 7). [TAPPUACH.]

ENCAMPMENTS. Of the Jewish system of

EAST.—FIRST DIVISION—CAMP OF JUDAH: 186,400.

NORTH.—FOURTH DIVISION—CAMP OF DAN: 157,600.

SOUTH.—SECOND DIVISION—CAMP OF REUBEN: 151,450.

WEST.—THIRD DIVISION—CAMP OF EPHRAIM: 108,100.

encampment the Mosaic books have left a detailed description. From the period of the sojourn in the wilderness to the crossing of the Jordan the twelve tribes were formed into four great armies, encamping in as many fronts, or forming a square, with a great space in the rear, where the tabernacle of the Lord was placed, surrounded by the tribe of Levi and the bodies of carriers, etc., by the stalls of the cattle and the baggage: the four fronts faced the cardinal points while the march was eastward, but as Judah continued to lead the van, it follows that when the Jordan was to be crossed the direction became westward, and therefore the general arrangement, so far as the cardinal points were concerned, was reversed.* It does not appear that, during this time, Israel ever had lines of defence thrown up; but in after ages, when only single armies came into the field, it is probable that the castral disposition was not invariably quadrangular; and, from the many positions indicated on the crests of steep mountains, the fronts were clearly adapted to the ground and to the space which it was necessary to occupy. The rear of such positions, or the square camps in the plain, appear from the marginal reading of 1 Sam. xvii. 20, and xxvi. 5 to have been enclosed with a line of carts or chariots, which, from the remotest period, was a practice among all the nomade nations of the north. The books of Moses are so explicit on the subject of encampment, and the march of the Israelites, that we deem a distinct plan of the numbers and position of the twelve tribes, of the various corps of Levites, etc., with the tents of Moses and Aaron ranged about the tabernacle, and other particulars, sufficient to give a very clear idea of the whole, and to supersede the necessity of further description.—C. H. S.

ENCHANTMENTS. [DIVINATION.]

ENGINES OF WAR were certainly known much earlier than the Greek writers appear to admit, since figures of them occur in Egyptian monuments, where two kinds of the testudo, or pent-house, used as shelters for the besiegers, are represented, and a colossal lance, worked by men who, under the cover of a testudo, drive the point between the stones of a city wall. The chief projectiles were the catapulta for throwing darts, and the balista for throwing stones. Both these kinds of instruments were prepared by Uzziah for the defence of Jerusalem (2 Chron. xxvi. 15), and battering the wall is mentioned in the reign of King David (2 Sam. xx. 15); but the instrument itself for throwing it down may have been that above-noticed, and not the battering-ram. The ram was, however, a simple machine, and capable of demolishing the strongest walls, provided access to the foot was practicable; for the mass of cast metal which formed the head could be fixed to a beam lengthened sufficiently to require between one and two hundred men to lift and impel it;† and when it was still heavier, and hung in the lower floor

* If the leading tribes did not thus turn with the direction of the march, Judah and his two wings must have formed the rear in crossing the Jordan.

† The Algerines, about two centuries ago, took the lower mast of one of their frigates and impelled it by forcing 400 slaves to use their personal strength in the work.

of a movable tower, or *helipolis*, it became a most formidable engine of war—one used in all great sieges from the time of Demetrius, about B.C. 306,

233. Battering Ram.

till long after the invention of gunpowder. Towers of this kind were largely used at the destruction of Jerusalem by the Romans. Of the balistæ and catapultæ it may be proper to add that they were of various powers. For battering walls there were some that threw stones of fifty, others of one hundred, and some of three hundred weight; in the field of battle they were of much inferior strength. Darts varied similarly from small beams to large arrows, and the range they had exceeded

234. Balista.

a quarter of a mile, or about 450 yards. All these engines were constructed upon the principle of the sling, the bow, or the spring, the last being an elastic bar, bent back by a screw or a cable of sinews, with a trigger to set it free, and contrived either to impel darts by its stroke, or to throw stones from a kind of spoon formed towards the summit of the spring.—C. H. S.

ENGLISH VERSIONS. 1. The earliest English version in prose of any book of the Bible was made about the time when Edward the Third ascended the throne, by William de Schorham. The MS. is in the British Museum, containing the Psalter in Latin and English. Immediately after, Richard Rolle, chantry priest at Hampole, translated and published the same book. Next to the psalter was translated the N. T.; probably by Wycliffe. To the several books were prefixed prologues; but they betray a different hand from the text. Before the N. T. was completed, a translation of the Old was undertaken by one of Wycliffe's coadjutors, Nicholas de Hereford; as is stated in a note at the end of a copy in the Bodleian Library. It would seem that the writer was suddenly stopped

in the book of Baruch; so that the translation had to be completed by another, probably Wycliffe. This version has all the canonical, besides the apocryphal books, except the fourth book of Esdras. It was the first English version of the whole Bible. A second revised translation was suggested, and perhaps commenced by Wycliffe; but it was not completed and published till after his death. Prefixed is a general prologue, whose date determines that of the version, and was probably 1388. This prologue was designed as a preface to the O. T. only; for it may be assumed that the O. T. was put forth by itself before the New was revised. The author of the general prologue, and consequently of the corrected version, was John Purvey, the leader of the Lollard party after Wycliffe's death. He had the assistance of Nicholas Hereford, John Ashton, John Parker, and Robert Swynderby.

The former of these versions was that in which Wycliffe took a leading part; the N. T., and probably some portions of the Old, being wholly his own work. If it be assigned to 1380 the date cannot be far from the truth; for it was evidently completed in the latter part of his life. The second, or Purvey's, which was a revision of the first, rather than an independent translation, belongs, as we have seen, to about 1390. Both were made from the Latin or Vulgate.

The N. T. part of the latter was first printed by Lewis, in 1731. It was afterwards reprinted by Baber in 1810. Both editors, however, erroneously ascribed it to Wycliffe. It was again published by Messrs. Bagster in the *English Hexapla*, 1841, from a MS. now in the collection of Lord Ashburnham. The first part of the earlier version ever printed was in Dr. Adam Clarke's Commentary on the Bible, from a MS. in his own possession. In 1848 the N. T. was printed for the first time by Lea Wilson, from a MS. belonging to himself. It was reserved for the Rev. Josiah Forshall and Sir Frederick Madden to publish both versions complete; *The Holy Bible, containing the Old and New Testaments, with the Apocryphal books, in the earliest English versions made from the Latin Vulgate by John Wycliffe and his followers*; four vols., royal quarto, 1850. (See the preface to this splendid edition, pp. 1-64.)

Wycliffe, though a zealous reformer, and a man of learning in his own day, was ignorant of the Hebrew and Greek languages. Hence he was unfitted for the task of translating the Bible. Latin was all but universal in the 14th century; and the Latin Bible or Vulgate was the only document which constituted *the Word of God* in the estimation of men. The version, as far as it proceeded from Wycliffe, is remarkable for its fidelity, and the propriety of the words selected. Still it is but the translation of a translation, and therefore more important as illustrative of the state of our language in the 14th century than as contributing to the criticism or interpretation of the Scriptures.

2. *Tyndale's Translation.*—William Tyndale, having printed at Hamburg an edition of the Gospel by Matthew and an edition of Mark, committed to the press at Cologne the first edition of his N. T. in 4to, with a prologue and glosses. In consequence, however, of the exertions of Cochlæus, a violent and crafty enemy to the printing of the Scriptures, the edition was interrupted before it was printed off. A precious fragment of it is now in the library of the Right Hon. Thomas Grenville.

(Facsimiles are given by Mr. Anderson, in his 'Annals of the English Bible,' vol. i. p. 64.) At Worms, whither he proceeded on leaving Cologne, he commenced another edition of the N. T. in 8vo, without the prologue and glosses belonging to the 4to. A third edition was printed at Antwerp in 1526, a fourth at the same place in 1527, a fifth in 1529, a sixth in 1534, and three editions in 1535. In 1536, the year in which he was strangled at Vilvorde, there were ten or twelve editions. He also printed at different times the five books of Moses; and in 1531, the book of Jonah, with an admirable prologue respecting the state of his country. In addition to the Pentateuch, he translated other parts of the O. T., at least as far as the end of Chronicles. The O. T. was made from the original, not from Luther's German version; for there is no evidence to shew that Tyndale was acquainted with German, or indeed that he ever saw Luther; though there is abundant testimony of his skill in Hebrew. Besides, its internal character proves that it was made from the original Hebrew and Greek.

The excellence of this version, the basis of all subsequent English Bibles, has never been called in question by candid and competent judges, notwithstanding the severe opposition it encountered during the life of the honoured Tyndale, and the peculiar circumstances in which he was placed. The language is pure, appropriate, and perspicuous. It is an astonishing monument of the indomitable zeal and great learning of the author. The N. T. part was printed in Bagster's *Hexapla*.

3. *Myles Coverdale.*—The English version of the whole Bible made by Coverdale is dated 1535, in folio. Where it was printed is matter of conjecture. In the title-page it professes to be faithfully and truly translated out of the 'Douche (German) and Latyn.' This Bible was imported into England in 1536; and various expedients were tried in the way of altering the title-page and the dedication, or of affixing a new title-page, in order to procure it the royal approbation. Another edition, in 4to, was issued in 1550, and in the same form reissued in 1553. This Bible certainly owed its origin to Lord Cromwell's patronage. Coverdale states, that he had five translations before him 'to help him herein.' Although the author had the benefit of Tyndale's, his work must be reckoned inferior. In addition to the culpable obsequiousness of Coverdale, he was not so well skilled in the original languages of the Scriptures; and had therefore to rely more on the German and Latin (Anderson, vol. i. p. 587). This translation has been reprinted by Bagster. [COVERDALE.]

4. *Matthew's Bible.*—Although this version is the same as Tyndale's previously described, yet it deserves to be separately spoken of. John Rogers, an intimate friend of Tyndale, set about the superintendence of a new edition soon after the incarceration of the latter at Vilvorde. Where it was printed cannot now be ascertained. Hamburg, Marburg, Paris, Antwerp, and Lubeck, have all been named. When Rogers had proceeded with the printing as far as Isaiah, Richard Grafton and Edward Whitchurch, the celebrated printers, undertook to bring out the work as a matter of trade. The N. T. entire, and the Old as far as the end of Chronicles, are Tyndale's; the remainder of the O. T. was done by Rogers himself, with the assist-

ance perhaps of Coverdale's sheets. The whole was finished in 1537. Why it bears the name of Thomas Matthew is not clear. It has been conjectured, however, that it may have been commenced at the request of a person of that name. Archbishop Cranmer, without any previous connection with the undertaking, was applied to by Grafton to procure it royal patronage, which he happily effected though Lord Cromwell.

In the year 1538 another edition was begun at Paris, edited by Coverdale, which was interrupted by an order of the Inquisition. It was finished in London, in April 1539. This book was set forth and enforced by the highest authority in England.

5. *Taverner's Bible*.—Richard Taverner, the editor of this work, was a learned layman. His Bible was published in London, 1539, folio. Two other editions of it were issued in quarto. It is not a new version, but a correction of Matthew's.

6. *Cranmer's Bible*.—The first great Bible, with a prologue, by Cranmer, was published in 1539, folio, printed by Whitchurch. Three subsequent editions had the archbishop's name affixed to the title-page. The N. T. is printed in Bagster's *Hexapla*. [CRANMER.]

7. *Geneva Bible*.—The N. T., in duodecimo, printed at Geneva, by Conrad Badius, in 1557, is properly a revision of Tyndale's from the Greek, by William Whittingham. It was merely preparatory, however, to the revision of the entire Bible by Whittingham and other exiles, which appears to have been begun in January 1558, and to have been continued till the 10th April 1560. Whittingham had for his associates in the undertaking Anthony Gilby and Thomas Sampson. Its size is quarto. This was the first English Bible printed in Roman letter, and the first in verses. A patent relative to it was issued by Elizabeth in favour of John Bodeleigh. The work is a new translation from the original, not simply a revision of any former version. It is faithful and literal. The N. T. portion was reprinted by Bagster in the *Hexapla*.

8. *Archbishop Parker's, or the Bishops' Bible*.—This Bible was published in 1568, at London, in one folio volume. It was superintended by Parker, Archbishop of Canterbury, the text being carefully revised after the originals, by upwards of fifteen scholars, eight of whom were bishops. Different portions were assigned to different individuals, the initials of whose names are placed at the end of their several parts. It was not, as is commonly supposed, undertaken by royal command. The text of it is much better than that of any preceding one.

9. *Anglo-Romish Version*.—An English translation of the N. T. was published at Rheims in 1582, in a quarto volume. It is made from the Latin Vulg. not from the original, and is accompanied with annotations. In 1609-10 the O. T. was translated from the Vulg., and published at Douay in two quarto volumes, also with notes. These three volumes contain the standard version of Roman Catholics. Many of the original Hebrew and Greek words are retained, so that simplicity and perspicuity are sacrificed. It has been conjectured that this was done to render it as obscure as possible to the common people. The N. T. has been reprinted in Bagster's *Hexapla*.

10. *King James's Bible*.—The proposal for this new translation of the Bible originated with Dr. John Rainolds, of Corpus Christi College, Oxford. Forty-seven persons were engaged upon it, doubt-

less the most eminent men for learning that could then be procured. They met in companies at different places, having their respective tasks assigned them. According to the ordinary account, fourteen rules were given to the translators for their guidance; but another account states that only seven were finally prescribed. The whole was revised by twelve men together, two having been chosen out of each of the six companies. The final revision was made by Dr. Miles Smith, who wrote the Preface, and Dr. Bilson. It was first published, in a folio volume, in 1611. The whole expense was defrayed by Barker, the patentee. In order to judge of the real character of this work, which has continued to be the authorized version down to the present day, it is necessary to consider two of the rules given to the editors or translators, viz., the *first* and *fourteenth*:—'The ordinary Bible read in the church, commonly called the Bishops' Bible, to be followed, and as little altered as the original will permit.' Again:—'These translations to be used when they agree better with the text than the Bishops' Bible: viz., 1. Tyndale's; 2. Matthew's; 3. Coverdale's; 4. Whitchurch's (Cranmer's); 5. The Geneva.' From these instructions it may be inferred that the A. V. is a revision of the Bishops' Bible, by a careful collation of the originals and a comparison of existing translations. It was not a new and independent work, but a laborious compilation from existing works of the same kind, regulated in every case by the Greek and Hebrew.

It is needless to pronounce a formal encomium on our A. V. The time, learning, and labour expended on it were well bestowed. It far surpasses every other English version of the entire Bible, in the characteristic qualities of simplicity, energy, and purity of style, as also in uniform fidelity to the original.

A revision of it, however, is now wanted; or rather a new translation from the Hebrew and Greek, based upon it. Since it was made, criticism has brought to light a great mass of materials; and elevated itself in the esteem of the critical theologian as an important science. Hermeneutics too have been cultivated, so as to assume a systematic, scientific form. We require, in consequence, a new English version, suited to the present state of sacred literature. It need scarcely be stated that King James's translators have failed to apprehend the true meaning in many passages. Of the merit attaching to their version a considerable share belongs to Tyndale. Parker's Bible was the professed basis, and that was a revision of Cranmer's. Cranmer's Bible was chiefly a correction of Matthew's, or in other words of Tyndale's, as far as Tyndale had translated. Thus King James's translation resolves itself at last, in no small measure, into Tyndale's; and when we consider the adverse circumstances continually pressing upon that noble-minded man, with the little assistance he could obtain; the work he produced assumes a pre-eminent position amid the immortal monuments of human learning and skill.

Thus few men have successfully attempted an English version of the entire Bible since the authorized one of 1611. They have contented themselves with separate books, either of the O. or N. T. In point of style and diction Lowth's translation of Isaiah is the best. Dr. Campbell translated the

Gospels, and Macknight the Epistles; but the former scarcely reaches the expectations which a reader of the *Preliminary Dissertations* would form; while the latter has not commended itself to competent judges. [PURVER; GEDDES; BOOTHROYD.]

See Johnson's *Account of the several English translations of the Bible*, Lond. 1730, 8vo, reprinted in Bp. Watson's *Theological Tracts*; Bp. Marsh's *History of the Translations which have been made of the Scriptures, from the earliest to the present age*, Lond. 1812, 8vo; Lewis's *History of the principal Translations of the Bible*, Lond. 1739, 8vo; Newcome's *Historical View of the English Biblical translations*, Dublin, 1792, 8vo; Cotton's *List of Editions of the Bible, from the year 1505 to 1820*, Oxford, 1821, 8vo; Walter's *Letter on the Independence of the Authorized Version of the Bible*, Lond. 1823, 8vo; Todd's *Vindication of our Authorized Translation, etc.*, Lond. 1819, 8vo; Whitaker's *Historical and Critical Inquiry into the Interpretation of the Hebrew Scriptures, etc.*, Lond. 1819, 8vo, and Supplement, 1820; Townley's *Illustrations of Biblical Literature*, Lond. 1821, 3 vols. 8vo; and especially Anderson's *Annals of the English Bible*, Lond. 1845, 2 vols. 8vo, which must be regarded as the *standard work* on the subject.—S. D.

ENGRAVING. The following are the terms by which this art is indicated in the Hebrew Scriptures—(1) הַצֵּב, (2) הַקֶּקֶק, (3) הַקֶּרֶט; (4) הַרְשָׁה or הַרְתָּה; (5) הַפְּסָל, (6) הַפְּתַח, (7) הַמְקַלְעֵת, (8) הַטָּעַט. There is much indistinctness in the terms of

the ancient art of the Jews, arising from the fact, that one and the same artisan combined, in skill and practice, many branches, which the modern principle of 'division of labour' has now assigned to different pursuits. Thus Aholiab was not only 'an engraver,' but also 'a cunning workman' in general art, 'and an embroiderer in blue, and in purple, and in scarlet and fine linen' (Exod. xxxviii. 23). In like manner Bezaleel is described as accomplished 'in all manner of workmanship; and to devise curious works, to work in gold, and in silver, and in brass, and in the cutting of stones to set them, and in carving of wood, to make any manner of cunning work' (Exod. xxxv. 31-33). These numerous gifts they both possessed and practised themselves, and imparted to others; so that they formed an early school of art to supply the demand created by the institution of the Mosaic ritual, the members of which school were as comprehensive in their attainments as their great teachers (Exod. xxxv. 34; xxxvi. 1, 2). The same combination of arts seems to have characterized the later school, which was formed under the auspices of David, when preparing for the erection of the temple (1 Chron. xxii. 15; xxviii. 21). Many of these artificers were Phœnicians, whom the king had invited to his new capital (2 Sam. v. 11; 1 Chron. xiv. 1). In the next reign, Hiram, to whose genius the temple of Solomon owed much of the beauty of its architectural details, as well as its sacred vessels (1 Kings vii. 15-45), was a native of Tyre, the son of a Tyrian artificer by an Israelite mother. This man's skill was again as comprehensive as that of his great predecessors (v. 14). We are not surprised, therefore, to find extreme

indefiniteness in the terms with which our article is surmounted. No. (1), although once in the A. V. (Job xix. 24) translated '*graven*' (with an undoubted reference to the ancient art of engraving), is generally used to indicate the rougher work of *heaving* stone or wood, in quarry or forest. In Prov. ix. 1, indeed, it is applied to the finer art of *heaving* or fashioning *pillars*; but its usual objectives of בָּאָר ('*cistern*,' Jer. ii. 13), קֶבֶר ('*sepulchre*,' Is. xxii. 16), יַקֵּב ('*winepress*,' Is. v. 2),

prove that הַצֵּב has to do with rougher operations than those which fall under our idea of 'engraving.' (But see below, under (8), עֵט.) This word is *contrasted* with No. (4) in our list, חֲרֵשׁ (or, as it once occurs, חֲרַת in Exod. xxxii. 16), which is used to describe '*engraving*,' in Jer. xvii. 1. In Gen. iv. 22 the participial derivative of this root is employed in the description of Tubal-cain, the Biblical progenitor of all artificers of the kind indicated in this article. But it is less in the verbal forms, than in the *noun* חֲרֵשׁ, that this word expresses the art

before us. As a noun it occurs more than thirty times; and is rendered variously in A. V. (*engraver, craftsman, smith, artificer, etc.*) Though it indicates artistic work by *fine* instruments, in metal, wood, and stone, and is thus opposed to the rougher operations of הַצֵּב, it yet includes other usages, which remove it from the specific sense of our art. (Thus, while with אֲבָן alone, Exod. xxviii. 11, it may well refer to the fine work of the *engraver in stone*, yet in the phrase הַרְשִׁי אֲבָן קִיר הַחֵיטָה, literally, *heavers of the stone of the wall*, 2 Sam. v. 11; or more simply חֲרֵשֵׁי קִיר הַחֵיטָה [*workers of wall*], 1 Chron. xiv. 1, it can hardly describe a higher art than what is attributed to it in A. V.—that of the ordinary '*mason*;' similarly with עֵצִים, *timber*, it points to the work of the '*carpenter*,' 1 Chron. xiv.

1, etc.; and with בְּרוֹזָה *iron* to that of the '*smith*' or iron-founder.) The prevalent idea, however, of חֲרֵשׁ is the subtle work of the finer arts; and with this well agree such passages as Prov. vi. 18, where the word describes the '*heart that deviseth wicked imaginations*,' and 1 Sam. xxiii. 9, where it is predicated of Saul, '*secretly practising mischief*' [*Hiph.*

part. שֹׂאֵל מַחְרִישׁ הַרְעָה]. Gesenius has collected instances of the like meaning of the word in the other Shemitic languages; and compares with it the '*Doli fabricator*' of Virgil, *Aeneid*, ii. 264; and the cognate phrases, '*Fabricare quidvis*,' Plautus, *Asin* i. 1. 89; and ὄλον τεύχευ, κατὰ τεύχευ, of Hesiod and Homer, and τεκταίνεσθαι μήτηρ, *Iliad*, x. 19 (*Thest.* 529). In connection with the word חֲרֵשׁ, we have in 1 Chron. xiv. 14, an indication that, even in early times, encouragement was given to associations of art among the ancient Jews, by providing for their members a local habitation in which to pursue their calling, which is proved to have been an *honourable* one from the illustrious names which are associated with its pursuit (ver. 13, 14). From this passage (of ver. 14, compared with ver. 21 and 23), we further learn that the various arts were *hereditary* in certain families.* No. (2)

* The word '*stonesquarers*,' in 1 Kings v. 18, is

on our list, חֲקֵק, describes a branch of art which more literally coincides with our idea of engraving. In Ezek. iv. 1 the word is used of engraving a plan or map; in Job xix. 23, of inscribing upon tablets [of stone or metal], a very early instance of the art; similarly in Is. xxx. 8; whilst in Ezek. xxiii. 14 [חֲקֵקוּ] the word seems to indicate painting, *portraying in colours* [חֲקֵקוּם בְּשֵׁנִיר]; and the addition of עַל-הַקִּיר, upon the wall, raises the suspicion that fresco art, which was known to very ancient nations, including the Egyptians, was practised by the Babylonians, and admired if not imitated by the Jews; comp. ver. 14, 15, 16. (On the art of *colouring* as known to the Assyrians, Egyptians, Greeks, etc., see Sir G. Wilkinson, *On Colour and Taste*, p. 153.) The LXX. renders the remarkable phrase before us, Ἐξῆραφῆνέους ἐν γραφίδι, without specifying colour; but Symmachus, the Vulgate, the Peschito, and the Chaldee paraphrase all include in their versions the express idea of colour. The idea of careful and accurate art which is implied in the term under consideration imparts much beauty to the passage in Is. xlix. 16, 'Behold, I have graven thee upon the palms* of my hands,' where the same word is used. The second clause of this sentence, 'Thy walls are continually before me,' may be compared with Is. xxii. 16, where our verb חֲקֵק is also employed to describe the engraved plan or sketch of a house for architectural purposes. Among other applications of the art indicated by this word, may be mentioned monumental stones, such as the אֲבֵן הָעֵזֶר of 1 Sam. vii. 12, with suitable inscriptions; see especially Deut. xxvii. 2-8. In No. (5), פָּסַל, and its noun פָּסֵל (always rendered in A. V. 'graven image'), we have the operation rather of the sculptor's or the carver's art than the engraver's. In several passages of Isaiah (xxx. 22; xl. 19; xli. 7; xlv. 12-15) curious details are given of the fabrica-

tion of idols, which afforded much employment to the various artificers engaged in the complicated labour of image-manufacture (see also Jer. x. 3-9, from which it would seem that the wrought and prepared metal for covering the idol was imported, and put on by Jewish artisans). Working in ivory was common to the ancient Egyptians (Wilkinson's *Anc. Egypt*, iii. 169); the Assyrians (Layard's *Nineweh*, ii. 420); the ancient Greeks (Grote's *Greece*, vi. 30-32); and the artificers of Jerusalem (Solomon's ivory throne, 1 Kings x. 18; ivory palaces, Ps. xlv. 8; ivory beds, Amos, vi. 4); and of Samaria (Ahab's ivory house, 1 Kings, xxii. 39; which was not an uncommon luxury, Amos iii. 15). No doubt the alliance of the royal houses of Israel and (indirectly) of Judah with the Phœnician monarch (1 Kings xvi. 31) was the means of attracting many of the artificers of Tyre and Sidon and Gebal to the metropolis of each of the Jewish kingdoms; both in Solomon's time and in Ahab's, ivory-sculpture was probably a Phœnician art. The neighbouring idolators, whose example was so disastrous to Israel, were skilled in image-manufacture. From Deut. vii. 25 it appears that the body of the idol was of sculptured wood, overlaid with one or other of the precious metals. The passage, 1 Sam. vi. 2-12, seems to prove that the Philistines had artificers in the precious metals capable of forming the figures of small animals; and their idols that were taken among the spoils of the great battle of Baal-perazim were probably graven of wood (1 Chron. xiv. 12). No. (6), פָּתַח [Piel and Pual], is perhaps distinguished from the term we have just considered (פָּסַל) by being used to describe figures in relief rather than statues, such as the cherubic figures on the walls of the temple (see 1 Chron. iii. 7). Compare the cognate noun פְּתִיחַת, engraved figure, in 1 Kings vi. 29, which passage informs us that the temple walls were lavishly adorned with these figures, standing out probably in various degrees of relief (see also other but similar work, described by this verb, 1 Kings vii. 36). The chief application, however, of the word is to the cutting and engraving of precious stones and metals [intaglio work, as distinguished from the raised work of cameo, etc.]; such as the breast-plate of the high-priest (Exod. xxviii. 9-11, 21), and the plate of his mitre (ver. 36, 37). The mystic engraving of Zech. iii. 9 is likewise described in the same terms. The splendid jewellery of Solomon's time, as referred to in the Canticles, i. 10, 11, is best classed under the art indicated by פָּתַח and its derivatives. From Is. iii. 18-24 it appears that this art of the goldsmith continued rife in later reigns; and was not unknown even after the captivity (see Zech. vi. 11). The neighbouring nations were no less skilled in this branch of art; for instance, the Egyptians, Exod. xii. 35, compared with xxxii. 2, 3; the Canaanites, Josh. vi. 19; the Midianites, Num. xxxi. 50, and (afterwards) Judg. viii. 24-26; the Ammonites, 1 Chron. xx. 2; the Syrians of Zobah and Hamath, 2 Sam. viii. 7-11. No. (7), מְקַלְעֵת, like our last term of art, describes sculpture in relief [wie auf altägypt. Denkmälern, also nicht Hautrelief (Vulg.)], says Fürst, *Hebr. Wort.-b. i.* 780; it occurs 1 Kings vi. 18, 29 ('carved figures of cherubims,' A. V.), 32, vii. 31 ('gravings,' A. V.) No. (3) and No. (8) are the Hebrew names of the

in the original הַגְּבִלִים, 'Giblites,' or inhabitants of Gebal [or Byblos], north of Berytus, on the Mediterranean, and lying nearest the celebrated Cedar forest of all the harbours thereabouts (Keil, on Kings). This proximity encouraged the inhabitants in their art of engraving and sculpture for which they were noted. In Ezek. xxvii. 9 they are called יִקְנֵי גְבַל, 'the ancients of Gebal;' these, and 'the wise men thereof,' Rosenmüller in a learned note on the verse describes as *peritissimi, optimi fabri*; so Grotius, in *Crit. Sacr.* See also Poli *Synopsis*, in loc., who refers to Pliny, *Nat. Hist.* v. 18; Ptolemy, v. 15; Strabo [*ed. Casaub.*], p. 1096.

* There is here an allusion to the eastern custom of tracing out on their hands the sketches of eminent cities or places, and then rubbing them with the powder of the hennah or cypress, and so making the marks perpetual. Maundrell (*Journey from Aleppo to Jerusalem*, p. 100 [London, 1810]), describes the process of 'pilgrims having their arms and hands marked with the usual ensigns of Jerusalem.' See also Rosenmüller, in loc., and J. D. Michaelis, *Notæ in Lowthii Prælect.* [Oxford, 1821], pp. 501, 502; and Burder's *Oriental Customs* [London, 1840], p. 149.

engraver's *tools*. **קֶרֶט** occurs only in Exod. xxxii. 4 (A. V. 'a *graving tool*'), and in Is. viii. 1 (A. V. 'a *pen*'). This was rather the *scalprum fabrice* of the Romans (Livy, xxvii. 49), than the *stylus* (see art. *Scalptura*, in Smith's *Dict. of G. and R. Antiq.* For two other opinions as to the meaning of **קֶרֶט** in Exod. xxxii. 4, see Gesenius, *Thes.* 520). **עֵט** (which in Ps. xlv. 2 and Jer. viii. 8, means a writer's style or reed), has the same meaning as the previous word in the other places of its occurrence (Job xix. 24; Jer. xvii. 1); here it has the epithet **בְּרִיזָה**, i. q. 'Pen of iron.' The occurrence of **עֵט**, in Job xix. 24, imparts to the **הִתְעַבֵּן** the idea of a finer art than is usually expressed by that verb. See above, No. (1). (De Saulcy's *Histoire de l'art Judaique*, Paris, 1858, has been consulted in the preparation of this article.)—P. H.

ENOCH (הֲנוֹךְ; Sept. and N. T. Ἐνώχ).

Four persons bearing this name are mentioned in the O. T., the most distinguished of whom was the son of Jared and father of Methuselah. According to the O. T., *he walked with God*; and, after 365 years, *he was not, for God took him* (Gen. v. 24). The inspired writer of the Epistle to the Hebrews says, 'By faith Enoch was translated that he should not see death, and was not found, because God had translated him' (xi. 5). *Walking with God* implies the closest fellowship with Jehovah which it is possible for a human being to enjoy on earth. As a reward, therefore, of his extraordinary sanctity, he was transported into heaven without tasting of death. Elijah was in like manner translated; and thus the doctrine of immortality was palpably taught under the ancient dispensation. The traditions of the Jews have ascribed to Enoch many fabulous qualities. They have invested him with various attributes and excellences for which the Bible furnishes no foundation. Thus, he is represented as the inventor of letters, arithmetic, and astronomy; as the *first author*, from whom several books emanated. Visions and prophecies were commonly ascribed to him, which he is said to have arranged in a book. This book was delivered to his son, and preserved by Noah in the ark. After the flood it was made known to the world, and handed down from one generation to another. Hence the Arabians call him **ادريسى** *Edris*, i. e., *the learned* (Koran, Sur. xix.) See Juchasin, f. 134; Eusebius, *Præpar. Evang.* ix. 17, and *Hist. Eccles.* vii. 32; Barhebr. *Chron.*, p. 5.—S. D.

ENOCH, BOOK OF. The interest that once attached to the apocryphal book of Enoch has now partly subsided. Yet a document quoted, as is generally believed, by an inspired man, can never be wholly devoid of importance or utility in sacred literature. We shall allude to the following particulars relating to it:—

1. History of the book of Enoch.
2. The language in which it was written.
3. Constituent parts, authorship, and age.
4. The place where it was written.
5. Did Jude really quote it.
6. Its use.

In several of the fathers mention is made of

Enoch as the author, not only of a prophetic writing, but of various productions. The book of Enoch is alluded to by Justin Martyr, Irenæus, Clement of Alexandria, Tertullian, Origen, Augustine, Jerome, Hilary, and Eusebius. It is also quoted on various occasions in the *Testament of the Twelve Patriarchs*, a document which Nitzsch has shewn to belong to the latter part of the first century or the beginning of the second. The passages in these ancient writings relating to our present purpose have been carefully collected by Fabricius, in his *Codex Pseudepigraphus* (vol. i., pp. 160-224), and by Gildemeister in the *Zeitschrift der deutsch-morg. Gesellschaft*, Band. ix. Jewish writers have also referred to the book more or less expressly. There are reminiscences of it in different works; as in the book Sohar, in Rabbi Menahem, and others enumerated by Jelinek in the seventh volume of the *Zeitschrift der deutschen morgenländischen Gesellschaft*, p. 249, et seqq. In the 8th century Georgius Syncellus, in a work entitled *Chronographia*, that reaches from Adam to Diocletian, made various extracts from 'the first book of Enoch.' In the 9th century Nicephorus, patriarch of Constantinople, at the conclusion of his *Chronographia Compendium*, in his list of *canonical and uncanonical books*, refers to the book of Enoch, and assigns 4800 *στίχοι* as the extent of it. After this time little or no mention appears to have been made of the production until Scaliger printed the fragments of Syncellus regarding it, which he inserted in his notes to the *Chronicus Canon* of Eusebius. In consequence of the extracts, the book of Enoch excited much attention and awakened great curiosity. At the beginning of the 17th century an idea prevailed that it existed in an Ethiopic translation. A Capuchin monk from Egypt assured Peiresc that he had seen the book in Ethiopic; a circumstance which excited the ardour of the scholar of Pisa so much, that he never rested until he obtained the tract. But when Job Ludolph afterwards visited the Royal Library in Paris, he found it a fabulous and silly production. In consequence of this disappointment the idea of recovering it in Ethiopic was abandoned. At length Bruce brought home three MSS. of the book of Enoch from Abyssinia. 'Amongst the articles,' he states, 'I consigned to the library at Paris, was a very beautiful and magnificent copy of the prophecies of Enoch in large quarto. Another is amongst the books of Scripture which I brought home, standing immediately before the book of Job, which is its proper place in the Abyssinian Canon; and a third copy I have presented to the Bodleian Library at Oxford by the hands of Dr. Douglas, bishop of Carlisle.' As soon as it was known in England that such a present had been made to the Royal Library at Paris, Dr. Woide, librarian of the British Museum, set out for France with letters from the secretary of state to the ambassador at that court, desiring him to assist the learned bearer in procuring access to the work. Dr. Woide accordingly transcribed it, and brought the copy back with him to England. The Parisian MS. was first publicly noticed by the eminent Orientalist De Sacy, who translated into Latin ch. i. ii. iii. iv. xvi., also xxii. and xxxi., and published them in the *Magasin Encyclopédique*, ar. vi. tom. i. p. 382, et seqq. Mr. Murray, editor of *Bruce's Travels*, gave some account of the book from the traveller's own MS. The Bodleian MS.

was translated into English by Dr. Laurence, then Professor of Hebrew in Oxford; and thus the public were favoured, for the first time, with the whole book in English, A. D. 1821. In 1833 a second, improved edition of the translation appeared; and, in 1838, the third edition, revised and enlarged. To the translation is prefixed a preliminary dissertation of 59 pages, giving some account of the book, its author, the time and place of its composition, etc. etc. It has also been translated into German by Dr. Hoffmann of Jena. According to Angelo Mai there is a MS. copy of the book of Enoch among the Ethiopic codices of the Vatican, which must have been brought into Europe earlier than Bruce's MSS. In 1834 Ruppell procured another MS. of Enoch from Abyssinia, from which Hoffmann made the second part of his German version.

In 1840 Gfrörer made and published a Latin version in his *Propheta veteres Pseudepigraphi*, etc. Being taken from the English and German translations it has little value.

In 1838 Laurence edited the original work in Ethiopic from Bruce's MSS. In 1851 Dillmann published it in Ethiopic from five MSS. (*Liber Henoch, Æthiopicæ*, Lipsiæ, 8vo); which was followed in 1853 by a German version, with a general introduction and copious explanations (*Das Buch Henoch, uebersetzt und erklärt*, Leipzig, 8vo). On this standard edition a judgment must now be formed of the original work; not on the imperfect and faulty editions of Laurence and Hoffmann.

There is little doubt that the Ethiopic translation exhibits the identical book, which, as most believe, Jude quoted; and which is also mentioned or cited by many of the fathers. The fragments preserved by Syncellus (reprinted by Laurence, Hoffmann, and Dillman) are obviously the same, the deviations being of little importance. It is manifest also, to any one who will compare the quotations made by the fathers with the Ethiopic version, that both point to the same original. The extracts in question could not have been interpolations, as they are essential to the connections in which they are found.

The book was never received into the series of canonical writings. The *Apostolical Constitutions* expressly style it *apocryphal* (vi. 16); while Origen (*contra Celsum*) affirms that it was not reckoned divine by the churches; although in another place he hints that some of his contemporaries were of a different opinion. In the *Synopsis of Scripture* published with the works of Athanasius, as well as in the writings of Jerome and Augustine, its non-canonicity is distinctly stated. The only ancient writer who reckoned it of divine authority was Tertullian, who undertakes to defend it against the objections by which it was then assailed (See his treatise *De Cultu Fæminarum*). His arguments, however, are puerile.

The Greek translation, in which it was known to the fathers, appears to be irrecoverably lost. There is no trace of it after the 8th century. The last remnants of it are preserved by Syncellus. The Ethiopic was made from it, not from the Hebrew.

The leading object of the writers, who were manifestly imbued with deep piety, was to comfort and strengthen their contemporaries. They lived in times of distress and persecution, when the enemies

of religion oppressed the righteous. The outward circumstances of the godly were such as to excite doubts of the divine equity in their minds; or at least to prevent it from having that hold on their faith which was necessary to sustain them in the hour of trial. In accordance with this, the writers exhibit the reward of the righteous and the punishment of the wicked. To give greater authority to their affirmations, they put them into the mouths of Enoch and Noah. Thus they have all the weight belonging to the character of eminent prophets and saints. The narrative of the fallen angels and their punishment, as also of the flood, exemplifies the retributive justice of Jehovah; while the Jewish history, continued down to a late period, exhibits the final triumph of His people, notwithstanding all their vicissitudes. Doubtless the authors lived in times of trial; and looking abroad over the desolation, sought to cheer the sufferers by the consideration that they should be recompensed in the Messianic kingdom. As for their wicked oppressors, they were to experience terrible judgments. The writers occasionally delight in uttering dire anathemas against the wicked. It is plain that the book grew out of successive times and circumstances by which they were surrounded. It gives us a glimpse not only of the religious opinions, but also of the general features which characterized the whole period. The book belongs to the apocalyptic literature of the period between the close of the O. T. canon and the advent of Messiah. It is therefore of the same class of composition as the fourth book of Ezra, and the Jewish Sibyllines. The principal interest attaching to it arises from its contributing to our knowledge of the development of Jewish Messianic ideas subsequently to the writings of inspired prophets. In tracing the gradual unfolding and growth of those ideas among the Jewish people, we are the better prepared for the revelation of the N. T.

2. The Language in which it was written.—

The careful reader soon sees that the work was composed at first in Hebrew, or rather Hebrew-Aramæan. This was long ago perceived by Joseph Scaliger: though he had before him nothing but the Greek fragments preserved by Syncellus. Hottinger, however, observed, in opposition to Scaliger, that a Hebraising style is no sure proof of a Hebrew original. Hoffmann adduces the Hebrew-Aramæan etymology of names, especially the names of angels, as an evidence of the Aramæan original; an argument which is more pertinent; and Laurence infers from the book of Sohar that Hebrew was its primitive language. The writer's thorough acquaintance with the canonical Scriptures of the Jews in the tongue in which they were composed; their use of them in the original, not the Greek translation of the LXX.; their Hebrew etymologies of names, especially the appellations of angels and archangels; the fact that all words and phrases can be easily rendered back into Hebrew or Aramæan; and the many Hebrew idioms and turns that occur, prove that neither Greek nor Ethiopic was the original language, but the later Palestinian Hebrew. Thus the names of the sun are *Oryares* and *Tomas* (lxxviii. 1) from אֲזַרְתָּם and חַמָּה. In lxxvii. 1, 2, we read that 'the first wind is called the eastern because it is the first,' which

can only be explained by the Hebrew, קְדֻמוֹנִי, קְדָרִים; 'the second is called the south, because the Most High there descends,' i.e., קְדָרִים from יָרָר קָרָם (Dillmann, *Das Buch Henoch*, pp. 235, 236).

The names of the conductors of the month are also Hebrew (lxxxii. 13), as Murray (p. 46) and Hoffmann (p. 690) remark.

At what time the Greek version was made from the original can only be conjectured. It could not have been long after the final redaction of the whole; probably about the time of Philo. Having appeared in Greek it soon became widely circulated. The Ethiopic version was made after the O. T. had been translated into that tongue.

3. *Constituent parts, Authorship, and Age.*—The Book of Enoch is divided in the Ethiopic MSS. into twenty sections; which are subdivided into 108 chapters. But copies differ in their specification of chapters. Dillmann has properly departed from the MSS., and endeavoured to make divisions of sections, chapters, and verses, which may represent the text pretty nearly as it is preserved among the Abyssinians. We shall follow his edition.

The work is divided into five parts or books, with an introduction, and several concluding chapters. The introduction consists of the first four chapters, characterising the book to which it belongs as a revelation of Enoch the seer respecting the future judgment of the world, and its results both towards the righteous and rebellious sinners, written to console the pious in the times of final tribulation.

The first part comprehends chapters v.-xxxvi.; the second, xxxvii.-lxxi.; the third, lxxii.-lxxxii.; the fourth, lxxxiii.-xc.; and the fifth, xcii.-cv. Chapters cvii.-cviii. form the conclusion.

Laurence remarks, that 'the book may have been composed at different periods; perhaps it might also be added, that there may have been different tracts, as well as tracts composed by different authors.' This idea was taken up by Murray, and wrought out in a treatise of considerable ingenuity; though it must be affirmed that the author signally failed from want of critical ability, as well as of a better text than Laurence's. *Enoch restitutus*, as Murray terms his work, was reviewed by Hoffmann in his *second excursus*; an honour to which it was scarcely entitled.

The first thing that strikes a reader of this apocalyptic production is, that extracts from a prophecy of Noah appear in loose and awkward connection with Enoch's prophetic revelations. Thus the 65th chapter begins: 'And in those days Noah saw the earth how it was bowed down, and its corruption was near. And he lifted up his feet thence, and went to the ends of the earth, and cried to his grandfather, Enoch,' etc. etc. Portions are ascribed to Enoch; others belong to Noah. To the former belong chapters xxxvii.-lxxi.; i-16, chiefly, but incompletely, and a few other places fragmentarily; as also xci. 3-cv.; viii. 20-36; lxxxiii.-lxxxii., lxxxiii., lxxxiv., lxxxv.-xc., cvi., etc., etc., etc. To the latter belong vi. 3-8, ix.-xi. fragmentarily, liv. 7-lv. 2, xvii.-xix., lxxv.-lxxix. The first Enoch book lies in xxxvii.-lxxi., with a few interpolations. Chapter xxxvii. is a sort of preface, in which the writer calls his book a *vision of wisdom*. It consists of three parts, viz., xxxviii.-xliv., xlv.-lix., lviii.-lxxi., each commencing

with *parable the first, parable the second, parable the third*, respectively. Here the author represents Enoch as travelling through the upper heavens, where he sees many wonderful things, some actually and in the body; others in prophetic visions; which describes them accordingly, viz., the mysteries of the angel world, of the kingdom of heaven, the Messianic kingdom, the person of the Messiah, the establishment of his kingdom by judgments, its growth and completion, the blessedness of the elect, and the condemnation of the unbelieving. The book treats not only of the secrets of the purely *spiritual*, but also those of the *visible*, world. The latter are evidently touched upon in subservience to the former, to shew that the secret powers of the visible world work in harmony towards the consummation of the Messianic reign, when righteousness shall obtain secure and eternal victory over all opposition. The ultimate tendency and drift of the whole production are the Messianic issues of all things.

It is obvious that the author was a poet of no mean order. His inspiration was high, his ideas elevated and pure. He had a creative fancy which could body forth new forms and shapes. Speaking out of the midst of his own time, he could throw himself back into the past, and mould it suitably to his purpose. His language too, has the living freshness of a master. He was well acquainted with the book of Daniel, as is obvious from the spirit of his production. Not that he was an imitator of that book, far from it; his mind was too powerful and independent. It is characteristic of him that he calls Jehovah *Lord of Spirits*, that he specifies as the seven spiritual beings that stand before God, the four highest angels, Michael, Raphael, Gabriel, Phanuel; and the three highest hosts, the Cherubim, Seraphim, and Ophanim; that he speaks of the *Elect*, and of one in particular as the *Elect by way of eminence, the Son of Man, i. e., the Messiah*. The charm of the writer's descriptions is irresistible, transporting the reader into the highest regions of the spiritual world. With a genuine glow of feeling, and the elevation of purest hope, he carries us away, till we are lost in wonder at the poetic inspiration of one living at a period comparatively so late. His work must have created a new branch of writing at the time; leading to numerous imitations.

The first Enoch book was written after Daniel, and as far as we can judge from its descriptions and tone, it appeared about 144 B.C., after Jonathan had been made prisoner by the Syrians; when the Jewish people seemed to be in complete subjection to their conquerors, and it was necessary to turn all the nobler spirit they had, against the oppression and cunning of foreign kings. This is consistent with the mention of the Parthians in lvi. 5-7, for that people were well known in Palestine after the Parthian expedition of Antiochus Sidetes, in which John Hyrcanus was obliged to accompany him. Laurence's argument for the year 40 B.C., founded on this mention of the Parthians, is nugatory (Preliminary Dissertation, p. 37, *et seqq.*, 3d edition). The connection of the passage shews that the writer does not describe his immediate present, but the distant Messianic times. He speaks in parables. The analogy too of the 57th chapter shews that he neither refers to the march of the Parthians into Palestine and to Jerusalem, about 40 B.C., nor to a definite historical event in

the future, but to the Medo-Parthians as about to play the part of Magog in Ezekiel. The attention of the Israelites had been increasingly directed to the Parthians since the Maccabæan struggles, till they became well known in the course of the second century. Hence the date 40 B. C. is inadmissible; though Hoffmann, Gfrörer, and Krieger, follow Laurence in adopting it. Kœstlin has endeavoured, but unsuccessfully, to shew that this piece was written between the years 80 and 60 of the Christian era.

The second Enoch book consists of vi. 1, 2; vii. 1-6; viii. 4; ix. 1-6, 8-11; x. 4-10, 12-11. 2; xii. xvi.; lxxxi, 1-4; lxxxiv.; xci. 3-cv. It may be divided into two unequal parts, the first of which is preserved in fragments that are now scattered here and there, and difficult to be discovered; the second is easily detected in xci. 3-cv. Chapters i.-v. form an introduction to the whole. The object of the writer was much the same as that of his predecessor, viz., to threaten, as well as to console, his countrymen. He was a gifted poet; and had the faculty of powerful description, with a spirit moved and passionate, greatly excited by the commotion of the times. He wrote chiefly on account of the internal dissensions of the people; not with relation to heathen oppressors. With the first book of Enoch he was acquainted, as the spirit of it is largely echoed in his. Yet he was evidently an independent author, adducing much new matter. He is more rhetorical than poetical. The people of God are generally designated by him 'the righteous;' God is 'the mighty,' 'the great,' 'the Holy One,' 'The Messiah he calls 'the plant or root of righteousness,' 'the Son of God.' His work must have been composed not long after the first book of Enoch, viz., under John Hyrcanus, about ten to fifteen years later. An analysis of the ten weeks of the world's history, described in xci. and xciii., of which seven had elapsed when Enoch revealed the wonderful things contained in the book, brings us to the time of Hyrcanus.

The third book of Enoch consists of viii.; xx.-xxxvi.; lxxiii.-lxxxii.; lxxxiii. 1-11; lxxxv.-xc.; cvi.; not completely but fragmentarily. It is difficult to collect the dispersed and imperfect members of this scattered work. It is more didactic and learned than the other two; and is mainly occupied with unfolding the secrets of creation. The writer, too, had a poetical genius; but he was less impassioned than his predecessors. He had both skill and ability; but borrowed from the first book more than the second author did. It is characteristic of him that he assumes seven leading *evil* angels, as well as seven good ones; that he calls the latter *the white ones*; that he terms both good and bad angels *stars*, and the Holy Land, *the blessed*. The appendix, viz., chapter cviii., was afterwards added to this third book by an unknown hand.

This writer, in grouping the periods of time from the creation till his own day, gives as the third that of the dominion of the 70 shepherds over the people on whom righteous punishment had fallen (ch. lxxxix. 59-xc. 13). This reaches from the 8th and 7th centuries before Christ to the author's present. He seems to have divided the 70 into 12 + 23 + 23 + 12, four series of foreign rulers. The first twelve kings consist of Assyrian, Babylonian, and Egyptian kings; the five Assyrian ones

from Pul to Esarhaddon, and the three Chaldæan ones, besides the four Egyptian, from Necho till Amasis. The first 23 begin with Darius the Mede, and Cyrus. The 12 + 23 make 35, the half of 70. The second 23 consists of Alexander and his next two successors, Cassander, Antigonus, Demetrius; the next five kings of the new Macedonian house; the first seven Ptolemies; and the first five Seleucidæ. The last twelve consist of the twelve Seleucidæ, from Antiochus the Great to Demetrius II. The 36, or as it may be read 37 shepherds, in xc. 1 should be 35, as Laurence conjectured on a wrong ground; Ewald on a right one. The author of this book lived under John Hyrcanus, a little later than the writer of the second Enoch book. It does not seem to us worth while to enter minutely into the various views and computations of the seventy shepherds that have been put forward by scholars. It may suffice to say that Laurence, Gfrörer, Krieger, Lücke, Hoffmann, are all more or less in error, as Dillmann and Ewald have elaborately demonstrated. (See Dillmann's *Das Buch Henoch, allgemeine Einleitung*, p. 47, *et seqq.*; and Ewald's *Abhandlung*, p. 51, *et seqq.*; Ewald's *Geschichte des Volkes Israel*, vol. iv., p. 397, *et seqq.*, 2d edition.)

Besides these three Enoch books, there is the book of Noah existing in an abridged, mutilated, and fragmentary form. Being now scattered in disjointed pieces through the Enoch books, it is difficult of detection. It may be seen, however, in vi. 3-8; ix. 7; x. 1-3, 11-22 b, 17-19; liv. 7-lv. 2; lx. 1-10, 24, ff. 64; lxx. 1-lxix. 1, 2-16 a, and a few other passages. The production referred to the secrets of the angelic and heavenly world, and human inventions and errors. The end of the old world which was destroyed by the flood, the deliverance of Noah and his house, threatenings and promises in relation to the new world, are described in it. It is evident that the author of the Noah book had the other three productions before him; and that he was mainly influenced and guided by the third. How long after the Enoch books this Noah production was composed, cannot be exactly determined. It was probably 50 years later.

An editor subsequently undertook to put them together so as to form the entire work. In doing so he proceeded very freely and independently. He transposed, abridged, and added, putting the parts into the order that seemed best. The appendix to the third Enoch book had been composed before; thus making six persons concerned in the whole. Probably the editor belonged to the middle of the first century B. C.

Such is Ewald's theory of the composition of the book, an ingeniously elaborated and complex one, that admits of question and doubt. But it is impossible at the present day to arrive even at probability in relation to the structure of the whole. Plausible theories may be proposed very different in their nature. We believe that Ewald has assumed too many separate writers. That there are two Enoch books is plain. That there are also pieces of a Noah book is unquestionable. Under these three heads we should put all, a final compiler having interwoven the parts so as to give a kind of unity to the whole. In constructing the second Enoch book it is unnecessary to assume so much dismemberment as Ewald does. With all the allowance that can be reasonably made for corrup-

tion of the text in the process of translation and transmission, it cannot well be supposed that a later redactor would put or leave the alleged second and third Enoch books in so disjointed a form as Ewald's theory implies. That the entire production appeared before the Christian era is clearly deducible from the fact that the Roman empire never appears as a power dangerous to Israel.

Stuart has laid considerable stress on the Christology of the book as indicative of an acquaintance on the authors' part with the N. T., especially the Apocalypse. But the Christological portions do not possess sufficient distinctness to imply a knowledge of the N. T. The name Jesus never occurs. Neither are the appellations *Lord*, *Lord Jesus*, *Jesus Christ*, or even *Christ*, employed. The words *faith*, *believers*, *God* and *his anointed*, *deny*, etc., can hardly be claimed as Christian terms, because they occur in the Ethiopic O. T. as the representatives of Hebrew-Greek ones. All that can be truly deduced from the Christology is, that it is highly developed, and very elevated in tone; yet fairly derivable from the O. T. in all its essential and individual features. Nor is there anything in the eschatology or angelology to necessitate a Christian origin. We allow that the Messiah is spoken of in very exalted terms. His dignity, character, and acts surpass the descriptions presented in other Jewish books. But they are alike in the main, coloured by the highly poetical imagination of the writers, in conformity with the sublimity and animation of their creations. We must therefore reject Stuart's opinion of a Jewish-Christian origin. All the arguments adduced on its behalf are easily dissipated, since Dillmann's edition and Ewald's criticisms have led to a better acquaintance with the text of the work itself. Nor is Hilgenfeld's attempt to shew that the first Enoch book (xxvii.-lxxi.) proceeded from Christian gnostics more successful, as Dillmann has remarked (*Pseudepigraphen des A. T. in Herzog's Encyklopadie*, vol. xii., pp. 309, 310). Equally futile is Hoffmann's endeavour to shew that the work did not appear till after the destruction of Jerusalem in the first century, when both Jude's epistle and the Apocalypse had been written (*Die Zeitschrift der deutschen morgenländischen Gesellschaft*, vol. vi., p. 87, et seq.). Not very dissimilar is Bötcher's view, that the book, like the Sybilline oracles, was made up in the first and second centuries after Christ, of pieces belonging to different times (*De Inferis*, i. sec. 505). Nothing is more certain than that the work belongs to an ante-Christian world; and therefore the only problem is how to distribute the different books incorporated, and when to date them separately and collectively. After Laurence, Hoffmann and Gfrörer had erred in placing the whole under Herod the Great; Krieger and Lücke rightly assigned different portions to different times; putting ch. i.-xxxvi. and lxxii.-cviii. to the early years of the Maccabean struggle; and xxxvii.-lxxi. to 38-34 B.C. How far we believe this apportionment incorrect will be seen from the preceding statements (see Krieger's *Beiträge zur Kritik und Exegese*, 1845; and Lücke's *Versuch einer vollständigen Einleitung in die Offenbarung des Johannes*, u. s. w., sec. II, 2d ed.)

The mention of books of Enoch in the Testament of Judah, in the Testament of Benjamin, in Origen (*c. Cels.* and *Homil. in Num.*), and of the

first book of Enoch in the fragments preserved by Syncellus, consists with the idea that the whole was then divided into different books. Tertullian leads us to believe that it was of the same extent in the Greek text then existing as it is in the present Ethiopic.

4. *The place where it was written.*—The place where the authors lived and wrote is Palestine. This alone seems to suit the circumstances implied in the work, which is largely pervaded by the spirit of persons whose power, religion, and independence had been overborne by foreign interference. Laurence, however, endeavours to shew from the 72d chapter (71st Laurence), where the length of the days at various periods of the year is given, that the locality must have been between the 45th and 49th degrees of north latitude, in the northern districts of the Caspian and Euxine seas. Hence he conjectures that the writer was one of the Jews who had been carried away by Shalmaneser and did not return. Krieger supposes (*Beiträge zur Kritik und Exegese*, p. 53) that Enoch, the imaginary writer, drew from the astronomical traditions or writings of northern Asia, regardless of the difference of Palestine's geographical position. Murray has shewn (p. 63, et seq.) that one passage favours the idea that the author lived in Abyssinia; whence he infers that the production proceeded from various persons belonging to countries removed from one another. But De Sacy has remarked that as the authors' astronomical system is partly imaginary, their geography may be also visionary. Neither Egypt, nor Chaldea, nor Palestine, suits the astronomy of the book. The scientific knowledge of the Israelites was imperfect. It is therefore idle to look for accuracy in geography or astronomy. The writer or writers systematised such knowledge as they had of natural phenomena after their own fashion; as appears from the fact that to every third month thirty-one days are assigned. The allusions to the Oriental theosophy and the opinions of Zoroaster do not necessarily commend a Chaldean origin, at least of the astronomical part; since the images of fire, radiance, light, and other Oriental symbols, may be satisfactorily accounted for by the Jews' intercourse with other nations, and their residence there for a time. The Oriental philosophy of Middle Asia was evidently not unknown to the authors. Zoroastrian doctrines are embodied in the work because Persian influences had been felt by the Israelites since the Babylonian captivity.

5. *Did Jude really quote the book of Enoch?*—Some are most unwilling to believe that an inspired writer could cite an Apocryphal production. Such an opinion destroys, in their view, the character of his writing, and reduces it to the level of an ordinary composition. But this is preposterous. The apostle Paul quotes several of the heathen poets; yet who ever supposed that by such references he sanctions the productions from which his citations are made, or renders them of greater value? All that can be reasonably inferred from such a fact is, that if the inspired writer cites a particular sentiment with approbation, it must be regarded as just and right, irrespective of the remainder of the book in which it is found. The apostle's sanction extends no farther than the passage to which he alludes. Other portions of the original document may exhibit the most absurd and superstitious notions. It has always been the current opinion

that Jude quoted the book of Enoch; and there is nothing to disprove it. It is true that there is some variation between the quotation and its original; but this is usual even with the N. T. writers in citing the Old.

Others, as Cave, Simon, Witsius, etc., suppose that Jude quoted a *traditional* prophecy or saying of Enoch; and we see no improbability in the assumption. Others again believe that the words apparently cited by Jude were suggested to him by the Holy Spirit. But surely this hypothesis is unnecessary. Until it can be shewn that the book of Enoch did not exist in the time of Jude, or that his quoting it is unworthy of him, or that such knowledge was not handed down traditionally so as to be within his reach, we abide by the opinion that Jude really quoted the book. While there are probable grounds for believing that he might have become acquainted with the circumstance independently of inspiration, we ought not to have recourse to the hypothesis of *immediate suggestion*. On the whole, it is most likely that the book of Enoch existed before the time of Jude; and that the latter really quoted it in accordance with the current tradition. Whether the prophecy ascribed to Enoch was *truly* ascribed to him, is a question of no importance.

6. *Its use*.—Presuming that it was written by Jews, the book before us is an important document in the history of Jewish opinions. It indicates an essential portion of the Jewish creed before the appearance of Christ; and assists us in comparing the ideas of the later with those of the earlier Jews. We would not appeal to it as possessing *authority*. The place of *authority* can be assigned to the Bible alone. No human composition, be it ever so valuable, is entitled to usurp dominion over the understandings of men. But apart from all ideas of *authority*, it may be fairly regarded as an index of the state of opinion at the time when it was written. Hence it confirms certain opinions; provided they can be shewn to have a good foundation in the Word of God.

Mr. Stuart in depicting the Christology of the book, finds the doctrine of the Trinity distinctly recognised in lxi. 9, etc. (lx. 12 of Laurence). But he has been misled by Laurence's version. The passage runs thus:—'When the saints shall be judged by the elect one 'they shall all speak with one voice, and praise, extol, exalt, and magnify the name of the Lord of spirits. And he shall call to all the host of the heavens, and all the saints that are above, and the host of God, the Cherubim, and Seraphim, and Ophanim, and all the angels of power, and all the angels of principalities, and of the elect, and the other powers which are upon the dry land, over the water, on that day,' etc. Here a plurality of persons in the Godhead is *not* discoverable.

The manner in which the Messiah is depicted exceeds in loftiness what we find in the O. T.:—'I saw one who had a head of days (comp. Dan. vii. 13), and his head was white as wool, and with him was another whose countenance was as the appearance of a man, and full of grace was his countenance, like to one of the holy angels. And I asked one of the angels who went with me and shewed me all hidden things respecting that Son of Man who he was, and whence he was, and wherefore he went with the ancient of days? And he answered me, and said to me, This is the Son

of Man who has righteousness, with whom righteousness dwells, and who revealeth all the treasures of that which is concealed, because the Lord of spirits has chosen him, and his lot before the Lord of spirits has surpassed all through uprightness for ever. And this Son of Man whom thou hast seen shall raise up the kings and the mighty from their couches, and the powerful from their thrones, and shall loose the bands of the powerful, and break in pieces the teeth of sinners. And he shall hurl the kings from their thrones, and drive them out of their kingdoms, because they magnify him not nor praise him, nor thankfully acknowledge whence the kingdom is lent to them. And the face of the mighty shall he reject, and shame shall fill them,' etc. (xvi.) After this general conception of Messiah, he is invested with divine attributes, as—'Before the sun and the signs were made, the stars of heaven created, his name was already named in presence of the Lord of spirits' (xlviii. 3); 'before the creation of the world was he chosen and concealed before him, and will be before him from everlasting to everlasting' (xlviii. 6). It is also said that the angels know him and praise his name (xl. 5; xlviii. 2). Thus it appears that a pre-existence is assigned to the Messiah; he had a hidden existence, before time began, in the presence of God. Highly, however, as he is exalted, he is not represented as a Being truly God, or on an equality with the Father. All that is said is, that he is exalted above all other creatures, sits on the throne of the divine glory, having all judgment committed to him, and judges angels themselves (lv. 4; lxi. 8). Nowhere is *proper worship* ascribed to him; on the contrary, he is represented as joining in the universal worship offered to the Lord of spirits. He is still the *Son of Man* and the *Elect one*, on whom the fulness of the Spirit is poured out; a creature subordinate to God, with a kind of idealised pre-existence, clothed with the highest attributes of majesty and humanity. The Christology, generally, is a development of the acknowledged Jewish doctrine; and never transgresses the Jewish standpoint in deifying the Messiah, or hinting at the incarnation. The 7th chapter of Daniel contains in germ the ideas of Messiah, which are developed and set forth in the work before us. It is there that we find the essence of its Christology.

Wisdom is not hypostatized in the book, any more than in Proverbs. It is merely *personified*. This appears from the following passages:—'Wisdom found no place where she should dwell; then she had a dwelling in heaven. Wisdom came to dwell among the sons of men, and found no habitation: then wisdom returned to her place, and took up her abode among the angels. And unrighteousness came forth from her recesses; whom she did not seek she found, and dwelt among them, as the rain in the wilderness, and as the dew on the thirsty land' (xlii. 2-3). 'The wisdom of the Lord of spirits has revealed him [the Son of Man] to the holy and righteous' (xlviii. 7). 'The righteous one will arise from sleep, and wisdom shall arise to be given them' (xci. 10).

In like manner, the *word* is not an appellation of Messiah. 'The word calls me, and the spirit is poured out upon me [Enoch]' (xci. 1). 'The Lord called me with his own mouth, and said to me, 'come hither, Enoch, and to my holy word'' (xiv. 24). The only passage in which *the word* appears

to be used personally of Messiah is xc. 38, 'And the first among them [was the word, and the same word] became a great beast,' etc. But we agree with Dillmann in holding that the words in brackets are a Christian gloss. They give no suitable sense. Besides, the identification of the *word* with Messiah is foreign to the Christology of the book, and does violence to Jewish ideas of His person (Dillmann, *Das Buch Henoch*, p. 287).

As in the canonical prophecies of the O. T. so here, the final establishment of the Messianic kingdom is preceded by wars and desolations. In the eighth of the ten weeks into which the world's history is divided, the sword executes judgment upon the wicked; at the end of which God's people have built a new temple, in which they are gathered together. The tenth week closes with the eternal judgment upon angels (ch. xc. xci.)

With respect to the doctrine of a general resurrection, it is certainly implied in the work. But the mode of the resurrection of the wicked and the righteous is differently presented. The *spirits* of the former are taken out of sheol and thrown into the place of torment (xcviii. 3; ciii. 8; cviii. 2-5); whereas the spirits of the righteous raised again will be reunited to their *bodies*, and share the blessedness of Messiah's kingdom on earth (li. 5; xci. 10; xcii. 3; c. 5). The reunion of their *bodies* with their spirits appears a thing reserved for the righteous.

In bringing out the sentiments expressed in the book care must be taken not to convert them into *dogmas*, or fixed ideas that formed part of the writer's settled creed. Their descriptions are poetical and ideal. Hence doctrines cannot well be deduced from them. As well might one attempt to construct a theology out of the prophetic writings of the O. T. As the authors of the work built largely on the prophets, assuming a like tone, and animated in part by the same spirit, they cannot be truly regarded as other than Hebrew poets, and prophets of an inferior order to the old inspired ones of a better age.

Stuart has gone to the book with his system of theology, and derived from it a Christology essentially Christian. Hence he supposes that the writer of several passages had some acquaintance with the Gospel and Revelation of John. Surely the reverse is the fact. The Apocalypse is a work that savours strongly of the Jewish apocalyptic literature, Daniel and Enoch. This is consistent with the fact adduced against it by Stuart, viz., that John bears on the face of all his writings the stamp of originality (*Biblical Repository for Jan.* 1840, p. 127).

As various sects in Judaism were tolerably developed at the time of some of the writers, it has been a subject of inquiry whether the peculiar doctrines of any appear in the work. According to Jellinek (*Zeitschrift der deutsch.-morgenländ. Gesellschaft*, vii. p. 249) the work originated in the sphere of Essenism. We learn from Josephus that the Essenes preserved as sacred the names of the angels: and put up certain prayers before sunrise, as if they made supplication for that phenomenon (*Jewish Wars*, book ii. ch. viii.) Now there is a very developed angel-doctrine in the work before us; and we also find the following passage:—'When I went out from below and saw the heaven, and the sun rise in the east, and the moon go down in the west, a few stars, and everything as

He has known it from the beginning, I praised the Lord of judgment and magnified Him, because He has made the sun go forth from the windows of the east,' etc. (lxxxiii. 11). This certainly reminds one of Essenism shewing its influence on the mind of the writer. It belongs to the third Enoch book. The 108th chapter, which was later than the third Enoch book, is more plainly Essenic. The pious, whom God rewards with blessings, are described as having lived a life of purity, self-denial, and asceticism like to that of the Essenes. Yet Dillmann appears disinclined to find any reflexion of Essenism in lxxxiii. 11, or elsewhere (*Das Buch Henoch Allgemeine Einleitung*, p. liii.) We admit that the first and second Enoch books are free from it, as also the Noah book. It is obvious that none of the writers belonged to the school of the Pharisees. They were tolerably free from the sects of their people; rising above the narrow confines of their distinctive peculiarities, which were not then fully developed.

The Book of Enoch the Prophet, by Richard Laurence, LL.D., Archbishop of Cashel, third edition, Oxford, 1838, 8vo. *Das Buch Henoch in vollständiger Uebersetzung mit fortlaufendem Commentar, ausführlicher Einleitung und erläuternden Excursen*, von Andr. G. Hoffmann, Erste Abtheilung, Jena, 1833, 8vo. *Zweite Abtheilung* Jena, 1838, 8vo. *Enoch Restitutus, or an attempt to separate from the books of Enoch the book quoted by St. Jude*, etc., by the Rev. Ed. Murray, London, 1836, 8vo. *American Biblical Repository* for 1840, in which are two articles by Professor Stuart on the book of Enoch. *Versuch einer vollständigen Einleitung in die Offenbarung Johannis*, von Dr. F. Lücke, Bonn, 1848, 8vo, sec. 11, second edition. A. F. Gröner's tract in the *Tübinger 'Zeitschrift für Theologie'*, entitled, '*Die Quellen zur Kenntniss des Zustandes der jüdischen Dogmen und der Volksbildung im Zeitalter Jesu Christi*,' 4 Heft. pp. 120, sq. for the year 1837. *Das Jahrhundert des Heils*, Abtheil., i. p. 93, et seqq.; Wieseler's *Zur Auslegung und Kritik der Apocalypht. Litteratur des A. u. N. T., erster Beytrag*, p. 162, et seqq. Silvestre de Sacy's *Notice du livre d'Enoch in Magasin Encyclopédique*, an vi. tom. i. p. 382. This dissertation contains a Latin version of several chapters, and was translated into German by F. T. Rink, Königsberg, 1801, 8vo. De Sacy, in the *Journal des Savans* for 1822, October. Fabricii *Codex Pseudepigraphus Veteris Testamenti*, vol. i. pp. 160-224. Bruce's *Travels*, vol. ii., 8vo edition. *The Genuineness of the Book of Enoch Investigated*, by Rev. J. M. Butt, M.A., London, 1827, 8vo. *Liber Henoch, Æthiopice*, Leipzig, 1851, 8vo, by Dillmann. *Das Buch Henoch uebersetzt und erklärt*, von Dr. A. Dillmann, Leipzig, 1853, 8vo. *Abhandlung ueber des Æthiopischen Buches Henoch, Entstehung, Sinn, und Zusammensetzung*, von H. Ewald, Göttingen, 1854, 4to. *Ueber die Entstehung des Buches Henoch*, by K. R. Koestlin, in Baur and Zeller's *Jahrbuch* for 1856, Heft. 2 and 3. *Die Jüdische Apokalyphtik*, von A. Hilgenfeld, Jena, 1857, 8vo. *Pseudepigraphen des alten Testaments*, by Dillman, in Herzog's *Encyclopedie*, vol. xii., p. 308, et seqq. The publication of a good Ethiopic text by Dillmann, and his excellent translation of it, accompanied with copious explanations, have introduced a new era in our acquaintance with the nature of the work. Possessing all that he has written about it,

with the masterly essay of Ewald, and Koestlin's judicious articles, the student may well dispense with everything previously published in elucidation of the book. No opinion founded on the very imperfect editions and translations of Laurence and Hoffmann can be now relied upon.—S. D.

ENON. [ÆNON.]

ENSIGNS. [STANDARDS.]

EPÆNETUS (Ἐπαίνετος), a Christian resident at Rome when Paul wrote his Epistle to the Church in that city, and one of the persons to whom he sent special salutations (Rom. xvi. 5). In the received text he is spoken of as being 'the first fruits of Achaia' (ἀπαρχὴ τῆς Ἀχαΐας); but 'the first fruits of Asia' (τῆς Ἀσίας) is the reading of the best MSS. (A B C D E F G 67) of the Coptic, Armenian, Æthiopic, Vulgate, the Latin Fathers, and Origen (*In Ep. ad Rom. Comment.* lib. x., *Opera*, vii. p. 431; *In Numer. Hom.* xi., *Opera*, x. p. 109). This reading is preferred by Grotius, Mill, Bengel, Whitby, Koppe, Rosenmüller, Rückert, Olshausen, and Tholuck; and admitted into the text by Griesbach, Knapp, Tittmann, Scholz, Lachmann, Tischendorf, Alford, Vaughan, and Wordsworth; also by Bruder, in his edition of Schmidt's Concordance, Lips. 1842.—J. E. R.

EPAPHRAS (Ἐπαφρᾶς), an eminent teacher in the church at Colossæ, denominated by Paul 'his dear fellow-servant,' and 'a faithful minister of Christ' (Col. i. 7; iv. 12). From Paul's Epistle to Philemon it appears that he suffered imprisonment with the apostle at Rome. It has been inferred from Col. i. 7, that he was the founder of the Colossian Church; and Dr. Neander supposes that the apostle terms him ὑπὲρ ἡμῶν διάκονος τοῦ Χριστοῦ (a servant of Christ in our stead), because he committed to him the office of proclaiming the Gospel in the three Phrygian cities, Colossæ, Hierapolis, and Laodicea, which he could not visit himself (*Hist. of Planting*, etc., i. pp. 200, 373, Eng. transl.) This language, however, is by no means decisive; yet most probably Epaphras was one of the earliest and most zealous instructors of the Colossian Church. Lardner thinks that the expression respecting Epaphras in Col. iv. 12, ὁ ἐξ ἡμῶν, is quite inconsistent with the supposition of his being the founder of the Church, since the same phrase is applied to Onesimus, a recent convert (*Hist. of the Apostles and Evangelists*, c. xiv.; *Works*, vi. 153). But, in both cases, the words in question seem intended simply to identify these individuals as the fellow-townsmen of the Colossians, and to distinguish them from others of the same name in Rome (*v. Macknight* on Col. iv. 2).—J. E. L.

EPAPHRODITUS (Ἐπαφρόδιτος), a messenger (ἀπόστολος) of the church at Philippi to the Apostle Paul during his imprisonment at Rome, who was entrusted with their contributions for his support (Phil. ii. 25; iv. 18). Paul's high estimate of his character is shewn by an accumulation of honourable epithets (τὸν ἀδελφόν, καὶ συνεργόν, καὶ συστρατιῶτην μου), and by fervent expressions of gratitude for his recovery from a dangerous illness brought on in part by a generous disregard of his personal welfare in ministering to the Apostle (Phil. ii. 30). Epaphroditus, on his return to

Philippi, was the bearer of the epistle which forms part of the canon. Grotius and some other critics conjecture that Epaphroditus was the same as the Epaphras mentioned in the Epistle to the Colossians. But though the latter name may be a contraction of the former, the fact that Epaphras was most probably in prison at the time sufficiently marks the distinction of the persons. The name Epaphroditus was by no means uncommon, as Wetstein has shewn by various quotations from classical authors (*Nov. Test. Gr.*, tom. ii. p. 273).—J. E. R.

EPHAH. [WEIGHTS AND MEASURES.]

EPHAH (עֵיפָה). 1. One of the sons of Midian (Gen. xxv. 4; Sept. Γεφάρ; 1 Chron. i. 33, Sept. Γαιφά), whose descendants formed one of the tribes of the desert connected with the Midianites, Shebaites, and Ishmaelites (Is. lx. 6, 7).

2. (Sept. Γαιφά) Caleb's concubine (1 Chron. ii. 46).

3. Son of Jahdai, of the tribe of Judah (1 Chron. ii. 47).—W. L. A.

EPHAI (עֵיפָי), Chetibh, עֹפָי Ophai; Sept. Ἴωφέ), 'the Netaphathite' whose sons were captains of the forces that came into Gedsliah to Mizpeh, and probably suffered with him at the hands of Ishmael (Jer. xl. 8; xli. 3).†

EPHER (עֶפְרַיִם; Sept. Ἀφείρ, Ὀφέρ). 1. The second son of Midian (Gen. xxv. 4; 1 Chron. i. 33). Gesenius regards the word as equivalent to the Arabic غفیر Ghifir, a calf or young animal; and

Knobel suggests that the descendants of Epher are the Banu Ghiphar of the Kenana Arabs in Hedjaz. (*Exeget. Hb. d. A. T.* in loc.)

2. (Sept. Ἀφερ; Alex. Γαφέρ). One of the sons of Ezra of the tribe of Judah (1 Chron. iv. 17).

3. (Sept. Ὀφέρ). One of the heads of the half tribe of Manasseh on the east of Jordan (1 Chron. v. 24).—W. L. A.

EPHER-DAMMIM (עֶפְרַיִם דַּמִּיִּם; Ἀφροδομίν, Ἀφροδομιν; Vat. Ἐφερμέν; in *finibus Domimim*), the cessation or boundary of blood (1 Sam. xvii. 1). In 1 Chron. xi. 13, the form of the word is דַּמִּיִּם. It is the proper name of a place in the tribe of Judah in the Valley of Elah, 'between Shochoh and Azekah,' where the Philistines encamped preparatory to the battle in which David slew Goliath. Its exact locality is unknown. It may have derived its name from the battle referred to, the result of which was the overthrow of the Philistine power, and an end put to the effusion of Israelitish blood.—I. J.

EPHESIANS, EPISTLE TO THE. 1. This epistle expressly claims to be the production of the Apostle Paul (i. i; iii. 1); and this claim the writer in the latter of these passages follows up by speaking of himself in language such as that apostle is accustomed to use in describing his own position as an ambassador of Christ (iii. 1, 3, 8, 9). The justice of this claim seems to have been universally admitted by the early Christians, and it is expressly sanctioned by several of the fathers of the second

and third centuries (Irenæus, *Adv. Hær.* v. 2, 3; Clemens Alex. *Protrept.* ix. p. 69, ed. Potter; *Stram.* iv. 8, p. 592; Origen, *Cont. Cels.* iv. p. 211, ed. Spencer; Tertullian, *Adv. Marc.* v. II, 17; Cyprian, *Testim.* iii. 7, etc.) The epistle is also cited as part of sacred Scripture by Polycarp (*Ep. ad Philipp.* c. I; c. 12); and it is probably to it that Ignatius refers when, in writing to the Ephesians, he calls them Παύλου συμμύστοι . . . ὅς ἐν πάσῃ ἐπιστολῇ μνημονεύει ὑμῶν ἐν Χριστῷ Ἰησοῦ (c. 12, Conf. Cotelerii, *Annot. in loc.*; Pearson, *Vind. Ignatian.* Par. ii. p. 119; Lardner's *Works*, vol. ii. p. 70, 8vo). It is certain that Marcion accepted it as canonical, and by Valentinian and his school it was cited as Scripture (Hug. *Introd.* Fisdick's Trans. p. 551; Hippolytus, *Philosophumena*, vi. 34).

In the face of this decided and general testimony, the objections which have been urged on internal grounds against the genuineness of this epistle cannot be allowed to influence us, even did they possess more intrinsic weight than can be assigned to them; for it is incredible that a forged writing should have obtained such general reception as genuine, at so early a period from the time of its alleged author. These objections are chiefly:—1. The absence of any friendly greetings in this epistle, coupled with what are alleged to be indications of want of previous acquaintance on the part of the writer with the Ephesians, facts which, it is asserted, are incompatible with the supposition that it was written by Paul, whose relations with the Ephesian Church were so intimate; 2. The occurrence of words, and phrases, and sentiments, which indicate acquaintance with those Gnostic ideas which were familiar only at a period much later than that of the Apostle; and 3. The close resemblance of this epistle to the Epistle to the Colossians, suggesting that the former is only a copious expansion ('wortreiche erweiterung,' Baur) of the latter. These objections do not rise above the level of mere cavils. The first may be passed by here, as the allegations on which it rests will be particularly considered when we come to the question of the destination of the epistle; at present it may suffice to cite the remark of Reuss in reference to the *unreasonableness* of such objections: 'If Paul writes simple letters of friendship they are pronounced insignificant, and so spurious, because there is a want of the didactic character in them; and, on the other hand, if this prevails, there is proof of the spuriousness of the writing in the absence of the other. What! must both elements always be united according to some definite rule? is it so with us? or are any two of Paul's epistles alike in this respect?' (*Die Geschichte d. H. Schr. Neuen Test.*, p. 104, 3d edit.) The second of the above objections has reference to such passages as i. 21; ii. 7; iii. 21; where it is alleged the Gnostic doctrine of Aeonis is recognised; and to the expression πλήρωμα, i. 23, as conveying a purely Gnostic idea; and to such words as μυστήριον, σοφία, γνῶσις, φῶς, σκοτία, etc. On this it seems sufficient to observe, without denying the existence of Gnostic allusions in this epistle, that on the one hand the objection assumes, that because Gnostic schools and systems did not make their appearance till after the age of the apostles, the ideas and words in favour with the Gnostics were unknown at an earlier period, a position which cannot be maintained [GNOSTICS]; and on the other, that

because the apostle uses phraseology which was employed also by the Gnostics, he uses it in the *same sense* as they did, which is purely gratuitous and indeed untrue, for to confound the αἰῶνες and πλήρωμα of the apostle with the αἰῶνες and πλήρωμα of the Gnostics, as Baur does, only proves, as Lange has remarked, that 'a man may write whole books on Gnostics and Gnosticism, without detecting the characteristic difference between the Christian principle and Gnosticism' (*Apostol. Zeitalt.* i. 124). With regard to the resemblance between this epistle and that to the Colossians, it can surprise no one, that, written at the same time, they should in many respects resemble each other; but it does not require much penetration to discover the many points of difference between them, especially in the point of view from which the writer contemplates his main subject, the Lord Jesus Christ, in each; in the one as the prehistoric, pre-existent, supreme source of all things, in the other as the incarnate, historical, exalted, glorified head of the Church, to whom all things are subjected (comp. Eph. i. 20-23, with Col. i. 15-20; and Lange, *Ap. Zeit.* i. 118). As for the alleged 'copious expansion,' that may be left to the judgment of the reader; as well as the counter notion of Schneckenburger, that the Epistle to the Colossians is an epitome of that to the Ephesians made by Paul himself. On such objections in general, we may say with Reuss, that 'rash hypotheses, whatever acceptance they may have received, tell by their deficiency or strangeness not against the epistle but against themselves; and in opposition to all cavils, the many traits which disprove the presence in the thoughts of a deceptive imitation by a foreign hand, stand as valid arguments in its defence' (*Gesch.* p. 104).

2. It is much more difficult to determine to whom this epistle was addressed. On this subject two hypotheses have been principally entertained, besides the common opinion which, following the [disputed] reading in ch. i. ver. I, regards the party to whom it was sent as the church at Ephesus. Grotius, reviving the opinion of the ancient heretic Marcion, maintains that the party addressed in this epistle was the church at Laodicea, and that we have in this the epistle to that church which is commonly supposed to have been lost; whilst others contend that this was addressed to no church in particular, but was a sort of circular letter, intended for the use of several churches, of which Ephesus may have been the first or centre.

The view of Grotius, which has been followed by some scholars of eminent name, among whom are found Hammond, Mill, Venema, Wetstein, and Paley, rests chiefly on two grounds; viz., the testimony of Marcion, and the close resemblance between this epistle and that to the Colossians, taken in connection with Col. iv. 16. With respect to the former of these grounds, it is alleged that, as Marcion was under no temptation to utter a wilful falsehood in regard to the destination of this epistle, he probably had the authority of the church at Laodicea, and it may be the tradition of the churches generally of Asia Minor for the opinion which he expresses (Grotius, *Proleg. ad Ephes.*; Mill, *Proleg. ad N. T.* p. 9, Oxon. 1707). But, without charging Marcion with *designedly* uttering what was false, we may suppose that, like some critics of recent times, this

view was suggested to him by the Apostle's allusion, in Col. iv. 16, to an epistle addressed by him to the Laodiceans. Nor is there the least ground for supposing that Marcion spoke in this instance on the authority of the Asiatic churches; on the contrary, there is every reason to believe the opposite, for not only do Origen and Clement of Alexandria, who were fully acquainted with the views of the eastern churches on such matters, give no hint of any such tradition being entertained by them, but Tertullian, to whom we are indebted for our information respecting the opinion of Marcion,* expressly says that in that opinion he opposed the tradition of the orthodox churches, and imposed upon the epistle a false title, through conceit of his own superior diligence in exploring such matters ('Ecclesie quidem veritate epistolam istam ad Ephesios habemus emissam, non ad Laodicenos, sed Marcion ei titulum aliquando interpolare gestiit, quasi et in isto diligentissimus explorator.'—*Adv. Marc.* v. 17). It is plain that to a statement of such a nature no weight can be safely attached. With regard to the other argument by which this view is advocated, we cannot help expressing surprise that such men as Mill and Paley should have deemed it of so much importance as to rest upon it the chief weight of their opinion. To us it appears to possess no force whatever in support of the view which they espouse. Admitting the fact of a close resemblance between the Epistle to the Colossians and that before us, and the fact that Paul had, some time before sending the former epistle, written one to the church at Laodicea, which he advises the Colossians to send for and read, how does it follow from all this that the Epistle to the Laodiceans and that now under notice were one and the same? To us it appears more probable that, seeing the two extant epistles bear so close a resemblance to each other, had the one now bearing the inscription 'to the Ephesians' been really the one addressed to the Laodiceans, the apostle would not have deemed it of so much importance that the churches of Colossæ and Laodicea should interchange epistles. Such being the chief arguments in favour of this hypothesis (for those which, in addition, Wetstein alleges from a comparison of this epistle with that to the church at Laodicea, in the Apocalypse, are not deserving of notice; see Michaelis, *Introd.* vol. iv. p. 137), we may venture to set it aside as without any adequate support. It may be observed, also, that it seems incompatible with what the apostle says Col. iv. 15, where he enjoins the church at Colossæ to send his greetings to the brethren at Laodicea, etc. Now one sends greetings by another only when it is impossible to express them oneself. But if Paul wrote to Laodicea at the same time as to Colossæ, and sent both letters by the same bearer, Tychicus, there was manifestly no occasion whatever for his sending his salutations to the latter of these churches through the medium of the former; it was obviously as easy, and greatly more natural, to have sent his salutations to the church at Laodicea in the epistle addressed to themselves. This seems

to prove that the epistle to the Laodiceans had been written some considerable time before that to the Colossians, and therefore could not have been the same with that now under notice.

The opinion that this epistle was a sort of circular letter was first broached by Archbishop Usher. His words are (*Annal. Vet. et Nov. Test.* p. 680, Bremæ, 1686), 'Notandum, in antiquis nonnullis codicibus (ut ex Basilii lib. 2, adv. Eunomium, et Hieronymi in hunc Apostoli locum commentario apparet) generatim inscriptam fuisse hanc epistolam τοῖς ἀγίοις τοῖς ὄδοι, καὶ πιστοῖς ἐν Χρ. Ἰη. vel (ut in literarum encyclicarum descriptione fieri solebat) sanctis qui sunt . . . et fidelibus in Christo Jesu; ac si Ephesum primo, ut præcipuam Asiæ metropolim, missa ea fuisset, transmittenda inde ad reliquas (insertis singularum nominibus) ejusdem provinciæ ecclesias.' To this opinion the majority of critics have given their suffrage; indeed, it may almost be regarded as the received opinion of Biblical scholars in the present day. This may make it apparently presumptuous in us to call it in question; and yet it seems to us so ill supported by positive evidence, and exposed to so many objections, that we cannot yield assent to it. In the first place it is to be observed that it is an hypothesis entirely of modern invention. No hint is furnished of any such notion having been entertained concerning the destination of this epistle by the early church. With the solitary exception of Marcion, so far as we know, all parties were unanimous in assigning Ephesus as the place to which this epistle was sent, and Marcion's view is as much opposed to the supposition of its being a circular letter as the other. As respects the external evidence, therefore, this hypothesis is purely destitute of support. 2. It is an hypothesis suggested for the purpose of accounting for certain alleged facts, some of which are, to say the least, doubtful, and others of which may be explained as well without it as with it. These facts are—1. The alleged omission of the name of any place at the commencement of the epistle; 2. Marcion's assertion that this epistle was addressed to the Laodiceans, which, it is said, arose probably out of his having seen that copy of this circular epistle which had been sent to Laodicea; 3. The want of any precise allusions to personal relations subsisting between the apostle and those to whom this epistle was addressed; and 4. The expressions of unacquaintedness with those to whom he wrote, which occur in this epistle, e. g., iii. 1-4. How these facts may be reconciled with the supposition that this epistle was addressed to the Ephesians will fall to be considered afterwards; at present the question is, How do they favour the hypothesis that this was a circular letter? Now, supposing them to be unquestionable, and admitting that they are not irreconcilable with this hypothesis, it must yet appear to all that they go very little way towards affording primary evidence in its support. It is not one which grows naturally out of these facts, or is suggested by them; it is plainly of foreign birth, and suggested for them. But when it is remembered that the first of these alleged facts is (to say the least) very doubtful; that the second is made to serve this hypothesis only by means of another as doubtful as itself, and that, were its services admitted, it would prove too much, for it would go to shew that, to the Laodiceans, the apostle not only sent

* Epiphanius also speaks of Marcion as having an Epistle to the Laodiceans in his *Apostolicon*; but, as he states that he had also the Epistle to the Ephesians, this cannot be regarded as corroborating the testimony of Tertullian.

a peculiar epistle, mentioned Col. iv. 16, but gave them a shaft also in this circular epistle written some time after their own; and that the *third* and *fourth* are both either partially or wholly questionable, it must be admitted that this hypothesis stands upon a basis which is little better than none. 3. Had the epistle been addressed to a particular circle of churches, some designation of these churches would have been given, by which it might have been known what churches they were to which this letter belonged. When it is argued that this must be a circular letter, because there is no church specified to which it is addressed, it seems to be forgotten that the designation of a particular set of churches is as necessary for a circular epistle as the designation of one church is for an epistle specially addressed to it. If we must leave out the words ἐν Ἐφέσῳ in ch. i. 1, what are we to put in their place? for if we take the passage as it stands without them, it will follow that the epistle was addressed to *all* Christians everywhere, which is more than the advocates of the hypothesis now under notice contend for. It will not much help them to say, with Usher, that the name of the place was left blank to be filled up; for the question immediately arises, By whom was it to be filled up? If by the church at Ephesus, to whom the epistle was first sent, then it could not be a circular epistle, but was a special epistle to the church at Ephesus, which they were left to communicate to as many or as few other churches as they pleased; and this may be said, we suppose, of all Paul's Epistles; nor is it at all improbable that this is exactly what the Ephesians would have done of their own accord, without any blank being left to give them the hint. If we say with Michaelis that the blank was left to be filled up by the Apostle himself, who had a number of copies written, which he thus addressed to particular churches, the question occurs, How do we know in that case that there ever was a blank at all? If every copy of this epistle that was sent by the Apostle had the name of a place written in it before it left him, there was, of course, no blank in any of them. The reasoning here, in fact, is a mere *petitio principii*. If we ask, How is it known that this was a circular epistle? the answer is, Because the name of the place was left blank to be filled in by the Apostle. If, now, we ask, How is it known that the place was left blank? it is answered, Because this is a circular epistle, 'ut in literarum encyclicarum descriptione hoc fieri solebat!' Besides, it seems hardly consistent with the Apostle's perfect integrity of character to suppose that he would insert in the copy sent to each church the name of the place where that church was located, in such a way as to lead the members of that church to suppose that the epistle they received was specially addressed to them. As an apostolic letter was usually esteemed a treasure of no ordinary value by the church to which it was originally sent, we may easily suppose that it would occasion no small mortification to each of the churches round Ephesus to find that what each had supposed to be a letter specially addressed to itself was in fact only a copy of what had been sent to many others. In fine, this suggestion of Michaelis renders it very difficult to account for the prevailing insertion of ἐν Ἐφέσῳ in the text, as well as the universal tradition of the church, that such was the destination of

this epistle. The solution proposed by Michaelis himself, viz., that 'when the several parts of the Greek Testament were collected into a volume, the copy inserted in this collection must have been procured from Ephesus,' besides being mere unsupported supposition, proceeds on the assumption that the Canon of the N. T. was formed by authority, which is what cannot be proved [CANON]. Hug's opinion that 'the title πρὸς Ἐφεσίους was given to it, either because Ephesus was the most eminent of the Asiatic cities, or was the first which received it,' might account, perhaps, for a *preponderance* of testimony in favour of this title, but is certainly inadequate to account for the *unanimity* of testimony by which it is supported. On these grounds the suggestion of Michaelis appears to be inadmissible, and our objection to Usher's hypothesis remains in full force. 4. In ch. vi. 21, 22, Paul mentions that he had sent to those for whom this epistle was destined, Tychicus, who should make known to them all things, that they might know his affairs, and that he might comfort their hearts. From this it appears that Tychicus was not only the bearer of this letter, but that he was personally to visit, converse with, and comfort those to whom it was addressed. On the supposition that this was a circular letter, the following questions are naturally raised by this statement of the Apostle: Was Tychicus to carry this letter from church to church? or had he a distinct copy for each church in the circle? If the former, it will follow that no church ever *possessed* this epistle, but that certain churches around Ephesus enjoyed the advantage of *reading* it or *hearing* it read, while the bearer of it stayed with them. If the latter, then it may be asked, Was Tychicus, as he carried round these copies to deliver them, bound to abide at each church, and to answer all the demands and inquiries which the Apostle's declarations in the passage quoted would prompt its members to make? To affirm of either of these suppositions that it is *impossible*, would be, perhaps, to go too far; but it must be felt by every one, that, under all the circumstances of the case, neither of them is very *probable*.

The objections just stated seem to us to justify the rejection of Usher's hypothesis respecting the destination of this epistle; we now turn to the consideration of the common, and, as we believe, the true view of this matter. Here it will be necessary to consider, in the first instance, the objections which have been offered to this view. These are borrowed from the epistle itself, in which, it is said, we not only miss those allusions to personal relations and intercourse which we should expect in an epistle from Paul to a church with which he had been so closely connected as with that at Ephesus, but we meet with statements which seem to imply that the parties to whom this epistle was written were, at the time, strangers to the Apostle. As respects the former of these objections, it must be admitted that the epistle contains no direct allusions to previous intercourse between the writer and those whom he addresses; but this may be partly accounted for by the circumstance that several years had now elapsed since that intercourse took place; and probably, during the interval, messages had been sent by the Apostle to the Ephesians which rendered it unnecessary to allude to his earlier personal intercourse with them in this epistle. It is worthy of remark, on the other

hand, that the tone and style of the epistle are such as of themselves to suggest the probability of previous intercourse between the parties; such warmth of feeling and so much of a free outpouring of thought not being customary in a letter addressed to strangers, however strong might be the writer's general interest in their welfare. The peculiar nature of the composition as a theological tractate must also be taken into account, as serving to explain the absence of personal allusions and greetings. With regard to the passages in which it is alleged that Paul writes as if the parties he addresses were personally unknown to him, they are all susceptible of a very different construction. When the Apostle says (i. 15), 'Wherefore also, *I having heard of your faith,*' etc., he is not necessarily to be understood as intimating that this knowledge had then for the first time been obtained by him through the report of others; he rather means that, as some years had elapsed since he left them, he was rejoiced to hear that they were still steadfast in the faith. Again, when he says (iii. 2), '*If ye have heard of the dispensation of the grace of God which is given me to you-ward,*' etc., and (iv. 21), '*If so be that ye have heard him,*' etc., the force of the particle *εἴγε* is not *adversative*, but rather, according to its proper meaning (comp. Hermann. *ad Viger.* sec. 512; Kühner's *Gram. d. Gr. Sp.* sec. 704, I. 2), and the ordinary usage of the Apostle, *concessive*; it is thus equivalent to *since, forasmuch as*, and expresses rather the confidence of knowledge than the uncertainty of ignorance. To these passages, then, no weight whatever deserves to be attached, as tending to shew the erroneousness of the ordinary designation of this epistle. In favour of this designation, on the other hand, are to be urged the reading *ἐν Ἐφέσῳ* (i. 1), and the unanimous testimony of Christian antiquity. This reading is that supplied by all the MSS. except Codex B.* and ancient versions. From a passage, however, in one of the writings of Basil (*Adv. Eunomium*, lib. ii.), it has been inferred that in his day some MSS. were extant in which these words were not found. In maintaining against Eunomius, that Jesus Christ may justly be styled *ὁ ὢν*, Basil argues that this is the more proper from the circumstance that the Apostle, writing to the Ephesians, calls Christians *ὄντας*, absolutely and peculiarly, saying *τοῖς ἁγίοις τοῖς ὄνται καὶ πιστοῖς ἐν Χρ. Ἰη.*, and adds, 'for so those before us have handed down, and we have found it in old copies.' Now there can be no doubt that Basil here means to say that he had both traditional and documentary authority for reading *τοῖς ὄνται* absolutely without the addition of *ἐν Ἐφέσῳ* after these words, else his whole argument against Eunomius, based on this quotation, must go for nothing. But in the first place, supposing that in these MSS. to which Basil refers, the words *ἐν Ἐφέσῳ* were not found at all in the address of the epistle, of what weight, in a critical point of view, is this fact? Of the age, number, source, and general worth of these testimonies to which Basil appeals, we know nothing, and we must be jealous of taking a keen controversialist's authority for the value of what serves

his purpose against his antagonist. As the case stands, we have on the one side the unanimous testimony of all the extant witnesses in favour of *ἐν Ἐφέσῳ*; we have against it only the assertion of a writer who, to support what he considers a good stroke at his adversary, assures us that he had heard a tradition that these words were to be omitted, and had seen some MSS. in which they were omitted, thereby at the same time implicitly assuring us that in his day the *received* reading was the same as in ours. In such a case it is surely preposterous to attach any weight whatever to such a testimony. But, secondly, does Basil's statement necessarily deny the existence of the words *ἐν Ἐφέσῳ* in any part of this verse? Admitting that he did not read them after *τοῖς ὄνται*, does it follow that he did not read them here at all? May not the passage have stood, in the authorities to which he appeals, thus—*τοῖς ἐν Ἐφέσῳ τοῖς ἁγίοις τοῖς ὄνται*, κ. τ. λ.? the words having been transposed by some transcriber whose blunder Basil, with the blind zeal of a controversialist, hailed as proving his argument? This supposition has in its favour—1. that Basil, in the passage quoted, formally states that Paul wrote thus in an epistle to the Ephesians; 2. that this reading supports as well Basil's argument against Eunomius, as if *ἐν Ἐφέσῳ* had been entirely omitted; and 3. that unless we insert those or similar words somewhere in the passage, the inscription of this epistle becomes so vague and indefinite as to be without meaning. Some confirmation of this suggestion may be drawn, perhaps, from the place in which Jerome alludes to the argument here urged by Basil from this passage. After stating the argument he adds, '*Alii vero simpliciter non ad eos qui sunt, sed qui Ephesi sancti et fideles sunt, scriptum arbitrantur,*' where he arranges the words in the same order, substantially, in which we have supposed them to have stood in Basil's MSS. If this suggestion, however, be deemed ungrounded or improbable, we have still the fact that Basil's evidence is unsupported, to fall back upon, in support of the received reading. Stress has also been laid by Hug and others upon the passage from Tertullian, already quoted, in which he charges Marcion with having altered the title of this epistle. Had the MSS., it is argued, in Tertullian's time, contained *ἐν Ἐφέσῳ*, Marcion must have had to alter, not only the title of the epistle, but, to be consistent, the text also of the first verse; and with this Tertullian does not charge him, though 'not accustomed,' as Hug reminds us, 'to overlook anything in him.' But this surely is, at best, very precarious reasoning. Tertullian may have not deemed it worth while to specify Marcion's alteration of the text just because it was rendered so obviously necessary by his alteration of the title, that in mentioning the latter (which was all his purpose required), he, by implication, also intimated the former.

From these considerations it appears that the received reading *ἐν Ἐφέσῳ* is impregnable. As a necessary consequence it follows that the title *πρὸς Ἐφεσίου* expresses the original and proper destination of this epistle.

The epistle is so much the utterance of a mind overflowing with thought and feeling, that it does not present any precisely marked divisions under which its different parts may be ranked. After the usual apostolic salutation Paul breaks forth

* In this Codex it appears on the margin; Hug says it is inserted there by the first hand (*De Antiquitate Cod. Vat.* p. 26), but this Tischendorf has shewn to be a mistake.

into an expression of thanksgiving to God and Christ for the scheme of redemption (i. 3-10), from which he passes to speak of the privileges actually enjoyed by himself and those to whom he was writing, through Christ (i. 11-23). He then reminds the Ephesians of their former condition when they were without Christ, and of the great change which, through divine grace, they had experienced (ii. 1-22). An allusion to himself, as enjoying by divine revelation the knowledge of the mystery of Christ, leads the Apostle to enlarge upon the dignity of his office, and the blessed results that were destined to flow from the exercise of it to others (iii. 1-12). On this he grounds an exhortation to his brethren not to faint on account of his sufferings for the gospel, and affectionately invokes on their behalf the divine blessing, concluding this, which may be called the more doctrinal part of his epistle, with a doxology to God (iii. 13-21). What follows is chiefly hortatory, and is directed partly to the inculcation of general consistency, steadfastness in the faith, and propriety of deportment (iv. 1; v. 21), and partly to the enforcement of relative duties (v. 22; vi. 9). The epistle concludes with an animated exhortation to fortitude, watchfulness, and prayer, followed by a reference to Tychicus as the bearer of the epistle, and by the usual apostolic benediction (vi. 10-24).

This epistle was written during the earlier part of the Apostle's imprisonment at Rome, at the same time with that to the Colossians [COLOSSIANS, EPISTLE TO THE].

Literature.—The questions connected with the literary history of this epistle are discussed fully in the Introductions of Hug, Davidson, De Wette, Schott, Bleek, the Beiträge of Schneckenburger, and by Meyer and Alford in the Prolegomena to their Commentaries; valuable remarks are found in Reuss, *Geschichte d. H. S. Neuen Test.*; Neander, *Apostol. Age*, E. T., i. 314, ff.; Lange, *Apostol. Zeitalt.* i. 117, ff.; Lünemann, *De Ep. ad Ephes. authentia*, Gott. 1842. COMMENTARIES—Seb. Schmidt, Strasb. 1684; Schutze, 1778; Krause, 1789; Holzhausen, 1833; Rückert, 1834; Harless, 1834; Meier, 1834; Matthies, 1834; Sederholm, 1845; Eadie, 1854; Ellicott, 1855; Stier, 1858.—W. L. A.

EPHESUS (Ἐφεσος), an old and celebrated city, capital of Ionia, one of the twelve Ionian cities in Asia Minor in the Mythic times, and said to have been founded by the Amazons, was in later ages inhabited by the Carians and Leleges, and taken possession of by the Ionians, under Androclus, the son of Codrus. It lay on the river Cayster, not far from the coast of the Icarian sea, between Smyrna and Miletus. It was also one of the most considerable of the Greek cities in Asia Minor; but while, about the epoch of the introduction of Christianity, the other cities declined, Ephesus rose more and more. It owed its prosperity in part to the favour of its governors, for Lysimachus named the city Arsinoë, in honour of his second wife, and Attalus Philadelphus furnished it with splendid wharfs and docks; in part to the favourable position of the place, which naturally made it the emporium of Asia on this side the Taurus (Strabo, xiv. pp. 641, 663). Under the Romans Ephesus was the capital not only of Ionia, but of the entire province of Asia, and bore the honourable title τῆς πρώτης καὶ μεγίστης μητρόπο-

λεως τῆς Ἀσίας, of the first and greatest metropolis of Asia. (Boeckh, *Corp. Inscr. Gr.* 2968-2992). The Bishop of Ephesus in later times was the president of the Asiatic dioceses, with the rights and privileges of a patriarch (Evagr. *Hist. Eccl.* iii. 6). In the days of Paul Jews were found settled in the city in no inconsiderable number (compare Joseph. *Antiq.* xiv. 10, 11), and from them the Apostle collected a Christian community (Acts xviii. 19; xix. 1; xx. 16, 17), which, being fostered and extended by the hand of Paul himself, became the centre of Christianity in Asia Minor. On leaving the city the Apostle left Timothy there (1 Tim. i. 3); at a later period, according to a tradition which prevailed extensively in ancient times, we find the Apostle John in Ephesus, where he employed himself most diligently for the spread of the gospel, and where he not only died, at a very old age, but was buried, with Mary the mother of the Lord. Some make John bishop of the Ephesian communities, while others ascribe that honour to Timothy. In the book of Revelations (ii. 1) a favourable testimony is borne to the Christian churches at Ephesus.

The classic celebrity of this city is chiefly owing to its famous temple, and the goddess in whose honour it was built, namely, 'Diana of the Ephesians.' This goddess has been already noticed, and a figure given of her famous image at Ephesus [ARTEMIS].

Around the image of the goddess was afterwards erected, according to Callimachus (*Hymn. in Dian.* 248), a large and splendid temple:

τοῦ δ' οὐ τι θεώτερον ὄψεται ἤως
οὐδ' ἀφνειότερον βέα κεν Πυθῶνα παρέλθοι

This temple was burnt down in the night in which Alexander was born, by an obscure person of the name of Eratosthratus, who thus sought to transmit his name to posterity; and, as it seemed somewhat unaccountable that the goddess should permit a place which redounded so much to her honour to be thus recklessly destroyed, it was given out that Diana was so engaged with Olympias, in aiding to bring Alexander into the world, that she had no time nor thought for any other concern. At a subsequent period, Alexander made an offer to rebuild the temple, provided he was allowed to inscribe his name on the front, which the Ephesians refused. Aided, however, by the whole of Asia Minor, they succeeded in erecting a still more magnificent temple, which the ancients have lavishly praised and placed among the seven wonders of the world. It took two hundred and twenty years to complete. Pliny (*Hist. Nat.* xxxvi. 21), who has given a description of it, says it was 425 feet in length, 220 broad, and supported by 127 columns, each of which had been contributed by some prince, and were 60 feet high: 36 of them were richly carved. Chersiphron, the architect, presided over the undertaking, and, being ready to lay violent hands on himself, in consequence of his difficulties, was restrained by the command of the goddess, who appeared to him during the night, assuring him that she herself had accomplished that which had brought him to despair. The altar was the work of Praxiteles. The famous sculptor Scopas is said by Pliny to have chiselled one of the columns. Apelles, a native of the city, contributed a splendid picture of Alexander the Great. The rights of sanctuary, to the extent of a stadium

in all directions round the temple, were also conceded, which in consequence of abuse the emperor Tiberius abolished. The temple was built of cedar, cypress, white marble, and even gold, with which it glittered (Spanh. *Observat. in Hymn. in Dian.* 353). Costly and magnificent offerings of various kinds were made to the goddess, and treasured in the temple, such as paintings, statues, etc., the value of which almost exceeded computation. The fame of the temple, of the goddess, and of the city itself, was spread not only through Asia but the world, a celebrity which was enhanced and diffused the more readily because sacred games were practised there, which called competitors and spectators from every country. Among his other enormities Nero is said to have despoiled the temple of Diana of much of its treasure. It continued to conciliate no small portion of respect, till it was finally burnt by the Goths in the reign of Gallienus.

At Ephesus Diana was worshipped under the name of Artemis. There was more than one divinity which went by the name of Artemis, as the Arcadian Artemis, the Taurian Artemis, as well as the Ephesian Artemis. It will be seen, from the figure given on p. 235, that this last differed materially from the Diana, sister of Apollo, whose attributes are the bow, the quiver, the girt-up robe, and the hound; whose person is a model of feminine strength, ease, and grace; and whose delights were in the pursuits of the chase.—

Along the shady hills and breezy peaks
Rejoicing in the chase, her golden bow
She bends, her deadly arrows sending forth.

The 'silver shrines' of the Ephesian Artemis, mentioned in Acts xix. 24, have been already noticed [DEMETRIUS, 3].

Among the distinguished natives of Ephesus in the ancient world, may be mentioned Apelles and Parrhasius, rivals in the art of painting, Heraclitus, the man-hating philosopher, Hipponax, a satirical poet, Artemidorus, who wrote a history and description of the earth. The claims of Ephesus, however, to the praise of originality in the prosecution of the liberal arts, are but inconsiderable; and it must be content with the dubious reputation of having excelled in the refinements of a voluptuous and artificial civilization. With culture of this kind, a practical belief in, and a constant use of, those arts which pretend to lay open the secrets of nature and arm the hand of man with supernatural powers, have generally been found conjoined. Accordingly, the Ephesian multitude were addicted to sorcery; indeed, in the age of Jesus and his apostles, adepts in the occult sciences were numerous: they travelled from country to country, and were found in great numbers in Asia, deceiving the credulous multitude, and profiting by their expectations. They were sometimes Jews, who referred their skill and even their forms of proceeding to Solomon, who is still regarded in the East as head or prince of magicians (Joseph. *Antiq.* viii. 2. 5; Acts viii. 9; xiii. 6, 8). In Asia Minor Ephesus had a high reputation for magical arts (Ortlob, *De Ephes. Libris combustis*).

The books mentioned, Acts xix. 19, were doubtless books of magic. How extensively they were in use may be learnt from the fact that 'the price of them' was 'fifty thousand pieces of silver.' Very celebrated were the Ephesian letters (*Ἐφέσια*

γράμματα), which appear to have been a sort of magical formulæ written on paper or parchment, designed to be fixed as amulets on different parts of the body, such as the hands and the head (Plut. *Sym.* vii.; Lakemacher, *Obs. Philol.* ii. 126; Deyling, *Observ.* iii. 355). Erasmus (*Adag. Cent.* ii. 578) says that they were certain signs or marks which rendered their possessor victorious in everything. Eustathius (*ad Hom. Odys.* τ 694) states an opinion that Cræsus, when on his funeral pile, was very much benefited by the use of them; and that when a Milesian and an Ephesian were wrestling in the Olympic games, the former could gain no advantage, as the latter had Ephesian letters bound round his heel; but, these being discovered and removed, he lost his superiority and was thrown thirty times. These passages shew the feeling which prevailed respecting the books that were bought and burned, and serve to illustrate the remark made by the writer of the Acts, 'So mightily grew the word of the Lord and prevailed.'

The ruins of Ephesus lie two short days' journey from Smyrna, in proceeding from which towards the south-east the traveller passes the pretty village of Sedekuy; and two hours and a half onwards he comes to the ruined village of Danizzi, on a wide, solitary, uncultivated plain, beyond which several burial-grounds may be observed; near one of these, on an eminence, are the supposed ruins of Ephesus, consisting of shattered walls, in which some pillars, architraves, and fragments of marble have been built. The soil of the plain appears rich. It is covered with a rank, burnt-up vegetation, and is everywhere deserted and solitary, though bordered by picturesque mountains. A few corn-fields are scattered along the site of the ancient city, which is marked by some large masses of shapeless ruins and stone walls. Towards the sea extends the ancient port, a pestilential marsh. Along the slope of the mountain and over the plain are scattered fragments of masonry and detached ruins, but nothing can now be fixed upon as the great temple of Diana. There are some broken columns and capitals of the Corinthian order of white marble: there are also ruins of a theatre, consisting of some circular seats and numerous arches, supposed to be the one in which Paul was preaching when interrupted by shouts of, 'Great is Diana of the Ephesians.' The ruins of this theatre present a wreck of immense grandeur, and the original must have been of the largest and most imposing dimensions. Its form alone can now be spoken of, for every seat is removed, and the proscenium is a hill of ruins. A splendid circus (Fellows' *Reports*, p. 275) or stadium remains tolerably entire, and there are numerous piles of buildings seen alike at Pergamus and Troy as well as here, by some called gymnasia, by others temples; by others again, with more propriety, palaces. They all came with the Roman conquest. No one but a Roman emperor could have conceived such structures. In Italy they have parallels in Adrian's villa near Tivoli, and perhaps in the pile upon the Palatine. Many other walls remain to shew the extent of the buildings of the city, but no inscription or ornament is to be found, cities having been built out of this quarry of worked marble. The ruins of the adjoining town, which arose about four hundred years ago, are entirely composed of materials from Ephesus. There are a few huts within these

ruins (about a mile and a half from Ephesus), which still retain the name of the parent city, *Asalook*—a Turkish word, which is associated with the same idea as Ephesus, meaning the City of the Moon (Fellows). A church dedicated to St. John is thought to have stood near, if not on the site of, the present mosque. Arundell (*Discoveries*, vol. ii. p. 253) conjectures that the gate, called the Gate of Persecution, and large masses of brick wall, which lie beyond it, are parts of this celebrated church, which was fortified during the great Council of Ephesus. The tomb of St. John was in or under his church, and the Greeks have a tradition of a sacred dust arising every year, on his festival, from the tomb, possessed of miraculous virtues: this dust they term manna. Not far from the tomb of St. John was that of Timothy. The

tomb of Mary and the seven *παῖδια* (boys, as the *Synaxaria* calls the Seven Sleepers) are found in an adjoining hill. At the back of the mosque, on the hill, is the sunk ground-plan of a small church, still much venerated by the Greeks. The sites of two others are shewn at Asalook. There is also a building, called the Prison of St. Paul, constructed of large stones without cement.

Though Ephesus presents few traces of human life, and little but scattered and mutilated remains of its ancient grandeur, yet the environs, diversified as they are with hill and dale, and not scantily supplied with wood and water, present many features of great beauty. Arundell (ii. 244) enumerates a great variety of trees which he saw in the neighbourhood, among which may be specified groves of myrtle near Ephesus. He also found

235. Ephesus.

heath in abundance, of two varieties; and saw there the common fern, which he met with in no other part of Asia Minor.

Dr. Chandler (p. 150, 4to) gives a striking description of Ephesus, as he found it on his visit in 1764:—'Its population consisted of a few Greek peasants, living in extreme wretchedness, dependence, and insensibility, the representatives of an illustrious people, and inhabiting the wreck of their greatness—some the substructure of the glorious edifices which they raised; some beneath the vaults of the stadium, once the crowded scene of their diversions; and some in the abrupt precipice, in the sepulchres which received their ashes. Such are the present citizens of Ephesus, and such is the condition to which that renowned city has been reduced. It was a ruinous place when the Emperor Justinian filled Constantinople with its statues and raised the church of St. Sophia on its columns. Its streets are obscured and overgrown.

A herd of goats was driven to it for shelter from the sun at noon, and a noisy flight of crows from the quarries seemed to insult its silence. We heard the partridge call in the area of the theatre and of the stadium. The pomp of its heathen worship is no longer remembered; and Christianity, which was then nursed by apostles, and fostered by general councils, barely lingers on, in an existence hardly visible.' Even the sea has retired from the scene of devastation, and a pestilential morass, covered with mud and rushes, has succeeded to the waters which brought up ships laden with merchandise from every part of the known world (Herod. i. 26; ii. 148; Liv. i. 45; Pausan. vii. 2, 4; Philo, *Byz. de sept. Orb. Mirac.* Gronov. *Thesaur.* viii.; Creuzer, *Symbol.* ii. 13; Hassl, *Erdbeschr.* ii. 132; for a plan of Ephesus, see Kiepert's Atlas, von Hellas; Arundell's *Visit to the Seven Churches of Asia*; Fellows' *Excursion in Asia Minor*, 1839; *Discoveries in Asia Minor*, by Rev. T.

Arundell, 1834); and for a special reference to the Epistle, Conybeare and Howson's *Life and Letters of St. Paul*.—J. R. B.

EPHOD. [PRIESTS.]

EPHRAEM, THE SYRIAN, as he is commonly called, was born at Nisibi. His father was a heathen priest, who beheld his intercourse with the Christians with horror, and ultimately expelled him from home because he would unite himself to them. James, bishop of Nisibi, received him into his house, and instructed him in Christian knowledge, and, on his death, Ephraem retired to Edessa, where he devoted himself to a solitary life of study and meditation. Drawn by the fame of Basil the Great to visit him at Cæsarea, he was, though reluctantly, ordained by him, and returned to Edessa as a deacon. He now set himself to oppose the heretical notions which were becoming prevalent in the Syrian churches, especially those of Bardesanes and the Arians. This he did, as by other means, so chiefly by means of hymns and metrical homilies. The fame he acquired drew around him a multitude of scholars, to whom he expounded the Scriptures; and thus arose the school of Edessa, the successor of that of Antioch. Having refused the honour of the episcopate (it is said, by feigning insanity), he died in the year 378, though some place his death after 379. So great was his reputation, that his works were read in the churches of Greece after the reading of Scripture (Hieron. *Catal.* c. 115). His writings were numerous; those of them extant have been collected in 6 vols. fol., edited by Assemani, Rom. 1732. They are partly in Syriac, partly in Greek; the latter being, it is supposed, translations, though it is somewhat singular, if this be the case, that no work exists in both tongues. Among the former are commentaries on the whole of the O. T., with the exception of Psalms and the writings attributed to Solomon. His commentaries on the N. T. have not come down to us, except those on the Pauline epistles in an Armenian translation, and a few fragments on the Gospels in the Catena. Though Gregory of Nyssa says he followed the method of the school of Antioch in seeking to bring out the literal sense of Scripture, his extant commentaries shew a decided leaning to the allegorical method.—W. L. A.

EPHRAIM (אֶפְרַיִם; Sept. Ἐφραΐμ), the younger son of Joseph, but who received precedence over the elder in and from the blessing of Jacob (Gen. xli. 52; xlvi. 1). That blessing was an adoptive act, whereby Ephraim and his brother Manasseh were counted as sons of Jacob in the place of their father; the object being to give to Joseph, through his sons, a double portion in the brilliant prospects of his house. Thus the descendants of Joseph formed *two* of the tribes of Israel, whereas every other of Jacob's sons counted but as one. There were thus, in fact, thirteen tribes of Israel; but the number twelve is usually preserved, either by excluding that of Levi (which had no territory), when Ephraim and Manasseh are separately named, or by counting these two together as the tribe of Joseph, when Levi is included in the account. The intentions of Jacob were fulfilled, and Ephraim and Manasseh were counted as tribes of Israel at the departure from Egypt, and as such shared in the territorial distribution of the

Promised Land (Num. i. 33; Josh. xvii. 14; 1 Chron. vii. 20). The precise position of the immediate descendants of Joseph in Egypt might form an interesting subject for speculation. Being the sons of one in eminent place, and through their mother connected with high families in Egypt, their condition could not at once have been identified with that of the sojourners in Goshen; and perhaps they were not fully amalgamated with the rest of their countrymen until that king arose who knew not Joseph.

At the departure from Egypt, the population of the two tribes of Ephraim and Manasseh together amounted to 72,700 men capable of bearing arms, greatly exceeding that of any single tribe, except Judah, which had somewhat more. During the wandering, their number increased to 85,200, which placed the two tribes much higher than even Judah. At the Exode, Ephraim singly had 40,500, and Manasseh only 32,200; but a great change took place in their relative numbers during the wandering. Ephraim lost 8000, and Manasseh gained 20,500; so that just before entering Canaan, Ephraim stood at 32,500, and Manasseh at 52,700. At the departure from Egypt, Ephraim, at 40,500, was above Manasseh and Benjamin in numbers; at the end of the wandering it was, at 32,500, above Simeon only, which tribe had suffered a still greater loss of numbers (comp. Num. i. and xxvi.)

One of the finest and most fruitful parts of Palestine, occupying the very centre of the land, was assigned to this tribe. It extended from the borders of the Mediterranean on the west to the Jordan on the east; on the north it had the half-tribe of Manasseh, and on the south Benjamin and Dan (Josh. xvi. 5, *sq.*; xvii. 7, *sq.*) This fine country included most of what was afterwards called Samaria, as distinguished from Judæa on the one hand, and from Galilee on the other. The tabernacle and the ark were deposited within its limits, at Shiloh; and the possession of the sacerdotal establishment, which was a central object of attraction to all the other tribes, must, in no small degree, have enhanced its importance, and increased its wealth and population. The domineering and haughty spirit of the Ephraimites is more than once indicated (Josh. xvii. 14; Judg. viii. 1-3; xii. 1) before the establishment of the regal government; but the particular enmity of Ephraim against the other great tribe of Judah, and the rivalry between them, do not come out distinctly until the establishment of the monarchy. In the election of Saul from the least considerable tribe in Israel, there was nothing to excite the jealousy of Ephraim; and, after his heroic qualities had conciliated respect, it rendered the new king true allegiance and support. But when the great tribe of Judah produced a king in the person of David, the pride and jealousy of Ephraim were thoroughly awakened, and it was doubtless chiefly through their means that Abner was enabled to uphold for a time the house of Saul; for there are manifest indications that by this time Ephraim influenced the views and feelings of all the other tribes. They were at length driven by the force of circumstances to acknowledge David upon conditions; and were probably not without hope that, as the king of the nation at large, he would establish his capital in their central portion of the land. But when he not only established his

court at Jerusalem, but proceeded to remove the ark thither, making his native Judah the seat both of the theocratical and civil government, the Ephraimites became thoroughly alienated, and longed to establish their own ascendancy. The building of the temple at Jerusalem, and other measures of Solomon, strengthened this desire; and although the minute organization and vigour of his government prevented any overt acts of rebellion, the train was then laid, which, upon his death, rent the ten tribes from the house of David, and gave to them a king, a capital, and a religion suitable to the separate views and interests of the tribe. Thenceforth the rivalry of Ephraim and Judah was merged in that between the two kingdoms; although still the predominance of Ephraim in the kingdom of Israel was so conspicuous as to occasion the whole realm to be called by its name, especially when that rivalry is mentioned.—J. K.

EPHRAIM (Ἐφραΐμ), a city in the wilderness of Judaea, to which Jesus withdrew from the persecution which followed the miracle of raising Lazarus from the dead (John xi. 54). It is placed by Eusebius (*Onomast.* s. v. Ἐφραΐμ) eight Roman miles north of Jerusalem. This indication would seem to make it the same with the Ephraim which is mentioned in 2 Chron. xiii. 19, along with Bethel and Jeshanah, as towns taken from Jeroboam by Abijah. And this again is doubtless the same which Josephus also names along with Bethel as 'two small cities' (πολιτεῖα), which were taken and garrisoned by Vespasian while reducing the country around Jerusalem (*De Bell. Jud.* iv. 9. 9). [It is probably the same as Ophrah (Josh. xviii. 23), which Robinson and Stanley identify with Taiyibeh (*B. R.* ii. 124; *S. and P.* 214)].—J. K.

EPHRAIM, MOUNT, a mountain or group of mountains in central Palestine, in the tribe of the same name, on or towards the borders of Benjamin (Josh. xvii. 15; xix. 50; xx. 7; Judg. vii. 24; xvii. 1; 1 Sam. ix. 4; 1 Kings iv. 8). From a comparison of these passages it may be collected that the name of 'Mount Ephraim' was applied to the whole of the ranges and groups of hills which occupy the central part of the southernmost border of this tribe, and which are prolonged southward into the tribe of Benjamin. In the time of Joshua these hills were densely covered with trees (Josh. xvii. 18), which is by no means the case at present. In Jer. l. 19, Mount Ephraim is mentioned in apposition with Bashan, on the other side of the Jordan, as a region of rich pastures, suggesting that the valleys among these mountains were well watered and covered with rich herbage, which is true at the present day.—J. K.

EPHRAIM, THE FOREST OF, in which Absalom lost his life (2 Sam. xviii. 6-8), was in the country east of the Jordan, not far from Mahanaim. How it came to bear the name of a tribe on the other side the river is not known. Some think it was on account of the slaughter of the Ephraimites here in the time of Jephthah (Judg. xii. 4-6); but others suppose that it was because the Ephraimites were in the habit of bringing their flocks into this quarter for pasture; for the Jews allege that the Ephraimites received from Joshua, who was of their tribe, permission to feed their flocks in the woodlands within the territories of any of the

tribes of Israel; and that as this forest lay near their territories on the other side the Jordan, they were wont to drive their flocks over to feed there (see Jarchi, Kimchi, Abarbanel, etc., on 2 Sam. xviii. 6).—J. K.

EPHRATH or EPHRATAH (אֶפְרַתָּה, אֶפְרַתָּה; Sept. Ἐφραθά), the ancient name of Bethlehem (Gen. xxxv. 16; xlviii. 7). It would also appear from Ruth i. 2, that Ephrath was the name of a district, of which Bethlehem was the chief town. The sons of Naomi are called 'Ephrathites of Bethlehem-Judah.' And in Mic. v. 2, we read, 'And thou Bethlehem-Ephrathah,' which in Matt. ii. 6, is rendered καὶ σὺ Βηθλεὲμ γῆ Ἰούδα, thus giving the district in which Bethlehem was situated; and may we not reasonably suppose that Ephrath, though not equivalent to γῆ Ἰούδα, was still the name of a district?

Various theories have been suggested regarding the origin and meaning of the name Ephrath. It has been thought strange that a daughter of Israel (the wife of Caleb, 1 Chron. ii. 19, 50) should bear the same name as a Canaanitish town; and some have imagined either that she gave her name to the place, or took her name from it. The former supposition is impossible because the name Ephrath existed in the time of Abraham; and the latter seems to be very doubtful (See, however, Smith's *Dict. of the Bible*, s. v.) There can be little doubt that the name Ephrath is derived from the fertility of the soil immediately around it in comparison with that of the adjoining wilderness. The vineyards and olive groves which cover the terraced slopes of Bethlehem are still luxuriant and fruitful; and the fields of the plain below yield rich crops of grain (See BETHLEHEM; Lange on Matt. ii. 6; Stanley, *S. and P.* 137).—J. L. P.

EPHRON (עֶפְרוֹן; Sept. Ἐφρών), a Hittite residing in Hebron, who sold to Abraham the cave and field of Machpelah as a family sepulchre (Gen. xxiii. 6).

EPHRON (Ἐφρών). 'A large and very strong city' on the east of Jordan, destroyed by Judas Maccabæus (1 Maccab. v. 46-52; 2 Maccab. xii. 27). It seems to have been placed in a defile or valley. Its site has not been identified.—W. L. A.

EPHRON, MOUNT (הַר עֶפְרוֹן; Sept. τὸ ὄρος Ἐφρών), on the boundary line of Judah (Josh. xv. 9). As it was between the water of Nephtoth and Kirjath-jearim, it is probably the range of hills on the west side of the *Wady Beit-Hanina*.—†.

EPICURÆANS. [PHILOSOPHY, GREEK].

EPIPHI (Ἐπιφή, 3 Maccab. vi. 38), the eleventh month in the Egyptian calendar. It began on the 25th of June in the Julian calendar. As the Egyptian months had each 30 days, from the 25th of Pachon (the 9th month beginning 26th April) to the 4th of Epiphi would be 40 days.—W. L. A.

EPISTLE. Epistles are probably as old as the art of writing. Verbal messages seem to have been the usual way of communication between persons at a distance from one another in the primitive conditions of society, but there is no proof that there was no other way. In the Homeric poems, though messages are usual, letters are not unknown, as we see from the story of Bei-

Ierophon. In the Bible, the first mention is in the time of David, who gave Uriah a letter to Joab (2 Sam. xi. 14, 15). This seems to have been done as the only way of concealing the king's wicked design. It must have been sealed, like the letters which Jezebel 'wrote' 'in Ahab's name, and sealed with his seal,' to plot the death of Naboth the Jezreelite (1 Kings xxi. 8-10). The contents of these letters are simply royal commands, and nothing is said of salutation or even address. It is to be noticed that the answer of Joab was by a messenger (ver. 18-25); and that no mention is made of a written reply to Jezebel's letter; we only read that the news of the death of Naboth was 'sent' to her (ver. 14). In neither case was secrecy still necessary. Jehu wrote letters and sent them to Samaria to authorities, respecting Ahab's children, the form of which, or of the one transcribed, is the first instance in the Bible of anything like a formula. It begins, 'Now as soon as this letter cometh to you,' but ends without any like phrase. It was apparently replied to by a message, and Jehu wrote another letter, which, as given, has not the same peculiarity as the first. That Jehu, who, though perhaps well born, was a rough soldier, should have written, and there is no ground for supposing that he used a scribe, but, from the extremely characteristic style, rather evidence against such an idea, indicates that letter-writing was then common (2 Kings x. 1-7). In this case secrecy may have been thought desirable, but the importance of the matter would have been a sufficient reason for writing. The letter which the king of Syria, Benhadad, sent by Naaman to Jehoram king of Israel, though to a sovereign with whom the writer was at peace, is in the same peremptory style, with no salutation, from which we may conjecture that only the principal contents are given in this and like instances (2 Kings v. 5, 6). The 'writing' (מִכְתָּב) to Jehoram king of Judah, from Elijah,

must have been a written prophecy rather than a letter (2 Chron. xxi. 12-15); though it must be observed that such prophecies when addressed to persons are of an epistolary character. Hezekiah, when he summoned the whole nation to keep the passover, sent letters, 'from the king and his princes,' as had been determined at a council held at Jerusalem by the king, the princes, and all the congregation. The contents of these letters are given, or the substance. The form is that of an exhortation, without, however, address. The character is that of a religious proclamation (2 Chron. xxx. 1-9). The letter or letters of Sennacherib to Hezekiah seem to have been written instructions to his messengers, which were given to Hezekiah to shew him that they had their master's authority. It is to be observed that the messengers were commanded, 'Thus shall ye speak to Hezekiah,' and that Hezekiah 'received the letter' from them. What he received was probably a roll of papyrus, as that which Jehoiakim burnt seems to have been (Jer. xxxvi. 23), for when he took it to the temple he 'spread it before the LORD' (2 Kings xix. 9-14; Is. xxxvii. 9-14; comp. 2 Chron. xxxii. 17). It does not appear to have been usual for the prophets to write letters. Generally they seem, when they did not go themselves to those whom they would address, either to have sent a messenger, or to have publicly proclaimed what they were commissioned to say, knowing that the

report of it would be carried to those whom it specially concerned. When Nebuchadnezzar had carried captive some of the people of Judah, we read how Jeremiah addressed them by a letter, which is a written exhortation and prophecy (xxix. 1-23). It can scarcely be said that here we perceive a positive distinction between the later prophets and the earlier, for Elijah sent a letter or 'writing' to Jehoram king of Judah, as already noticed. The distance of Babylon from Jerusalem, and of Jerusalem from the kingdom which was the scene of Elijah's ministry, seems to afford the true explanation. That letters were not uncommon between the captives at Babylon and those who remained at Jerusalem before it was destroyed, appears probable, from the mention of letters to Zephaniah the priest and to others from a false prophet Shemaiah, at Babylon, in contradiction of Jeremiah's letter (24-29). Jeremiah was commanded to send to the captives a condemnation of this man (30-32), and it is therefore probable that at least three letters passed on this occasion. Though with the little evidence we have we cannot speak positively, it seems as if the custom of letter-writing had become more common by degrees, although there is no ground for inferring any change in its character. Still we find nothing of an address or signature. The letter seems to be always a document, generally a message written for greater security or to have full authority, and was probably rolled, tied up, and sealed with the writer's seal.

Although no Hebrew letters are preserved of the time before David, it might be supposed that the form might have been derived from Egypt. We have papyri containing copies by Egyptian scribes of the kings of the Rameses family, about the 13th century B.C., of letters of their own correspondence. These shew a regular epistolary style, the conventionalism of which at once removes us from all ideas of Semitic literature. There is an air of the monuments about it that strikes us in the descriptive character of certain of the formulas. Some letters, from a superior to an inferior, commence in the manner shewn in the following example:—'The chief librarian Amen-em-an, of the royal white house, says to the scribe Penta-ur, Whereas, this letter is brought to you, saying—communication.' A usual ending of such letters is, 'Do thou consider this.' Some begin with the word 'Communication.' The fuller form also seems to be an abbreviation. An inferior scribe, addressing his superior, thus begins; 'The scribe Penta-ur salutes his lord, the chief librarian, Amen-em-an, of the royal white house. This comes to inform my lord. Again I salute my lord. Whereas I have executed all the commissions imposed upon me by my lord, well and truly, completely and thoroughly[?] I have done no wrong. Again I salute my lord.' He ends, 'Behold this message is to inform my lord.' A more easy style is seen in a letter of a son to his father, which begins,—'The scribe Amen-mesu salutes [his] father, captain of bowmen, Bek-en-ptah,' and ends 'Farewell.' A military officer writing to another, and a scribe writing to a military officer, appear to begin with a prayer for the king, before the formula 'Communication.' A royal or government letter is a mere written decree, without any formal introduction, and ending with an injunction to obey it. The contents of these letters are always addresses to the person

written to, the writer using the first person singular. The subject-matter is various, and perhaps gives us a better idea of the literary ability of the Egyptians, and their lively national character, than any other of their compositions.*

In the books of Scripture written after the return from Babylon, mention is made of letters of the enemies of the Jews to the kings of Persia, and of the kings to these persons, the Jews, or their officers, some of which are given. These are in an official style, with a greeting and sometimes an address. The letter to Artaxerxes contains the form, 'Be it known unto the king,' 'Be it known now unto the king' (Ezra iv. 11-16); and his answer thus begins; 'Peace [or 'welfare'], and so forth' (17-22), the expression 'and so forth,' occurring elsewhere in such a manner that it seems to be used by the transcriber for brevity's sake (10, 11; vii. 12). It must therefore not be compared to the common modern Arabic formula of commencement, 'After the [usual] salutations.' The letter of the opponents of the Jews to Darius (Hystaspis) thus begins:—'Unto Darius the king, all peace. Be it known unto the king' (v. 6-17). The letter of Artaxerxes (Longimanus) to Ezra is a written decree, and not an ordinary letter save in form (vii. 11, 26). Nehemiah asked for, and was granted, letters from the same king to the governors, and the keeper of the king's forest (Neh. ii. 7, 9). When he was rebuilding Jerusalem, Sanballat sent him 'an open letter' by his servant, repeating an invented rumour of the Jews' intention to rebel (vi. 5, 7): no doubt it was left not sealed purposely, either in order that the rumour should be so spread as if by accident, or to shew disrespect. At this time many letters passed between the nobles of Judah and Tobiah, and letter-writing seems to have been common (17, see also 19). In Esther we read of exactly the same custom as that spoken of in the case of Jezebel's letter, the authority of writings with the king's name and seal, even if not written by him. It is related that Ahasuerus 'took his signet from his hand, and gave it unto Haman, who caused letters to be written containing a mandate:—' In the name of king Ahasuerus was it written, and sealed with the king's signet' (Esth. iii. 10, 12, 13). In like manner, the same authority was given to Esther and Mordecai, and it is remarked, 'for the writing which is written in the king's name, and sealed with the king's signet, may not be reversed' (viii. 7, 8).

The Hebrew word for a letter is סֵפֶר, 'a writing,' hence also 'a book.' In the later books, סֵפֶר, סֵפֶרֶת, סֵפֶרֶת, סֵפֶרֶת, etc., occur.

In the N. T., epistles take a very important place as authoritative documents addressed to the churches. Of these there are the separate canonical epistles, and the short epistle addressed by the apostolic council held at Jerusalem, to the Gentile converts in Antioch, Syria, and Cilicia, which is included in the Acts. There is also a letter from Claudius Lysias to Felix, which may be supposed to preserve the official style of the provinces. It uses the common Greek formulas, beginning, after the names of the writer and the person written to,

with 'Greeting' (Χαίρειν), and ending with 'Farewell' ('Ἐββλωσο, Acts xxiii. 25-30). The epistle of the council has the same form, save only that the plural, 'Fare ye well,' Ἐββλωσθε, is used (xv. 23, 29). The separate epistles, with the exception of that of St. James, which has the formula 'Greeting,' and that to the Hebrews, as well as the First of St. John, which have not an epistolary beginning, all commence, after the name, and usually the divine commission, of the writer, and the name of the church or person written to, with a salutation, generally a prayer that the church or person addressed may receive grace, mercy, and peace. The salutation at the end is a grace, sometimes accompanied by a doxology. St. Paul appears to have generally added, at the end, his own salutation in his own hand (2 Thes. iii. 17; see also 1 Cor. xvi. 21; Col. iv. 18). He probably always employed an amanuensis. His handwriting was large, as we learn from a passage in the Epistle to the Galatians (vi. 11), not correctly translated in the A. V. The apostles use the singular and plural of the first person, in the latter case speaking in the name of the church, or perhaps associating with themselves, as does St. Paul, another teacher or other teachers. After the address and salutation, the main subject at once follows, and special greetings with all personal matters are not introduced until its discussion has ended. In St. Paul's Epistles, the style seems to shew plain indications of writing by dictation in the length and intricate construction of some of the sentences, and the occurrence of parentheses. The contents of each of the Epistles will be found discussed under the article devoted to it.

St. Paul refers to a custom of the apostolic time, the giving recommendatory letters, *συστατικαὶ ἐπιστολαὶ* (2 Cor. iii. 1), to persons going from one church to another.—R. S. P.

EPISTLES OF THE N. T. In directing our inquiry first of all towards the relation in which the epistles stand to the other component parts of the N. T., we find that both the O. and N. T. have been arranged by divine wisdom after one and the same plan. All the revelations of God to mankind rest upon history. Therefore in the O., as well as in the N. T., the history of the deeds of God stands FIRST, as being the basis of holy writ; thereupon follow the books which exhibit the doctrines and internal life of the men of God—in the O. T. the Psalms, the writings of Solomon, etc., and in the N. T. the Epistles of the Apostles; finally, there follow in the O. T. the writings of the prophets, whose vision extends into the times of the N. T.; and at the conclusion of the N. T. stands its only prophetic book, the Revelation of John.

In this also we must thankfully adore divine wisdom, that the epistles, which lay down the doctrines of the Christian religion, originate, not from one apostle alone, but from all the four principal apostles; so that one and the same divine truth is presented to our eyes in various forms as it were in various mirrors, by which its richness and manifold character are the better displayed.

The epistles of the N. T. divide themselves into two parts—the PAULINE and the so-called CATHOLIC.

The PAULINE epistles are thirteen in number; or fourteen, if we add to them the Epistle to the

* See Mr. C. W. Goodwin's paper, 'Hieratic Papyri.' *Cambridge Essays*, 1858; pp. 226, *seqq.*

Hebrews. Up to our days their genuineness has almost unanimously been recognised in Germany, with the exception only of the pastoral epistles, and more especially the first letter to Timothy. Eichhorn and Bauer have attacked the genuineness of all the three pastoral epistles, and Schleiermacher that of the first epistle to Timothy. Indeed, the very peculiar character of the Pauline epistles is so striking to any one who is not ignorant of the want of ease and originality conspicuous in the counterfeit writings of early times, as to leave not the least doubt of their genuineness. Depth of thought, fire of speech, firmness of character—these manly features, joined withal to the indulgence of feelings of the most devoted love and affection, characterise these epistles. The amiable personal character of the apostle may be most beautifully traced in his Epistles to the Philipians and to Philemon.

All the epistles, except the one to the Romans, were called forth by circumstances and particular occasions in the affairs of the communities to which they were addressed. Not all, however, were preserved; it is, at least, evident, from 1 Cor. v. 9, that a letter to the Corinthians has been lost; from Col. iv. 16, it has also been concluded—though probably erroneously, since there perhaps the letter to the Ephesians is referred to—that another letter to the community of Laodicea has likewise been lost. Press of business usually compelled Paul—what was, besides, not uncommon in those times—to use his companions as amanuenses. He mentions (Gal. vi. 11), as something peculiar, that he had written this letter with his own hand. This circumstance may greatly have favoured the temptation to forge letters in his name, because since the period of Alexandrian literature it was not unusual to indite spurious books, as is evident from Eusebius (*Hist. Eccles.* p. 23); and even Christian bishops made complaints about the falsification of their letters. Paul alludes to this (2 Thes. ii. 2), and therefore writes the greeting (2 Thes. iii. 17) with his own hand. Paul himself exhorted the communities mutually to impart to each other his letters to them, and read them aloud in their assemblies (Col. iv. 16). It is therefore probable that copies of these letters had been early made by the several communities, and deposited in the form of collections. So long therefore as the various communities transmitted the manuscripts to each other, no other letters, it is obvious, could come into the collections than those to whose genuineness the communities to whom they were originally addressed, bore witness. Even Peter (2 Peter iii. 16) seems to have had before him a number of Paul's letters, as, about forty years later, a number of letters of Ignatius were transmitted by Polycarp to Smyrna, while the church of Philippi forwarded to him those directed to them (*Ep. Polic.* sub fin.; Euseb. *Hist. Eccles.* iii. 36). This Pauline collection, in contradistinction to the gospels, passed by the name of *ὁ ἀπόστολος*.

The letters of Paul may be chronologically arranged into those written before his Roman imprisonment, and those written during and after it: thus beginning with his first letter to the Thessalonians, and concluding with his second to Timothy, embracing an interval of about ten years (A. D. 54-64). In our Bibles, however, the letters are arranged according to the pre-eminent parts

and stations of the communities to whom they were addressed, and conclude with the epistles to the two bishops and a private letter to Philemon.

That the epistles offered great difficulties was already felt in the earliest times (2 Pet. iii. 16). In the Roman Church their true understanding was more particularly lost by the circumstance that it understood by THE LAW, only the *opus operatum* of the ceremonial law; consequently the Roman Church could not comprehend justification by faith, and taught instead justification by works; as soon, therefore, as the true understanding of the Pauline epistles dawned upon Luther, his breach with the Roman Church was decided.

Among the more ancient interpreters of the Pauline letters, Chrysostom and Calvin deserve particular distinction; though the former, with all his zeal and psychological penetration, was still deficient in the true hermeneutic method.

THE CATHOLIC EPISTLES.—There is, in the first instance, a diversity of opinion respecting their name: some refer it to their WRITERS (letters from all the other apostles who had entered the stage of authorship along with Paul); some, again, to their CONTENTS (letters of no special but general Christian tenor); others, again, to the RECEIVERS (letters addressed to no community in particular). None of these views, however, is free from difficulties. The first and the second views—and more especially the first—cannot be brought to harmonize with the idiomatic expressions in the extant pages of the ancient writers; the second is, besides, contradicted by the fact that the letter of James is of a special tenor, while, on the contrary, that to the Romans is of such a general character as to deserve the name CATHOLIC in that sense. The third opinion is most decidedly justified by passages from the ancient writers (Euseb. *Hist. Eccles.* v. 18; Clem. Alex. *Strom.* iv. 15, ed. Potter, p. 606; Orig. *c. Cels.* i. 63). The Pauline Epistles had all their particular directions, while the letters of Peter, James, 1 John, and Jude, were circular epistles. The Epistles 2 and 3 John were subsequently added, and included on account of their shortness, and to this collection was given the name CATHOLIC LETTERS, in contradistinction to the Pauline, which were called *ὁ ἀπόστολος*.—A. T.

EPISTLES OF THE APOSTOLICAL FATHERS. Under this head we shall briefly notice those remains of Christian antiquity which are ascribed to the writers usually styled the Apostolic Fathers, from the circumstance that they were converted to the Christian faith during the lifetime, and probably by the instrumentality, of the Apostles. Of Barnabas and the epistle which bears his name we have already spoken at length [BARNABAS].

I. CLEMENT, or CLEMENS ROMANUS. It will probably be generally admitted that no production of the early church approaches so near the apostolic writings, in the union of devout feeling with justness and sobriety of thought, as that denominated the 'First Epistle of Clement to the Corinthians,' but addressed in the name of 'the Church sojourning at Rome (*ἡ παροικοῦσα Ῥώμην*) to the Church of God sojourning at Corinth.' Eusebius terms it, 'great and wonderful' (*μεγάλη τε καὶ θαυμασία*), and states that in his own and former times it was read in most churches (*Hist. Eccles.*

iii. 16; iii. 38; iv. 22, 23). Irenæus calls it *ικανωτάτην γραφήν*, 'a most powerful writing' (Euseb. *Hist. Eccles.* v. 6). It is frequently quoted by Clemens Alexandrinus (*Strom.* i. 7, sec. 38; *Opera*, ed. *Klotz*, ii. p. 29), ὁ ἀπόστολος Κλήμης; *Strom.* iv. 17, sec. 107; ii. p. 335; *Strom.* v. 12, sec. 81; iii. p. 57; *Strom.* vi. 3, sec. 65; iii. p. 137. The only known manuscript of this epistle is that appended to the celebrated Alexandrian Codex, which was presented to Charles I. by Cyrillus Lucaris, the patriarch of Constantinople. The same manuscript contains also a fragment of the so-called second Epistle. They were first published at Oxford, in 1633, by Patrick Young, the royal librarian. Sir Henry Wotton re-examined the manuscript, amended Young's copy in above eighty places, and published a very correct edition at Cambridge, in 1718. Certain portions of the first epistle have been thought to bear internal evidence of spuriousness. Bignonius, in a letter to Grotius, instances ch. xl., which relates to the presentation of offerings at set times, in which the word *λαϊκός* occurs; and the epithet *ancient* (*ἀρχαίαν*) applied to the Corinthian church in ch. xvii. Mosheim asserts that some passages are evidently taken from Clement of Alexandria (Mosheim's *Commentaries*, transl. by Vidal, vol. i. p. 271). The main object of this epistle was to allay the dissensions which had arisen in the Corinthian church, and especially to repress the unruly spirit shewn by many against their teachers. It is worthy of notice that Clement uniformly speaks of the opposition of the Corinthians against their presbyters, never of their insubordination to their bishop: he inculcates submission to the presbyters, but never to the bishop. Comp. ch. xvii., liv., lvii. In two other passages the term *πρεσβύτεροι* appears to denote simply the elder members of the church, while the term *ἡγουμένοι* (Heb. xiii. 7, 17, 24) is used for their teachers or superintendents. Ch. i., 'Being subject to those that have the rule over you' (*τοῖς ἡγουμένοις ὑμῶν*), 'and giving due honour to the aged among you' (*τοῖς παρ' ὑμῶν πρεσβυτέροις*). Ch. xxi., 'Let us honour those that are set over us' (*τοὺς προσηγουμένους*); 'let us respect the aged that are among us' (*τοὺς πρεσβυτέρους*); 'let us instruct the young', etc. In ch. xlii. he speaks of bishops and deacons in a manner which shews that he considered the former as synonymous with presbyters: 'They (the Apostles) appointed their first-fruits to be bishops and deacons (*ministers*, Abp. Wake's transl. of those who should believe. Nor was this any new thing, seeing that long before it was written concerning bishops and deacons. For thus the Scripture, in a certain place, saith, I will appoint their overseers (bishops, *τοὺς ἐπισκόπους*), and their ministers (deacons, *τοὺς διακόνους*) in faith.' It has indeed been supposed that the bishop of the Corinthian church was deceased, and that the disorders which Clement sought to repress broke out before his successor was appointed. But had this been the case, for which there is not the slightest evidence, it is almost incredible that no allusion should be made to it. The only legitimate inference appears to be, 'that the original constitution of the church of Corinth still subsisted in Clement's time; the government was still vested not in one man, but in many' (Dr. Arnold's *Sermons on the Christian Life*, Introduction, p. xlvii.)

In Clement's Epistle only one book of the N. T. is expressly named, Paul's first Epistle to

the Corinthians; but though the Evangelists are not named, several sayings of Christ contained in our Gospels are repeated. There are also evident allusions to the Acts, all the Pauline Epistles (1 Thessalonians excepted), the Epistles of Peter and James, and the Epistle to the Hebrews. A tabular view of these passages is given by Dr. Lardner (*Credibility of the Gospel History*, pt. ii. ch. ii.; *Works*, vol. ii. pp. 35-53). Eusebius, speaking of Clement's Epistle, says, 'He has inserted in it many sentiments taken from the Epistle to the Hebrews, and sometimes makes use of the identical expressions, from which it is evident that that composition is not a recent one.

. . . Paul having addressed the Hebrews in their native language, some say that the Evangelist Luke, and others that this very Clement, translated the document; an opinion which is supported by the fact, that the Epistle of Clement and that to the Hebrews are marked by the same peculiarities of style, and in both compositions the sentiments are not unlike' (*Hist. Eccles.* iii. 38, ed. Valessii, 1672, p. 110).

As to the date of this epistle, it has been fixed by Grabe, Galland, Wotton, and Hefele, about the year 68; but Cotelierus, Tillemont, and Lardner think that it was written at the close of the Domitian Persecution in 96 or 97. A passage in ch. xli., in which Clement speaks in the present tense respecting the sacrifices of the Mosaic law, has been supposed to favour the earlier date; but Josephus adopts the same phraseology in his *Antiquities*, which were not finished till twenty years after the destruction of Jerusalem.

The first writer that notices the second Epistle of Clement is Eusebius, who does not absolutely pronounce it spurious, but says that it was less known than the former, and not quoted by ancient writers (*Hist. Eccles.* iii. 38). Photius states decidedly that it was rejected as spurious. It is only a fragment, and its style is rather homiletic than epistolary. The Gospels are quoted several times in it, more expressly than in the first Epistle, and there is one passage from an apocryphal writing called the Gospel according to the Egyptians (Lardner's *Credibility*, etc., part ii. ch. 3; *Works*, ii. 55). In 1752, John James Wetstein published, at the end of his edition of the Greek Testament, two epistles in Syriac (accompanied by a Latin translation), attributed to Clement, which were discovered at the end of a manuscript of the Syriac N. T. Immediately on their publication Dr. Lardner examined the evidence for their genuineness, and gave the result of his inquiries in a *Dissertation* (*Works*, vol. x. pp. 186-212), to which we refer the reader, only remarking that the whole strain of these compositions, and the allusions to prevailing practices, sufficiently indicate that they were written long after Clement's time.

The following works have also been attributed to Clement, but, as they are unquestionably spurious, we shall merely give their titles. 1. The *Apostolic Constitutions*, in eight books. 2. The *Apostolic Canons*. 3. The *Recognitions of Clement*. 4. The *Clementina*. They are all printed in the *Patres Apostolici* of Cotelierus, vol. i. (Mosheim's *Commentaries*, translated by Vidal, vol. i. pp. 270-274).

2. IGNATIUS, according to Eusebius (*Hist. Eccles.* iii. 36) and Origen (*Hom. vi. in Luc. Opera*, ed. Lommatsch, v. 104), the second bishop, or,

according to Jerome (*De Vir. Illustr.* xvi.), the third bishop of Antioch in Syria. Fifteen epistles bear his name. Three of these (one addressed to the Virgin Mary, the other two to St. John) are preserved only in a Latin version. The rest are extant in Greek and in an ancient Latin version, and are addressed to Mary of Cassabolis or Neapolis, to Hero, to the churches at Tarsus, Antioch, Philippi, Ephesus, Magnesia, Trallium, Rome, Philadelphia, Smyrna, and to Polycarp. The first eight are unanimously allowed to be spurious. Of the remaining seven (which were written on his journey from Antioch to Rome, where he suffered martyrdom by exposure to wild beasts), there are two recensions, one longer, the other shorter. It has been warmly controverted whether the longer epistles are interpolations of the shorter, or the shorter abridgments of the longer. Mr. Whiston contended earnestly in favour of the longer recension, including the Epistles to Tarsus, Antioch, and Hero, and attempted to prove that the smaller were only heretical extracts from them made in the fourth century. He published both recensions, with translations and various readings, in the first volume of his *Primitive Christianity Revived*, London, 1711, 5 vols. 8vo. The same opinion has lately been maintained by Dr. Charles Meier of the University of Giessen (*Studien und Kritiken*, 1836, p. 340), whose arguments have been met by Dr. Richard Rothe in an essay on the genuineness of the Ignatian Epistles appended to his work *Die Anfänge der Christlichen Kirche und ihrer Verfassung*, Wittenberg, 1837. Lardner and most modern critics adopt the shorter recension. Mosheim expresses himself very doubtfully, and, while he allows the seven epistles to have 'something of a genuine cast,' confesses that he is unable to determine how much may be considered as authentic (*Commentaries*, translated by Vidal, vol. i. pp. 276, 277). Dr. Neander, while he allows many passages to bear the impress of antiquity, considers even the shorter recension to be grossly interpolated. The support which it was supposed might be drawn from these epistles in favour of episcopacy gave, on their publication, an exaggerated importance to the question of their genuineness, and called forth the polemical skill of several distinguished theologians of the seventeenth century. In 1666 a work appeared by Dallæus (Jean Daillé), entitled, *De Scriptis quæ sub Dionysii Areopagite et Ignatii Antiocheni nominibus circumferuntur Libri duo*, in which he maintains that the Ignatian Epistles were forged at the close of the third, or at the beginning of the fourth century (c. xxxviii. p. 461). In reply to this and other writers, Bishop Pearson published his celebrated *Vindicia Ignatiana*, Cantab. 1672, which was reprinted by Cotelæus in his edition of the *Apostolic Fathers*, vol. ii. pp. 251-444. (Wake's *Genuine Epistles of the Apostolic Fathers*, London, 1737, pp. xl. li. pp. 60-128; Lardner's *Credibility*, pt. ii. ch. 5; *Works*, vol. ii. pp. 73-94; Neander's *Church Hist.* E. T. ii. 443 [Clarke's ed.]; Cureton, *Corpus Ignatianum*, etc., 1847; Bunsen, *Die 3 ächten und die 4 unächtigen Briefe des Ignatius*, 1847; Petermann, *S. Ignatii Epp. coll. ed. Gr., verss. Syr. Armen. Lætt.* 1849.)

3. POLYCARP'S *Epistle to the Philippians*. Irenæus, in a letter to Florinus the Valentinian, preserved in part by Eusebius (*Hist. Eccles.* v.

20), gives an interesting account of his early recollections of Polycarp, and refers to the epistles which he sent to the neighbouring churches. Only one, however, has been preserved; it was addressed to the Philippians, and in Jerome's time was publicly read in the assembly of Asia—'Scriptis ad Philippenses valde utilem epistolam quæ usque hodie in Asia conventu legitur' (*De Vir. Illustr.* c. 13). It is also mentioned by Eusebius (*Hist. Eccles.* iii. 36), who cites two passages from it (sec. 8 and sec. 13) relating to Ignatius, and remarks that it contains several quotations from the first epistle of Peter (*Hist. Eccles.* iv. 14). It is divided into fourteen sections, of which the first nine and the thirteenth, preserved by Eusebius, are in the original Greek, and the rest only in an ancient Latin Version. This version of the whole epistle was first printed at Paris in 1498. Peter Halloix published the epistle in Greek and Latin in 1633, from a copy sent by the Jesuit Sirmont to Turrianus. Fourteen years after, Archbishop Ussher obtained another copy, from which he prepared an edition in 1647. An excellent edition, edited by Sir Thomas Smith, appeared in 1709 (Hefele's *Patrum Apostolicorum Opera*, p. xviii.; Lardner's *Credibility*, pt. ii. ch. 6).

4. *The Shepherd of Hermas* [HERMAS].—J. E. R.

EPISTLES, SPURIOUS [APOCRYPHA]. Of these many are lost, but there are several still extant: the principal are—

The Epistle of Paul to the Laodiceans.

The Third Epistle of Paul to the Corinthians.

The Epistle of Peter to James.

The Epistles of Paul and Seneca.

There was an Epistle to the Laodiceans extant in the beginning of the second century, which was received by Marcion; but whether this is the same with the one now extant in the Latin language is more than doubtful. 'There are some,' says Jerome, 'who read the Epistle to the Laodiceans, but it is universally rejected.' The original epistle was most probably a forgery founded on Col. iv. 16, 'And when this epistle is read among you, cause that it be read also in the church of the Laodiceans, and that ye likewise read the Epistle from Laodicea.' The apparent ambiguity of these last words has induced some to understand St. Paul as speaking of an epistle written by him to the Laodiceans, which he advises the Colossians to procure from Laodicea, and read to their church. 'Some,' says Theodoret, 'imagine Paul to have written an Epistle to the Laodiceans, and accordingly produce a certain forged epistle; but the Apostle does not say the Epistle to, but the Epistle from, the Laodiceans.' Bellarmine, among the Roman Catholics, and among the Protestants Le Clerc and others, suppose that the passage in Colossians refers to an epistle of St. Paul, now lost, and the Vulg. translation—*eam quæ Laodicensium est*—seems to favour this view. Grotius, however, conceives that the Epistle to the Ephesians is here meant, and he is followed by Hammond, Whitby, and Mill, and also by Archbishop Wake (*Epistles of the Apostolic Fathers*). Theophylact, who is followed by Dr. Lightfoot, conceives that the epistle alluded to is 1 Timothy. Others hold it to be 1 John, Philemon, etc. Mr. Jones conjectures that the epistle now passing as that to the Laodiceans (which seems entirely compiled out of the

Epistle to the Philippians) was the composition of some idle monk not long before the Reformation; but this opinion is scarcely compatible with the fact mentioned by Mr. Jones himself, that when Sixtus of Sienna published his *Bibliotheca Sancta* (A.D. 1560), there was a *very old* manuscript of this epistle in the library of the Sorbonne. This epistle was first published by James Le Fevre of Estaples in 1517. It was the opinion of Calvin, Louis Capell, and many others, that St. Paul wrote several epistles besides those now extant. One of the chief grounds of this opinion is the passage 1 Cor. v. 9. There is still extant, in the Armenian language, an epistle from the Corinthians to St. Paul, together with the Apostle's reply. This is considered by Mr. La Croze to be a forgery of the tenth or eleventh century, and he asserts that it was never cited by any one of the early Christian writers. In this, however, he is mistaken, for this epistle is expressly quoted as Paul's by St. Gregory the Illuminator in the third century, Theodore Chrethorin in the seventh, and St. Nierses in the twelfth. Neither of them, however, is quoted by any ancient Greek or Latin writer (Henderson, *On Inspiration*, p. 497. The passages are cited at length in Father Paschal Aucher's *Armenian and English Grammar*, Venice, 1819).

The *Epistle of Peter to James* is a very ancient forgery. It was first published by Cotelierus, and is supposed to have been a preface to the *Preaching of Peter*, which was in great esteem among some of the early Christian writers, and is several times cited as a genuine work by Clement of Alexandria, Theodotus of Byzantium, and others. It was also made use of by the heretic Heraclion, in the second century. Origen observes of it, that it is not to be reckoned among the ecclesiastical books, and that it is neither the writing of Peter nor of any other inspired person. Mr. Jones conceives it to be a forgery of some of the Ebionites in the beginning of the second century.

The *Epistles of Paul and Seneca* consist of eight pretended Latin letters from the philosopher Seneca to St. Paul, and six from the latter to Seneca. Their antiquity is undoubted. St. Jerome had such an idea of the value of these letters that he was induced to say, 'I should not have ranked Seneca in my catalogue of saints, but that I was determined to it by those Epistles of Paul to Seneca and Seneca to Paul, which are read by many. . . . He was slain by Nero, two years before Peter and Paul were honoured with martyrdom.' St. Augustine also observes (*Epistle to Macedonius*) that 'Seneca wrote certain epistles to St. Paul, which are now read.' The epistles are also referred to in the spurious 'Acts' of Linus, the first bishop of Rome after the Apostles. But these *Acts* are a manifest forgery, and were first alluded to by a monk of the eleventh century. The letters do not appear to have been mentioned by any other ancient writer; but it seems certain that those now extant are the same which were known to Jerome and Augustine. The genuineness of these letters has been maintained by some learned men, but by far the greater number reject them as spurious. Mr. Jones conceives them to be a forgery of the fourth century, founded on Philip. iv. 22. Indeed, there are few persons mentioned in the N. T., as companions of the Apostle, who have not had some spurious piece or other fathered on them.

These are the principal of the ancient forged

epistles. Among those now universally rejected are the well-known *Epistle of Lentulus* to the Roman Senate, giving a description of the person of Christ (*Orthodoxographia*, p. 2, Basil, 1555; Fabrici *Cod. Epig.*, 1719), and some pretended epistles of the Virgin Mary. One of these is said to be written in Hebrew, and addressed to the Christians of Messina in Sicily, of which a Latin translation has been published, and its genuineness gravely vindicated (*Veritas Vindicata*, 1692, fol.) It is dated from Jerusalem, in the 42d year 'of our Son,' nones of July, *Luna 17, Feria quinta*. The metropolitan church of our Lady of the *Letter*, at Messina, takes its name from the possession of this celebrated epistle, of which some have pretended that even the autograph still exists. An epistle of the Virgin to the Florentines has been also celebrated, and there is extant a pretended letter from the same to St. Ignatius, together with his reply.—W. W.

ER (עֶר; Sept. Ἑρ). 1. The eldest son of Judah by the daughter of Shuah, a Canaanite (Gen. xxxviii. 3; Num. xxvi. 19). It is said 'Er was wicked in the sight of the Lord,'* which probably intimates his having followed the abominable idolatries of his mother's race, 'and the Lord slew him' (Gen. xxxviii. 7). 2. The nephew of the preceding, son of his brother Shilah (1 Chron. iv. 21). 3. The son of Jose and father of Elmodad in our Lord's genealogy (Luke iii. 28).—W. L. A.

ERAN (עֶרָן; Sept. Ἑραν), son of Shuthelah, eldest son of Ephraim and ancestor of the *Eranites* (Num. xxvi. 36). The Samar. and Syr. read with the Sept. 7 for 7 in this name. No corresponding name occurs in the genealogy of Ephraim in 1 Chron. vii. 20.—W. L. A.

ERASMUS, DESIDERIUS, was born at Rotterdam the 28th of October 1467, and died at Basel on the 11th or 12th July (O. S.) 1536. His father's name was Gerhard Præst; his mother was the daughter of a physician of Sevenbergen. They were never married. He was called Gerhard after his father; and subsequently took the names of Desiderius and Erasmus, which, the first in Latin, the second in Greek, have a similar meaning to Gerhard in German. At the age of thirteen both his parents died, and he was ill-used by his guardians; they misappropriated his property, and endeavoured to force him into a monastery. He resisted a long time, but at length, in 1486, he entered a monastery at Stein, near to Gouda, and took the vows a year afterwards. The monastic life, however, was repugnant to him, and he gladly accepted the post of secretary to the Archbishop of Cambray, which his reputation for Latin scholarship procured him. This was in 1492, and at the same time he was ordained priest. At the expiration of this time he went to study at Paris; but left in 1497. His life after this was somewhat unsettled. He visited Holland, England (repeatedly), and Italy; for some time he was professor of theology and Greek at Cambridge, where he was the instrument, if not of introducing, yet of establish-

* There is a play on the words here, produced by a transposition of the letters, which is lost in the translation: Er (עֶר) was רַע, etc. Of such the Hebrews were fond. [EDUCATION.]

ing the latter in the English universities. In 1516 he was invited to the Low Countries, to the court of the king of Spain, afterwards Charles V., and was appointed royal counsellor without any particular duties and with a pension. The rest of his life was spent mostly at Basel or in the Netherlands. He left Basel in 1529 for Friburg, thinking himself unsafe at Basel, in consequence of the religious excitement of the time and place. He fell ill at Friburg, however, and returned to Basel in 1535, and died there the year after.

Erasmus was a voluminous writer. His contributions to Biblical science entitle him to a place of honour in the ranks of those who have been its promoters. In 1505 he published a translation of the N. T. in Latin; and in 1516 he edited the first published edition of the N. T. in Greek, with a Latin translation. Before this he had issued a commentary on the 1st Psalm, published in 1515, which contained the important words, 'Legant et idiotæ legem domini quacumque lingua.' His text of the Greek N. T. passed through five editions in his lifetime; in the third (1522) of which he inserted 1 John v. 7, which he had on critical grounds previously omitted. He had but one MS. for the Apocalypse, and this being defective at the end, he translated the missing verses from the Vulg. This MS. he borrowed from Reuchlin, but did not return it. It was long supposed to be lost, but has been recently discovered in the library of the princely house of Cettingen—Wallenstein at Maylingen in Bavaria. He wrote also *Adnotationes in Nov. Test.*, Basil, 1522; and *Paraphrases in N. T.* So highly were these latter esteemed in England, that by an order in council, every parish church was obliged to possess a copy of a translation of them. The position of Erasmus in the great religious conflict of his age was somewhat ambiguous; neither by Romanists nor by Lutherans was he trusted. Without having courage to identify himself with the Reformation movement, he yet in various ways contributed greatly to help it forward. His great service to the church as well as to society, was the impulse he gave, and the great assistance his works contributed, towards sound learning and criticism. The best edition of his works is that published at Basel in 1540-41 in 9 vols. folio. They have been reprinted with some additions, but not so accurately, at Leyden, in 1703-1706, in 10 vols. folio.

ERASTUS (Ἐραστός), a Corinthian, and one of Paul's disciples, whose salutations he sends from Corinth to the Church at Rome as those of 'the chamberlain of the city' (Rom. xvi. 23). The words so rendered (οἰκονόμος τῆς πόλεως; Vulg. *arcarius civitatis*) denote the city treasurer or steward, an officer of great dignity in ancient times (comp. Joseph. *Antiq.* vii. 8. 2). We find this Erastus with Paul at Ephesus, whence he was sent along with Timothy into Macedonia (Acts xix. 22). They were both with the apostle at Corinth when he wrote, as above, from that city to the Romans: at a subsequent period Erastus was still at Corinth (2 Tim. iv. 20), which would seem to have been the usual place of his abode.—J. K.

ERECH (Ἐρέχ; Sept. Ὀρέχ), one of the cities which formed the beginning of Nimrod's kingdom in the plain of Shinar (Gen. x. 10). It is not said that he built these cities, but that he established

his power over them; from which we may conclude that they previously existed. An ancient tradition, which Jerome and others have followed, but which is against all probability, and has no foundation to rest upon, identifies Erech with Edessa. Bochart, however, rather seeks the name in the Aracca or Aracha of the old geographers, which was on the Tigris, upon the borders of Babylonia and Susiana (Ptolemy, vi. 3; Ammian. Marcell. xxxiii. 6, 26). This was probably the same city which Herodotus (i. 185; vi. 119) calls Arderikka, *i. e.*, Great Erech. Rosenmüller happily conjectures that Erech probably lay nearer to Babylon than Aracca; and this has been lately confirmed by Col. Taylor, the British resident at Bagdad, who is disposed to find the site of the ancient Erech in the great mounds of primitive ruins, indifferently called Irak, Irka, and Senkerah, by the nomade Arabs; and sometimes El Asayah, 'the place of pebbles.' These mounds, which are now surrounded by the almost perpetual marshes and inundations of the lower Euphrate, lie some miles east of that stream, about midway between the site of Babylon and its junction with the Tigris. Some have thought that the name of Erech may be preserved in that of Irak (*Irak-Arabi*), which is given to the region enclosed by the two rivers, in the lower part of their course.—J. K.

ERES or ÆRES (Ἔρες) occurs in numerous places of Scripture, but authors are not agreed on the exact meaning of the term: Celsius (*Hierobot.* i. 106, *sq.*), for instance, conceives that it is a general name for the pine tribe, to the exclusion of the cedar of Lebanon, which he considers to be indicated by the word Berosh. The majority of authors, however, are of opinion that the cedar of Lebanon (*Pinus Cedrus* or *Cedrus Libani* of Botanists) is alone intended. The discrepancy of opinion has on this occasion, however, arisen from the doubt whether Eres, in the numerous passages of Scripture where it occurs, is always used in the same signification; that is, whether it is always intended to specify only one particular kind of the pine tribe, or whether it is not sometimes used generically. In the latter case others of the pine tribe appear to be intended along with the cedar of Lebanon, and not to its exclusion, as advocated by the learned Celsius. We are disposed to think that the different passages in which *Eres* occurs authorise our considering it a general term, applied to different species.

But before proceeding to compare these passages with one another, it will be desirable to ascertain its modern acceptation, as well as the meaning which it bears in Arabic works on *Materia Medica*. In these such terms are generally used in a more precise sense than in general works, the authors of which are usually unacquainted with the correct appellation of the products of nature.

In the first place there is no doubt that the name *arz* or *ars* (آرز), is, at the present day, applied to the cedar of Lebanon by the Arabs in the neighbourhood. Mr. Harmer, on Canticles v. 15, observes that the country people near the mountain call the cedar *ars*, which is very nearly the original name. But the same name appears to be applied also to others of the pine tribe: thus 'at Aleppo the fir-tree is included under the name *ars*' (Niebuhr, as

quoted by Rosenmüller, *Bibl. Bot.* p. 246). So we find the term *alerce*, that is *al-arz*, applied by the Arabs to a coniferous plant, a native of Mount Atlas, and of other uncultivated hills on the coast of Africa. The wood-work of the roof of the celebrated mosque, now the cathedral, of Cordova, which was built in the ninth century, has been proved to be formed of the wood of this tree (Loudon's *Arboret.* p. 2463). From *alerce* the English name *larch* is supposed to have been derived. If we consult Persian works on *Materia Medica*, we find the name *aras* or *orus* given as a synonyme of *abhul*, which is a species of juniper: so, again, *ooruz* is described as *durukht sunoburbebur*, that is, 'the pine-tree without fruit;' *sunobur* appearing as the general term for pine-trees, which are distinguished by the name of *sunobur sughar*, 'the lesser pine,' called also *tunob*, and *sunobur kubar*, 'the larger pine:' of this are given, as synonyms, *nazov* and *chilghozah*, which is the *Pinus Gerardiana* of Botanists. With the Arabs,

as quoted by Celsius, *l. c.* p. 107: 'آرز (arz) nomen generale est ad pini species designandas;' and he further quotes Abu'l Fadli, as stating, 'Arz est arbor zanaubar (pinus) cujus, quoad omnes ejus species, mentionem faciemus sub lit. Z. si Deus volet.—Loco condito hoc modo pergit: Zanaubar (pinus) est arbor magna. Gignitur in montibus, et regionibus frigidis. Ejus tres sunt species, mas nempe, et femina major, atque minor.' It is not necessary for us on the present occasion to determine what are the species intended by the Arabian authors. They no doubt sometimes follow Dioscorides, and at other times insert names and descriptions which will apply only to the species indigenous in the mountains of Persia. Different species of pine, therefore, will be adduced as the kinds intended, in different countries. We may also remark, as stated by Celsius, that the translators of the sacred Scriptures into Arabic sometimes use the term *sunobar*, sometimes *arz*, as the representative of *eres*.

Rosenmüller states that 'the word *eres*, which occurs so frequently in the O. T., is, by the ancient translators, universally rendered cedar' (κέδρος). Therefore it has been inferred by him, as well as others, that the cedar of Lebanon must be intended: but the name does not appear to have been applied specially to this tree by the ancients. Thus the *κέδρος* of Dioscorides is supposed by Sprengel, in his edition of that author, to be a species of juniper, and Dr. Lindley, the editor of the last numbers of Sibthorpe's *Flora Græca*, agrees with him: 'κέδρος, juniperus oxycedrus, vel potius J. Phœnicia, secundum Sprengelium, cui assentio, κέδρος μικρά, juniperus communis.' J. oxycedrus is the brown-berried juniper, and J. Phœnicia is the Phœnician juniper or cedar, while J. Lycia, the Lycian juniper or cedar, is *cedrus Phœnicia altera* Plinii et Theophrasti. These have already been mentioned under the article *BEROSII*.

Pliny, speaking of the plants of Syria, says, 'Juniperi similem habent Phœnicia et cedrum minore. Duo ejus genera, Lycia et Phœnicia, differunt folio: nam quæ durum, acutum, spinosum habet, oxycedros vocatur, ramosa et nodis infesta: altera odore præstat. Fructum ferunt myrti magnitudine, dulcem sapore. Et majoris cedri duo genera: quæ floret, fructum non fert.

Frugifera non floret: et in ea antecedentem fructum occupat novus. Semen ejus cupresso simile. Quidam cedrelaten vocant. Ex hac resina laudatissima' (*Hist. Nat.* xiii. 11). The conclusion of this passage, as translated by Holland, is, 'and the timber of it is everlasting: wherefore in old time they were wont to make the images of the gods of this wood, as it appeareth by the statue of Apollo Sosianus, made of cedar wood brought

236. Cedar of Lebanon.

from Seleucia.' Again (xvi. 39), 'as for cedars, the best simply be those that grow in Candia, Africke, and Syrie. This vertue hath the oile of cedar, that if any wood or timber be thoroughly anointed therewith it is subject neither to worm nor moth, nor yet to rottenness.' The greater part of this account of the different kinds of cedar is adopted from Theophrastus (iii. 12); though, no doubt, the latter was also acquainted with a large cedar, as appears from lib. v. c. 9, where, speaking of Syria, he says, 'Illic enim cedri in montibus, cum longitudine, tum crassitudine præstantissimæ nascuntur.' Quintus Curtius also uses the term *κέδρος* in a general sense, when he says of the palace of Persepolis, 'multa cedro ædificata erat regia.'

If we proceed to compare the several passages of Scripture in which the word *Eres* occurs, we shall equally find that one plant is not strictly applicable to them all. The earliest notice of the cedar is in Lev. xiv. 4, 6, where we are told that Moses commanded the leper that was to be cleansed to make an offering of two sparrows, cedar-wood, wool dyed in scarlet, and hyssop; and in ver. 49, 51, 52, the houses in which the lepers dwell are directed to be purified with the same materials. Again, in Num. xix. 6, Moses and Aaron are commanded to sacrifice a red heifer: 'And the priest shall take cedar-wood, and hyssop, and scarlet.' As remarked by Lady Callcott (*Scrip. Herbal*, p. 92), 'The cedar was not a native of Egypt, nor could it have been procured in the desert without great difficulty; but the juniper is most plentiful there, and takes deep root in

the crevices of the rocks of Mount Sinai.' That some, at least, of the cedars of the ancients were a species of juniper is evident from the passages we have quoted; the wood of most of them is more or less aromatic. The ancients, it may be remarked, threw the berries of the juniper on funeral piles, to protect the departing spirit from evil influences, and offered its wood in sacrifice to the infernal gods, because they believed its presence was acceptable to them. They also burned it in their dwelling-houses to keep away demons. It is curious that, in the remote parts of the Himalayan Mountains, another species of this genus is similarly employed, as the present writer has mentioned elsewhere (*Himalayan Botany*, p. 350): 'Here there is also another species, *Juniperus religiosa*, Royle, called *gogul* by the natives, and employed for burning as incense in their religious ceremonies.'

At a later period we have notices of the various uses to which the wood of the *eres* was applied, as 2 Sam. v. 11; vii. 2-7; 1 Kings v. 6, 8, 10; vi. 9, 10, 15, 16, 18, 20; vii. 2, 3, 7, 11, 12; ix. 11; x. 27; 1 Chron. xvii. 6; 2 Chron. ii. 8; ix. 27; xxv. 18. In these passages we are informed of the negotiations with Hiram, King of Tyre, for the supply of cedar-trees out of Lebanon, and of the uses to which the timber was applied in the construction of the Temple, and of the king's palace; he 'covered the house with beams and boards of cedar;' 'the walls of the house within were covered with boards of cedar;' there were 'cedar pillars,' and 'beams of cedar;' and the altar was of cedar. In all these passages the word *eres* is employed, for which the Arabic translation, according to Celsius (*loc. cit.*), gives *sunobar* as the synonyme. There is nothing distinctive stated respecting the character of the wood, from which we might draw any certain conclusion, further than that, from the selection made and the constant mention of the material used, it may be fairly inferred that it must have been considered as well fitted, or rather, of a superior quality, for the purpose of building the Temple and palace. From this, however, proceeds the difficulty in admitting that what we call the cedar of Lebanon was the only tree intended by the name *Eres*. For modern experience has ascertained that its wood is not of a superior quality. To determine this point, we must not refer to the statements of those who take their descriptions from writers who, indeed, describe cedar-wood, but do not prove that it was derived from the cedar of Lebanon. The term 'cedar' seems to have been as indefinite in ancient as in modern times. Now we find it applied to the wood of *Juniperus virginiana*, which is red or pencil cedar; and to that of *J. Bermudiana* or Bermuda cedar. *J. oxycedrus* yields the cedar of the north of Spain and south of France, but the term is also applied to many other woods, as to white cedar, that of *Melia Azedarach*; and Indian cedar, that of *Cedrela Toona*.

Mr. Loudon, in his *Arboretum* (p. 2417), describes it thus: 'The wood of the cedar is of a reddish white, light and spongy, easily worked, but very apt to shrink and warp, and by no means durable.' But when the tree is grown on mountains, the annual layers of wood are much narrower, and the fibre much finer than when it is grown on plains; so much so that a piece of cedar-wood brought from Mount Lebanon by Dr. Pari-

sel, in 1829, and which he had made into a small piece of furniture, presented a surface compact, agreeably veined, and variously shaded, and which, on the whole, may be considered handsome (*Hist. du Cedre*, p. 43). But Dr. Poccocke, who brought away a piece of one of the large cedars which had been blown down by the wind, says that the wood does not differ in appearance from white deal, and that it does not appear to be harder. Varennes de Feuille considers it as the lightest of the resinous woods, and he adds that it contains very little resin; that its grain is coarse, and that he thinks the wood can neither be so strong nor so durable as it has the reputation of being. Mr. Loudon says (*loc. cit.*) that a table which Sir J. Banks had made out of the Hillingdon cedar was soft, without scent (except that of common deal), and possessed little variety or veining; and the same remarks will apply to a table which Mr. L. had made from a plank which is referred to as having been kindly presented to him by J. Gostling, Esq. of Whitton Park. Dr. Lindley (*Gardeners' Chronicle*, vol. i. p. 699), calls it 'the worthless, though magnificent cedar of Mount Lebanon.' A correspondent, however, at p. 733, says, 'Mr. Wilcox of Warwick, a most ingenious and skilful carver (in his works little inferior to the celebrated Gibbons), has now in his rooms some specimens of furniture made of cedar of Lebanon, ornamented with carved work, in flowers, leaves, etc. etc., in the best taste, and in sharpness and colour so similar to box-wood that any common observer would mistake it to be such.' In reply to this Dr. Lindley adds, 'The fact last mentioned is the first that has come to our knowledge of the cedar of Lebanon having been found of important use.' He is of opinion that some of the cedar-trees sent by Hiram, king of Tyre, may have been obtained from Mount Atlas, and may have been the produce of the above *Alerce* or *Al Arz*—the *Callitris quadrivalvis*—which no doubt furnished the ancients with one of their most valued woods [THYINE]. This is hard, durable, and fragrant, and commonly used in religious buildings in the East.' Though we have seen both temples and palaces built entirely with one kind of cedar (that of the *Cedrus Deodara*), we think it more probable that, as the timber had to be brought from a distance, where all the kinds of cedar grew, the common pine-tree and the cedar of Lebanon would both furnish some of the timber required for the building of the Temple, together with juniper cedar. The name *arz*, as we have seen, is applied by the Arabs to all three; and they would give all the qualities of timber that could be required. We have shewn that the *κέδρος* of the ancients was most probably the wood of a juniper. Celsius was of opinion that the *eres* indicated the *Pinus sylvestris* or Scotch pine, which yields the red and yellow deals of Norway, and which is likewise found on Mount Lebanon. This opinion seems to be confirmed by Ezek. xxvii. 5, 'They have made all thy ship boards of fir-trees of Senir, they have taken cedars from Lebanon to make masts for thee.' For it is not probable that any other tree than the common pine would be taken for masts, when this was procurable, since even in the present day 'Pallas assures us that the pine of Livonia and Lithuania differs not from the *Pinus sylvestris*; masts, he says, are not made of any peculiar species, as foreigners, and more especially the French, think;

but they are all of the *Pinus sylvestris*' (Loudon, *Arboret.* p. 2158).

Though Celsius appears to us to be quite right in concluding that *eres*, in some of the passages of Scripture, refers to the pine-tree, yet it seems equally clear that there are other passages to which this tree will not answer. It certainly appears improbable that a tree so remarkable for the magnificence of its appearance as the cedar of Lebanon should not have been noticed in the Sacred Scriptures; and this would be the case if we applied *eres* exclusively to the pine, and *berosh* to the cypress. If we consider some of the remaining passages of Scripture, we cannot fail to perceive that they forcibly apply to the cedar of Lebanon, and to the cedar of Lebanon only. Thus, in Ps. xcii. 12, it is said, 'The righteous shall flourish like a palm-tree, and spread abroad like a cedar of Lebanon.' It has been well remarked 'that the flourishing head of the palm and the spreading abroad of the cedar are equally characteristic.' But the prophet Ezekiel (ch. xxxi.) is justly adduced as giving the most magnificent and, at the same time, the most graphic description of this celebrated tree: (ver. 3), 'Behold, the Assyrian was a cedar in Lebanon with fair branches, and with a shadowing shroud, and of an high stature; and his top was among the thick boughs.' (ver. 5), 'Therefore his height was exalted above all the trees of the field, and his boughs were multiplied, and his branches became long, because of the multitude of waters.' (ver. 6), 'All the fowls of heaven made their nests in his boughs, and under his branches did all the beasts of the field bring forth their young.' In this description, Mr. Gilpin has well observed, 'the principal characteristics of the cedar are marked; first, the multiplicity and length of its branches. Few trees divide so many fair branches from the main stem, or spread over so large a compass of ground. 'His boughs are multiplied,' as Ezekiel says, 'and his branches become long,' which David calls spreading abroad. His very boughs are equal to the stem of a fir or a chestnut. The second characteristic is what Ezekiel, with great beauty and aptness, calls his shadowing shroud. No tree in the forest is more remarkable than the cedar for its close-woven leafy canopy. Ezekiel's cedar is marked as a tree of full and perfect growth, from the circumstance of its 'top being among the thick boughs.' The other principal passages in which the cedar is mentioned are 1 Kings iv. 33; 2 Kings xix. 23; Job xl. 17; Ps. xxix. 5; lxxx. 10; xcii. 12; civ. 16; cxlviii. 9; Cant. i. 17; v. 15; viii. 9; Is. ii. 13; ix. 10; xiv. 8; xxxvii. 24; xli. 19; xlv. 14; Jer. xxii. 7, 14, 23; Ezek. xvii. 3, 22, 23; Amos ii. 9; Zeph. ii. 14; Zech. xi. 1, 2; and in the Apocrypha, 1 Esdras iv. 48; v. 55; Ecclus. xxiv. 13; l. 12; but it would occupy too much space to adduce further illustrations from them of what indeed is the usually admitted opinion.

It is however necessary, before concluding, to give some account of this celebrated tree, as noticed by travellers in the East, all of whom make a pilgrimage to its native sites. The cedar of Lebanon is well known to be a widely-spreading tree, generally from 50 to 80 feet high, and when standing singly, often covering a space with its branches, the diameter of which is much greater than its height. The horizontal branches, when the tree is exposed on all sides, are very large in

proportion to the trunk, being disposed in distinct layers or stages, and the distance to which they extend diminishes as they approach the top, where they form a pyramidal head, broad in proportion to its height. The branchlets are disposed in a flat fan-like manner on the branches. The leaves, produced in tufts, are straight, about one inch long, slender, nearly cylindrical, tapering to a point, and are on short footstalks. The male catkins are single, solitary, of a reddish hue, about two inches long, terminal, and turning upwards. The female catkins are short, erect, roundish, and rather oval; they change after fecundation into oval, oblong cones, which, when they approach maturity, become from 2½ inches to 5 inches long. Every part of the cone abounds with resin, which sometimes exudes from between the scales. Belon, who travelled in Syria about 1550, found the cedars about 28 in number, in a valley on the sides of the mountains. Rauwolf, who visited the cedars in 1574, 'could tell no more but 24, that stood round about in a circle; and two others, the branches whereof are quite decayed from age.' De la Roque, in 1688, found but 20. Maundrell, in 1696, found them reduced to 16; and Dr. Pococke, who visited Syria 1744 and 1745, discovered only 15. One of these, that had the soundest body, though not the largest, measured 24 feet in circumference, and another, with a sort of triple body, and of a triangular figure, measured 12 feet on each side. 'The wood,' he says, 'does not differ from white deal in appearance, nor does it seem to be harder. It has a fine smell, but is not so fragrant as the juniper of America, which is commonly called cedar, and it also falls short of it in beauty. I took a piece of the wood from a great tree that was blown down by the wind, and left there to rot. There are 15 large ones standing.' Mr. Buckingham, in 1825, says, 'Leaving Biskerry on our right, we ascended for an hour over light snow, until we came to the *Arr-el Libinien*, or the cedars of Lebanon.' Mr. Laure, who, in company with the Prince de Joinville visited the cedars in 1836, calls them *El-Herd*. M. Lamartine, in 1832, says, 'These trees diminish in every succeeding age. Travellers formerly counted 30 or 40; more recently, 17; more recently still only 12. There are now but 7. These, however, from their size and general appearance, may be fairly presumed to have existed in Biblical times. Around these ancient witnesses of ages long since past, there still remains a little grove of yellow cedars, appearing to me to form a group of from 400 to 500 trees or shrubs. Every year, in the month of June, the inhabitants of Beschierai, of Eden, of Kandbin, and the other neighbouring valleys and villages, climb up to these cedars, and celebrate mass at their feet. How many prayers have resounded under these branches, and what more beautiful canopy for worship can exist!'—J. F. R.

ERI (ערִי; Sept. 'Aḡdels; AL. 'Aḡdis). A son of Gad (Gen. xvi. 16).

ERNESTI, JOHANN AUGUST, a distinguished philologist and theologian of the 18th century, was born at Tennstädt in Thüringen, August 4th, 1707. After being at Schulpforta, he studied at Wittenberg and Leipzig. In the latter place he became professor of ancient literature, 1742. In 1756 he was appointed professor of eloquence; in

1758 doctor and professor of theology, and subsequently canon (Domherr) at Meissen. He died 11th September 1781. The chief of his theological writings is his *Institutio interpretis Novi Testamenti*, 1761; a fifth edition, with remarks by Ammon, appeared in 1809. This work is distinguished by its classical diction and terseness. Though many things belonging to the departments of introduction and criticism are brought into it, the popularity of the book is shewn by the number of editions it passed through, and by its translations into English. It put grammatical interpretation on a sure foundation. He also edited and wrote most of the *Neue theologische Bibliothek*, 10 vols. 8vo, 1760-69; and *Die neueste theologische Bibliothek*, 4 vols. 8vo, 1773-79. His *Opuscula Philologico-critica*, 1764, 1777, are partly theological, partly philological. Ernesti's influence upon theology was far-reaching in his own time and that immediately following. His stand-point was a conservative one. Yet his strength lay in philology, not in exegetical theology. Hence he will be best remembered by his editions of the classics, especially that of Cicero.—S. D.

ERPENIUS (ERPEN), THOMAS, one of the most celebrated Oriental scholars, was born at Gorkum in Holland, on the 7th of September 1584. Having completed his elementary education at the schools of Leyden and Middeldorf, he, at an early age, devoted himself to the study of Oriental languages. Having spent a year at the University of Leyden, he left it, honoured with the dignity of Magister, in order to visit foreign universities and libraries. After his return to his native country in 1612, he was elected, in the following year, to the chair of Oriental Languages at the University of Leyden, and, as the special professorship of Hebrew was not then vacant, a second chair for Hebrew was founded for him in 1619, in order that he might be able to teach that language also publicly. Appointed Oriental interpreter to the States-General, he still further extended his linguistic knowledge, and such was the mastery he acquired in reading and writing the Eastern idioms, chiefly Arabic, that Eastern princes are said to have expressed their highest admiration for the purity and elegance of diction to be found in his foreign letters. Many and tempting were the offers with which Erpenius himself was honoured by foreign princes and learned bodies; but he rejected them all, fully satisfied with his sphere in his own country. A contagious fever cut his life short in his fortieth year, 13th November 1624. The most meritorious of his many works is undoubtedly his Arabic Grammar, which first appeared in 1613 (*Grammatica Arabica*, 4to), and which, up to within a comparatively recent time, has held almost undisputed sway. It has been often re-edited, with additions by Deusing (1636), Golius (1656), Schultens (1748), Morss (1796), etc. He also wrote *Gramm. Ebræa generalis*, Leyden 1621, often reprinted; and a *Gramm. Syra et Chaldaea*, edited by C. l'Empereur, after the author's death, Amsterdam, 1628. It cannot be said that he reached the same eminence in these branches of Semitic as he did in Arabic. Other contributions to linguistic and Biblical literature are three orations, *De linguarum ebrææ et arabicæ dignitate*, published together in 1621, 4to; *Pauli Apost. ad Romanos Epistola, arabice*, Ley-

den, 1615, 4to; *Pentateuchus Mosis Arabice*, 1622, 4to; *Historia Josephi Patriarchæ ex Alcorano*, Leyden, 1617, 4to; *Psalmi Davidis Syriace*, 1625, 4to; *Grammatica Arabica dicta Giarumia etc. cum versione latina et comm.* 1617, 4to; *Elmacin's Historia Saracenicæ*, Arabic and Latin, of which, however, he had not completed the printing, when he died, and which was afterwards edited by Golius, Leyd. 1625, fol.

ESAR-HADDON. [ASSYRIA.]

ESAU (עֵשָׂו; Sept. Ἰσαῦ). The origin and meaning of the name are not quite free from ambiguity. Simon, deriving the word from עֵשָׂו, *texit*, renders it *pilis operatus* (covered with hair), and some such reason as this implies, seems involved in the passage Gen. xxv. 25. Cruden, however, explains the name as meaning *one who does* (qui facit), an actor or agent. His surname of Edom (red) was given him, it appears (Gen. xxv. 30) from the red pottage which he asked of Jacob. Esau was the eldest son of 'Isaac, Abraham's son' (Gen. xxv. 19) by Rebekah, 'the daughter of Bethuel the Syrian of Padan-aram, the sister to Laban the Syrian.' The marriage remaining for some time (about 19 years; compare xxv. 20, 26) unproductive, Isaac entreated Jehovah, and she became pregnant. Led by peculiar feelings 'to inquire of Jehovah,' Rebekah was informed that she should give birth to twins, whose fate would be as diverse as their character, and, what in those days was stranger still, that the elder should serve the younger. On occasion of her delivery the child that was born first was 'red, all over like an hairy garment; and they called his name Esau.' Immediately afterwards Jacob was born.

In process of time the different natural endowments of the two boys began to display their effects in dissimilar aptitudes and pursuits. While Jacob was led by his less robust make and quiet disposition to fulfil the duties of a shepherd's life, and pass his days in and around his tent, Esau was impelled, by the ardour and lofty spirit which agitated his bosom, to seek in the toils, adventures, and perils of the chase, his occupation and sustenance: and, as is generally the case in natures like his, he gained high repute by his skill and daring.

A hunter's life is of necessity one of uncertainty as well as hardship; days pass in which the greatest vigilance and the most strenuous exertions may fail even to find, much less capture, game. Esau had on one occasion experienced such a disappointment, and, wearied with his unproductive efforts, exhausted for want of sustenance, and despairing of capturing any prey, he was fain to turn his steps to his father's house for succour in his extremity. On reaching home he found his brother enjoying a carefully prepared dish of pottage: attracted by the odour of which he besought Jacob to allow him to share in the meal. His brother saw the exigency in which Esau was, and determined not to let it pass unimproved. Accordingly, he puts a price on the required food. Esau was the elder, and had in consequence immunities and privileges which were of high value. The surrender of these to himself Jacob makes the condition of his complying with Esau's petition. Urged by the cravings of hunger, alarmed even by the fear of instant death, Esau sold his birth-

right to his younger brother, confirming the contract by the sanction of an oath. Jacob having thus got his price, supplied the famishing Esau with needful refreshments.

Arrived now at years of maturity, Esau, when 40 years of age, married two wives, Judith and Bashemath, both of whom were Canaanites, and, on account of their origin, were unacceptable to Isaac and Rebekah, especially the latter (Gen. xxvii. 46). Esau thus became alienated from the parental home, and the way was in some measure smoothed for the transference of the coveted birthright to the younger son.

The time for the fulfilment of the compact between the brothers at length arrived. Isaac is 'sick unto death.' His appetite, as well as his strength, having failed, is only to be gratified by provocatives. He desires some savoury venison, and gives the requisite instructions to Esau, who accordingly proceeds in quest of it. On this Rebekah begins to feel that the critical time has come. If the hated Hittites are not to enter with her less favoured son into possession of the family property, the sale of the birthright (the original idea of which she may have suggested to the 'plain man,' her son Jacob) must now in some way be confirmed and consummated. One essential particular remained—the father's blessing. If this should be given to Esau, 'all hope was gone; for this, like our modern wills, would hand the inheritance and the accompanying headship of the tribe to Esau and his wives. Isaac, however, had lost his sight—indeed all his senses were dull and feeble. It was therefore not very difficult to pass off Jacob upon him as Esau. Rebekah takes her measures, and, notwithstanding Jacob's fears, succeeds. Isaac, indeed, is not without suspicion, but a falsehood comes to aid Jacob in his otherwise discreditable personation of Esau. The blessing is pronounced, and thus the coveted property and ascendancy are secured. The affectionate endearments which pass between the deceiver and the abused old blind father, stand in painful contrast with the base trickery by which mother and son had accomplished their end.

Esau, returning from the field, found that he had been deprived for ever of his birthright, in virtue of the irrevocable blessing, and but too naturally conceived and entertained a hatred of Jacob, and even formed a resolution to seize the opportunity for slaying him, which the days of mourning consequent on the approaching decease of their father would be likely to afford. Words to this effect, which Esau let drop, were repeated to his mother, who thereupon prevailed on her younger son to flee to his uncle Laban, who lived in Haran, there to remain till time, with its usual effect, might have mitigated Esau's wrath. Meanwhile Esau had grown powerful in Idumæa, and when, after many years, Jacob intended to return within the borders of the Jordan, he feared lest his elder brother might intercept him on his way, to take revenge for former injuries. He accordingly sent messengers to Esau, in order, if possible, to disarm his wrath. Esau appears to have announced in reply, that he would proceed to meet his returning brother. When, therefore, Jacob was informed that Esau was on his way for this purpose with a band of four hundred men, he was greatly distressed, in fear of that hostility which his conscience told him he had done something to

deserve. What then must have been his surprise, when he saw Esau running with extended arms to greet and embrace him? and Esau 'fell on his neck, and kissed him, and they wept.' Jacob had prepared a present for Esau, hoping thus to conciliate his favour; but, with the generous ardour which characterises, and somewhat of the disinterestedness which adorns, natures like his, Esau at first courteously refused the gift—'I have enough, my brother, keep that thou hast unto thyself' (Gen. xxxiii.)

The whole of this rencontre serves to shew, that if Jacob had acquired riches, Esau had gained power and influence as well as property; and the homage which is paid to him indirectly, and by implication, on the part of Jacob, and directly, and in the most marked and respectful manner by the females and children of Jacob's family, leads to the supposition that he had made himself supreme in the surrounding country of Idumæa.

Esau from this time appears but very little in the sacred narrative. He was ready to accompany Jacob, or to send with him an escort, probably for protection, but Jacob's fears and suspicions induced him to decline these friendly offers; and they separated on the same day that they met, after an interview in which Jacob's bearing is rather that of an inferior to his lord than that of a brother, and Esau's has all the generosity which a high nature feels in forgiving an injury, and aiming to do good to the injurer. The latter, we are merely told, 'returned on his way to Seir' (Gen. xxxiii. 16).

Jacob and Esau appear together again at the funeral rites which were paid to their deceased father; but the book of Genesis furnishes no particulars of what took place.

Esau is once more presented to us (Gen. xxxvi.) in a genealogical table, in which a long line of illustrious descendants is referred to 'Esau, the father of the Edomites' (Gen. xxxvi. 43). [IDUMEA. Respecting Esau's wives, see BASHMATH.] —J. R. B.

ESDRAELON, PLAIN OF. [JEZREEL.]

ESDRAS is the Greek (Ἐσδρας) for Ezra the famous scribe and priest [EZRA] which is used in our English version of the Apocrypha instead of Ezra (1 Esd. viii. 1, 3, 7, 8, 9, 19, 23, 25, 91, 92, 96; ix. 1, 7, 16, 39, 40, 42, 45, 46, 49; 2 Esd. i. 1; ii. 10, 33, 42; vi. 10; vii. 2, 25; viii. 2, 19; xiv. 1, 38). By this Greek form of the name, the A. V., following the Geneva Bible, also designates the apocryphal books of Ezra, to distinguish them from the canonical volume. But this is simply arbitrary, as all other English translations, as well as the ancient versions, and the translations of the reformers on the Continent, have rightly one form for both.—C. D. G.

ESDRAS, THE FIRST BOOK OF, is the first of the Apocryphal books in the English translations of the Bible (viz., Coverdale, Matthews, Taverner, the Geneva Bible, Cranmer's Bible, the Bishops' Bible, the A. V.), which follow Luther and the translators of the Zurich version, who were the first that separated the apocryphal from the canonical books. It must, however, be observed that Luther himself never translated the apocryphal portions of Ezra, because he regarded them as unworthy of a place amongst the apocrypha (see below, sec. 5).

1. *The Title and Position of the Book.*—This book has different titles. In some editions of the Sept., it is called ὁ Ἱερεὺς, *the Priest* (Cod. Alex.), which is equivalent to Ezra, who κατ' ἐξοχήν was styled הַכֹּהֵן or הַסֹּפֵר, in others it is designated Ἐσδρας *Ezra*, whilst in the Vatican and many modern editions of the Sept., as well as in the *Old Latin* and the Syriac, it is called '*the first book of Ezra,*' and accordingly is placed before the canonical Ezra, which is called '*the second book of Ezra,*' because the history it gives is in part anterior to that given in the canonical Ezra. In the Vulg. again, where Ezra and Nehemiah are respectively styled *the first and second book of Ezra,* this apocryphal book, which comes immediately after them, is called '*the third book of Ezra.*' Others again call it '*the second book of Ezra*' (*Isidor. Origgen. vi. 2*), because Ezra and Nehemiah, which it follows, were together styled '*the first book of Ezra,*' according to a very ancient practice among the Jews, who by putting the two canonical books together, obtained the same number of books in the Scriptures as the letters in the Hebrew alphabet: and others call it *Pseudo-Ezra*, in contradistinction to the canonical Ezra. The name *first Esdras* given to it in the A. V. is taken from the Geneva Bible; the older English translations (*viz.*, Coverdale's Bible, Matthew's Bible, the Bishops' Bible), as well as the sixth article of the Church of England (1571), following Luther and the Zurich Bible, call it *the third Esdra*, according to the Vulg. Since the Council of Trent (1546) this book has been removed from its old position to the end of the volume in the Sixtine and Clementine editions of the Vulg.

2. *The Design and Contents of the Book.*—The design of this book, as far as its original portion is concerned (iii. 1-v. 6), is to excite the heathen rulers of Judæa to liberality and kindness towards the Jews, by depicting the good example of Darius, from whom Zerubbabel obtained permission by the aid of wisdom to return with his brethren to Palestine and to rebuild the city and the temple. This design is worked out in the following attractive story. Darius, having given a sumptuous feast to all his subjects in the second year of his reign, retired to rest (iii. 1-3); when asleep his three bodyguards, Zerubbabel being one of them, proposed each to write a maxim stating what he thought was the most powerful thing, in the hope that the king would reward the wisest writer (4-9). Accordingly they all wrote; one said 'Wine is the most powerful;' the other, 'A king is the most powerful;' whilst Zerubbabel wrote—'Women are very powerful, but truth conquers all.' The slips containing these maxims were put under the king's pillow, and were given to him when he awoke (10-12). When he had read them he immediately sent for all his magnates, and having read these maxims before them (13-15), called upon the three youths to explain their sayings (16, 17). The first spoke elaborately about the great power which wine manifests in different ways (18-24); the second descanted upon the unlimited power of royalty, illustrating it by various examples (iv. 1-12); whilst Zerubbabel discoursed upon the mighty influence of women, frequently contravening the power of wine and monarchs, and then burst forth in praise of truth so eloquently, that all present exclaimed—'Great is truth, and mightiest above all things' (13-41). Darius then offered to Zerubbabel anything he should ask (42), whereupon he reminded the king of his vow

to rebuild Jerusalem and return the sacred vessels when he ascended the throne (43-47). The king stood up, kissed Zerubbabel, wrote to all officials to convey him and all his brethren to Palestine, and to supply all the necessary materials for the rebuilding of the temple (48-63).

This is preceded and followed by descriptions of events which present the whole as one continuous narrative, relating in historic order the restoration of the temple-service first under Josiah, then under Zerubbabel, and finally under Ezra, and which are compiled from the records contained in the books of Chronicles, Ezra, and Nehemiah, as follows:—

I. Chap. i. corresponds to 2 Chron. xxxv. and xxxvi., giving an account of Josiah's magnificent celebration of the passover-feast in the eighteenth month of his reign, and continuing the history till the Babylonish captivity.

II. Chap. ii. 1-15 corresponds to Ezra i. 1-11, recording the return of the Jews from Babylon under the guidance of Sanabassar in the reign of Cyrus.

III. Chap. ii. 16-30 corresponds to Ezra iv. 7-24, giving an account of Artaxerxes' prohibition to build the temple till the second year of Darius.

IV. Chap. iii. 1-v. 6 contains the original piece.

V. Chap. v. 7-73 corresponds to Ezra ii. 1-iv. 6, giving a list of the persons who returned with Zerubbabel, describing the commencement of the building of the temple and the obstacles whereby it was interrupted 'for the space of two years' until the reign of Darius.

VI. Chap. vi. 1-vii. 15 corresponds to Ezra v. 1-v. 22, giving an account of the building of the temple by Zerubbabel under Darius, of its completion in the sixth year of this monarch's reign and of the commencement of the temple service.

VII. Chap. viii. 1-ix. 36 corresponds to Ezra vii. 1-x. 44, describing the return of Ezra with his colony, and the putting away of the strange wives.

VIII. Chap. ix. 37-55 corresponds to Neh. vii. 23-viii. 12, giving an account of Ezra's public reading of the law.

The original piece around which all this clusters, has evidently been the cause of this transposition and remodelling of the narrative contained in the canonical books. Having assumed that Zerubbabel returned to Jerusalem with a portion of his brethren in the *second year* of Darius, the compiler naturally placed Ezra ii. 1-iv. 5, which gives the list of those that returned, *after* the original piece, for it belongs to Zerubbabel's time, according to ii. 2, and the original piece he placed after Ezra iv. 7-24, because Ezra (Ezra iv. 24) led him to suppose that Artaxerxes reigned before Darius.

3. *The Unity and Original Language of the Book.*—The above analysis of its contents shows that the book gives us a consecutive history *de templi restitutione* as the *Old Latin* tersely expresses it. It is, however, not complete in its present state, as is evident from the abrupt manner in which it concludes with Neh. viii. 12. We may therefore legitimately presume that the compiler intended to add Neh. viii. 13-18, and perhaps also chap. ix. Josephus, who follows the history given in this book, continues to speak of the death of

Esra (*Antiq.* xi. 5. 5), from which it may be concluded that it originally formed part of this narrative. More venturesome are the opinions of Zunz, that Neh. i. vii. originally belonged to this book (*Die Gottesdienstl. Vorträge*, p. 29), and of Eichhorn, that 2 Chron. xxxiv. followed the abrupt breaking off (*Einleitung in d. Apokr.*, p. 345, etc.)

As to its original language, this compilation is undoubtedly made directly from the Hebrew, and not from the present Sept. This is evident from the rendering of **לכני העם** for **ἐμπροσθεν τοῦ λαοῦ**, reading **לכני לעבני** for **לכני לעבני** (comp. i. 11 with 2 Chron. xxxiv.

12) and of **כלי מחמדיה** and **ובכל כלי** and **καὶ συνετέλεσαν πάντα τὰ ἔνδοξα αὐτῆς**, reading **כל** and **ובכל כלי** (comp. i. 53 with 2 Chron. xxxvi. 19; see also ii. 7-9 with Ezra i. 4, 6; ii. 17 with Ezra iv. 9; ii. 16 with Ezra iv. 7; ii. 24 with Ezra iv. 16; ix. 10 with Ezra x. 4), since these can only be accounted for on the supposition that the book was compiled and translated from the Hebrew. The translator, however, did not aim so much to be literal as to produce a version compatible with the Greek idiom. Hence he sometimes abbreviated the Hebrew (comp. i. 10 with 2 Chron. xxxv. 10-12; ii. 15, 16 with Ezra iv. 7-11; v. 7 with Ezra v. 6, 7; vi. 4 with Ezra v. 3, 4; viii. 6 with Ezra vii. 6; viii. 14 with Ezra vii. 17; viii. 20 with Ezra vii. 22), and sometimes tried to make it more intelligible by adding some words (comp. i. 56 with 2 Chron. xxvi. 20; ii. 5 with Ezra i. 3; ii. 9 with Ezra i. 4; ii. 16 with Ezra iv. 6; ii. 18 with Ezra iv. 12; v. 40 with Ezra ii. 63; v. 47 with Ezra iii. 1; v. 52 with Ezra iii. 5; v. 66 with Ezra iv. 1; vi. 41 with Ezra ii. 64; vi. 8 with Ezra v. 14; vi. 9 with Ezra v. 8; vii. 9 with Ezra vi. 18). The original portion, too, is a Palestinian production, embellished to suit the Alexandrian taste. The Hebrew forms of it may be seen in Josephus (*Antiq.* xi. 3. 1; and Josippon ben Gorion (i., c. 6, p. 47, etc., ed. Breithaupt).

4. *The Author and Date of the Book.*—It is now impossible to ascertain the author or date of this production, inasmuch as neither the book itself nor ancient history gives us the slightest clue to this subject. Whoever the author was, he seems to have lived in Palestine (comp. v. 47), and certainly was master of the Greek, as is evident from his superior style, which resembles that of Symmachus, and from his successfully turning the Hebraisms into good Greek (comp. viii. 5 with Ezra viii. 17; ix. 13 with Ezra x. 14). The compiler must have lived at least a century before Christ, since Josephus follows his narrative of the times of Ezra and Nehemiah (comp. *Antiq.* xi. 5; xi. 45). The book must therefore have existed for some time, and have acquired great reputation and authority, to make the Jewish historian prefer its description of those days to that of the canonical books.

5. *The Canonicity and importance of the Book.*—This book was never included in the Hebrew canon, nor is it to be found in the catalogues of the Hebrew Scriptures given by the early Fathers, e.g., Melito, Origen, Eusebius, etc., and St. Jerome emphatically warns us 'not to take pleasure in the dreams of the 3d and 4th apocryphal books of Ezra (*Praef. in Esdr. et Nechem.*) The Councils of Florence (1438) and Trent (1546) decided against its canonicity—Luther would not even translate it, 'because there is nothing in it which is not

better said by Esop in his Fables, or even in much more trivial books' (*Vorrede auf den Baruch*); the version given in the later editions of Luther's Bible being the work of Daniel Cramer, and the Protestant Church generally has treated it with great contempt, because it contradicts the canonical books of Ezra and Nehemiah. On the other hand, Josephus, as we have seen, regards it as a great authority, and it was treated with great reverence by the Greek and Latin Fathers. St. Augustine mentions it amongst the canonical books (*De Doctr. Christ.*, lib. ii. 13), and quotes the passage, 'truth is the strongest' (chap. iii. 12), as Ezra's prophecy respecting Christ (*De Civit. Dei*, xviii. 16); the same sentence is quoted as Scripture by Cyprian (*Epist.* lxxiv.; comp. also Clemens Alexandrinus, *Strom.* i.; Athanasius, *Orat.* iii. *Cont. Arianos*; Justin Martyr, *Dial. cum Tryph.*) Now modern criticism has justly taken the middle course between treating it with contempt and regarding it as canonical, and has recognised in it an important auxiliary to the settling of the text, and to the adjusting of the facts recorded in Chronicles, Ezra, and Nehemiah, since this book has evidently been made from a different recension of the Hebrew, and has some readings and divisions preferable to those contained in the canonical books (comp. chap. v. 9 with Ezra ii. 12; chap. ix. 12 with Ezra x. 6; chap. ix. 16 with Ezra x. 16). Both Bertheau in his commentary on Ezra and Nehemiah (*Exeget. Handbuch*, part xviii.), and Fritzsche in his Commentary on the apocryphal Ezra (*Exeget. Handb. z. d. Apokr.*, part i.), have shewn the important services which the canonical and uncanonical records may render to each other.

6. *Literature on the Book.*—Joseph. *Antiq.*, x. 4. 5-5; xi. 1-5; Josippon ben Gorion, ed. Breithaupt, 1710, p. 47, ff.; Trendelenburg, in *Eichhorn's allg. Biblioth.* i. p. 180, ff.; Eichhorn, *Einleitung in d. Apokr. Schriften d. A. T.*, p. 335, ff.; Herzfeld, *Geschichte d. V. Israel von d. Zerstörung d. ersten Tempels*, p. 320, ff.; Ewald, *Geschichte d. V. Israel*, iv. p. 131, ff.; Keil, *Historisch-Kritische Einleitung in d. A. T.*, ed. 1859, p. 677, ff.; Fritzsche, *Kurzgef. exegetisches Handbuch z. d. Apokr. d. A. T.*, i. p. 3, ff.; Davidson, *The Text of the O. T. considered*, etc., p. 987, ff.; Bertheau, *Ezra, Nehemias und Ester, Exeget., Handbuch z. A. T.*, part viii.—C. D. G.

ESDRAS, THE SECOND BOOK OF, *i. e.*, the second in the order of the apocryphal books, as given in the English translations of the Bible, which follow the Zurich Bible.

1. *The Title and Position of the Book.*—The original title of this book by which it is appropriately called in the Greek Church, is Ἀποκάλυψις Ἐσδρα, or προφητεία Ἐσδρα, the *Revelation or prophecy of Ezra* (comp. Nicephorus *ap. Fabric. Cod. Pseud. V. T.*, ii. p. 176; *Cod. Apocr. N. T.*, i. p. 951, sqq.; Montfaucon, *Biblioth. Coislin*, p. 194). The designation, 1 Ezra, which it has in the Arabic and Ethiopic versions, arises from the fact that it was placed before the canonical Ezra, because it begins a little earlier (*i. e.*, with 558 B. C.) than the Hebrew Ezra. It is also called 2 Ezra in the Latin version, because it follows the canonical books Ezra and Nehemiah, which were together styled the *first* Ezra, and it is still more generally denominated 4 Ezra, a name given to it by St. Jerome (comp. *Praef. in Esdr. et Nechem.*), because it is in most of

the Latin MSS. the fourth of the books which go by the name of Ezra, and which are placed in the following order; 1 Ezra, *i.e.*, the canonical Ezra; 2 Ezra, *i.e.*, Nehemiah; 3 Ezra, *i.e.*, 1 apocryphal Ezra; and 4 Ezra, *i.e.*, this book. The name 4 Ezra is retained by Luther, the Zurich Bible, Coverdale, Matthew's Bible, Cramer's Bible, the Bishops' Bible, and in the sixth article of the Church of England (1571). The name 2 Esdras, given to it in the A. V., is taken from the Geneva Bible. This book, like the former one, is placed at the end of the Vulgate in the Sixtine and Clementine editions, because it has been excluded from the canon by the Council of Trent.

2. *The Design and Plan of the Book.*—The design of this book is to comfort the chosen people of God who were suffering under the grinding oppression of the heathen, by assuring them that the Lord has appointed a time of deliverance when the oppressors shall be judged, and the ten tribes of Israel, in union with their brethren, shall return to the Holy Land to enjoy a glorious kingdom which shall be established in the days of Messiah. This is gradually developed in an *introduction*, and *seven angelic revelations, or visions*, in which Ezra is instructed in the mysteries of the moral world, as follows.

Introduction (iii. 1-36 *Auth. Version*; or i. 1-36 *Ethiopic Version*). When on his couch in Babylon, in the 30th year after the destruction of Jerusalem (558 B. C.), mourning over the deplorable fate of his brethren (1-3), and recounting the dealings of God with mankind generally (4-12), and with his chosen people in particular, in consequence of their sinful nature inherited from Adam (13-22), for which the temple was destroyed and the city delivered into the hands of Gentiles (23-27), Ezra asked God why the heathen sinners of Babylon are spared, whilst the people of his covenant are so unsparingly punished (28-36)?

First Revelation (iv. 1-v. 15 *A. V.*; ii. 1-iii. 23 *Eth.*) In answer to this, the angel Uriel is sent, who, after censuring the presumptuousness of a short-sighted man in trying to fathom the unsearchable dealings of the Most High, when he cannot understand the things below (1-21), and after Ezra's earnest reiteration of the question (22-25), says that sin has not yet reached its climax (26-31), enumerates the signs whereby the fulness of that time will be distinguished, and promises to reveal to him still greater things if he will continue to pray and fast seven days (32-v. 15).

Second Revelation (v. 16-vi. 34 *A. V.*; iii. 24-iv. 37 *Eth.*) Having fasted seven days according to the command of the angel, and against the advice of the prince of the Jews (16-21), Ezra again appeals to God, asking why he does not punish his sinful people himself, rather than give them over to the heathen (22-30)? Uriel, who appears a second time, after referring again to the inscrutable judgments of God (31-56), reveals to Ezra, according to promise, more distinctly what shall be the signs of the latter days, saying that with Esau [Idumeans] the present world will terminate, and the world to come begin with Jacob (vi. 1-10), whereupon the day of judgment will follow, and be announced by the blast of a trumpet (11-25); Enoch and Elias, the forerunners of Messiah, shall appear (26), and sin and corruption be destroyed (27-28); tells him to be comforted, patient, and resigned, and that he shall hear

something more if he will fast again seven days (29-34).

Third Revelation (vi. 35-ix. 25 *A. V.*; iv. 38-ix. 27 *Eth.*) The fasting being over, Ezra again appeals to God, to know how it is that his chosen people, for whom this wonderful world was created, are deprived of their inheritance (35-59)? Whereupon Uriel appears a third time, tells him that it is because of their sin (vii. 1-25), describes the death of Messiah, the resurrection, the judgment, and the things which will come to pass, concluding with an admonition to Ezra to fast and pray again (26-ix. 25).

Fourth Revelation (ix. 26-x. 59 *A. V.*; ix. 28-x. 74 *Eth.*) After appealing again to God in behalf of his brethren (26-37), Ezra suddenly saw a woman in the deepest mourning for her only son, who had been born to her after being married thirty years, and who died on the day of his nuptials (38-x. 1), and would not be comforted (2-4). He rebuked her for being so disconsolate about the loss of one son, when Sion was bereaved of all her children (2-14), and recommended her to submit to the dealings of God (15-24), her face speedily shone very brightly, and she disappeared (25-27); whereupon Uriel appeared to Ezra, and told him that the woman is Sion, the thirty years of her barrenness are 'the thirty years wherein no sacrifice was offered in her,' her first-born is the temple built by Solomon, his death on the day of his marriage is the destruction of Jerusalem, and the extraordinary brightness of the mother's face is the future glory of Sion (28-59).

Fifth Revelation (xi. 1-xii. 51 *A. V.*; xi. 1-xii. 58 *Eth.*) Ezra in a dream had a revelation of the latter days under the figure of an eagle coming up from the sea with three heads and twelve wings, which afterwards produced eight smaller wings spread over all things, and reigning over all the world (1-7). These wings, beginning from the right side, according to a voice which proceeded from the body of the eagle, reigned successively over all the earth, and perished, so that there remained six small wings (8-23), which, however, in attempting to rule, also perished, and the three heads only were left on the eagle's body (24-31). These now reigned, one after the other, and perished, so that a single head remained (32-35). A lion (Messiah) declared unto the eagle that all his wings and heads were destroyed because he ruled the earth wickedly (36-46), when the body and whatever was left of the eagle were burnt in fire (xii. 1, 2). Ezra awoke, and having prayed for the interpretation of this vision (3-9), was told by the angel that the eagle was the fourth monarchy which Daniel saw, and was admonished again to fast and pray (10-51).

Sixth Revelation (xiii. 1-58 *A. V.*; xiii. 1-64, *Eth.*) Ezra then had another dream, in which he saw a mighty *πνεῦμα* arise from the sea resembling a man, who destroyed all his enemies with the blast of his mouth, and gathered around him large multitudes (1-13). On awaking, Ezra was told by the angel that it was the Messiah, who shall gather together the ten tribes, lead them to their holy land, and give them Sion 'prepared and builded for them' (14-58).

Seventh Revelation (xiv. 1-48 *A. V.*; xiv. 1-52, *Eth.*) Three days later the voice which spoke to Moses in the bush tells Ezra that the latter days are at hand (1-12), bids him set his house in order,

reprove those that are living (13-18), and write down, for the benefit of those who are not yet born, ninety-four books, *i.e.*, the twenty-four inspired books of the O. T. which have been burnt, and seventy books of divine mysteries, which he duly did with the help of scribes (19-44), the recovered Scriptures to be communicated to all, and the Cabbalistic books only to the sages (45-48).

3. *The Unity and Original Language of the Book.*—Despite the arbitrary division into chapters in our English version which sometimes interrupts a vision in the middle of a sentence, few readers will fail to see the intimate connection and the beautiful adjustment of these angelic revelations, and how every one of them forms an essential part in leading us further and further, till we reach the climax of the apocalypse. It is owing to this remarkable unity which the whole work displays, that the numerous interpolations made for dogmatic purposes have so easily been detected.

The idea of a Hebrew original has now been pretty generally given up by scholars, despite the positive assertion of Galatinus (*De Arcanis Catholice Veritatis*), that a copy of it was reported to exist among the Jews at Constantinople in his day, and it is commonly believed that it was written in Greek. Although the Greek is lost, yet there can be no doubt that the *Old Latin* version, through which alone this book has been known to us till lately, was a translation from that language. This is evident from the fact that it imitates the Greek idiom in making the adjective in the comparative degree govern a *genitive case*, and not, as in Latin, an *ablative*, and introduces other Grecisms, which are barbarous in the version (comp. ii. 24; v. 13, 26, 39; vi. 25, 31, 46, 57; vii. 5; viii. 7, 8, 38, 44; ix. 14; xi. 42). This is, moreover, corroborated by the Arabic and Ethiopic versions discovered in modern days, the one by the learned Gregory of Christ Church, Oxford [GREGORY], translated into English by Simon Ockley, and the other by Archbishop Laurence, both of which are made directly from the Greek, as well as the quotation from this book in the Fathers (*see below*, sec. 5), which prove the very early existence of it in Greek. It is, however, equally certain that many of the things contained in this book are of Palestinian origin, and are still to be found in Hebrew or Aramaic dispersed through the Talmud and Midrashim.

4. *The Author and Date of the Book.*—The greatest divergency of opinion prevails about the author and date of this book. He has successively been described as a true prophet who lived 336 B.C.*; an impostor who flourished 160 A.D.; a Jew, a Christian, a converted Jew, and as a Montanist. The whole complexion of the book, however, in-

contestably shews that the author of it was a Jew. His personating Ezra, the contempt and vengeance which he breathes against the Gentiles (vi. 56, 57), the intense love he manifests for the Jews, who alone know the Lord and keep his precepts (iii. 30-36), declaring that for them alone was this world created (iv. 63, 66; vi. 55-59; vii. 10, 11), and reserving all the blessings of salvation for them (vii. 1-13); his view of righteousness, which consists in doing the works of the Law, and that the righteous are justified and rewarded for their good works (viii. 33, 36), the purport of his questions, referring exclusively to the interests of this people (iv. 35; vi. 59); the Hæcædic legends about the Behemoth and Leviathan which are reserved for the great Messianic feast (vi. 49-52), the ten tribes (xiii. 39-47), the restoration of the Scriptures and the writing of Cabbalistic books for the sages or Rabbins of Israel (xiv. 20-22; 37-47), all this proves beyond doubt that the writer was a thorough Hebrew. Chapters i., ii., xv., and xvi., which contain allusions to the N. T. (comp. i. 30 with Matt. xxxiii. 37-39; ii. 11 with Luke xvi. 9; ii. 12 with Rev. xxii. 2; xv. 8 with Rev. vi. 10; xvi. 29 with Matt. xxxiv. 10; xvi. 42-44 with 1 Cor. vii. 29), and especially the anti-Jewish spirit by which they are pervaded, as well as the name of *Jesus* in chapter viii. 28, which have been the cause why some have maintained that this book is the production of a Christian, are now generally acknowledged to be later interpolations made by some Christian, and are wanting both in the Arabic and Ethiopic versions. The same dogmatic causes which dictated these additions also gave rise to the omission of a long and important passage between ver. 35 and 36 of chapter vii. in the English version, which is found both in the Arabic and Ethiopic, and which was known to Ambrose (*De Bono Mortis*, x., xi.)

As to the date of the book, this has most unnecessarily and most unsafely been made to depend upon the interpretation of the different wings and heads of the eagle in xi. and xii., since no two expositors agree in their explanation of this vision, and every one finds in the 'three heads,' the 'twelve feathered wings,' and the 'eight counterfeathers' such emperors, kings, and demagogues as will square with his pre-conceived notions what they shall describe. So, for instance, the learned Whiston makes the three heads to mean the kingdom of France since Francis the Great, 1515 A.D.; of Spain, since Ferdinand, the author of the Inquisition, 1468 A.D.; and the house of Austria since the Emperor Albert, 1438—all of whom persecuted the Protestants (*Authen. Records*, i. p. 81). The safest and most satisfactory data for determining its probable age, are—1. The quotations from it in the Epistle of St. Barnabas (c. xii. with 2 Ezra v. 3) and in Clemens Alexandrinus (*Strom.* iii. 16), shewing beyond doubt that the book was well known at the commencement of the Christian era, and must therefore have been written some time before to have obtained such general currency and acceptance; and 2. The minute description which the writer gives of the pre-existence and death of Messiah (vii. 29; xiv. 7), which no Jew would have given at the very outset of Christianity, to which we have traced the book, when these very points were the stumblingblock to the ancient people, and formed the points of contest between Judaism and Christianity, thus shewing that it must have been

* This is certainly the opinion of Whiston, though Dr. Davidson denies it (*The Text of the O. T. considered*, p. 995), as will be found to be the case by referring to *A collection of Authentic Records*, London, 1722, vol. 1, p. 50. The passages in Whiston's *Essay on the Apostolic Constitutions* (pp. 38, 39), in which this eccentric writer assigns it to a converted Jew who lived about 90-100 A.D., seem to refer to the interpolations which undoubtedly belong to that age. At all events, the statement in the *Authentic Records*, being written ten years later, must be taken as Whiston's final opinion.

written before Christ. We may, therefore, safely assign it to about 50 B.C.

5. *The Canonicity and importance of the Book.*—By many of the Fathers this book was undoubtedly regarded as canonical. The quotations from it in the Epistle of St. Barnabas is described as the saying of a prophet (c. xii.), the quotation by Clemens Alexandrinus is introduced as *Εὐδῶς ὁ προφήτης λέγει (*Strom.* iii. 16), and Ambrose speaks of it as containing *divine revelations* (*De Bono Mortis*, x. xi.) The famous story about Ezra being inspired to write again the Law, which was burnt (xiv. 20-48), has been quoted by Irenæus (*Adv. Hær.* iii. 21. 2); Tertullian (*De Cult. fem.* i. 3); Clemens Alexandrinus (*Strom.* i. 22); Chrysostom (*Hom.* viii., in *Heb.*), and many others. The Ethiopian Church regards it as canonical, which may be seen from the manner in which it is alluded to in the Book of Devotions, called 'The Organon of the Blessed Virgin Mary' (written circa 1240), 'Open my mouth to praise the virginity of the mother of God, as thou didst open the mouth of Ezra, who rested not for forty days until he had finished writing the words of the Law and the Prophets, which Nebuchadnezzar king of Babylon had burnt' (*Prayer for Monday*, see also *Prayer for Tuesday*). St. Jerome was the first who denounced it. In reply to Vigilantius who, regarding this book as inspired, appealed to xii. 36-45, to prove that 'none would venture to intercede for others in the day of judgment,' this Father, playing upon the name Vigilantius, remarked, 'Tu vigilans dormis, et dormiens scribis, et propinas mihi librum apocryphum, qui sub nomine Esdræ a te et similibus tui legitur, ubi scriptum est, quod post mortem nullus pro aliis gaudeat deprecari,' quem ego librum nunquam legi, quid enim necesse est in manus sumere, quod Ecclesia non recipit. Nisi forte Balsamum et Barbelum, et thesaurum Manichæi, et ridiculum nomen Leusiboræ proferas; et quia radices Pyrenæi habitus, vicinusque es Hiberiæ, Basilidis, antiquissimi heretici, et imperitiæ scientiæ incredibilia portenta prosequeris, et proponis, quoad totius orbis auctoritate damnatur (*Ep.* liii., ad *Vigilant.*) This is a most important passage, inasmuch as it shews that those of the primitive Church who, from their knowledge of Hebrew, had the best means of ascertaining what were the canonical Scriptures of the ancient Synagogue, repudiated this book as uncanonical. In the Council of Trent, the second Ezra, like the first, was excluded from the canon, and Luther denounced it as worse than Esop's Fables [ESDRAS, FIRST BOOK OF]. But this is going too far. Historico-critical expositors of the Bible, and those who are engaged in Christological works, whilst regarding 2 Esdras as not belonging to the canon, yet see in it a most important record of Jewish opinion on some vital points. It shews that the Jews before the rise of Christianity most distinctly believed in the immortality of the soul, that the Messiah was denominated *the son of God*, that he existed in heaven previous to his appearance upon earth (xiv. 7), and that he was to die (vii. 29).

6. *Literature on the Book.*—The Latin text is published in Walton's *Polyglot*, vol. iv., and in J. A. Fabricii, *Codex. Apocr. Vet. Test.* ii., p. 173, *seqq.*, with the additions and variations of the Arabic version. An English translation of the important Arabic version made by Simon Ockley is given in Whiston's *Primitive Christianity*, vol. iv., Lond.

1711; the Ethiopic version, with a Latin and English translation and valuable remarks, was published by Archbishop Laurence, entitled *Primi Esræ Libri Versio Æthiopica*, Oxon. 1820; comp. also Lee, *Dissertation upon the second Book of Esdras*, Lond. 1722; Whiston, *Authentic Records*, Lond. 1727, vol. i., p. 44, ff.; Van der Vlis, *Disputatio Critica de Esræ Libro Apokrypha*, Amstelodami, 1839; Gfrörer, *Das Jahrhundert des Heils*, Stuttgart, 1838, vol. i. p. 69, ff.; and by the same author, *Propheta veteres Pseudepigraphi*, Stuttgart, 1840, p. 66, ff.; Lücke, *Einleitung in d. Offenbarung Johannis*, 2d ed., p. 138, ff.; Davidson, *The Old Testament Text Considered*, Lond. 1856, p. 990, ff.; Hilgenfeld, *Die jüdische Apokalypitik*, Jena, 1857, p. 187, ff.; Volkmar, *Das vierte Buch Esra*, Zurich, 1858; Keil, *Einleitung in d. Alte Testament*, 1859, p. 734, ff.—C. D. G.

ESEBON. [HESHBON.]

ESEK (עֶשֶׂק; Sept. Ἀδικία), the name given by Isaac to 'a well of springing water' dug by his servants, and about which they and the herdsmen of Gerar had a strife (*Gen.* xxvi. 20), whence the name, from עֶשֶׂק, to strive. The rendering of the LXX., and of the Vulg. *calumnia*, arose probably from the translators reading עֶשֶׂק for עֶשֶׂק.—W. L. A.

ESHBAAL. [ISHBOSHETH.]

ESHCOL (אֶשְׁכּוֹל; Sept. Ἐσχόλη), one of the Amoritic chiefs with whom Abraham was in alliance when his camp was near Hebron, and who joined with him in the pursuit of Chedorlaomer and his allies, for the rescue of Lot (*Gen.* xiv. 13, 24).

ESHCOL, THE VALLEY OF (נַחַל־אֶשְׁכּוֹל; Sept. Φάραγξ Βόρρνος). The valley in which the Hebrew spies obtained the fine cluster of grapes which they took back with them, borne 'on a staff between two,' as a specimen of the fruits of the Promised Land (*Num.* xiii. 24). The cluster was doubtless large; but the fact that it was carried in this manner, does not, as usually understood, imply that the bunch was as much as two men could carry, seeing that it was probably so carried to prevent its being bruised in the journey. The valley of Eshcol probably took its name from the distinguished Amorite already mentioned, and is hence to be sought in the neighbourhood of Hebron. Accordingly the valley through which lies the commencement of the road from Hebron to Jerusalem is indicated as that of Eshcol. 'This valley is now full of vineyards and olive-yards; the former chiefly in the valley itself, the latter up the sides of the enclosing hills. 'These vineyards are still very fine, and produce the finest and largest grapes in all the country' (Robinson, i. 317). [Van de Velde says (ii. 64) that he was told that there is in the district of Hebron a well still known by the name of 'Ain Eskali.]

ESHEAN (אֶשְׁעָן; Sept., cod. Alex. Ἐσῶν). A town in the mountain district of Judah (*Josh.* xv. 52). Van de Velde thinks this may be the same as Ashan; but this is inadmissible, partly because of the difference of letters in אֶשְׁעָן and אֶשָׁן, and partly because the only Ashan mentioned in Scripture lay

in the low country (Josh. xv. 42, comp. ver. 33), while Eshean is expressly placed in the hill country of Judah (ver. 48, 52). To escape this last and fatal objection, Van de Velde follows Von Raumer (*Palæst.* p. 173) in supposing two Ashans, one in Judah and the other in the southern part of Palestine, belonging to Simeon; but that the Ashan of Judah and that of Simeon were one and the same, is evident from comparing Josh. xv. 42 and xix. 7, where Ether appears as in the vicinity of both, and Josh. xix. 7 with 1 Chron. iv. 32, where the same holds of Ain-Rimmon.—W. L. A.

ESHEK (עֶשֶׂק; Sept. Ἀσῆλ; Alex. Ἐσελέκ), a Benjamite descended from Saul, whose son Ulam was the head of a family or clan famous for their skill in archery (1 Chron. viii. 39, 40).

ESHEL (אֶשֶׁל) occurs in three places of Scripture, in one of which, in our A. V., it is rendered *grove*, and in the other two *tree*. Celsius (*Hierobot.* i. 535) maintains that אֶשֶׁל has always a general, and not a specific signification, and that it is properly translated *tree*. This, as stated by Rosenmüller, has been satisfactorily refuted by Michaelis in his *Supplem.*, p. 134. If we compare the passages in which the word *eshel* occurs, we shall see that there is no necessity for considering it a generic term: the more so, as we find in the Arabic a name very similar to it, and applied to a tree of which the character and properties would point it out as likely to attract notice in the situations where *eshel* is mentioned. The first notice of this tree is in Gen. xxi. 33, 'And Abraham planted a *grove (eshel)* in Beer-sheba, and called there on the name of the Lord.' The second notice is in 1 Sam. xxii. 6: 'Now Saul abode in Gibeah under a *tree (eshel)* in Ramah, having his spear in his hand, and all his servants were standing about him.' Under such a tree also he and his sons were buried, for it is said

signifies a 'terebinth tree,' but is translated 'oak' in the A. V.: 'They arose, all the valiant men, and took away the body of Saul, and the bodies of his sons, and brought them to Jabesh, and buried their bones under the oak in Jabesh, and fasted seven days.'

Celsius has quoted several authorities in support of his opinion that *eshel* is used in a generic sense, as R. David Kimchi, who remarks, '*Eschel est nomen generale omni arbori:*' and with reference to the passage in Genesis, 'Et plantavit Eschel, h. m. interpretatur: et plantavit plantationem.' So Rosenmüller, though considering the term to be specific, says, 'We have the testimony of Rabbi Jonah or Abulwalid, in his *Hebrew-Arabic Lexicon*, that the Arabic term *athle* is not unfrequently used for any large tree, as was the word *eshel* by the later Hebrews.' The word *athle* which is cited, is no doubt the Arabic ائل *asul* or *athul*.

The letter ع is the fourth letter of the Arabic alphabet: its legitimate power appears to be that of *th* in the English word *thing*; but in the mouth of a Turk, Syrian, Egyptian, Persian, and a native of Hindoostan, it is either pronounced like an *s* lisped, or not to be distinguished from that character. In a few instances it is pronounced like *t* (Richardson, *Persian and Arabic Dictionary*). In that work ائل *asl* is translated 'a tamarisk shrub;' ائلام *asalat*, 'large prickly tamarisks.' In *Illustr. Himal. Bot.* p. 214, we have said 'The Arabic name *asul* or *atul* is applied to *furax* (an arboreous species of tamarisk) in India, as to *T. orientalis* in Arabia and Egypt.' So in the *Ulfaz Udweih*, translated by Mr. Gladwin, we have at No. 36, ائل *ussel*, the tamarisk bush, with 'jhaou as the Hindee; and گز *guz* as the Persian syno-

nyme. The tamarisk and its products were highly valued by the Arabs for their medicinal properties, and are described in several places under different names in Avicenna; the plant being noticed under *toorfa*, and the galls, which are often found on it, under *jous-al-toorfa*, but which are also called *chezmezech* or *kuzmezech*. They adopt much of the description of Dioscorides, though the translation of Serapion no doubt errs in making *athel* the *ἀκανάτις* of the Greeks. But Serapion himself, from Isaac eben Amram, says, '*Athel est species tamarisci.*'

If we refer to travellers in eastern countries, we shall find that most of them mention the *athul*. Thus Prosper Alpinus (*De Plantis Ægypti*, c. ix. *De Tamarisco atle vocata*) gives a figure which sufficiently shews that it must grow to the size of a large tree: 'Alterum vero tamarisci domesticum genus in Ægypto spectatur—quod ad magnæ olivæ magnitudinem crescit;' and says that he had heard of its attaining, in another place, to the size of a large oak; that its wood was employed for making a variety of vessels, and its charcoal used throughout Egypt and Arabia; and that different parts of it were employed in medicines. So Forskall, who calls the species *Tamariscus orientalis*, gives *atl* as its Arabic name, and identifies it with אֶשֶׁל, says, 'Gallæ Tamaricis in officinis usurpantur loco fructus.' Belon (in his *Observ.* ii. 28), says, 'Tamarices in Ægypto humidis et sicciioribus locis indif-

237. Tamarisk. [Tamarix orientalis.]

(1 Sam. xxxi. 13), 'And they took their bones, and buried them under a *tree (eshel)* at Jabesh, and fasted seven days.' In the parallel passage of 1 Chron. x. 12, the word *alah* is employed. This

ferenter nascuntur; illarum enim silvulæ perinde in aridioribus locis reperiuntur atque in humidis litoribus. Eæ autem exrescentia quam Gallam nominavimus adeo onuste sunt, ut parum absit quin rami præ pondere rumpantur.' In Arabia Burckhardt found the tree called *asul* in the neighbourhood of Medina, and observes that the Arabs cultivated it on account of the hardness of its wood. If we endeavour to trace a species of tamarisk in Syria, we shall find some difficulty, from the want of precision in the information supplied by travellers on subjects of Natural History. But a French naturalist, M. Bové, who travelled from Cairo to Mount Sinai, and from thence into Syria, has given ample proofs of the existence of species of tamarisk in these regions. Thus, near Sinai, he says, 'Le lendemain, je m'avancai dans la vallée el Cheick, presque entièrement couverte de *tamarix mannifera*.' In proceeding from Suez to Gaza, in an extensive plain of barren sand, he again finds a tamarisk; and further on, 'De là nous arrivâmes à quelques dunes de sable, où je remarquai de très gros Tamarix.' On the borders of Palestine, and the day before reaching Gaza, he says, 'Vers midi, nous nous arrêtàmes dans la vallée Lesare, bordée de dunes de sable mouvant, et remplie de Tamarisc qui ont trois à quatre mètres de circonférence, et de douze à quinze mètres de hauteur: that is, in the very country in which Beersheba is supposed to have been situated, we have Tamarisk trees, now called *asul*, where the *eshel* is described as having been planted.

It is very remarkable that the only tree which is found growing among the ruins of Babylon is a tamarisk. Thus, on the north side of the Kasr, where Ker Porter thought he saw traces of the hanging gardens, there stands upon an artificial eminence a tree to which the Arabs give the name of *athela*. It is a species of tree altogether foreign to the country. Two of the attendants of Ker Porter, who were natives of Bender Bushire, assured him that there are trees of that kind in their country, which attain a very great age, and are called *gaz*. 'The one in question is in appearance like the weeping-willow, but the trunk is hollow through age, and partly shattered. The Arabs venerate it as sacred, in consequence of the Calif Ali having reposed under its shade after the battle of Hillah' (Rosenmüller, *Bibl. Geog.* ii. p. 20, from Ker Porter; comp. Ainsworth's *Researches*, p. 125). It may be observed that the present writer has already quoted the two names here given as applied to the tamarisk, in a Persian work on *Materia Medica*, published in India.

From the characteristics of the tamarisk-tree of the East, it certainly appears as likely as any to have been planted in Beersheba by Abraham, because it is one of the few trees which will flourish and grow to a great size even in the arid desert. It has also a name in Arabic, *asul*, very similar to the Hebrew *eshel*. Besides the advantage of affording shade in a hot country, it is also esteemed on account of the excellence of its wood, which is converted into charcoal. It is no less valuable on account of the galls with which its branches are often loaded, and which are nearly as astringent as oak-galls. It is also one of those trees which were esteemed by the ancients, being the *μυρική* of Theophrastus, Dioscorides, etc. 'Hanc enim vaticinaturi manu gestabant ut Apollo in Lesbo, inde *Alyricus* dictus, etc.' To this they were probably

led, as in some other instances, by finding that it was esteemed in those eastern countries, from which much of their information and opinions were, in the first instance, derived. The only difficulty is to ascertain the exact species found in the several situations we have indicated—a difficulty which arises from their similarity to one another, rendering it almost impossible to distinguish them in the state of dried specimens. Ehrenberg, who has most recently investigated the species, gives a *tamarix tetragyna* as a species of Syria, and *T. orientalis* of Forskal as the species found in Arabia, Persia, and India, and *T. arboresca* as a variety of *T. gallia* found near Cairo. But as they are all so similar, any of the arboreous species or varieties which flourish in the most barren situations, would have the name *asul* applied to it, and this name would appear to an Arab of those regions the most appropriate translation for *eshel*, in the passage where Abraham is described as planting a tree, and calling on the name of the Lord, the everlasting God.—J. F. R.

ESHKALONITES. [ASKELON.]

ESHTAOL (עֶשְׂתָּאֹל; Sept. Ἔσθαὸλ, and Ἔσθαὸλ), a town of the Shephelah or plain of Philistia. It is connected with Zorah, Zanoah, and Bethshemesh; and we may hence conclude that it was situated close to the foot of the mountains of Judah, and in or near Wady Surâr (Josh. xv. 33; xix. 41). It was one of the towns allotted to Dan, though within the bounds of Judah. In the camp of Dan (or *Mahanah-Dan*) between Zorah and Eshtaol, Samson began to exhibit the strength and valour which afterwards distinguished him, and there, too, after a brilliant but melancholy career, his mangled remains were buried (Judg. xiii. 25 with xviii. 11; xvi. 31). Eshtaol was one of the great strongholds of the Danites, and its inhabitants, with those of Zorah, were noted for their daring. The 600 men who captured and colonized Laish were natives of these two towns (Judg. xviii.).

From the way in which Eshtaol is connected in several passages of Scripture with Zorah, and from the topography of the district, which the writer has had an opportunity of carefully examining, there would seem to be a high probability that the site of this ancient town is now occupied by the village of *Yeshua* or *Eshwa*, as the natives pronounce it (عشوع). *Yeshua* lies at the eastern extremity of

the broad valley which runs up among the hills between Zorah and Bethshemesh. The mountains rise steep and rugged immediately behind it; but the village is encompassed by fruitful fields and orchards. Zorah occupies the top of a conical hill, scarcely two miles westward, and a lower ridge connects the hill with the mountains at *Yeshua*. Upon that ridge the permanent camp, or gathering place of Dan ('between Zorah and Eshtaol,' Judg. xiii. 25) was probably fixed. In the time of Jerome Eshtaol was known as a village close to Zorah (*Onomast.* s.v. *Eshtaol* and *Sarea*). A brief, but clear description of this region is given by Robinson (*B.R.*, iii. 153, sq.)—J. L. P.

ESHTEMOH or ESHTEMOA (עֶשְׂתֵּמוֹהַ and עֶשְׂתֵּמוֹא; Sept. cod. Alex. Ἐσθεμῶ, etc.) In Josh. xv. 50 this name is written without the guttural *y*; but in all other places it retains that letter. The Sept.

has also several ways of representing the name, some of which bear little resemblance to the original. The position of Esstemoa is defined with considerable minuteness in the Bible. It was in the mountains of Judah, near the southern border of that tribe, and not far distant from Anab, Jattir, and Socho, the sites of which are known (Josh. xv. 50). All that is known of its history may be told in a very few words. It was assigned to the priests (Josh. xxi. 14). It was one of those cities which David frequented when hiding from Saul, and to which, as a reward for kindness and hospitality, he sent part of the spoils of the Amalekites (1 Sam. xxx. 26-31). Eusebius and Jerome simply mention it as a large village in Darom, in the province of Eleutheropolis (*Onomast.* s. v. *Esthemo*). Dr. Robinson has rightly identified it with *Semita*, a village eight miles south of Hebron, and the last inhabited place towards the desert. He says, 'it is situated on a low hill, with broad valleys round about, not susceptible of much tillage, but full of flocks and herds, all in fine order.' Beside it are some olive groves. The ancient ruins are extensive; among them are foundations of massive bevelled stones, shewing that the architecture is Jewish. The most conspicuous object now is a fragment of an old castle, which appears from the character of the masonry to be of Saracenic origin (Robinson, *B. R.* iii. 206; Wilson, *Lands of the Bible*, i. 353).—J. L. P.

ESLI ('Εσλί, var. lect. 'Εσλεί), son of Nagge, in the genealogy of our Lord (Luke iii. 25). Probably this represents the Hebrew אַזְלִיָּה, *Azaliyah*.

ESS, LEANDER VAN, a Roman Catholic theologian, was born on the 15th February 1772, at Warburg, entered the Benedictine monastery of Marienmünster in Paderborn, 1790, became priest 1796, and was afterwards pastor at Schmalenberg in the principality of Lippe. In 1813 he received a call to Marburg as professor *extraordinarius* of theology. Various circumstances afterwards induced him to resign this and other offices which he held. Having retired from public life, he lived secluded at Darmstadt and elsewhere, till his death in 1847. Van Ess translated the N. T. in conjunction with Karl Van Ess, his relative; 8vo, Brunswick, 1807; 4th edition, 1819, Salzburg. The Pope subsequently interdicted its printing. His work on the Vulgate version gained the proposed prize, *Pragmatisch-kritische Geschichte der Vulgata im Allgemeinen, und zunächst in Beziehung auf das Tridentische Decret*, 1824, 8vo. He also published *Gedanken ueber Bibel und Bibellesen*, 1816; and an edition of the LXX., Lips. 1824. He assisted the operations of the Bible Society on the Continent, by circulating the Scriptures among Roman Catholics. For this he was regarded with suspicion; and compelled by various influences to withdraw from the public service of his church.—S. D.

ESSENES OR ESSAEANS (עֲסֵאנִי, *Aboth R. Nathan*, c. xxxvi; 'Εσσηνοί Joseph; *Esseni* Pliny; 'Εσσηαιοί, Joseph. *Bell. Jud.* i. 3. 5, etc.; Philo), a very remarkable Jewish sect or order of Judaism, which, by virtue of the exemplarily holy and self-denying life of its followers, exercised a most beneficial influence upon the Jewish community, and prepared the way for Christianity.

I. *The name of the sect and its signification.*—

There is hardly an expression, the etymology of which has called forth such a diversity of opinion as this name. The Greek and the Hebrew, the Syriac and the Chaldee, names of persons and names of places, have successively been appealed to, to yield the etymology of this appellation, and to tell the reason why it has been given to this sect; and there are no less, if not more, than *nineteen* different explanations of it. 1. Philo (*Quod omnis prob. lib.*, sec. xii.) derives it from the Greek ἑσος, *holy*. 2. Josephus, according to Jost (*Geschichte d. Judenthums*, i. 207), seems either to derive it from the Chaldee עֲשֵׂה, *to be quiet, to be mysterious*, because he renders עֲשֵׂה *the high-priest's breastplate*, for which the Sept. has λογείον by ἑσση, or directly from עֲשֵׂה, in the sense of λογείον or λόγιον, *endowed with the gift of prophecy*.* 3. Epiphanius (*Haer.* xix.) takes it to be the Hebrew עֲסֵאנִי=εσσηανόν *γένος, the stout race*. 4. Suidas (s. v.) and Hilgenfeld (*Die jud. Apokal.*, p. 278) make it out to be the Aramaic form עֲשֵׂה = Ψεωρητικοί, *seers*, and the latter maintains that this name was given to the sect because they pretended to see visions, and to prophesy. 5. Jossipon ben Gorion (lib. iv., secs. 6, 7, pp. 274 and 278, *ed. Breithaupt*) takes it for the Hebrew עֲשֵׂה, *the pious, the puritans*. 6. De Rossi (*Meor Enaim*, c. iii.), Gfrörer (*Philo*, ii. p. 341), Dähne (*Ersch u. Gruber's Encyclop.*, s. v.), Nork (*Real-Wörterbuch*, s. v.), Herzfeld (*Geschichte d. V. Israel*, ii. p. 395), and others insist that it is the Aramaic עֲשֵׂה = Ψεωρητικός, *physician*, and that this name was given to them because of the spiritual or physical cures they performed. 7. Aboth R. Nathan (c. xxxvi.) and a writer in Jost's Annalen (i. 145), derive it from עֲשֵׂה, *to do, to perform*; the latter says that it is the Aramaic from עֲשֵׂה, and that they were so called because of their endeavours to perform the law. 8. Rappaport (*Erech Millin*, p. 41) says that it is the Greek ἑσος, *an associate, a fellow of the fraternity*. 9. Frankel (*Zeitschrift*, 1846, p. 449, etc.) and others think that it is the Hebrew expression עֲשֵׂה, *the retired*. 10. Ewald (*Geschichte d. V. Israel*, iv. p. 420) is sure that it is the Rabbinic עֲשֵׂה, *servant (of God)*, and that the name was given to them because it was their only desire to be Ψεωρητικοί Θεοῦ. 11. Graetz (*Geschichte d. Juden*, iii. 525) will have it that it is from the Aramaic עֲשֵׂה, *to bathe*, with aleph prostheticum, and that it is the shorter form for עֲשֵׂה סְחִי=סְחִי שְׁחִיָּה, ἡμεροβαπτισιαί, *hemerobaptists*, a name given to this sect because they baptized themselves early in the morning. 12. Dr. Löw (*Ben Chananja*, i. 352) never doubts but that they were called *Essenes* after their founder, whose name he tells us was עֲשֵׂה, the disciple of Joshua b. Perachja. 13. Others again say that it alludes to *Jesse*, the father of David. 14. Others again submit that it is derived from the town *Essa*, or the place *Vadi Ossiss* (*comp. Ewald, Geschichte d. V. I.*, iv. p. 420). 15. Dr. Adler (*Volkstheorie*, vi. p. 50), again, derives it from the Hebrew עֲשֵׂה, *to bind together, to associate*, and says that they were called עֲשֵׂה, because they united together to keep the law. 16. Dr. Cohn suggests the Chaldee

* Jost himself hazards no opinion about the etymology of this name; and Mr. Westcott, the writer of the article *Essenes* in *Smith's Dictionary of the Bible*, is wrong in representing him as deriving it from עֲשֵׂה, *the silent, the mysterious*.

root עֵשֶׂן *to be strong*, and that they were called עֵשֶׂנִי, because of their strength of mind to endure sufferings and to subdue their passions (Frankel's *Monatsch.* vii. 272). 17. Oppenheim thinks that it may be the form עֵשֶׂן, and stands for עֵשֶׂן מְהַרְהָרֵשׁ, מְהַרְהָרֵשׁ הַקֹּדֶשׁ, מְהַרְהָרֵשׁ הַמָּטָה, עֵשֶׂן מְהַרְהָרֵשׁ, *observers of the laws of purity and holiness (ibid.)* 18. Jellinek (*Ben Chananja*, iv. 374), again, derives it from the Hebrew הַצֵּן, *sinus, περιζώμα*, alluding to the כַּנְפִים mentioned in the Talmud (*Bechoroth*, 30, a), *i. e.*, the apron which the Essenes wore; whilst, 19. Others again derive it from חַסִּיָּא *pious*. The two last-mentioned explanations seem to have much to recommend them, and both of them are natural and expressive of the characteristics of this sect. We, however, incline towards the last, because it plainly connects the Essenes with the *Chasidim*, from which they originated. [CHASIDIM.]

2. *The tenets and practices of the sect.*—The cardinal doctrine of this sect was the sacredness of the inspired Law of God. To this they adhered with such tenacity that they were led thereby to pay the greatest homage to Moses the Lawgiver, and to consider blasphemy of his name a capital offence. They believed that to obey diligently the commandments of the Lord, to lead a pure and holy life, to mortify the flesh and the lusts thereof, and to be meek and lowly in spirit, would bring them in closer communion with their Creator, and make them the temples of the Holy Ghost, when they would be able to prophesy and perform miracles, and, like Elias, be ultimately the forerunners of the Messiah. This last stage of perfection, however, could only be attained by gradual growth in holiness, and by advancement from one degree to another. Thus, when one was admitted a member of this order, and had obtained the זֵרִין = *περιζώμα, apron*, which, from its being used to dry oneself with after the baptisms, was the symbol of purity, he attained—1. To the state of *outward or bodily* purity by baptisms (זֵרִינות מביאה), (לידי נקיות). 2. From bodily purity he progressed to that stage which imposed abstinence from carnal intercourse (נקיות מביאה לידי פרישות). 3. From this stage, again, he attained to that of *inward or spiritual* purity (פרישות מביאה לידי פרישות מביאה לידי פרישות). 4. From this stage, again, he advanced to that which required the banishing of all anger and malice, and the cultivation of a meek and lowly spirit (טוהרה מביאה לידי ענוה). 5. Thence he advanced to the stage of holiness (ענוה מביאה לידי חסידות). 6. Thence, again, he advanced to that wherein he was fit to be the temple of the Holy Spirit, and to prophesy (חסידות מביאה לידי חסידות). 7. Thence, again, he advanced to that state when he could perform miraculous cures and raise the dead (רוח הקדש לידי תהה"מ). and 8. Attained finally to the position of Elias, the forerunner of the Messiah (תהה"מ לידי אליהו). *Comp. Talmud, Jerusalem Sabbath*, c. i.; *Shekalim*, c. iii.; *Babyl Aboda Zara*, xx. 6; *Midrash Rabba, Shir Hashirim, at the beginning, and Ben Chananja*, iv. 374.

As contact with any one who did not practise their self-imposed Levitical laws of purity, or with anything belonging to such an one, rendered them impure, the Essenes were, in the course of time, obliged to withdraw altogether from general so-

ciety, to form a separate community, and live apart from the world. Their manner of life and practices were most simple and self-denying. They chiefly occupied themselves with tilling the ground, tending flocks, rearing bees, and making the articles of food and dress required by the community, as it was contrary to their laws of Levitical purity to get anything from one who did not belong to the society, as well as with healing the sick and studying the mysteries of nature and revelation. Whatever they possessed was deposited in the general treasury, of which were several managers, appointed by the whole fraternity, who supplied therefrom the wants of every one, so that they had all things in common, hence there were no distinctions amongst them of rich and poor, or of masters and servants. They reprobated slavery and war, and would not even manufacture martial instruments. They rose before the sun, and did not talk about any worldly matters till they had all assembled together and offered up their national prayer for the renewal of the light of the day

(המאיר לארץ), whereupon they dispersed to their respective engagements, according to the directions of the overseers, till the fifth hour, or eleven o'clock, when the labour of the forenoon terminated, and all reassembled, had a baptism in cold water, after which they put on their white garments, entered their refectory with as much religious solemnity as if it were the holy Temple, sat down together in mysterious silence to a common meal, which had the character of a sacrament,—and may be the reason why they did not offer sacrifices in the temple,—the baker placed before each one a little loaf of bread, and the cook a dish of the most simple food, the priest invoked God's blessing upon the repast, and concluded with thanks to the Bountiful Supplier of all our wants. This was the signal of their dismissal, when all withdrew, put off their sacred garments, and resumed their several employments till the evening, when they again partook of a common meal. Such was their manner of life during the week. On the Sabbath, which they observed with the utmost rigour, and on which they were more especially instructed in their distinctive ordinances, Philo tells us 'they frequent the sacred places, which are called synagogues, and there they sit according to their age in classes, the younger sitting below the elder, in becoming attire, and listening with eager attention. Then one takes up the holy volume and reads it, whilst another of the most experienced ones expounds, omitting that which is not generally known; for they philosophise on most things in symbols, according to the ancient zeal' (*Quod omnis prob. lib. sec. xii.*) The study of logic and metaphysics they regarded as injurious to a devotional life. They were governed by a president, who was chosen by the whole body, and who also acted as judge. In cases of trial, however, the majority of the community, or at least a hundred members of it, were required to constitute the tribunal, and the brother who walked disorderly was excommunicated, yet was not held regarded as an enemy, but was admonished as a brother, and received back after due repentance.

As has already been remarked, the Essenes generally were celibates; their ranks had therefore to be recruited from the children of the Jewish

community at large, whom they carefully trained for this holy and ascetic order. Previous to his final admission, the candidate for the order had to pass through a noviciate of two stages. Upon entering the first stage, which lasted twelve months, the novice (*νεοσύστατος*) had to cast in all his possessions into the common treasure, and received a *spade* (*σκαλλis*, ἀξιώμαρον = ירת) to bury the excrement (comp. Deut. xxiii. 12-15), an *apron* (*περιζώμα* = ירו), used at the baptisms, and a *white robe* to put on at meals, which were the symbols of purity, and, though still an outsider, he had to observe some of the ascetic rules of the society. If, at the close of this stage, the community found that he had properly acquitted himself during the probationary year, the novice was then admitted into the second stage, which lasted two years. During this period he was admitted to a closer fellowship with the brotherhood, and shared in their lustral rites, but was still excluded from the common meals. Having passed satisfactorily through the second stage of probation, the novice was then fully received into the community (*εἰς τὸν οὐκλον*), when he bound himself by awful oaths* that, in the first place, he will exercise piety towards God; and then that he will observe justice towards all men; and that he will do no harm to any one, either of his own accord or by the command of others; that he will always hate the wicked, and help the righteous; that he will ever be faithful to all men, especially to his rulers, for without God no one comes to be ruler, and that if he should be ruler himself he should never be overbearing nor endeavour to outshine those he rules either in his garments or in finery; that he will always love truth, and convince and reprove those that lie; that he will keep his hand from stealing, and his soul clear from any unjust gain; that he will not conceal anything from the members of his society, nor communicate to any one their mysteries, not even if he should be forced to it at the hazard of his life; and finally, that he will never deliver the doctrines of the Essenes to any one in any other manner than he received them himself, that he will abstain from all species of robbery, and carefully preserve the books belonging to their sect and the names of the angels † (*Bell. Jud.*, ii. 8. 7). This vow sufficiently shews the doctrines and practices of the sect.

3. *The Origin of this sect, and its relationship to Judaism and Christianity.*—The origin of this sect has been greatly mystified by Philo and Josephus, who being anxious to represent their co-religionists to cultivated Greeks in a Hellenistic garb, made the Essenes resemble as much as possible the Ascetic, Pythagorean, Platonic, and other philosophers. This mystification has been still more mystified by the account of Pliny, who tells us that this community has prolonged its existence

* This was the only occasion on which an oath was permitted among the Essenes, for their doctrine was, swear not at all, but let your communication be yea, yea; nay, nay.

† This refers to the secrets connected with the *Tetragrammaton* (שם המפורש), and the other names of God and the angels comprised in the theosophy of *Gen. i.* (מעשה מרכבה), and to the mysteries connected with the cosmogony (*מעשה בראשית*) which played so important a part both among the Essenes and the Kabbalists.

for thousands of ages ('*per seculorum millia— incredibile dictu, — gens eterna est in qua nemo nascitur, Hist. Nat., lib. v. c. 15*). Modern writers, with few exceptions, have shaped their description of this community according to these accounts, because they supposed that the Essenes are neither mentioned in the N. T. nor in the ancient Jewish writings, and hence some of them have been led to think that they originated in Egypt or Greece, or from an amalgamation of the philosophic systems of both countries. Frankel has the honour of being the first who, in an accumulation of passages from the Talmud and Midrashim, has demonstratively shewn that Essenisms is simply an order of Pharisaism, that both are sections of the Chasidim or Assideans [CHASIDIM], and that all these three orders are frequently spoken of under the same name. That the Essenes are simply an order of Pharisaism is most distinctly stated in *Aboth R. Nathan*, c. xxxvii., where we are told that there are eight distinctions or orders among the Pharisees, and that *those Pharisees who live in celibacy are the Essenes* (ה פרושים הם—פרוש) (מחופתו עשאני). This will, moreover, be seen from a comparison of the following practices, which Josephus describes as peculiar characteristics of the Essenes, with the practices of the Pharisees, as given in the Talmud and Midrashim:—

I. The Essenes had four classes of Levitical purity, which were so marked that a member of the upper class had to bathe himself when he touched anything belonging to the lower class, or when he came in contact with a stranger, so also the Pharisees (comp. *Bell. Jud.*, ii. 8. 10, with *Chagiga*, ii. 7).

II. The Essenes regarded ten persons as constituting a complete number for divine worship, and held the assembly of such a number as sacred; so the Pharisees (comp. *Bell. Jud.*, ii. 8. 9, with *Aboth* iii. 6; *Berachoth* 54, a).

III. The Essenes would not spit out in the presence of an assembly, or to the right hand; so the Pharisees (comp. *Bell. Jud.*, ii. 8. 9, with *Jerusalem Berachoth*, iii. 5).

IV. The Essenes regarded their social meal as a sacrament, so the Pharisees (comp. *Bell. Jud.*, ii. 8. 5, with *Berachoth* 55, a).

V. The Essenes bathed before meals, so the Pharisees (comp. *Bell. Jud.*, ii. 8. 5, with *Chagiga* 18, b).

VI. The Essenes put on an apron on the lower part of the body when bathing, the Pharisees covered themselves with the *Talith* (comp. *Bell. Jud.*, ii. 8. 5, with *Berachoth* 24, b).

VII. The Essenes bathed after performing the duties of nature, so the priests (comp. *Bell. Jud.*, ii. 8. 9, with *Joma* 28, a).

VIII. The Essenes abstained from taking oaths, so the Pharisees (comp. *Bell. Jud.*, ii. 8. 6, with *Shevuoth* 39, b; *Gittin* 35, a; *Bemidbar Rabba*, c. xxii.)

IX. The Essenes would not even remove a vessel on the Sabbath, so the Pharisees (comp. *Bell. Jud.*, ii. 8. 9, with *Tosifia Succa*, iii.)

X. The Essenes had a steward in every place where they resided, to supply the needy strangers of this order with articles of clothing and food, so the Pharisees (comp. *Bell. Jud.*, ii. 8. 4, with *Peah* viii. 7; *Baba Bathra* 8, a; *Sabbath* 118).

XI. The Essenes believed that all authority comes from God, so the Pharisees (comp. *Bell. Jud.*, ii. 8. 7, with *Berachoth* 58, a).

XII. An applicant for admission to the order of the Essenes had to pass through a novitiate of twelve months, so the כַּהֵן among the Pharisees (comp. *Bell. Jud.*, ii. 8. 7, with *Bechoroth* 30, b).

XIII. The novice among the Essenes received an apron (περίσσωμα) the first year of his probation, so the Chaber among the Pharisees (comp. *Bell. Jud.*, ii. 8. 7, with *Tosifia Demai*, c. ii.; *Jerusalem Demai*, ii. 3, b; *Bechoroth* 30, b).

XIV. The Essenes delivered the Theosophical books, and the sacred names, to the members of their society, similarly the Pharisees (comp. *Bell. Jud.*, ii. 8. 7, with *Chagiga* ii. 1; *Kiddushim* 71, a).

The real differences between the Essenes and the Pharisees, developed themselves in the course of time, when the *extreme* rigour with which they sought to perform the laws of Levitical purity, made them withdraw from intercourse with their fellowmen, and led them—1. To form an isolated order; 2. To keep from marriage, because of the perpetual pollutions to which women are subject in menstruum and child-birth, and because of its being a hindrance to a purely devotional state of mind; 3. To abstain from frequenting the Temple and offering sacrifices (comp. *Antiq.* xviii. 1. 5); and 4. Though they firmly believed in the immortality of the soul, yet they did not believe in the resurrection of the body (*Bell. Jud.*, ii. 8. 11).

As to their connection with Christianity, there can be no difficulty in admitting that Christ and the Apostles recognised those principles and practices of the Essenes, which were true and useful. Though our Saviour does not mention them by the name *Essenes*, which Philo and Josephus coined for the benefit of the Greeks, yet there can be no doubt he refers to them in Matt. xix. 12, when he speaks of those 'who abstain from marriage for the kingdom of heaven's sake,' since they were the only section of Jews who voluntarily imposed upon themselves a state of celibacy, in order that they might devote themselves more closely to the service of God. And I Cor. vii. can hardly be understood without bearing in mind the notions about marriage entertained by this God-fearing and self-denying order. Matt. v. 34, etc., and James v. 12, urge the abstinence from using oaths which was especially taught by the Essenes. The manner in which Christ commanded his disciples to depart on their journey (Mark vi. 8-10), is the same which these pious men adopted when they started on a mission of mercy. The primitive Christians, like the Essenes, sold their land and houses, and brought the prices of the things to the apostles, and they had all things in common (Acts iv. 32-34). John the Baptist must have belonged to this holy order, as is evident from his ascetic life (Luke xi. 22), and when Christ pronounced him to be *Elias* (Matt. xi. 14), he declared that the Baptist had really attained to that spirit and power which the Essenes strove to obtain in their highest stage of purity (*vide supra*, sec. 2).

4. *The Date, Settlements, and Number of this Order.*—The fact that the Essenes developed themselves gradually, and at first imperceptibly, through intensifying the prevalent religious notions, renders it impossible to say with exactness at what degree of intensity they are to be considered as detached from the general body. The Saviour, and the ancient Jewish writers do not speak of them as a separate body. Josephus, however, speaks of them as existing in the days of Jonathan

the Maccabæan, *i.e.*, 143 B.C. (*Antiq.* xiii. 5. 9); he then mentions Judas, an Essene, who delivered a prophecy in the reign of Aristobulus I., *i.e.*, 106 B.C. (*Bell. Jud.* i. 3. 5; *Antiq.* xiii. 11. 2). The third mention of their existence occurs in connection with Herod (*Antiq.* xv. 10. 5). These accounts distinctly shew that the Essenes at first lived among the people, and did not refrain from frequenting the court, as Menachem the Essene was a friend of Herod who was kindly disposed towards this order (*Ibid.*) This is, moreover, evident from the fact that there was a gate at Jerusalem which was named after them (Ἐσσηνῶν πύλη, *Bell. Jud.* v. 4. 2). When they ultimately withdrew themselves from the rest of the Jewish nation, the majority of them settled on the north-west shore of the Dead Sea, and the rest lived in scattered communities throughout Palestine and other places. Their number is estimated both by Philo and Josephus at 4000.

5. *The Literature on the Essenes.*—The oldest accounts we have of this order are those given by Josephus, *Bell. Jud.* ii. 8. 2-15; *Antiq.* xii. 5. 9; xv. 10. 4, ff.; xviii. 1. 2, ff.; Philo, *Quod omnis probus liber*, sec. xii. ff.; Pliny, *Hist. Natur.* v., c. xvi. xvii.; Solinus, *Polyhist.* c. cxxv.; Porphyry, *De Abstinence*, p. 381; Epiphanius, *Adv. Hær.* lib. i.; Eusebius, *Histor. Eccles.*, ii. c. xvii. Of modern productions we have Bellermann, *Geschichtliche Nachrichten aus dem Alterthume über Essäer und Therapeuten*, Berlin, 1821, who has studiously collected all the descriptions of this order; Gfrörer, *Philo und die jüdisch-alexandrinische Theosophie*, Stuttgart, 1835, p. 299, ff.; Prideaux, *Connection of the O. and N. T.*, part ii., book v., 5; Dähne, *Geschichtliche Darstellung der jüdisch-alexandrinische Religions Philosophie*, i. 467, ff.; and by the same author, the article *Essäer*, in *Ersch und Gruber's Encyclopädie*; Neander, *History of the Church*, ed. Bohn, vol. i. The Essays of Frankel, in his *Zeitschrift für die religiösen Interessen d. Judenthums*, 1846, p. 441, ff.; and *Monatschrift für Geschichte u. Wissenschaft d. Judenthums*, vol. ii. p. 30 ff., 61 ff., are most important, and may be considered as having created a new epoch in the treatment of the history of this order. Adopting the results of Frankel, and pursuing the same course still further, Graetz has given a masterly treatise upon the Essenes in his *Geschichte der Juden*, Leipzig, 1856, iii. 96 ff., 518 ff.; treatises of great value are also given by Jost, *Geschichte des Judenthums und seiner Secten*, Leipzig, 1857, p. 207 ff.; and Herzfeld, *Geschichte d. V. Israel*, Nordhausen, 1857, vol. ii. p. 368, 388, ff. The accounts given by Ewald, *Geschichte d. Volkes Israel*, Göttingen, 1852, vol. iv. p. 420, ff., and Hilgenfeld, *Die jüdische Apokalyphtik*, Jena, 1857, p. 245, ff., though based upon Philo and Josephus, are important contributions to the literature of the Essenes. To these must be added the very interesting and important relics of the Essenes, published by Jellinek, with instructive notices by the learned editor, in *Beth Ha-Midrash*, vol. ii., Leipzig, 1853, p. xviii. ff.; vol. iii. Leipzig, 1855, p. xx. ff.—C. D. G.

ESTHER (אֶסְתֵּר; Sept. Ἔσθηρ), a damsel of the tribe of Benjamin, born during the Exile, and whose family did not avail itself of the permission to return to Palestine, under the edict of Cyrus. Her parents being dead, Esther was brought up

by her cousin Mordecai. The reigning king of Persia, Ahasuerus, having divorced his queen, Vashti, on account of the becoming spirit with which she refused to submit to the indignity which a compliance with his drunken commands involved, search was made throughout the empire for the most beautiful maiden to be her successor. Those whom the officers of the harem deemed the most beautiful were removed thither, the eventual choice among them remaining with the king himself. That choice fell on Esther, who found favour in the eyes of Ahasuerus, and was advanced to a station enviable only by comparison with that of the less favoured inmates of the royal harem. Her Jewish origin was perhaps at the time unknown; and hence, when she avowed it to the king, she seemed to be included in the doom of extirpation which a royal edict had pronounced against all the Jews in the empire. This circumstance enabled her to turn the royal indignation upon Haman, the chief minister of the king, whose resentment against Mordecai had led him to obtain from the king this monstrous edict. The laws of the empire would not allow the king to recall a decree once uttered; but the Jews were authorized to stand on their defence; and this, with the known change in the intentions of the court, averted the worst consequences of the decree. The Jews established a yearly feast in memory of this deliverance, which is observed among them to this day [PURIM]. Such is the substance of the history of Esther, as related in the book which bears her name. The details, as given in that book, afford a most curious picture of the usages of the ancient Persian court, the accuracy of which is vouched not only by the historical authority of the book itself, but by its agreement with the intimations afforded by the ancient writers, as well as by the fact that the same usages are in substance preserved in the Persian court at the present day.

It should be observed that Esther is the name which the damsel received upon her introduction into the royal harem, her Hebrew name having been HADASSAH (הדרסה, *myrtle*, Esth. ii. 7). Esther is most probably a Persian word. Gesenius cites from that diffuse Targum on this book which is known as the second Targum on Esther, the following words: 'She was called Esther from the name of the star Venus, which in Greek is *Aster*.' Gesenius then points to the Persian word *Saidrah*, star, as that of which Esther is the Syro-Arabian modification; and brings it, as to signification, into connection with the planet Venus, as a star of good fortune, and with the name of the Syrian goddess Ashtôreth, according to the etymology of the word, already referred to in that article.

The difficulties of the history of the book of Esther, especially as regards the identity of the king, have been examined under AHASUERUS, and are also noticed in the following article.—J. K.

ESTHER, BOOK OF. 1. *Contents, Name, and Place in the Canon.*—In this book we have an account of certain events in the history of the Jews under the rule of the Persian king Ahasuerus (Ahashverosh), doubtless the Xerxes of the Greek historians. [AHASUERUS 3.] The writer informs us of a severe persecution with which they were threatened at the instigation of Haman, a favourite of the king, who sought in this way to gratify his jealousy and hatred of a Jew, Mordecai, who,

though in the service of the king, refused to render to Haman the homage which the king had enjoined, and which his other servants rendered; he describes in detail the means by which this was averted through the influence of a Jewish maiden called 'Hadassah, that is, Esther,' the cousin of Mordecai, who had been raised to be the wife of the king, along with the destruction of Haman and the advancement of Mordecai; he tells us how the Jews, under the sanction of the king, and with the aid of his officers, rose up against their enemies, and slew them to the number of 75,000; and he concludes by informing us that the festival of Purim was instituted among the Jews in commemoration of this remarkable passage in their history. From the important part played by Esther in this history the book bears her name. It is one of the five Megilloth, or books read in the synagogue on special festivals; the season appropriate to it being the feast of Purim, held on the 14th and 15th of the month Adar, of the origin of which it contains the account. Hence it stands in the Hebrew Canon after Coheleth, according to the order of time in which the Megilloth are read. By the Jews it is called *the Megillah*, *kar' êxiçhûp*, either from the importance they attach to its contents, or from the circumstance that from a very early period it came to be written on a special roll (מגילה) for use in the synagogue (Hottinger, *Theol. Phil.* p. 494). In the LXX. it appears with numerous additions, prefixed, interspersed, and appended; many of which betray a later origin, but which are so inwrought with the original story as to make with it a continuous and, on the whole, harmonious narrative. By the Christians it has been variously placed; the Vulgate places it between Tobit and Judith, and appends to it several Apocryphal additions [see next article]; the Protestant versions commonly follow Luther in placing it at the end of the historical books.

2. *Canonicity.* Among the Jews this book has always been held in the highest esteem. There is some ground for believing that the feast of Purim was by some of the more ancient Jews opposed as an unlicensed novelty (Talm. Hieros. Tr. *Megilloth*, fol. 70; Lightfoot, *Hor. Heb. ad Joh. x. 22*); but there is no trace of any doubt being thrown by them on the canonicity of the book. By the more modern Jews it has been elevated to a place beside the Law, and above the other hagiographa, and even the prophets (Pfeiffer, *Theol. Hermen.* p. 597, ff.; Carpov, *Introd.* p. 366, ff.) In the Christian Church it has not been so generally received. Whilst apparently accepted without question by the churches of the West in the early centuries, the testimony of the Eastern Church concerning it is more fluctuating. It is omitted in the catalogue of Melito, an omission which is shared with Nehemiah, and which some would account for by supposing that both these books were included by him under Ezra, a supposition which may be admitted in reference to Nehemiah, but is less probable in reference to Esther; Origen inserts it, though not among the historical books, but after Job, which is supposed to indicate some doubt regarding it on his part; in the catalogues of the Council of Laodicea, of the Apostolical Canons, of Cyrill of Jerusalem, and of Epiphanius, it stands among the canonical books; by Gregory of Nazianzus it is omitted; in the *Synopsis Scrip. Sac.* it is mentioned as said by

some of the ancients to be accepted by the Hebrews as canonical; and by Athanasius it is ranked among the *ἀναγιγνωσκόμενα*, not among the canonical books. These differences undoubtedly indicate that this book did not occupy the same unquestioned place in general confidence as the other canonical books of the O. T.; but the force of this, as evidence, is greatly weakened by the fact that it was not on historical or critical grounds, but rather on grounds of a dogmatical nature, and of subjective feeling, that it was thus treated. On the same grounds, at a later period, it was subjected to doubt, even in the Latin Church (Junilius, *De parlibus Leg. Div.*, c. 3). At the time of the Reformation, Luther, on the same grounds, pronounced the book more worthy to be placed 'extra canonem,' than 'in canone' (*De sermo arbitrio*; comp. his *Tischreden*, iv. 403, Berlin ed., 1848), but in this he stood alone in the Protestant churches of his day; nor was it till a comparatively recent period that his opinion found any advocates. The first who set himself systematically to impugn the claims of the book was Semler; and him Oeder, Corrodi, Augusti, Bertholdt, De Wette, and Bleek, have followed. Eichhorn with some qualifications, Jahn and Hävernick unreservedly, have defended its claims.

The objections urged against the canonicity of the book resolve themselves principally into these three—1. That it breathes a spirit of narrow, selfish, national pride and vindictiveness, very much akin to that displayed by the later Jews, but wholly alien from the spirit which pervades the acknowledged books of the O. T.; 2. That its untheocratic character is manifested in the total omission in it of the name of God, and of any reference to the divine providence and care of Israel; and 3. That many parts of it are so incredible as to give it the appearance rather of a fiction or romance than the character of a true history (Bertholdt, De Wette, etc.). The relevancy of these objections must be allowed; it only remains to inquire how far they admit of being obviated. Now, in regard to the first of these, whilst it must be admitted that the spirit and conduct of the Jews, of whom the author of this book writes, are not those which the religion of the O. T. sanctions, it remains to be asked whether, in what he narrates of them, he has not simply followed the requirements of historical fidelity; and it remains to be proved, that he has in any way indicated that his own sympathies and convictions went along with theirs. On both these points, we think, the impartial inquirer will arrive at a conclusion favourable to the author. There can be little doubt, that among the Jews of whom he writes, a very different state of religious and moral feeling prevailed from what belonged to their nation in the better days of the theocracy. The mere fact that they preferred remaining in the land of the heathen to going up with their brethren who availed themselves of the permission of Cyrus to return to Judæa, shows how little of the true spirit of their nation remained with them. In them, therefore, we need not wonder to find a spirit of worldliness and ungodliness predominant—a spirit of self-seeking, pride, and vindictiveness—a spirit much the same as that which we see characterising the later Judeism even in Palestine itself, but of which the beginnings were surely found among the extra-Palestinian Jews at the time to which this history relates. This being the case, the historian

could do nothing else than place before us such a picture as that which this book presents; had he done otherwise he would not have narrated the truth. It does not follow from this, however, that he himself sympathised with those of whom he wrote, in their motives, feelings, and conduct; or that the spirit dominant in them is the spirit of his writing. If this is alleged let it be proved; and it must be proved by some evidence more direct and conclusive than is furnished by the mere fact that he has faithfully described these men and women as they were, without comment or stricture. An historian, as such, is not bound to this; he fulfils his office when he truly places before us things as they really occurred, and the actors in his story as they really were. It is true, occasions may frequently present themselves in the course of his narrative when he might have indulged in reflections of an ethical or didactic character on what he has narrated; but to do this may not have been in the plan and conception of his work, and he may therefore have intentionally avoided it. Now when the subject is looked at in this way, the question as to the canonicity of the book of Esther, as affected by the character of its contents, resolves itself simply into this: Is it inconceivable or highly improbable that a prophet of Jehovah, or a man imbued with the religious beliefs of the O. T., could have written such a book? If the answer to this be in the negative, it follows that the book may be canonical notwithstanding the spirit which characterises those whose history it sets forth; if it be in the affirmative, it rests with the affirmant to substantiate his position.

Observations to the same effect may be made on the second objection. If the purpose of the author was to relate faithfully and without comment the actions and words of persons who were living without any vital recognition of God, the omission of all reference to God in the narrative will be sufficiently accounted for by this circumstance. If it be said, But a pious man would have spontaneously introduced some such reference, even though those of whom he wrote gave him no occasion to do so by their own modes of speech or acting; it may suffice to reply, that as we are ignorant of the reasons which moved the author to abstain from all remarks of his own on what he narrates, it is not competent for us to conclude from the omission in question that he was not himself a pious man. If again it be said, How can a book which simply narrates the conduct of Jews who had to a great extent forgotten, if they had not renounced the worship of Jehovah, without teaching any moral lessons in connection with this, be supposed to have proceeded from a man under God's direction in what he wrote; it may be replied that a book may have a most excellent moral tendency and be full of important moral lessons, even though these are not formally announced in it. That it is so with the book of Esther may be seen from such a work as M'Crie's *Lectures* on this book, where the great lessons of the book are expounded with the skill of one whose mind had been long and deeply versed in historical research. As the third objection above noticed rests on the alleged unhistorical character of the book; its force will be best estimated after we have considered the next head.

3. *Credibility*.—In relation to this point three opinions have been advanced. 1. That the book is wholly unhistorical, a mere legend or romance; 2. That it has an historical basis, and contains some

true statements, but that with these much of a fabulous kind is intermixed; 3. That the narrative is throughout true history. Of these opinions the first has not found many supporters; it is obviously incompatible with the reception of the book into the Jewish canon, for however late be the date assigned to the closing of the canon, it is incredible that what must have been known to be a mere fable, if it is one, could have found a place there; it is incompatible with the early observance by the Jews of the Feast of Purim, instituted to commemorate the events recorded here (comp. 2 Maccab. xv. 36); and it is rendered improbable by the minuteness of some of the details, such as the names of the seven eunuchs (i. 10), the seven officers of the king (i. 14), the ten sons of Haman (ix. 7-10), and the general accurate acquaintance with the manners, habits, and cotemporary history of the Persian court which the author exhibits. (See the ample details on this head collected by Eichhorn and Hävernick, *Einleit.* ii. 1, p. 338-357). The reception of the book into the canon places a serious difficulty also in the way of the second opinion; for if those who determined this would not have inserted a book wholly fabulous, they would as little have inserted one in which fable and truth were indiscriminately mixed. It may be proper, however, to notice the parts which are alleged to be fabulous; for only thus can the objection be satisfactorily refuted. First, then, it is asked, How can it be believed that if the king had issued a decree that all the Jews should be put to death, he would have published this twelve months before it was to take effect (iii. 12, 13)? But if this seem incredible to us, it must, if untrue, have appeared no less incredible to those for whom the book was written; and nothing can be more improbable than that a writer of any intelligence should by *mistake* have made a statement of this kind; and a fiction of this sort is exactly what a fabulist would have been most certain to have avoided, for knowing it not to be in accordance with fact and usage, he must have been sure that its falsehood would be at once detected. Secondly, It is said to be incredible that the king when he repented of having issued such an edict should, as it could not be recalled, have granted permission to the Jews to defend themselves by the slaughter of their enemies, and that they should have been permitted to do this to such an extent as to destroy 75,000 of his own subjects. To our habits of thinking this certainly appears strange; but we must not measure the conduct of a monarch like Xerxes by such a standard; *the caprices of Oriental despots are proverbially startling; their indifference to human life appalling; and Xerxes, as we know from other sources, was apt even to exceed the limits of ordinary Oriental despotism in these respects (comp. Herod. i. 183; vii. 35, 39, 238; ix. 108-113; Justin, ii. 10, 11). Thirdly, it is asked how can we believe that the king would issue an edict to all his subjects that every man should bear rule in his own house (i. 22)? We reply, that as the edicts of Oriental despots are not all models of wisdom and dignity, there seems to us nothing improbable in the statement that such an edict was, under the circumstances, issued by Ahasuerus. Fourthly, Is it credible, it is asked, that Esther should have been so long time in the palace of the king without her descent being known to the king or to Haman, as appears to have been the case?

VOL. I.

We reply that it does not appear certain that her Jewish descent was unknown; and if it were, we are too little acquainted with the usages of the Persian royal harem to be able to judge whether this was an unlikely thing to occur or not; we may suggest, however, that the writer of the history was somewhat more likely to know the truth on such points than German professors in the 19th century.

Such are the principal objections which have been urged by De Wette and Bleek against the credibility of this book. To readers in this country accustomed to weigh evidence, they will, doubtless, appear of little moment, while some of them will hardly escape being regarded as 'weak and contemptible.' It only remains for us to accept the historical character of the book. The history is a curious one, but its very singularity makes it all the more valuable as a record of customs and events in that distant time. With the establishment of its credibility falls to the ground the objections to its canonicity, founded on its alleged unhistorical character.

4. *Authorship and Date.*—No information exists as to the author of this book; nor have we any means of forming a tenable conjecture on the subject. Some have ascribed it to Mordecai, some to Ezra, some to Joiachim the high-priest; but these are mere guesses, for which no authority or valid reason can be adduced. 'Libri esther auctorem indicare velle,' says Le Clerc, 'prinde est ac haerolum se profiteri.'

That the book was written after the downfall of the Persian monarchy in the time of the Maccabees is the conclusion of Bertholdt, De Wette, and Bleek. The reasons, however, which they assign for this are very feeble, and have been thoroughly nullified by Hävernick. The latter supposes it to have been written at a much earlier date, and the reasons he urges for this are—1. The statement in ix. 32, compared with x. 2, where the author places what he himself has written on a par in point of authenticity with what is recorded in the Persian annals, as if cotemporary productions; 2. The vividness, accuracy, and minuteness of his details respecting the Persian court; 3. The language of the book, as presenting, with some Persianisms, those idioms which characterise the books of Ezra, Nehemiah, and Chronicles; and 4. The fact that the closing of the canon cannot be placed later than the reign of Artaxerxes, so that an earlier date must be assigned to this book, which is included in it. These reasons seem to be not without weight. Whether the book was written in Palestine or in Persia is uncertain, but probability inclines to the latter supposition.

5. *Commentaries.*—Serrarius, 1610, fol.; Fritzsche, 1848; Calmberg, 1837; Bertheau, 1862.—W. L. A.

ESTHER, APOCRYPHAL ADDITIONS TO. Besides the many minor deviations from the Hebrew, there are six important additions in the Septuagint and the other ancient versions of the book of Esther.

1. *Title and Position.*—In the Septuagint and the *Old Latin*, these additions are dispersed through the canonical book, forming therewith a well-adjusted whole, and have therefore no separate title. St. Jerome, however, separated them in his translation, and removed them to the end of the book, because they are not found in the Hebrew. They are, therefore, in this position in the MSS. and

the printed editions of the Vulgate, and form, according to Cardinal Hugo's division, the seven last chapters of the canonical Esther. Luther, who was the first that separated the apocryphal from the canonical books, entirely detached these additions, and placed them among the apocrypha under the title '*Stücke in Esther.*' In the Zurich Bible, where the Apocryphal and canonical books are also separated, the canonical volume is called 1 *Esther*, and these additions are denominated 2 *Esther*. Our English versions, though following Luther's arrangements, are not uniform in their designation of these additions. Thus Coverdale calls them '*The chapters of the book of Hester, which are not found in the text of the Hebrew, but in the Greek and Latin.*' In Matthews and the Bishops' Bible, which are followed by the A. V., they are entitled, '*The Rest of the chapters of the book of Esther, which are found neither in the Hebrew nor in the Chaldee,*' whilst the Geneva version adopts Luther's title.

2. *Design and Contents.*—The design of these additions is to give a more decidedly religious tone to the record contained in the book of Esther, and to shew more plainly how wonderfully the God of Israel interposed to save his people and confound their enemies. This the writer has effected by elaborating upon the events narrated in the canonical volume as follows :—

I. Chap. i. 1 of the canonical volume is preceded in the Sept. by a piece which tells us that Mordecai, who was in the service of Artaxerxes, dreamt of the dangers which threatened his people, and of their deliverance (1-12). He afterwards discovered a conspiracy against the king, which he discloses to him, and is greatly rewarded for it (13-18). This is in the Vulgate and English Version, xi. 1, xii. 6.

II. Between verses 13 and 14 of ch. iii. in the canonical book, the Septuagint gives a copy of the king's edict addressed to all the satraps, to destroy without compassion that foreign and rebellious people, the Jews, for the good of the Persian nation, in the fourteenth day of the twelfth month of the coming year. This is in the Vulg. and English version xiii. 1-7.

III. At the end of iv. 17 of the canonical book, the Septuagint has two prayers of Mordecai and Esther, that God may avert the impending destruction of his people. This is in the Vulg. and English version xiii. 8; xiv. 19.

IV. Between verses 1 and 2 of ch. v. in the canonical book, the Septuagint inserts a detailed account of Esther's visit to the king. This is in the Vulg. and English version xv. 4-19.

V. Between verses 13 and 14 of ch. viii. in the canonical books, the Septuagint gives a copy of the edict, which the king sent to all his satraps, in accordance with the request of Mordecai and Esther, to abolish his former decree against the Jews. This is in the Vulg. and English version xvi. 1-25.

VI. At the close of the canonical book, x. 3, the Septuagint has a piece in which we are told that Mordecai had now recalled to his mind his extraordinary dream, and seen how literally it has been fulfilled in all its particulars. It also gives us an account of the proclamation of the Purim festival in Egypt.

3. *Origin, historical Character, and Unity.*—The patriotic spirit with which the Jewish nation so fondly expatiated upon the remarkable events and

characters of bygone days, and which gave rise to those beautiful legends preserved in their copious literature, scarcely ever had a better opportunity afforded to it for employing its richly inventive powers to magnify the Great Jehovah, embalm the memory of the heroes, and brand the names of the enemies of Israel, than in the canonical book of Esther. Nothing could be more natural for a nation, who 'have a zeal of God,' than to *supply the name of God*, and to *point out more distinctly*, His interposition in their behalf in an inspired book, which, though recording their marvellous escape from destruction, had for some reasons omitted avowedly to acknowledge the Lord of Israel. Besides, the book implies and suggests far more than it records, and it cannot be doubted that there are many other things connected with the history it contains, which were well known at the time, and were transmitted to the nation. This is evident from the fact that Josephus already (*Antiq.* xi. 6. 6, *segg.*) gives the edict for the destruction of the Jews in the Persian empire, the prayers of Mordecai and Esther, and the second edict authorising the Jews to destroy their enemies; and that the second Targum, the Chaldee, published by De Rossi, and Josippon ben Gorion (ed Breithaupt, p. 74, ff.), give the dream of Mordecai as well as his prayer and that of Esther. Bearing in mind these facts, we shall have no difficulty in accounting for the apocryphal additions. The first addition which heads the canonical book, and in which Mordecai *foresees* in a dream both the dangers and the salvation of his people, is in accordance with the desire to give the whole a more religious tone. The second addition originated from the fact that iii. 13 of the canonical book speaks of the royal edict, hence this piece pretends to give a copy of the said document; the same is the case with the third addition, which follows iv. 17, and gives the prayers of Mordecai and Esther, for the said passage in the canonical volume relates that Esther ordered prayers to be offered. The fourth addition after v. 1, giving a detailed account of Esther's interview with the king, originated from a desire to give more information upon the fact, which is simply alluded to in the canonical passage. The fifth addition, after viii. 13, originated in the same manner as the second, viz., in a desire to supply a copy of the royal edict, whilst the sixth addition, after x. 3, beautifully concludes with an interpretation of the dream with which the first addition commences the canonical volume. From this analysis it will be seen that these supplementary and embellishing additions are systematically dispersed through the book, and form a well adjusted and continuous history. In the Vulg., however, which is followed by the versions of the Reformers on the continent, and our English translations, where these additions are torn out of the proper connection and removed to a separate place, they are most incomprehensible.

4. *Author, Date, and original Language.*—From what has been remarked in the foregoing section, it will at once be apparent that these apocryphal additions were neither manufactured by the translator of the canonical Esther into Greek, nor are they the production of the Alexandrian nor any other school or individual, but embody some of the numerous national stories connected with this marvellous deliverance of God's ancient people, the authorship of which is lost in the nation. Many of

them date as far back as the nucleus of the event itself, around which they cluster, and all of them grew up at first in the vernacular language of the people (*i.e.*, in Hebrew or Aramaic); but afterwards assumed the complex and language of the countries in which the Jews happened to settle down. Besides the references given in the preceding section which lead us to these conclusions, we also refer to the two Midrashim published by Jellinek in his *Beth Ha-Midrash*, vol. i., Leipzig, 1853, p. 1, *seqq.*

5. *Canonicity of these additions.*—The Fathers, who regarded the Septuagint as containing the sacred scriptures of the O. T., believed in the canonicity of these additions. Even Origen, though admitting that they are not in the Hebrew, defended their canonicity (*Ep. ad African.*, ed. West, p. 225), and the Council of Trent pronounced the whole book of Esther, with all its parts, to be canonical. These additions, however, were never included in the Hebrew canon, and the fact that Josephus quotes them only shews that he believed them to be historically true, but not inspired. St. Jerome, who knew better than any Father what the ancient Jews included in their canon, most emphatically declares—'Librum Esther variis translatoribus constat esse vitiatum: quem ego de archivis Hebræorum relevans, verbum e verbo expressius transtuli. Quem librum editio vulgata laciniosis hinc inde verborum sinibus (al. funibus) trahit, addens ea quæ ex tempore dici poterant et audiri; sicut solitum est scholaribus disciplinis sumto themate excogitare, quibus verbis uti potuit, qui injuriam passus est, vel qui injuriam fecit' (*Pref. in i. Esth.*)

ESTHER, FAST OF (תענית אסתר), so called from the fact that it was ordered by this queen to avert the impending destruction which at that time threatened the whole Jewish population of the Persian dominions (comp. Esther iv. 16, 17). The Jews to this day keep this fast on the 13th of Adar, the day which was appointed for their extirpation, and which precedes the *Feast of Purim*, because it was ordained both by Esther and Mordecai, that it should continue a national fast, to be observed annually in commemoration of that eventful day (comp. Esther ix. 31). During the Maccabæan period, and for sometime afterwards, this fast was temporarily superseded by a festival which was instituted to celebrate the anniversary of the

victory obtained by Judas Maccabæus over Nicanor on the 13th of Adar (comp. 1 Maccab. vii. 49; Joseph. *Antiq.* xii. 10. 5; Megillath Taanith, c. xii.; Josippon ben Gorion, iii. 22, p. 244, ed. Breithaupt). But this festival has long since ceased to be celebrated, and as early as the ninth century of the Christian era, we find the *fast of Esther* was again duly observed (comp. *Sheelthoth* of R. Achai, Purim 4), and it has continued ever since to be one of the fasts in the Jewish calendar. The Jews entirely abstain from eating and drinking on this day, and introduce into the daily service penitential psalms, and offer prayers which have been composed especially for this occasion. If the 13th of Adar happens to be on a Sabbath, this fast is kept on the Friday, because fasting is not allowed on the Sabbath-day. Some Jews go so far as to fast *three days*, according to the example of Esther (comp. iv. 6).—C. D. G.

ESTIUS (GULIELMUS), the Latinised name of WILLIAM HESSELS VAN EST, who was descended from an illustrious family of the Lords of the Castle of *Est*, near *Til*, in Holland. He was born at *Gorcum* in that country in 1542. After a complete course of learned studies at Utrecht and Louvaine, he fulfilled for upwards of ten years the duties of a Professorship of Divinity and Philosophy in the latter university, with great success. In 1580 he was admitted to the degree of Doctor of Divinity, and shortly afterwards was appointed to a Divinity Professorship in the University of Douay; at the same time he was made Superior of the Seminary, and Provost of St. Peter's Church, in that city. In 1603 he was elected to the Chancellorship of the same University, and died at Douay, September 20, 1613, aged 72 years. During the thirty-one years of his connection with Douay, he sustained with great eminence the character of a profound theologian and an accomplished professor: nor were his private virtues less conspicuous; his continual application to study not hindering him from works of charity, which he pursued with exceeding modesty. Besides many other writings, he left three works by which his fame has been perpetuated. The first and second of these take the highest rank respectively in dogmatic theology and exegetical divinity. Dismissing the first [his commentary on the Master of the Sentences], we proceed to notice his well-known work, entitled, '*In omnes Beati Pauli et aliorum Apostolorum epistolas Commentaria.*' The first edition of this commentary bears the date, Douay, 1614-1616. It has been continually republished at Cologne, at Paris, at Rouen, and at Mayence. Different editors have superintended the chief editions; the first, which was posthumous, was carefully edited by *Barthol. de la Pierre*, Professor of Divinity at Douay, who completed the work by adding the commentary on 1 John v.; 2 John, and 3 John, which Estius at the time of his death had left unaccomplished. The name of *J. Merle Horst* appears as editor on the title-page of the Paris edition of 1679. The best of the recent editions, Mayence, 1841, was edited very correctly by *F. Sausser*. A convenient *epitome* of Estius and Corn, a *Lapide* on St. Paul's Epistles, was published by *J. van Gorcum*, at Antwerp in 1620, and reprinted in 1754 at Louvaine. The utility of this little work was increased by its containing the *prefaces* of Estius, which are very valuable. Romanists and

Protestants have concurred in high praise of this, on the whole the best, commentary on the Apostolical Epistles. (Du Pin, *Nouvelle Bibliothèque*, cent. xvii. liv. v.; Walch, *Bibliotheca Theol. Selecta*, iv. p. 666). The third work above referred to is of less merit and renown than the commentary; but is nevertheless of some value. Its title is, *Annotations in præcipua ac difficiliora Sacra Scriptura loca.* This work has been often reprinted, though less frequently and less recently than the larger one. It is again a posthumous publication, consisting of notes collected by members of Estius' theological classes, and edited first by *Caspar Nemius*, for the Douay edition of 1628. A later editor, *Norbert d'Elbecque*, republished these 'Annotations' at Antwerp in 1699; in preparing this republication he used Estius' *Commentary* in the later part of the work. Walch sees in these Annotations evidences of much learning, and pronounces the book a valuable one, notwithstanding the drawback of its wanting the care and finish of the original author (vol. iv. p. 844; comp. Du Pin, *In loc. antea cit.*).—P. H.

ETAM (עֵטָם; Sept. *Ατράν*), a town in the tribe of Judah, which was decorated by Solomon with gardens and streams of water, and fortified by Rehoboam along with Bethlehem and Tekoa (1 Chron. iv. 3; 2 Chron. xi. 6; Joseph. *Antiq.* viii. 7. 3). From this place, according to the Rabbins, water was carried by an aqueduct to Jerusalem. Josephus places it at fifty stadia (in some copies sixty) from Jerusalem (southward); and alleges that Solomon was in the habit of taking a morning drive to this favoured spot in his chariot. Dr. Robinson (*Researches*, i. 168) inclines to find Etam at a place about a mile and a half south of Bethlehem, where there is a ruined village called Urtas, at the bottom of a pleasant valley of the same name. Here there are traces of ancient ruins, and also a fountain, sending forth a copious supply of fine water, which forms a beautiful purling rill along the bottom of the valley. It is usually supposed that 'the rock Etam,' to which Samson withdrew (Judg. xv. 8, 11), was near the town of the same name. Urtas seems too far inland for this; there is, however, a little to the east, the Frank mountain, which (this consideration apart) would have furnished just such a retreat as the hero seems to have found. [This Etam seems to be different from the Etam mentioned 1 Chron. iv. 32, which belonged to Simeon.]

ETHAM, the third station of the Israelites when they quitted Egypt. [EXODUS.]

ETHANIM. [ISRI.]

ETHBAAL (עֵתְבַאֵל; Sept. *Ἰεθεβαάλ*; Alex. *Ἰαβαάλ*). The father of Jezebel, Ahab's wife (1 Kings xvi. 31), and possibly also priest of Baal, as his name 'with Baal,' i.e., living with Baal, or under the favour and protection of Baal, might perhaps warrant us in supposing. Josephus, quoting Menander, mentions a man with a slight variation of the same name, *עֵתְבַאֵל*, i.e., 'with him is Baal,' as king of Tyre as well as Zidon, and calls him priest of Astarte. The worship of Baal was no doubt closely allied to that of Astarte, and it is even possible that a priest of Astarte might have been dedicated also to the service of Baal, and borne his name.

At any rate, there is nothing to contradict, and much to support, the idea of Ethbaal being thus dedicated, in the fact that Jezebel was so firm and devoted an adherent of Baal worship (Joseph. *Antiq.* viii. 13. 1; *C. Apion.* i. 18). An Ithobal was also king of Tyre in the time of Nebuchadnezzar (Joseph. *Antiq.* x. 11. 1; *C. Apion.* i. 21).—S. L.

ETHER (עֶתֶר; Sept. *Ἰθάκ*, *Ἰεθέρ*; Alex. *Ἀφέρ*, *Βεθέρ*), one of the cities originally belonging to Judah, but which were allotted to Simeon (Josh. xv. 42; xix. 7). Eusebius and Jerome confound it with Jathir (which see).—W. L. A.

ETHIOPIA. The Hebrew *Cush*, *כּוּשׁ*, as a geographical name, is rendered in the A. V. by Ethiopia. The two names, when applied to an African country, seem perfectly to correspond, as far as we can judge of a territory of uncertain extent, and it is possible that they are merely different forms of the same word. In one passage, in the description of the garden of Eden, an Asiatic Cush, or Ethiopia, must be intended (Gen. ii. 13), and the distribution of the descendants of Cush, with later Biblical historical indications, should be compared with the classical mentions of eastern and western Ethiopians, and other indications of profane history. In all other passages, the words Ethiopia and the Ethiopians, with one possible exception, 'the Arabians, that [were] near the Ethiopians' (2 Chron. xxi. 16), which may refer to Arabians opposite to Ethiopia, may be safely considered to mean an African country and people or peoples. In the Bible, as in classical geography, but one limit of Ethiopia is laid down, its northern frontier, just beyond Syene, the most southern town of Egypt. Egypt is spoken of as to be desolate 'from Migdol to Syene, even unto the border of Ethiopia' (Ezek. xxix. 10), or 'from Migdol to Syene' (xxx. 6), shewing that then, as now, the southern boundary of Egypt was at the First Cataract. The extent assigned to Ethiopia in ancient times may have been very great, as it was the land of the Negroes, and therefore represented all that was known of inner Africa, besides that part of the continent south of Egypt which is washed by the Red Sea. The references in the Bible are, however, generally, if not always, to the territory which was at times under Egyptian rule, a tract watered by the Upper Nile, and extending from Egypt probably as far as a little above the confluence of the White and Blue Rivers.

The name Cush is found in the Egyptian KEESH, which is evidently applied to the same territory, though we have the same difficulty in determining its limits, save on the north. The classical Ethiopia, *Aithiopia*, may have the same origin, through the Coptic *εσωα*, of which, unless it be derived from *εσω*, 'a boundary,' the Sahidic form *εσωα* may be the purest, and connect the classical with the ancient Egyptian name. In the Bible there is no certain notice of any Ethiopian race but Cushites: Chub (Ezek. xxx. 5) has been thought to be Nub, for Nubia, but this is an extremely rash conjecture; it is more probable that Phut is a territory or people of Ethiopia, for we find the word *PET*, 'the bow,' in the ancient Egyptian names, of Nubia, TA-MERU-PET, 'the region of the island of PET,' and of the Nubians, ANU-MERU-

PET, 'the ANU of the island of PET.' The last word is read by Dr. Brugsch KENS, and the second word he omits in reading, but we find no sufficient reason for attributing the sound KENS to the unstrung, or, in the less usual form, the strung bow, and prefer supposing that when the word KENS, undoubtedly a name of Nubia, precedes it, the sense is the KENS of PET, nor do we think the omission of the second word justifiable.

According to Dr. Brugsch, the first country above Egypt was TA-MERU-PET, or TA-KENS, corresponding to Nubia, and extending, under the Pharaohs, at least as far south as Napata.* As a nome, Nubia, before the formation of the Ombite Nome, included Ombos, Silsilis being probably the first city of the Egyptian Apollinopolite Nome. Although it is not impossible that at Silsilis was anciently the great natural barrier of Egypt on the south, we think that this extension of Nubia was simply for purposes of government, as Dr. Brugsch seems to admit (*Geographische Inschriften*, i. p. 100). South of the Nubia of the Pharaohs, he places a region, of which the name perhaps reads PENT-HEN ?-NUFRE, which, however, was probably a district of the former country. Still further, and near Meroë, he puts the land of KEESH, and in and about Meroë, the land of the NEHSEE or Negroes. But, with all deference for his authority, we think that KEESH commenced immediately above Egypt, probably always at the First Cataract, and included all the known country south of Egypt, TA-MERU-PET or TA-KENS, save as a nome, being a part of it, the modern Nubia. Names of conquered Negro nations, tribes, or countries, occur on the monuments of the empire: of these the most suggestive are the BARBARTA, and TAKRERR (see Brugsch, *Geogr. Inschr.*, i. pp. 100-107, 150-164; ii. 4-13, 20; iii. 3, 4, and indices s. vv. Aethiopen, Kes, etc.)

Ethiopia comprises two very different tracts. North of the region of tropical rains, it is generally an extremely narrow strip of cultivated land, sometimes but a few yards wide, on both sides, or occasionally on one side only, of the Nile. Anciently the watered tract was much broader, but the giving way of a barrier at Silsilis (Gebel es-Silsilih), or Syene (Aswán), has lowered the level of the river for some distance above the First Cataract, exactly how far cannot be accurately determined, but certainly for the whole space below the Third Cataract. The cultivable soil which was anciently productive is now far above the highest level of the stream. The valley is, however, never broad, the mountains seldom leaving a space of more than a mile within the greater part of the region north of the limit of tropical rains. The aspect of the country is little varied. On either side of the river, here narrower than in its undivided course in Upper Egypt, rise sterile sandstone and limestone mountains, the former sometimes covered by yellow sand-drifts. At the First Cataract, at Kaláb'sheh, and at the Second Cataract, the river is obstructed, though at the second place not enough to form a rapid,

* Dr. Brugsch supposes that TA-KENS was, in the earlier times, the whole tract south of Syene under Egyptian rule [therefore governed by the Prince of KEESH and corresponding to, or included in, that country], and, in the later times, little more than the Dodecaschoenus of the Ptolemies and Romans, the remains of the older territory (*Geogr. Inschr.* i. p. 100).

by red granite and other primary rocks. The groves of date-palms, here especially fine, are the most beautiful objects in the scene, but its general want of variety is often relieved by the splendid remains of Egyptian and Ethiopian civilization, and the clearness of the air throws a peculiar beauty over everything that the traveller beholds. As he ascends the river, the scenery, after a time, becomes more varied, until on the east he reaches the Abyssinian highlands, on the west the long meadows, the pasture-lands of herds of elephants, through which flows the broad and sluggish White Nile. In this upper region the climate is far less healthy than below, save in Abyssinia, which, from its height, is drained, and enjoys an air which is rare and free from exhalations.

The Nile is the great fertilizer of the northern regions of Ethiopia, which depend wholly upon its yearly inundation. It is only towards the junction of the two great streams that the rains take an increasingly important share in the watering of the cultivable land. In about N. lat. $17^{\circ} 40'$, the great river receives its first tributary, the Astaboras, now called the Atbarah. In about N. lat. $15^{\circ} 40'$, is the confluence of the Blue and White Niles. The Blue Nile, which has its source in Abyssinia, is a narrow rapid stream, with high steep mud-banks, like the Nile in Egypt; it is strongly charged with alluvial soil, to which it owes the dark colour which has given it its distinctive name. From this stream the country below derives the annual alluvial deposits. The White Nile is a colourless river, very broad and shallow, creeping slowly through meadows and wide marsh-lands. Of the cultivation and natural products of Ethiopia little need be said, as they do not illustrate the few notices of it in Scripture. It has always been, excepting the northern part, productive, and rich in animal life. Its wild animals have gradually been reduced, yet still the hippopotamus, the crocodile, and the ostrich abound, though the second is alone found throughout its extent. The elephant and lion are only known in its southernmost part.

In the Bible a Cushite appears undoubtedly to be equivalent to a Negro, from this passage, 'Can the Ethiopian change his skin, or the leopard his stripes' (Jer. xiii. 23)? and it is to be observed, that whenever the race of KEESH is represented on the Egyptian monuments by a single individual, the type is that of the true Negro. It is therefore probable that the Negro race extended anciently further to the north than at present, the whole country watered by the Nile, as far as it is known, being now peopled by a race intermediate between the Negro race and the Caucasian. There is no certain mention, in the Bible, of this intermediate race in Ethiopia, but the Egyptian and Ethiopian monuments afford us indications of its ancient existence in its modern territory, though probably it did not then extend as far south as now. At the present day, Ethiopia is inhabited by a great variety of tribes of this race: the Kunooz, said to be of Arab origin, nearest to Egypt, are very dark; the Noobeh, the next nation, much lighter: beyond them are some fair Arabs, the Caucasian Abyssinians, with scarcely any trace of Negro influence, save in their dark colour, and tribes as black as the true Negro, or nearly so, though not of the pure Negro type. The languages of Ethiopia are as various as the tribes, and appear to hold

the same intermediate place between the Semitic group and the Nigritian, if we except the Ethiopic, which belongs to the former family. [ETHIOPIC LANGUAGE.]

In all that relates to the civilization of ancient Ethiopia, we see the same connection with Egypt that is constantly indicated in the Bible. So far as the Egyptian sway extended, which was probably, under the empire, as far as somewhat above the junction of the two Niles, the religion of Egypt was probably practised. While the tract was under Egyptian rule, this was certainly the case, as the remains of the temples sufficiently shew. We find it as the religion of Tirhakah, in his Ethiopian as well as his Egyptian sculptures, and this is also the case of the later kings of Ethiopia who held no sway in Egypt. There were evidently local differences, but apparently nothing more. Respecting the laws and forms of government the same may be supposed. We have very little evidence as to the military matters of the Ethiopians, yet, from their importance to Egypt, there can be little doubt that they were skilful soldiers. Their armies were probably drawn from the Ethiopian, or intermediate race, not from the Negro. Of the domestic life of this people we have but slight hints. Probably they were more civilized than are their modern successors. Their art, as seen in the sculptures of their kings in Ethiopian temples, from Tirhakah downwards, is merely a copy of that of Egypt, shewing, after the first, an inferiority in style to the contemporary works of the original art. Their character can scarcely be determined from scanty statements, applying, it may be, to extremely different tribes. In one particular all accounts agree: they were warlike, as, for instance, we equally see in the defiance the Ethiopian king sent to Cambyzes (Herod. iii. 21), and in the characteristic inscription at Kalab'sheh of Silco, 'king (*βασιλευκος*) of the Nubadæ and all the Ethiopians' (*Modern Egypt and Thebes*, ii. pp. 311, 312), who is to be regarded as a very late Ethiopian king or chief in the time of the decline of the Roman empire. The ancients, from Homer downwards, describe them as a happy and pious race. In the Bible they are spoken of as 'secure' or 'careless' (Ezek. xxx. 9), but this may merely refer to their state when danger was impending.

Probably the modern inhabitants of Ethiopia give us a far better picture of their predecessors than we can gather from the few notices to which we have alluded. If we compare the Nubians with the representations of the ancient Egyptians on the monuments, we are struck by a similarity of type, the same manner of wearing the hair, and a like scantiness of clothing. There can be no question that the Nubians are mainly descended from an Egyptianized Ethiopian people of two thousand years ago, who were very nearly related to the Egyptians. The same may be said of many tribes further to the south, although sometimes we find the Arab type and Arab manners and dress. The Ethiopian monuments shew us a people like the ancient Egyptians and the modern Nubians. The northern Nubians are a simple people, with some of the vices, but most of the virtues, of savages. The chastity of their women is celebrated, and they are noted for their fidelity as servants. But they are inhospitable and cruel, and lack the generous qualities of the Arabs. Further south, manners are corrupt, and the national character is that of Egypt

without its humanity, and untouched by any but the rudest civilization.

In speaking of the history of the country, we may include what is known of its chronology, since this is no more than the order in which kings reigned. Until the time of the 12th dynasty of Egypt, we have neither chronology nor history of Ethiopia. We can only speculate upon the earlier conditions of the country, with the aid of some indications in the Bible. The first spread of the descendants of Cush seems to be indicated by the order in which the Cushite tribes, families, or heads are enumerated in Gen. x. All the names, excepting Nimrod, might be thought to indicate a colonization of southern and eastern Arabia, were there not good reason to suppose that Seba, though elsewhere mentioned with Sheba (Ps. lxxii. 10), is connected with Ethiopia, and is probably the Hebrew name of the chief Ethiopian kingdom from the time of Solomon downwards.* If this be the case, it would be remarkable that Nimrod is mentioned at the end of the list and Seba at the beginning, while the intervening names, most if not all, are Arabian. This distribution may account for the strongly-Caucasian type of the Abyssinians, and the greater indication of Nigritian influence in all the other Ethiopian races, for a curve drawn from Nimrod's first kingdom,—there can, we think, be little doubt, that the meaning in Genesis is, that he went northward and founded Nineveh,—and extending along the south Arabian coast, if carried into Africa, would first touch Abyssinia. The connection of southern Arabia and Abyssinia has been so strong for about two thousand years, that we must admit the reasonableness of this theory of their ancient colonization by kindred tribes. The curious question of the direction from which Egyptian civilization came cannot be here discussed. It is possible that it may have descended the Nile, as was, until lately, supposed by many critics, in accordance with statements of the Greek writers. The idea or tradition on which these writers probably build may be due to the Nigritian origin of the low nature-worship of the old Egyptian religion, and perhaps, so far as it is picture-writing, of the hieroglyphic system, of which the characters are sometimes called Ethiopic letters by ancient writers.

Under the 12th dynasty we find the first materials for a history of Ethiopia. In these days Nubia seems to have been thoroughly Egyptianized as far as beyond the Second Cataract, but we have no indication of the existence at that time in Ethiopia of any race but the Egyptian. We find an allusion to the Negroes in the time between the 12th dynasty and the 18th, in the name of a king of that period, which reads RA?-NEHSEE, or 'the Sun? of the Negroes,' rather than 'the Negro Sun?' (*Turin Papyrus of Kings*, ap. Lepsius *Königsbuch*, pl. xviii. 197; xix. 278). The word NEHSEE is the constant designation of the Negro race in hieroglyphics.

Before passing on to the beginning of the 18th dynasty, when the Egyptian empire commenced,

* Josephus, it should be remarked, calls Meroë Saba (*Antiq.* ii. 10. 2); in his time the city and island of Meroë were more famous than any other city and territory of Ethiopia above Egypt, so that his intention is perhaps to indicate Ethiopia generally. Seba of Cush he calls Sabas (*Ibid.* i. 6. 2).

we may notice two possible references to the Ethiopians in connection with the Exodus, for that event is placed either before or during the period of the empire, and we incline to the former opinion. In Is. xliii., which, though relating to the future, also speaks of the past, and especially mentions or alludes to the passage of the Red Sea (see particularly ver. 16, 17), Ethiopia is thus apparently connected with the Exodus: 'I gave Egypt [for] thy ransom, Ethiopia and Seba for thee' (ver. 3). It can scarcely be supposed that this is an emphatic relation of future events, and it is difficult to connect it with any other known past event, as the conquest of Egypt by Sennacherib, which may have already occurred. If this passage refer to the Exodus, it would seem to favour the idea that the Israelites went out during the empire, for then Ethiopia was ruled by Egypt, and would have been injured by the calamities that befel that country. In Amos there is a passage that may possibly connect the Ethiopians with the Exodus: '[Are] ye not as children of the Ethiopians unto me, O children of Israel? saith the LORD. Have not I brought up Israel out of the land of Egypt? and the Philistines from Caphtor, and the Syrians from Kir' (ix. 7)? But the meaning may be that the Israelites were no better than the idolatrous people of Cush.

At the beginning of the 18th dynasty we find the Egyptians making expeditions into Ethiopia, no doubt into its further regions, and bringing back slaves. At this time the Egyptians seem to have intermarried with people of Ethiopia, probably of the intermediate race, darker than the Egyptians, but not of the Negro race. One of the wives of Aähmes, or Amosis, the first king of the 18th dynasty, is represented as black, though not with Negro features. A later sovereign of the same dynasty, Amenoph III., is seen by his statues to have been partly Ethiopian, and this may have been one cause of his identification by the Greeks with Memnon. During this and the dynasty which succeeded it, the 19th, we have no proof that the regularly-governed Egyptian dominions extended beyond Napata; but it is probable that they reached a little beyond the junction of the White and Blue Niles. There can be no doubt that Ethiopia remained subject to Egypt as late as the reign of Rameses VI., soon after whom the empire may be said to have closed, having lasted three centuries from the beginning of the 18th dynasty. Under the empire, Ethiopia, or at least the civilized portion, was ruled by a governor, who bore the title, SUTEN-SA-EN-KEESH, 'Prince,' literally 'Royal son' 'of Cush,' etc. The office does not seem to have been hereditary at any time, nor is it known to have been held by a son of the reigning king, or any member of the royal family.

After the reign of Rameses VI., the feebleness of the later Theban kings may have led to the loss of Ethiopia, and we know that in Solomon's time there was a kingdom of Seba. Shishak, the first king of the 22d dynasty, probably made Ethiopia tributary. When this king, the Sheshenk I. of the monuments, invaded the kingdom of Judah, he had in his army 'the Lubim, the Sukkiim, and the Cushim' (2 Chron. xii. 13). The Lubim are a people of northern Africa, near Egypt, and the Sukkiim are of doubtful place. The indications are of an extensive dominion in Africa, for though the Lubim and Sukkiim may have been mercenaries, it is unlikely that the Cushim were also.

There can be no doubt that Shishak was a powerful king, especially as he was strong enough to invade Judah, and it is therefore probable that he restored the influence of the Egyptians in Ethiopia. Zerah the Ethiopian, on account of his army being of Cushim and Lubim, and thus as well as in consisting of chariots, horsemen, and foot, of like composition to that of Shishak (2 Chron. xvi. 8; xiv. 9, 12, 13; xii. 2, 3), seems certainly to have been either a king of this dynasty, or else a general of such a king. In the former case he would probably correspond to Usarken II. The names Usarken and Zerah seem very remote, but it must be remembered that Egyptian words transcribed in Hebrew are often much changed, and that in this case it is probable that both Egyptian and Hebrew forms, if they be two forms of one word, come from a third source. The style 'Zerah the Cushite' is unlike that applied to kings of Egypt who were foreigners, or of foreign extraction, as in the cases of 'So king of Egypt,' and 'Shishak king of Egypt.' On this account, and especially from the omission of the word king, or any royal appellation, though we cannot infer positively from the few instances in Scripture, Zerah may be rather supposed to have been a general, but the army that he commanded must, from the resemblance of its composition to that of Shishak's, have been that of a king of the same line.* It is recorded that Asa had an army of 580,000, and that Zerah the Ethiopian came against him with 1,000,000, and 300 chariots. These high numbers have been objected to, but the history of our times shews that war upon this large scale is not alone possible to great kingdoms, but also to states of no very large population, which put forth their whole strength.† It is to be noticed that Asa was evidently struck by the greatness of the hostile army, to which the prophet Hanani alludes, reproving him at a later time (2 Chron. xvi. 8). There is, therefore, too general an agreement for us to admit the supposition that the original number has not been preserved. Asa encountered Zerah 'in the valley of

* The possible identification of Zerah with Usarken II. is of great importance, as its settlement affirmatively would throw light upon the origin of the 22d dynasty, and, in consequence, upon the question of an eastern and western Cush. The proper names of that royal family are distinctly Babylonian, and Nimrod, NAMURAT, occurs among them: if, therefore, one of the kings be called a Cushite, we should be justified in looking to the eastern Cush, to Nimrod's country, especially as Semitic, though perhaps African, foreigners are seen to have gained power in Egypt at that time as mercenaries, and as Manetho does not connect this line with the 25th dynasty, which was probably though not certainly of African Ethiopians, and ruled Ethiopia. Mr. Kenrick rather too hastily remarks, as to the term Cushite, that 'no king of the Bubastite [22d] dynasty could have been so designated,' and is at some pains to explain what he considers to be a mistake (*Ancient Egypt*, ii. pp. 354, 355).

† We refer, on the one hand, to the great armies of the late campaign in Italy, and, on the other, to those of the present war in America. In the case of Zerah, he was probably joined by great bodies of marauding Arabs, as the smiting the cities about Gerar and the tents seems to indicate.

Zephathah at Mareshah,⁷ and praying for God's aid against this huge army, it was put to the rout, and he pursued it to Gerar, and smote all the cities round Gerar, which seem to have been in alliance with the invaders, and took much spoil from the cities, and also smote the tents of cattle, from which he took many sheep and camels (xiv. 8-15). This great overthrow may have been a main cause of the decline of the power of the 22d dynasty, which probably owed its importance to the successes of Shishak.

During the later period of this dynasty, it is pro-

bable that Ethiopia became wholly independent. The 23d dynasty appears to have been an Egyptian line of little power. The 24th, according to Manetho of but one king, Bocchoris the Saïte, was probably contemporary with it. In the time of Bocchoris, Egypt was conquered by Sabaco the Ethiopian, who founded the 25th dynasty of Ethiopian kings. The chronology and history of this line is obscure. We take Manetho's list for the chronology, with a necessary correction, in the following table:—

TABLE OF THE 25TH DYNASTY.

B.C.	Monuments.	Manetho.	Highest Date on Monuments.	Events.
		Yrs. A. E. C.*		
719	SHEBEK	Sabaco 8 12 12	XII.	Treaty with Hoshea, 723?
707	SHEBETEK	Sebichus 14 12 12		
695	TEHARKA	Tarkos 18 20 26	XXVI.	War with Sennacherib.
670	End of Dynasty.			

The duration we have given to the first and second reigns can only be considered to be conjectural. The sum of the dynasty would be 50 years, which is the duration Herodotus assigns to the Ethiopian dominion in Egypt (ii. 139), and as he lived at no great distance from the time, and is to be depended upon for the chronology of the next dynasty, we should lay some stress upon his evidence, did he not speak of but one Ethiopian king, Sabacos. There are two Hebrew synchronisms and one Egyptian point of evidence which aid us in endeavouring to fix the chronology of this dynasty. Either the first or second king of the dynasty is supposed to be the So of the Bible, with whom Hoshea, who began to reign B.C. 730, made a treaty at least three years before the taking of Samaria: the latter event is held to be fixed to B.C. 721: therefore one of these two Ethiopians was probably reigning in B.C. 723, or somewhat, perhaps seven years, earlier. But it is possible that the treaty may have been made before the conquest of Egypt. Tirhakah was contemporary with Hezekiah and Sennacherib at the time of the destruction of the Assyrian army. The chronology of Hezekiah's reign is extremely difficult, but we are disposed to think that the common reckoning, varying not more than three years, is correct, and that the preferable date of the accession of Hezekiah is B.C. 726. In this case we must follow Dr. Oppert in supposing that the date of Sennacherib's invasion should be Hezekiah's 24th year, instead of the 14th year (*Chronologie des Assyriens et des Babyloniens*, pp. 14, 15), or else infer a long interval between two wars. The last year of Hezekiah is thus B.C. 698, unless we suppose that his reign was longer than is stated in the Masoretic text, and perhaps was for the latter part contemporary with Manasseh's. Tirhakah's reign is nearly determined by the record in a tablet of the tombs of the Bulls Apis, that one of them was born in his 26th year, and died at the end of the 20th of Psammetichus I. The length of its life is unfortunately not stated, but it exceeded twenty years, and the longest age recorded is twenty-six.

Supposing the latter duration, the first year of Tirhakah's reign would fall B.C. 695, which would correspond to the 4th year of Manasseh. This reckoning is probable, as it would leave five years for the calamitous period before the reign of Psammetichus. The contemporaneousness of Tirhakah and Hezekiah can be explained by one of two suppositions, either that Hezekiah's reign exceeded twenty-nine years, or that Tirhakah ruled in Ethiopia before coming to the throne of Egypt. It must be remembered that it cannot be proved that the reigns of Manetho's 25th dynasty form a series without any break, and also that the date of the taking of Samaria is considered fixed by the Assyrian scholars. At present, therefore, we cannot venture on any changes.

We do not know the cause of the rise of the 25th dynasty. Probably the first king already had an Ethiopian sovereignty when he invaded Egypt. That he and his successors were natives of Ethiopia is probable from their being kings of Ethiopia and having non-Egyptian names. Though Sabaco conquered Bocchoris, and put him to death, he does not seem to have overthrown his line or the 23d dynasty: both probably continued in a tributary or titular position, as the Sethos of Herodotus, an Egyptian king of the time of Tirhakah, appears to be the same as Zet, who in the version of Manetho by Africanus is the last king of the 23d dynasty, and as kings connected with Psammetichus I. of the Saïte 26th dynasty are shewn by the monuments to have preceded him in the time of the Ethiopians, and probably to have continued the line of the Saïte Bocchoris. We think it probable that Sabaco is the 'So king of Egypt,' who was the cause of the downfall of Hoshea, the last king of Israel. The Hebrew name נִדְּב, if we omit the Masoretic points, is not very remote from the Egyptian SHEBEK. It was at this time that Egypt began strongly to influence the politics of the Hebrew kingdoms, and the prophecies of Hosea, denouncing an Egyptian alliance, probably refer to the reign of So or his successor; those of Isaiah, of similar purport, if his book be in chronological order, relate to the reign of Tirhakah. Tirhakah is far more com-

* A. Africanus. E. Eusebius. C. Probable correct reckoning.

memorated by monuments than his predecessors. At Thebes he has left sculptures, and at Gebel-Berkel, Napata, one temple and part of another. There seems no doubt that Sethos (Zet?) was at least titular king of part of Egypt, or the whole country, under Tirhakah, on the following evidence:—In the Bible, Tirhakah, when mentioned by name, is called 'king of Cush (Ethiopia),' and a Pharaoh is spoken of at the same period (Is. xxx. 2, 3; xxxvi. 6; 2 Kings xviii. 21); in the Assyrian inscriptions a Pharaoh is mentioned as contemporary with Sennacherib; and the Egyptian monuments indicate that two or three royal lines centered in that of the 26th dynasty. The only event of Tirhakah's reign certainly known to us is his advance against Sennacherib, apparently in fulfilment of a treaty made by Hezekiah with the Pharaoh whom we suppose to be Sethos. This expedition was rendered needless by the miraculous destruction of the Assyrian army, but it is probable that Tirhakah seized the occasion to recover some of the cities of Palestine which had before belonged to Egypt. Herodotus gives a traditional account of Sennacherib's overthrow, relating that when Egypt was ruled by Sethos, a priest-king, the country was invaded by Sennacherib, against whom Sethos, who had offended the military class, marched with an army of artificers and the like, and encamped near Pelusium, where in the night a multitude of field-mice gnawed the bow-strings and shield-straps of the Assyrians, who being thus unable to defend themselves, took to flight (ii. 141). It has been well observed that it is said by Horapollo that a mouse denoted 'disappearance' in hieroglyphics (*Hierog.* i. 50). Here we have evidently a confused tradition of the great overthrow of the Assyrians. Strabo, on the authority of Megasthenes, tells us that Tirhakah, in his extensive expeditions, rivalled Sesostris, and went as far as the Pillars of Hercules (xv. p. 686).

The beginning of the 26th dynasty was a time of disaster to Egypt. Tirhakah was either dead or had retired to Ethiopia, and Egypt fell into the hands of several petty princes, probably the Dodearchs of Herodotus, whose rule precedes, and perhaps overlaps, that of Psammetichus I., who is said to have been at first a Dodearch. In this time Esarhaddon twice invaded and conquered the country, but after his second invasion Psammetichus seems to have entirely thrown off the Assyrian yoke and restored Egypt to somewhat of its ancient power. There are several passages in Scripture which probably refer to these invasions, and certainly shew the relation of Ethiopia to Egypt at this time. The prophet Nahum, warning Nineveh, describes the fall of Thebes, 'Art thou better than No Amon, that was situate among the rivers, [that had] the waters round about it, whose rampart [was] the sea, [and] her wall from the sea? Cush and Mizraim [were her] strength, and [it was] infinite; Put and Lubim were in thy help' (iii. 8, 9). The sack and captivity of the city are then related. The exact period of Nahum is not known, but there can be little doubt that he lived after the time of that campaign of Sennacherib in which Hezekiah became a tributary of the king of Assyria (i. 11, 12). He therefore appears to refer either to one of the conquests of Egypt by Esarhaddon, or to a previous one by Sennacherib. The close alliance of Cush and Mizraim seems to point to the period of the Ethio-

pian rule, or that immediately after it, when the states, if separate, would have united against a common enemy. Three chapters of Isaiah relate to the future of Ethiopia and Egypt, and it is probable that they contain what is virtually one connected subject, although divided into a prophecy against Ethiopia, the burden of Egypt, and the record of an event shewn to prefigure the fall of both countries, these divisions having been followed by those who separated the book into chapters. The prophecy against Ethiopia is extremely obscure. It appears to foretell the calamity of Ethiopia to its furthest people, to whom messengers should be sent in vessels of papyrus, by the sea, here the Nile, as in the description of Thebes by the prophet Nahum (*l. c.*), bearing, probably, that news which is related in the next chapter. In the end the Ethiopians would send a present to the LORD at Zion (xviii.) Then follows 'the burden of Egypt,' apparently foretelling the discord and strife of the Dodearchy, the delivering of the people into the hand of a cruel lord, probably the Assyrian conqueror, the failure of the waters of Egypt and of its chief sources of revenue, and the partial conversion of the Egyptians, and, as it seems, their ultimate admission to the church (xix.) We then read how a Tartan, or general, of Sargon, the king of Assyria, took Ashdod, no doubt with a garrison from the Egyptian army. At this time, Isaiah was commanded to walk 'naked and barefoot,' probably without an outer garment, three years, probably three days, a day for a year, as a sign to shew how the Egyptians and Ethiopians, as no doubt had been the case with the garrison of Ashdod, probably of both nations, should be led captive by the king of Assyria. This captivity was to be witnessed by the Jews who trusted in Ethiopia and Egypt to be delivered from the king of Assyria, and the invasions of Egypt by Esarhaddon are therefore probably foretold (xx.) In the books of later prophets, Ethiopia does not take this prominent place: no longer a great power, it only appears as furnishing part of the Egyptian forces or sharing the calamities of Egypt, as in the history of Egypt we find Ethiopia occupying a position of little or no political importance, the successors of Tirhakah in that country being perhaps tributaries of the kings of the 26th dynasty. In the description by Jeremiah of Pharaoh-necho's army, the Ethiopians (Cush) are first spoken of among the foreign warriors mentioned as serving in it (xlvii. 9). Ezekiel prophesies the fear of Ethiopia at the overthrow of Egypt by Nebuchadnezzar (xxx. 4-9), and though the helpers of Egypt were to fall, it does not seem that the invasion of their lands is necessarily to be understood. One passage illustrates the difficult 18th chapter of Isaiah: 'In that day shall messengers go forth from me in ships to make ['secure' or] careless Ethiopia afraid, and great pain shall come upon them as in the day of Egypt' (Ezek. xxx. 9). Zephaniah, somewhat earlier, mentions the Ethiopians alone, predicting their overthrow (ii. 12). It is probable that the defeat of the Egyptian army at Carchemish by Nebuchadnezzar is referred to, or else the same king's invasion of Egypt. The kings of Egypt do not appear to have regained the absolute rule of Ethiopia, or to have displaced the native kings, though it is probable that they made them tributary. Under Psammetichus I. a revolt occurred in the Egyptian army, and a large body of rebels fled

tc Ethiopia, and there established themselves. A Greek inscription on one of the colossi of the great temple of Aboo-Simbil, not far below the Second Cataract, records the passage of Greek mercenaries on their return from an expedition up the river, 'king Psamatichus' having, as it seems, not gone beyond Elephantine. This expedition was probably that which Herodotus mentions Psammetichus to have made in order to bring back the rebels (ii. 30), and, in any case, the inscription is valuable as the only record of the 26th dynasty which has been found above the First Cataract. It does not prove, more especially as the king remained at Elephantine, that he governed any part of Ethiopia. The next event of Ethiopian history is the disastrous expedition of Cambyzes, defeated by the desert-march, and not by any valour of the invaded nation. From this time the country seems to have enjoyed tranquillity until the earlier Ptolemies acquired part of Lower Nubia that was again lost to them in the decline of their dynasty. When Egypt became a Roman province, Syene was its frontier-town to the south, but when, under Augustus, the garrison of that town had been overwhelmed by the Ethiopians, the Prefect Petronius invaded Ethiopia, and took Napata, said to have been the capital of Queen Candace. The extensive territory subdued was not held, and though the names of some of the Cæsars are found in the temples of Lower Nubia, in Strabo's time Syene marked the frontier. This part of Ethiopia must have been so unproductive, even before the falling of the level of the Nile, which Sir Gardner Wilkinson supposes to have happened between the early part of the 13th dynasty and the beginning of the 18th, that it may well have been regarded as a kind of neutral ground. The chronology of the kings of Ethiopia after Tirhakah cannot yet be attempted. Professor Lepsius arranges all the Ethiopians under four periods:— 1st, The 25th dynasty, first and second kings. 2d, Kings of Napata, beginning with Tirhakah, who, in his opinion, retired from Egypt, and made this his capital: of these kings, one, named NASTESSES, or NASTES-NEN, has left a tablet at Dongolah, recording the taking in his wars of enormous booty in cattle and gold (Lepsius, *Denkmäler*, v. 16;

Brugsch, *Geogr. Inschr.* i. pp. 163, 164). 3d, Older kings of Meroë, among whom is a queen KENTAHÉE, in whom a Candace is immediately recognized, and also MEE-AMEN ASRU and ARKAMEN, the latter Ergamenes, the contemporary of Ptolemy Philadelphus, who had, according to Diodorus Siculus, received a Greek training, and changed the customs of Ethiopia (iii. 6). Some of these princes had an extensive dominion. The name of Ergamenes is formed from Lower Nubia to Meroë. 4th, Later kings of Meroë, some, at least, of whom ruled both Meroë and Napata, though the former seems to have been the favourite capital in the later period (*Königsbuch*, taf. lxxi., lxxii., lxxiii.) The importance of queens is remarkably characteristic of an African people.

The spread of Christianity in Ethiopia is a remarkable event in the history of the country, and one in which the truth of 'the sure word of prophecy' has been especially evident. In this case, as in others, the Law may have been the predecessor of the Gospel. The pious eunuch, 'Ebed-melech the Ethiopian,' who befriended Jeremiah (xxxviii. 7-13; xxxix. 15-18), may have been one of many converts from paganism, but it is scarcely likely that any of these returned to their native land. The Abyssinian Jews, being probably a colony of those of Arabia, were perhaps of later origin than the time of the introduction of Christianity. But in the case of the Ethiopian eunuch, who had charge of all the treasure of Candace, queen of the Ethiopians, and who, on his return from worshipping at Jerusalem, was baptized by Philip the deacon, we see evidence of the spread of the old dispensation in Ethiopia, and of the reception there of the new (Acts viii. 27-39). In Psalm lxviii. (31), in Isaiah (xlv. 14), and probably in Zephaniah (iii. 10), the calling of Ethiopia to God's service is foretold. Whether conversion to the Law or to Christianity, or indeed to both, is intended, it is remarkable, that though long deprived of its actual geographical contact with the Coptic church, of which it is a branch, by the falling away of Nubia, the Abyssinian church yet remains, and the empire and the kingdom of Shoa are the only Christian sovereignties in the whole of Africa.

TABLE OF ETHIOPIAN HISTORY.

B. C. cir.	Egyptian Dynasty.	
2000	XII.	Ethiopia held as far as Semneh. Egyptian monuments begin.
1750?	XIII.	Ethiopia held as far as Isle of Argo.
	(Empire.)	
1500	XVIII.	Aähmes's expedition into Ethiopia.
1450	...	Thothmes II. Ethiopia governed by prince appointed by Pharaoh.
	...	Nine other princes mentioned on monuments.
1340	XIX.	Eleven other princes mentioned.
1150	XX.	Rameses VI. Last prince mentioned.
	(End of Empire.)	
1100?	XXV.	Shebek, Ethiopian king.
719?	...	Shebetek, Id.
707	...	Teharka, Id. Tirhakah. Capital in Ethiopia, Napata.
695	...	
669	XXVI.—XXXI.	
	Ptolemies and Cæsars.	} Later Ethiopian kings: capitals, Napata and Meroë.

The ancient monuments of Ethiopia may be separated into two great classes, the Egyptian and the Egypto-Ethiopian. In Lower Nubia the Egyptian are almost universal; at Napata we find Egypto-Ethiopian, as well as higher up in the island of Meroë. In the monuments north of Napata, of which the chief lie between the First and Second Cataracts, we perceive no difference from those of Egypt save in the occurrence of the names of two Ethiopian kings—ARKAMEN or Ergamenes, and ATSHERAMEN. The remains attest the wealth of the kings of Egypt, rather than that of the country in which they are found; their abundance is partly owing to the scanty modern population's not having required the ancient masonry for building-materials. The nearness of the mountains on either side to the river, and the value of the little tracts of alluvial soil, have rendered wholly or partly rock-hewn temples numerous here. Tombs are few and unimportant. Above the Second Cataract there are some similar remains, until the traveller reaches Gebel Berkel, the sacred mountain beneath which stood Napata, where, besides the remains of temples, he is struck with the sight of many pyramids. Other pyramids are seen in the neighbourhood. They are peculiar in construction, the proportion of the height to the base being much greater than in the pyramids of Egypt. The temples are of Egyptian character, and one of them is wholly, and another partly, of the reign of Tirhakah. The pyramids are later and are thoroughly Ethiopian. Yet higher up the river are the monuments of Meroë and neighbouring places. They are pyramids, like those of Napata, and temples, with other buildings, of a more Ethiopian style than the temples of the other capital. The size and importance of these monuments prove that the sovereigns who ruled at Meroë must have been very rich if not warlike. The furthest vestiges of ancient civilization that have been found are remains of an Egyptian character at Sôbah, on the Blue Nile, not far south of the junction of the two rivers. The name suggests the Biblical Seba, which, as a kingdom, may correspond to that of Meroë; but such resemblances are dangerous. The tendency of Ethiopian art was to imitate the earliest Egyptian forms of building, and even subjects of sculpture. This is plain in the adoption of pyramids. The same feeling is strongly evident in Egypt under the 26th dynasty, when there was a renaissance of the style of the pyramid-period, though no pyramids seem to have been built. This renaissance appears to have begun under, or immediately after, the later part of the 25th dynasty, and is seen in the subjects of sculpture and the use of titles. The monuments of Ethiopian princes, at first as good as those of Egypt at the same time, become rapidly inferior, and at last are extremely barbarous, more so than any of Egypt. The use of hieroglyphics continues to the last for royal names, but the language seems, after the earlier period, to have been little understood. An Ethiopian Demotic character has been found of the later period, which succeeded the hieroglyphic for common use and even for some inscriptions. We do not offer any opinion on the language of this character. The subject requires full investigation. The early Abyssinian remains, as the obelisk at Axum, do not seem to have any connection with those of more northern Ethiopia: they are of later times, and probably are of Arab origin. Throughout Ethi-

opia we find no traces of an original art or civilization, all the ancient monuments, save those of Abyssinia, which can scarcely be called ancient, shewing that the country was thoroughly Egyptianized.

Lepsius has published the Ethiopian monuments in his *Denkmäler* (*Abth.* v.; *Bl.* 1-75), as well as the inscriptions in Ethiopian Demotic (*Abth.* vi.; *Bl.* 1-11: see also, 12, 13).—R. S. P.

ETHIOPIC LANGUAGE. As it is maintained by competent judges that the Amharic and the Tigré are really dialects of the ancient Ethiopic or Geez,* it may be expected, from the recent progress of comparative grammar, that future scholars will apply them to elucidate the structure of the other Syro-Arabian languages. At present, however, as even the Amharic is not yet able to boast of adequate and accessible means for its study, and as neither possesses any ancient version of any part of the Bible, the Geez is the only one which claims a particular notice here.

The ancient Ethiopic or Geez, which is the only one of the three dialects which either has been, or is now, generally used in written documents of a sacred or civil kind, is to be classed as an ancient branch of the Arabic. This affinity is evident from the entire grammatical structure of the language: it is confirmed by the relation of its written character to that of the Himjarite alphabet; and either supports, or is supported by the assumption, that Habesh was actually peopled by a colony from southern Arabia. The grammatical structure of the Geez shews a largely predominant identity with that of Arabic; but it also possesses some traits which are in closer accordance with the other Syro-Arabian idioms, and some which are peculiar to itself alone. The main features of its structure are as follow:—The verb possesses the first ten conjugations of the Arabic verb, with the exception of the eighth and ninth; besides these it has two other conjugations which are unknown to the Arabic. The formation of nouns resembles most that of Hebrew; but nouns often have superfluous end-vowels, which are modified in particular cases, and are analogous to the Arabic nunnation. As for the flexion of nouns, the masculine and feminine plurals are either formed by affixed syllables (*ân, âl*) on the principle common to the whole Syro-Arabian family; or by changes within the compass of the radical letters, after the manner of the so-called *broken* plurals of the Arabic grammar. The state construct, and that relation of the noun which is equivalent to our objective case, are denoted by changes in the final vowels. There is no form for the dual number either in the verb or the noun. With regard to the vocabulary of the language, one-third of the roots are to be found in the same state in Arabic. By making allowance for commutations and transpositions, many other roots may be identified with their Arabic correspondents; some of its roots, however, do not exist in our present Arabic, but are to be found in

* Adelung and Vater, in the *Mithridates*, appear to be the chief authorities for doubting the intimate affinity of the Geez and Amharic. In this particular, and throughout the subject, we have followed Gesenius, in his two articles on the Ethiopic and Amharic languages in Ersch and Gruber's *Allgemeine Encyclopädie*.

Aramaic and Hebrew. Besides this it has native roots peculiar to itself: it has adopted several Greek words, but shews no traces of the influence of Coptic.

The alphabet possesses twenty-six consonants, arranged in a peculiar order, twenty-four of which may be regarded as equivalents to the same number of letters in the Arabic alphabet (the ones excepted being *س*, *د*, *ظ*, and *ع*). The remaining two are letters adopted to express the Greek *Π* and *Ψ*. The vowel-sounds, which are seven, are not expressed by separable signs, as in the Hebrew and Arabic punctuation, but are denoted by modifications in the original form of the consonants, after the manner of the *Dēvanāgari* alphabet. The mode of writing is from left to right. As for the written characters, Gesenius has traced the relation between some of them and their equivalents in the Phœnician alphabet. There is, however, the most striking resemblance between the Gees letters generally and those in the Himjarite inscriptions; a circumstance which accords well with the supposed connection of Southern Arabia and Habesh. Moreover, Lepsius, in an interesting essay, *Ueber die Anordnung und Verwandtschaft des Semitischen, Indischen, Aethiopischen, etc. Alphabets* (in his *Zwei Sprachvergleichende Abhandlungen*, Berlin, 1836, 8vo, pp. 74-80), has adduced some striking arguments to prove that the *Dēvanāgari* alphabet must have had some influence on the development of the Gees.

The literature of the Gees language is very scanty indeed, and that little is almost exclusively of a Biblical or ecclesiastical character. It possesses nothing, not even an imitation of the national poetry, nor of the lexicographical and grammatical works, of the Arabs. Some few historical works in the shape of chronicles, and a few medical treatises, constitute the main body of their profane literature. The Gees has ceased ever since the beginning of the 14th century to be the vernacular language of any part of the country, having been supplanted at the court of the sovereign by the Amharic. It still continues, however, to be the language used in religious rites, in domestic affairs of state, and in private correspondence.—J. N.

ETHIOPIC VERSION. The libraries of Europe contain some, although very rarely complete, manuscript copies of a translation of the Bible into the Gees dialect. This version of the O. T. was made from the Greek of the Septuagint, according to the Alexandrian recension, as is evinced, among other things, by the arrangement of the Biblical books, and by the admission of the Apocrypha without distinction. It is divided into four parts: *The Law*, or the Octateuch, containing the Pentateuch and the books of Joshua, Judges, and Ruth; *The Kings*, in thirteen books, consisting of two books of Samuel, two of Kings, two of Chronicles, two of Ezra (Ezra and Nehemiah), Tobit, Judith, Esther, Job, the Psalms; *Solomon*, in five books, consisting of Proverbs, Ecclesiastes, Canticles, Wisdom, and Sirach; *Prophets*, in eighteen books, consisting of Isaiah, Jeremiah's prophecy and Lamentations, Baruch, Ezekiel, Daniel, and the twelve minor prophets: lastly, they have also two books of the Maccabees. Besides this, they possess an apocryphal book of Enoch, which

they place next to that of Job. The critical uses of this version are almost exclusively confined to the evidence it gives as to the text of the Septuagint. The version of the N. T. was made directly from the Greek original. It follows the verbal arrangement of the Greek very closely, and has mistakes which are only to be explained by the confusion of words which resemble each other in that language. It is difficult to determine what recension it follows; but it frequently agrees with the Peshito and the Itala. A carefully edited edition of the O. T. is being executed by Dr. Augustus Dillmann of Tübingen, of which has appeared, *Tomus primus, sive Octoteuchus Aethiopicus*, Lipsiae, 1853. This work has a critical apparatus, and is based on a collation of MSS. The whole N. T. has appeared. The Gospels were edited anew from MSS. by T. P. Platt, M.A., in 1826, in 4to.—J. N.

ETHUN (ἔθουν) occurs in Prov. vii. 16, in connection with Egypt, and as a product of that country. It is translated *fine linen* of Egypt, in the A. V. As Egypt was from very early times celebrated for its cultivation of flax and manufacture of linen, there can be little doubt that *ethun* is correctly rendered, though some have thought that it may signify rope or string of Egypt, 'funis Ægyptius,' 'funis salignus v. intubaceus;' but Celsius (*Hierobot.* ii. p. 89) observes, 'Ethun non funem, sed linum et linteum esse, clamat græca vox ἄθουν vel ἄθουον, quam ab *ethun* esse deducendum.' So Mr. Yates, in his *Textrium Antiquorum*, p. 265, says of ἄθουν, that 'it was in all probability an Egyptian word, adopted by the Greeks to denote the commodity to which the Egyptians themselves applied it.' For ἔθουν, put into Greek letters, and with Greek terminations, becomes ἄθουν and ἄθουον. Hesychius states, no doubt correctly, 'that ἄθουν was applied by the Greeks to any fine and thin cloth, though not of linen.' Mr. Yates further adduces from ancient Scholia that ἄθουαι were made both of flax and of wool; and also that the silks of India are called ἄθουαι σερικαί by the author of the *Periplus of the Erythraean Sea*. In the same work it is shewn that the name ἄθουον was applied to cloths exported from Cutch, Ougein, and Baroach, and which must have been made of cotton. Mr. Yates moreover observes, that though ἄθουν, like σιδῶν, originally denoted linen, yet we find them both applied to cotton cloth. As the manufacture of linen extended itself into other countries, and as the exports of India became added to those of Egypt, all varieties, either of linen or cotton cloth, wherever woven, came to be designated by the originally Egyptian names ὀθουνή and Σιδῶν.

In the N. T. the word ἄθουον occurs in John xix. 40—'Then took they the body of Jesus and wound it in *linen clothes*' (ἄθουίους); in the parallel passage, Matt. xxvii. 59, the term used is σιδῶν, as also in Mark xv. 46, and in Luke xxiii. 53. We meet with it again in John xx. 5, 'and he stooping down saw the *linen clothes* lying.' It is generally used in the plural to denote 'linen bandages.' ὀθουνή occurs in Acts x. 11, 'and (Peter) saw heaven opened, and a certain vessel descending unto him, as it had been a great *sheet* knit at the four corners, and let down to the earth,' and also in xi. 5, where this passage is repeated.

From the preceding observations it is evident

that *δθλιον* may signify cloth made either of linen or cotton, but most probably the former, as it was more common than cotton in Syria and Egypt [SHESH].—J. F. R.

ETZ-'ABOTH (עֵץ עֲבוֹת) occurs in Lev. xxiii.

40, and Neh. viii. 15, and in both passages is mentioned along with *etz-shemen*. These words occur also in Ezek. xx. 28, where, as well as in the other passages, they are translated *thick trees*. The word עֵץ *etz*, used in several places in Scripture to designate a tree, is said to be derived from the verb *atz*, 'to fix,' 'to make steady.' The word 'aboth, according to Celsius (*Hierobot.* i. p. 322), is by the Rabbins, as well as in the Chaldee and Syriac versions, understood to mean the *myrtle*. But Celsius himself follows the Septuagint, the Vulgate, and several other authorities, in considering the *etz-'aboth* to signify a *shady tree*, 'foliis et frondibus densa.'

The shade of trees must always have been highly esteemed in eastern, or rather in warm climates. The planting of trees was early practised, as we have seen in the case of the *eshel* planted by Abraham at Beersheba, when he called on the name of the Lord. We know also that among the nations of antiquity, the planting of groves, and their consecration to their gods, were antecedent to the building of temples and altars, and were of almost universal adoption; and that groves were the scenes of their idolatrous worship and licentious rites. Hence probably the Jews were prohibited from planting trees around or near the altar of God. Shade and solitude seem always to have been considered as giving an air of mystery and devotion to religious services. Seneca, as quoted by Dr. Carpenter, says, 'If you find a grove thick set with ancient oaks that have shot up to a vast height, the tallness of the wood, the retirement of the place, and the pleasantness of the shade, immediately make you think it to be the residence of some god.' The prophet Hosea also gives the following description: 'They sacrifice upon the tops of the mountains, and burn incense upon the hills, under oaks and poplars and elms, because the shadow thereof is good' (Hos. iv. 13). Hence in the above passages, it is more than probable that *etz-'aboth* has a general, and not a specific, signification. There is no proof of the myrtle being intended: in fact, it is not likely to have been found in any part of the wilderness, and no better material can be required for the construction of booths than the boughs of thick or shady trees.—J. F. R.

ETZ-GOPHER (עֵץ גֹּפֶר, *etz-gopher*) is mentioned only once in Scripture, as the material of which Noah was directed to build the ark (Gen. vi. 14), 'Make thee an ark of gopher wood; rooms shalt thou make in the ark, and shalt pitch it within and without with pitch' (*khemar*, probably 'bitumen'). In endeavouring to ascertain the particular kind of wood which is mentioned in the above passage, we can get assistance only from the name, the country where the wood was supposed to have been procured, or the traditional opinions respecting it. That nothing very satisfactory has been ascertained is evident from the various interpretations that have been given of this word, so that some have preferred, as in our A. V., to retain the original Hebrew. The Septuagint

renders it 'squared timbers,' and Jerome in the Vulgate, renders it 'planed wood' and 'pitched wood.' Some have adopted the opinion that a kind of pine-tree is intended; and others that several species may be included, as they all yield resin, tar, and pitch. The Persian translator has also adopted the pine; but Celsius objects that it was never common in Assyria and Babylonia. The Chaldee version and others give the cedar, because it was always plentiful in Asia, and was distinguished by the incorruptible nature of its wood. But cedar is a very general term, and correctly applied, as we have seen [ERES], only to different kinds of juniper. These, though yielding excellent wood, remarkable for its fragrance, never grow to a large size in any warm country. Euty-chius, patriarch of Alexandria, relates in his *Annals* (p. 34), as quoted by Celsius (*Hierobot.* i. p. 331), that the ark was made of a wood called *sag* or *saj*

صن خشب الساج. The *sag* or *saj* has been thought by some to be ebony, but apparently without any foundation. Still less is there any likelihood of its being a shrub like *juniperus sabina*, as indicated in a note by Rosenmüller, Eng. transl. p. 261. It is curious, as already alluded to in the *Essay on the Antiquity of Hindoo Medicine*, as mentioned by Forskal, that the woods imported from India into Arabia are *saj*, *abnoos* (ebony), and *sissoo* (*Dalbergia sissoo*). Some Persian writers on *Materia Medica* consider *saj* to be the *sāl* (*shorea robusta*), another valued and much used Indian timber tree, but common only along the foot of the Himalayan mountains. The *teak* is the best known and the most highly valued timber tree on the Malabar coast, and it has long been imported into Arabia, and also into Egypt. One of the names by which it is known in India is *sagoon*. The *saj* is described in some Persian works, chiefly translations from the Arabic, as having large leaves like elephants' ears. This applies well to the leaves of the *teak* tree; and there is little doubt, therefore, that the *saj* of Arab authors is the *teak* tree. With respect to its being the gopher wood, the present writer has already remarked in the above work: 'The gopher wood of Scripture is so differently translated by different commentators, that it is difficult to form even a conjecture on the subject; besides being used at so early a period, and mentioned only once. It need not have been alluded to, except that the Arabic version translates it *saj*, which is the *teak*, and not likely to have been the wood employed.' The Chaldee Samaritan translator, for *gopher*, gives, as a synonym, *sisam*, of which Celsius says (*Hierobot.* i. p. 332), 'Vocem obscuram, sive referas ad *ξύλα σισάμωνα*, quæ ex Indiis adferri scribit Arrianus (*Peripl. Mar. Erythr.* p. 162), et *Ebano similia perhibent alii* (Salmas. in *Solin.* p. 727).' The *sisam* is probably the above *sissoo*, mentioned by Forskal as imported in his time into Arabia, and which is a highly-valued, dark-coloured wood, of which one kind is called blackwood (*Dalbergia latifolia*). The greatest number of writers have been of opinion that by the gopher wood we are to understand the cypress; and this opinion is supported by such authorities as Fuller in his *Miscell. Sac.* iv. 5; Bochart (*Geogr. Sacra*, i. 4); as well as by Celsius (*Hierobot.* i. p. 328). It has been stated that the letters *g* and *ph*, *k* and *p*, differ only in the soft or hard manner in which they are pronounced, and therefore that

gopher and *kupar* differ very little in sound, and that *iosos* in the Greek *κυπαρισσος* is a mere addition to the root. It is argued, further, that the wood of the cyprus, being almost incorruptible, was likely to be preferred; that it was frequently employed in later ages in the construction of temples, bridges, and even ships; and that it was very abundant in the countries where, according to these authors, the ark is supposed to have been built, that is, in Assyria, where other woods are scarce. But wherever the ark was built, there would be no deficiency of timber if there was a certain degree of moisture with warmth of climate; and we know not what change of climate may have taken place at the Deluge. The pine tribe, including the cyprus, appears as likely as any other to have been employed, usually growing as they do in extensive forests, and yielding straight and easily worked timber, calculated, from its resinous nature, effectually to resist moisture, especially if covered with pitch and tar, which might easily have been prepared from the refuse branches and timber, and used as well as the natural bitumen. But the whole of these suggestions amount only to conjectures, and there seems no possibility of arriving at a satisfactory conclusion.—J. F. R.

ETZ-HADAR (עֵץ הָדָר) occurs only once in Scripture, in Lev. xxiii. 40, where the Israelites are directed, in remembrance of their dwelling in tents or booths when they were brought out of the land of Egypt, to leave their homes and dwell in booths for a season every year. 'And ye shall take you on the first day the boughs of goodly trees (*peri etz-hadar*), etc.' The words *peri etz-hadar*, the Septuagint renders *καρπὸν ἐξ ὕλου ὀπαίων*, and the Vulgate, *fructus arboris pulcherrima*, the 'fructus ligni honoris' of Ursini. These translations are followed in many versions, as enumerated by Celsius (*Hierobot.* i. p. 252); but, as this author also shews, Onkelos and others consider the phrase to signify 'fructus arboris citrei:' so R. Aben Esra, in Hebrew, but as translated by Celsius, 'Fructus arboris speciosæ est citrus. Nam certe nullus fructus arboreus speciosior est illo.' The term *etragh* or *atruj* is that translated *citrus*. This interpretation has been adopted by the Jews, and is that given by Josephus. The orange and lemon have sometimes been adduced as the *citrus* of the above passages, but both were unknown in those early times so far north as Palestine; while the citron seems to have been early introduced from Media, and was known to the Greeks and Romans, as we shall shew under the article TAPPUACH. Some again are of opinion that the olive is intended by the word *hadar*, as the olive is mentioned instead of this tree by Nehemiah (viii. 15), in reference apparently to the above passage. Instead of fruit, however, some, as Tremellius and Dr. Geddes, conceive that *peri* signifies young growing shoots or boughs, as indeed it is interpreted in our A. V. There can be no objection to the citron being considered the *hadar*, as is done by the Jews; since we learn from Josephus that they had them in their hands in *festo Scenopogiorum*, when they threw them at King Alexander Jannæus; and they still continue to use citrons at the Feast of Tabernacles. But this does not prove that the citron was common in Palestine, or rather in the desert, at the time of Moses. The lawgiver, if he specified

any, would no doubt direct the Israelites to take such fruits or branches as were procurable in the desert; but it is probable, as maintained by the majority of commentators, that the term is general, rather than specific, and therefore that the fruit or branches of any goodly tree might be thus employed. (Comp. Ursini, *Arboret. Bibl.* p. 577).—J. F. R.

ETZ-SHEMEN (עֵץ שֶׁמֶן) occurs three times in Scripture, and is differently translated in all the three passages in the A. V. At the rebuilding of the temple, Nehemiah (viii. 15) directs the Israelites to 'go forth unto the mount and fetch *olive* and *pine branches* (*etz-shemen*), and *myrtle-branches*, and *palm-branches*, and branches of thick trees (*etz-aboth*), to make booths, as it is written.' This term occurs also in Is. xli. 19, where it is translated 'oil-tree.' The third mention of *etz-shemen* is in 1 Kings vi. 23, where it is translated *olive-tree*. If we collate the several passages in which *etz-shemen* occurs, we shall find reason to conclude that it is not the olive-tree, as it is translated in 1 Kings vi. 23, since in Neh. viii. 15, the olive-tree (*sait*) is distinguished from *etz-shemen*, which is there rendered *pine-tree*; and that it is as little likely to be the pine-tree, since in Is. xli. 19, *etz-shemen*, translated *oil-tree*, is mentioned as distinct from both the fir and the pine.

Though the above names, occurring in the same sentences with *etz-shemen*, enable us to say that it is not likely to have been any of them, it is not easy to say what tree is intended. Several have been adduced in addition to those mentioned above, as the different kinds of pine, including the cedar of Lebanon, the cypress, the citrus, the balsam-tree; but there is no proof in favour of any of these. Ursini and Celsius are both of opinion that the term is used generically, and therefore that no particular kind of tree is intended. This may appear to be the case in the earlier passages; but in those of Is. xli. 19, and of 1 Kings vi. 23, a specific tree seems to be pointed out; but we have no means of determining the particular tree, though there are several in Palestine which are not noticed in our version of the Scriptures, and though it is probable that some even of the modern Arabic names may bear some similarity to the Hebrew. The Arabic *shamanat*, signifying fragrant things, and the Persian *shamanah*, signifying anything odoriferous, a fragrant smell, seem to be connected with it. But Hebrew scholars consider *shemen* as having some reference to oiliness or fatness. Thus Celsius (*Hierob.* i. 310) quotes R. D. Kimchi as commenting on 1 Kings vi. 23, as follows: 'Intellige per עֵץ שֶׁמֶן speciem aliquam pini, ex qua manat pinguedo, unde faciunt picem; nam inde dicitur עֵץ שֶׁמֶן arbor pinguedinis.' The objection to *etz-shemen* being one of the pine tribe, is that it is mentioned as apparently distinct from both the pine and fir in the passage of Isaiah, while in that of Kings a tree is required having wood fit for making the cherubim. As no tree has yet been pointed out having a name similar either in meaning or sound to the Hebrew, and with wood of a good quality, it is better to consider *etz-shemen* as one of those not yet ascertained, than to add one more to the other unsatisfactory guesses.—J. F. R.

EUCHEL, ISAAC BEN ABRAHAM, of Copenhagen. He was born in 1756, and was one of the distinguished leaders of the Society for the Promo-

tion of Biblical literature and exegesis which was formed in the days of Mendelssohn, the reformer of modern Judaism [MENDELSSOHN]. To this excellent scholar Biblical literature is indebted for a learned treatise on the ancient mode of burial among the Jews, entitled, *Ist nach jüdischen Gesetzen das Uebernachten der Todten wirklich verboten?* Breslau, 1797, and a German translation of the Book of Proverbs, with a critical and exegetical commentary, which was at first published in Berlin, 1790, as a part of the great Bible work started by Mendelssohn, and of which improved editions appeared in Vienna 1799 and Offenbach 1805. Euchel died in 1804, in Berlin.—C. D. G.

EUCHERIUS, SAINT, born of an illustrious family in the second half of the 4th century. His father's name was Valerian: that of his wife, Gallia; by whom he had two sons, Salonus and Verianus, and two daughters, Consortia and Tullia. About the year 410 he left the world and retired with his wife and children, first to Lerins, and afterwards to a neighbouring island, Lero, now called St. Marguerite, where he led a recluse life, devoting himself to study, the education of his children, and the exercise of religion according to the idea of the time. During his retreat, he acquired so high a reputation for learning and piety, that about 434 he became bishop of Lyons, which dignity he retained till his death, in the time of Valentinian III. and Marcian. His son Verianus succeeded him as bishop of Lyons, and Salonus became chief of the church of Geneva. Eucherus was present at the first Council of Orange, 441, presided over by Hilary of Arles. He is said by Claudian Mamertius to have been accounted the greatest prelate of his time. The year of his death is uncertain; it was about 450. Besides some works of ascetic import, he wrote *Liber Formularum spiritalis intelligentiæ ad Veranium filium*, in eleven chapters, containing allegorical and mystical expositions of certain texts of Scripture: *Instructionum libri II. ad Salonium filium*, of which the first propounds and answers difficult questions on the O. and N. T., and the second gives explanations of Hebrew names; also homilies, which are mostly addressed to monks. There is a good account of Eucherus, and complete collection of his works, in the 50th vol. of the Abbé Migne's *Patrologiæ cursus completus*.—S. L.

EUERGETES (Ἐυεργέτης; *Euergetes*), 'benefactor,' a title of several Greek kings. Its use is thus referred to in our Saviour's teaching: 'The kings of the Gentiles exercise lordship over them; and they that exercise authority upon them are called benefactors' (ἐυεργέται, Luke xxii. 25). It was bestowed by states upon those who had conferred benefits upon them, and was taken by several kings.

A king of Egypt is mentioned by this title in the Prologue to Ecclesiasticus, wherein the translator states that, having gone into Egypt in the 38th year of king Euergetes, and been there some time, he found this book by his grandfather (Ἐν γὰρ τῷ ὁδοῦ καὶ τριακοστῷ ἔτει ἐπὶ τοῦ Ἐυεργέτου βασιλέως παραγενθῆς εἰς Αἴγυπτον, καὶ συγχροῦσας, εὗρον οὐ μικρὰς παιδείας ἀφόβοιον. 'Nam in octavo et trigesimo anno temporibus Ptolemæi Euergetis regis,' etc., Vulg.) There can be no question that a king of Egypt is here meant, for though a king of Syria could be intended

by this title, Alexander I., Antiochus VII., and Demetrius III. being shewn by their coins to have been styled Euergetes, no one of them reigned more than a few years. It is more probable, on *primâ facie* grounds, that an Egyptian Euergetes is here spoken of, if the same discrepancy should not be found. Two of the Ptolemies bore this title, Ptolemy III., always known as Euergetes, who reigned twenty-five years, B.C. 247-222; and Ptolemy VII. (or IX.), Euergetes II., more commonly called Physcon, who began to reign jointly with his brother Ptolemy VI. (or VII.), Philometor, B.C. 170, and became sole king in B.C. 146, dying in his fifty-fourth year, reckoned from the former date, and the twenty-ninth year of his sole reign, B.C. 117 (Fynes Clinton, *Fasti Hellenici*, iii. pp. 382, 383, 386, 399; Lepsius, *Königsbuch, Synoptische Tafeln*, p. 9). A great difficulty has arisen in the attempt to decide which of these kings is intended. Everything hinges upon the manner in which the reigns were reckoned. There is no satisfactory evidence for supposing that Euergetes I. counted his regnal years from a time before his accession; the evidence of the inscription at Adule, that Fynes Clinton adduces in favour of as high a date as the 27th year, is, we venture to say, wholly inconclusive (pp. 382, 383); besides, the 27th year is far short of the 38th. To ascertain the official reckoning of the years of Euergetes II., during the latter part of his rule, and thus to determine from what date he then counted his regnal years, we have only to examine the demotic papyri of his reign. From these Dr. Young collected a list of dates which appeared thirty years ago in his posthumous *Rudiments of an Egyptian Dictionary*; we are particular in mentioning the time that we may shew how long the commentators have neglected this conclusive evidence. These dates are year 29, 34, 45, 46, 47 or 43, 52, 53 (pp. 27-31). It is thus proved incontestably that Physcon counted his years from the commencement of his joint reign with Philometor, without any separate reckoning from his accession as sole king of Egypt. The hieroglyphic inscriptions, as we should expect, follow the same reckoning. Thus one of the Apis tablets gives the dates of the 28th, 31st, 51st, and 52d years of this king (Lepsius, *The 22d Egyptian Royal Dynasty*, trans. by Dr. Bell, p. 41). We must not pass by the idea of Winer (*RWB.* s. v. Jesus Sohn Sirachs), and Jahn (*Einleitung*, ii. pp. 930, *seqq.*), that the 38th year refers to the translator's age instead of a king's reign. It would be better to suppose an era. Three occur to us as possible, the era of the Seleucidæ and that of Simon the Maccabee, used in Palestine, and the era of Dionysius used in Egypt. The era of the Seleucidæ began B.C. 312, and its 38th year is therefore too early for the reign of Euergetes I.; the era of Simon the Maccabee began B.C. 143, or a little later, and its 38th year is too late for the reign of Euergetes II. The era of Dionysius commenced B.C. 285 (Lepsius, *Königsbuch*, l. c.), and its 38th year was therefore the last of Ptolemy II., Euergetes I. coming to the throne in the next year. The construction that does not allow the year of the reign of Euergetes to be intended, and thus necessitates some such explanation, is certainly the more correct; but as Dr. Davidson, who has laboriously collected much criticism upon this question that we have shewn to have been needless, observes, we need not here look for correct grammar (*Horne's*

Introduction, 1856, ii. pp. 1026-1028). With this admission, the usual reading cannot be doubted, and the date mentioned would be B.C. 133. Other evidence for the time of the composition of Ecclesiasticus, which, of course, can be approximatively inferred from that of the translation, is rather in favour of the second than the first Euergetes.—R. S. P.

EUMENES II. (Εὐμένης), king of Pergamus, and son of Attalus I. His accession to the throne is fixed by the death of his predecessor to B.C. 197 (Clinton, *F. H.*, iii. p. 403). He inherited from his father the friendship and alliance of the Romans, and when peace was made in B.C. 196 with Philip V., king of Macedonia, he was presented with the towns of Oreus and Eretria in Eubœa (Liv. xxxiii. 34). In B.C. 191 Eumenes and the Romans engaged the fleet of Antiochus (Liv. xxxvi. 43-45), and seeing more than ever the policy of adhering to the Romans, he, in the following year, rendered them valuable assistance at the battle of Magnesia, commanding his own troops in person (Liv. xxxvii. 39-44; Just. xxxi. 8; Appian, *Syr.* 34). As soon as peace was concluded, B.C. 188, Eumenes set out for Rome to ask some rewards for his services. The Senate were pleased with the modesty of his behaviour, and conferred upon him the Thracian Chersonese, Lysimachia, both Phrygiæ, Mysia, Lycæonia, Lydia, and Ionia, with some exceptions. One province only would have much enlarged his dominions, but by this large addition to his territory he found himself one of the most powerful of monarchs (Liv. xxxvii. 56; xxxviii. 39; Polyb. xxii. 27; Appian, *Syr.* 44). About the same time he married the daughter of Ariarathes IV., king of Cappadocia (Liv. xxxviii. 39). Eumenes continued in good favour with the Romans for several years, and repeatedly sent embassies to them. In B.C. 172 he again visited Rome, and in returning nearly lost his life through the treachery of Perseus, king of Macedonia (Liv. xlii. 11-16). In B.C. 169 Eumenes is said to have had secret correspondence with Perseus, by which act he lost the favour of the Romans (Polyb., *Frag. Vat.* xxix., Didot. ed., pp. 39, 40), and two years after he was forbidden to enter Rome (Liv., *Epit.* xlvii.) The latter part of his reign was disturbed by frequent wars with Prusias, king of Bithynia. The Romans favourably received his brother Attalus, apparently for the purpose of exciting him against Eumenes, who had sent him to Rome. Attalus, however, was induced through the entreaties of a physician, named Stratus, to abandon any such ideas. Eumenes thus managed to keep on friendly terms with his brother and the Romans till his death (Liv. xlv. 19, 20; Polyb. xxx. 1-3; xxxi. 9; xxxii. 5). The exact date of his death is not mentioned by any writer, but it must have taken place in B.C. 159 (Clinton, *F. H.*, iii. p. 406).

Eumenes II. much improved the city of Pergamus by erecting magnificent temples and other public buildings. His greatest act was the foundation of a fine and splendid library, which rose to be a rival in extent and value even to that of Alexandria (Strabo, xiii. 4, Didot. ed., p. 533; Plin. xxii. 11; xxxv. 3).

The large accessions of territory given to Eumenes at the completion of the treaty with Antiochus, in B.C. 188, are also mentioned in I Maccab. viii. 8. It is there said that 'the Romans gave him the

country of India and Media, and Lydia, and part of their fairest countries' (καὶ χωρῶν τῆν Ἰνδικῆν καὶ Μήδειαν καὶ Λυδίαν, καὶ ἀπὸ τῶν καλλίστων χωρῶν αὐτῶν). This is in part clearly out of the question, for neither India nor Media belonged to Antiochus or the Romans. All the Greek and Latin texts agree in this reading, and it is difficult to offer any solution. Many suggestions have been made, such as for India, the Eneti of Paphlagonia, mentioned in Strabo, and according to Zenodotus, called in his time Amisus (Strabo, xii. 3, p. 465). Hecateus says they were the Eneti of Homer (*Il.* ii. 852; Strabo, xii. 3, p. 473). But in any case these people had disappeared long before. Another suggestion is that the India of Xenophon is meant (*Cyrop.* i. 5, 3, etc.), which may have been on the Carian river Indus (Κάδβις, Strabo, xiv. 2, p. 556; Ptol. v. 2. 11), but this is not probable, and the Cypripædia is of no historical value whatever. Long dissertations have been written to solve this difficulty, but without much success (Cf. Wernsdorff, *De fid. Libr. Macc.*, sec. xxvii.) Grotius without any MS. authority substitutes 'Ionia,' for 'India,' and 'Mysia' for 'Media.' This is certainly the happiest suggestion, and perfectly agrees with the account of Livy (xxxvii. 55) 'ut *cis Taurum* montem quæ *intra regni Antiochi* fines fuissent, Eumeni attribuerentur præter Lyciam Cariamque, usque ad Mæandrum fluvium,' etc., and all the other statements of classical writers.—F. W. M.

EUNICE (Εὐνίκη), the mother of Timothy, a Jewess, although married to a Greek and bearing a Greek name. She was a believer in Christ, and even her mother Lois lived in the faith of the expected Messiah, if she did not live to know that he had come in the person of Jesus of Nazareth (2 Tim. i. 5; Acts xvi. 1).—J. K.

EUNUCH (εὐνοῦχος). This word, which we have adopted from the Greek, has, in its literal sense, the harmless meaning of 'bed-keeper,' *i. e.*, one who has the charge of beds and bed-chambers; but as only persons deprived of their virility have, from the most ancient times, been employed in Oriental harems, and as such persons are employed almost exclusively in this kind of service, the word 'bed-keeper' became synonymous with 'castratus.' In fact, there are few eastern languages in which the condition of those persons is more directly expressed than by the name of some post or station in which they are usually found. The admission to the recesses of the harem, which is in fact the domestic establishment of the prince, gives the eunuchs such peculiar advantages of access to the royal ear and person, as often enable them to exercise an important influence, and to rise to stations of great trust and power in Eastern courts. Hence it would seem that, in Egypt, for instance, the word which indicated an eunuch was applied to any court officer, whether a castratus or not. The word which describes Joseph's master as 'an officer of Pharaoh' (Gen. xxxvii. 36; xxxix. 1) is סָרִיס *saris*, which is used in Hebrew to denote an eunuch; and in these places is rendered רִבְּנָה, 'prince,' in the Targum, and εὐνοῦχος, 'eunuch,' in the Septuagint.

Authority would be superfluous in proof of a matter of such common knowledge as the employment of eunuchs, and especially of black eunuchs in the courts and harems of the ancient and modern

East. A noble law, which, however, evinces the prevalence of the custom prior to Moses, made castration illegal among the Jews (Lev. xxi. 20; Deut. xxiii. 1). But the Hebrew princes did not choose to understand this law as interdicting the use of those who had been made eunuchs by others; for that they had them, and that they were sometimes, if not generally, blacks, and that the chief of them was regarded as holding an important and influential post, appears from 1 Kings xxii. 9; 2 Kings viii. 6; ix. 32, 33; xx. 18; xxiii. 11; Jer. xxxviii. 7; xxxix. 16; xli. 16. Samuel was aware that eunuchs would not fail to be employed in a regal court; for he thus forewarns the people, 'He (the king) will take the tenth of your seed and of your vineyard, and give to his eunuchs [A. V. 'officers'] and to his servants' (1 Sam. viii. 15).

Under these circumstances, the eunuchs were probably obtained from a great distance, and at an expense which must have limited their employment to the royal establishment; and this is very much the case even at present.

In Matt. xix. 12, the term 'eunuch' is applied figuratively to persons naturally impotent. In the same verse mention is also made of persons 'who have made themselves eunuchs for the kingdom of heaven's sake;' which is a manifestly hyperbolic description of such as lived in voluntary abstinence (comp. Matt. v. 29, 30); although painful examples have occurred (as in the case of Origen) of a disposition to interpret the phrase too literally, and thus to act upon the following injunction, or permission, 'Let him who is capable of doing this, do it'—ὁ δὲ δυνατόμενος χωρεῖν χωρεῖτω.—J. K.

EUODIAS (Εὐδοκίας), a female member of the church at Philippi, who seems to have been at variance with another female member named Syntyche. Paul describes them as women who had 'laboured much with him in the gospel,' and implores them to be of one mind (Philip. iv. 2, 3).

EUPHRATES (Εὐφράτης), termed in Deut. i. 7, 'the great river,' where it is mentioned as the eastern boundary of the land which (ver. 8) God gave to the descendants of Abraham. In Gen. ii. 14, the Euphrates (פַּרְתִּי) is stated to be the fourth of the rivers which flowed from a common stream in the garden of Eden. Divines and geographers have taken much trouble in order to learn the position of Eden from the geographical particulars given in the Bible, without remembering that probably nothing more than a popular description was intended. It is true that two of the rivers mentioned in the passage, namely, the Tigris and the Euphrates, have their sources in the same high lands; but scientific geography neither sanctions nor explains the Scriptural account, if Eden is to be sought in the mountainous range in different and distant parts of which they rise.

In consequence of its magnitude and importance, the Euphrates was designated and known as 'the river,' being by far the most considerable stream in Western Asia. Thus in Exod. xxiii. 31, we read, 'from the desert unto the river' (comp. Is. viii. 7).

It has two sources and two arms—a western and an eastern—which rise in the mountains of Armenia. Of these streams the western is the shorter, and is called Kara Sou, or Melas; the eastern is itself made up of several streams, the longest of which bears the name of Murad, or Phrat. The two arms unite about three days'

journey from Erzeroum, near which rise two of the tributaries that concur in forming the Phrat. Thus uniting, they give rise to the Euphrates strictly so called, which, flowing to the south, divides Armenia from Cappadocia; but, being driven westward by the Anti-Taurus and Taurus mountains, it works its circuitous way through narrow passes and over cataracts, until, breaking through a defile formed by the eastern extremity of Mons Amanus (Alma Dagh), and the north-western extremity of Mons Taurus, it reaches the plain country not far from Samosata (Schemisat), then winds south and south-east, passing the north of Syria, and the north-east of Arabia Deserta, and at length, after many windings, unites with the Tigris, and thus united finds its termination in the Persian Gulf. (Herod. i. 180; Strabo, ii. p. 521; Ptolem. v. 13; Plin. *Hist. Nat.* v. 20; Q. Curt. i. 13; *Orbis Terrarum*, C. Kaercher Auct.; Map to *Report from the Select Committee on Steam Navigation to India*.) In conjunction with the Tigris, it forms the rich alluvial lands of Mesopotamia, over which it flows or is carried by canals, and thus diffuses abroad fertility and beauty. At Bagdad and Hillah (Babylon), the Euphrates and Tigris approach comparatively near to each other, but separate again, forming a kind of ample basin, till they finally become one at Koorma. Under the Cæsars the Euphrates was the eastern boundary of the Roman empire, as under David it was the natural limit of the Hebrew monarchy.

Although occasionally much more, the breadth of the Euphrates varies between 200 and 400 yards; but for a distance of 60 miles through the Lemlun marshes the main stream narrows to about 80 yards. The general depth of the Upper Euphrates exceeds 8 feet. In point of current it is for the most part a sluggish stream; for, except in the height of the flooded season, when it approaches 5 miles an hour, it varies from 2½ to 3½, with a much larger portion of its course under 3 than above. Its general description for some distance below Erzingan is that of a river of the first order, struggling through high hills, or rather low mountains, making an exceedingly tortuous course, as it forces its way over a pebbly or rocky bed, from one natural barrier to another. As it winds round its numerous barriers, it carries occasionally towards each of the cardinal points a considerable body of water; and is shallow enough in some places for loaded camels to pass in autumn, the water rising to their bellies, or about 4½ feet. The upper portion of the river is enclosed between two parallel ranges of hills, covered for the most part with high brushwood and timber of moderate size, having a succession of long narrow islands, on several of which are moderate-sized towns; the borders of this ancient stream being still well inhabited, not only by Bedouins, but by permanent residents. The following towns may be named: Samsat, Haoroum, Romkala, Bir, Giaber, Deir, Rava, Anna, Hadisa, El Oos, Jibba, Hit, Hillah, Lemlun, Korna, and Bussora. The scenery above Hit, in itself very picturesque, is greatly heightened by the frequent recurrence of ancient irrigating aqueducts, beautiful specimens of art, which are attributed by the Arabs to the Persians when fire-worshippers: they literally cover both banks, and prove that the borders of the Euphrates were once thickly inhabited by a highly civilized people. They are of stone. Ten miles below Hit is the last of these

The country now becomes flatter, with few hills: the river winds less; and the banks are covered with Arab villages of mats or tents, with beautiful mares, cattle, and numerous flocks, of goats and sheep. From Hit to Babylon the black tent of the Bedouin is almost the only kind of habitation to be seen. This distance is cultivated only in part; the rest is desert, with the date-tree shewing in occasional clusters. In descending, the irrigating cuts and canals become more frequent. Babylon is encircled by two streams, one above, the other below the principal ruin; beyond which they unite and produce abundance. For about thirty miles below Hillah both banks have numerous mud villages, imbedded in date-trees: to these succeed huts formed of bundles of reeds. The country lower down towards Lemlun is level and little elevated above the river; irrigation is therefore easy: in consequence, both banks are covered with productive cultivation, and fringed with a double and nearly continuous belt of luxuriant date-trees, extending down to the Persian Gulf. At one mile and a half above the town of Dewania is the first considerable deviation from this hitherto majestic river; another takes place 22 miles lower; and nine miles farther—at Lemlun—it again separates into two branches, forming a delta not unlike that of Damietta, and when the river is swollen, inundating the country for a space of about 60 miles in width with a shallow sheet of water, forming the Lemlun marshes, nearly the whole of which is covered with rice and other grain the moment the river recedes (in June). Here mud villages are swept away by the water every year.

Below Lemlun the Tigris sends a branch to the Euphrates, which is thus increased in its volume; and turning to the east, receives the chief branch of the Tigris, thence running in one united stream, under the name of the Shat al Arab, as far as the sea (the Persian Gulf). In this last reach the river has a depth of from 3 to 5 fathoms, varies in breadth from 500 to 900 yards, and presents banks covered with villages and cultivation, having an appearance at once imposing and majestic. The length of the navigable part of the river, reckoning from Bir to Bussora, is 143 miles; the length of the entire stream, 1400 miles. It is very abundant in fish. The water is somewhat turbid; but, when purified, is pleasant and salubrious. The Arabians set a high value on it, and name it Morad Sou; that is, Water of desire, or longing.

The river begins to rise in March, and continues rising till the latter end of May. The consequent increase of its volume and rapidity is attributable to the early rains, which, falling in the Armenian mountains, swell its mountain tributaries; and also in the main to the melting of the winter snows in these lofty regions. About the middle of November the Euphrates has reached its lowest ebb, and ceasing to decrease, becomes tranquil and sluggish.

The Euphrates is, on many accounts, an object of more than ordinary interest. 'The great river' is linked with the earliest times and some of the most signal events in the history of the world. Appearing among the few notices we have of the first condition of the earth and of human kind, it continues, through the whole range of Scripture history down to the present hour, an object of curiosity, interest, wonder, hope, or triumph.

In ancient as well as in modern times the Euphrates was used for navigation. Herodotus

states that boats—either coracles, or rafts, floated by inflated skins—brought the produce of Armenia down to Babylon (i. 194). The trade thus carried on was considerable.

The Emperor Trajan constructed a fleet in the mountains of Nisibis, and floated it down the Euphrates. The Emperor Julian also came down the river from the same mountains, with a fleet of not fewer than 1100 vessels.

A great deal of navigation is still carried on from Bagdad to Hillah, the ancient Babylon; but the disturbed state of the country prevents any above the latter place. In the time of Queen Elizabeth merchants from England went by this river, which was then the high road to India.

The prophets made use of the Euphrates as a figurative description of the Assyrian power, as the Nile with them represented the power of Egypt; thus in Is. viii. 7, 'The Lord bringeth up upon them the waters of the river, strong and many, even the king of Assyria' (Jer. ii. 18). Wahl's *Asien*, p. 700; Ritter's *Erdk.* ii. 120; *Traité Élément. Géographique*, Bruxelles, 1832, vol. ii.; Mannert's *Geogr.* ii. 142; Reichard's *Kl. Geogr. Schrif.*, p. 210; *Parliam. Rep. of Steam Navigation to India*, 1834.—J. R. B.

EUPOLEMUS (Εὐπόλεμος), the son of John, the son of Accos, one of the envoys sent by Judas Maccabæus to Rome to negotiate an alliance with the Romans (1 Maccab. viii. 17; 2 Maccab. iv. 11; Joseph. *Antiq.* xii. 10. 6). His father John is spoken of as one by whom various services had been rendered to the state.—†.

EUROCLYDON. [WIND.]

EUSEBIUS, Bishop of Cesarea, and father of ecclesiastical history, called Pamphili after his friend, the Martyr Pamphilus, to whom he was devotedly attached, was born in Palestine about A.D. 264. On the martyrdom of his friend he fled into Egypt, where he was thrown into prison. After his release he returned to Cesarea, and became bishop of that see, A.D. 315. He occupied a conspicuous position at the Council of Nice (327), where he had the honour to sit at the Emperor's right hand. Implicated in the disputes between the Arians and Athanasians, he pursued, theologically, a middle course; and was more eminent for his love of peace than for his orthodoxy. He retained his friendship with the Imperial family till his death, which took place (A.D. 340) while he was actively engaged in preparing, at the request of Constantine, fifty parchment MSS. for the use of the churches of the capital.

The historical and apologetical works of Eusebius are his best. His exegetical *Commentaries on the Psalms; Ten books on Isaiah*; a fragment on *Psalmes; Commentary on Luke*, and *Questiones Evangelicæ*, are deemed of an inferior order. But his '*Exegetical Introductions*,' as Semisch calls them, have attracted attention:—1. *Onomasticon de Locis Hebræicis* (περὶ τῶν τοπικῶν ὀνομάτων τῶν ἐν τῇ θείᾳ γραφῇ), a topographical account of places mentioned in Scripture (Bonfrère, Paris, 1631; Cleves, Amsterdam, 1707; Larsow et Parthey, Berl. 1862). 2. *The Ten Evangelical Canons*, designed to help the reader to compare the parallel statements in the Gospels. They are given in a very convenient form in Wordsworth's Greek Testament, vol. 1. 3. *Ζητήματα καὶ λύσεις*, questions and

answers, designed to remove the seeming contradictions in the first and last chapters of the Gospels.

4. A fragment entitled *περὶ τῆς τοῦ βιβλίου τῶν προφητῶν ὀνομασίας*. To the preceding we ought to add the 'Ἐκκλησιαστικὴ Ἱστορία, because of its important bearing on the history of the Canon. [CANON.] Good editions of it are Heinichen's, Lipsiæ, 1827, 8vo, 3 vols.; and Burton's, Oxonii, 1838, 2 vols. There are several English translations, useful editions of which have been published by Bohn and Bagster. The whole works of Eusebius were published at Basil, 1542; and at Paris, 1580. (Herzog. *Encyc.*; Smith's *Dic. of G. and R. Biog.*; Neander's *Gen. Ch. Hist.*; Neander's *Hist. of Christ. Dogmas*; Gieseler's *Eccles. Hist.*; Hagenbach's *Hist. of Doctrines*.)—I. J.

EUTHALIUS, Deacon of Alexandria, and afterwards, if the title of the Vatican MS. is to be credited, Bishop of Sulce (Σούλκης Ἐπίσκοπος), a city whose site has not been satisfactorily determined. According to the common opinion he was the first to apply the stichometrical arrangement to the books of the N. T. Previously the continuous form of writing was all but universal in the MSS. of the Scriptures, and this, combined with the absence of any system of punctuation, rendered the task of the public reader a very difficult one. In five of the books of the O. T. the parallelism of Hebrew poetry had led to a different method of writing, and the separate clauses or stanzas were arranged in separate lines (*στίχοι*, Greg. Naz. *Carm.*, 33). Euthalius saw that a similar arrangement might with advantage be applied to the books of the N. T.; and in the year 458 he published an edition of the Pauline epistles with the text divided in this way. He also introduced the division into chapters (*κεφάλαια*) already employed by a writer of the year 396, whom he terms *ἐνα τῶν σοφωτάτων τῶν καὶ φιλοχρίστων πατέρων*. From the same author he borrowed the summaries of the several chapters. A prologue on the life and writings of the Apostle Paul was prefixed to the work. A similar edition of the Acts of the Apostles, and of the Catholic epistles, was subsequently published by Euthalius, and dedicated to Athanasius the younger, who succeeded to the see of Alexandria in 490. In the preparation of this work he derived, as he himself acknowledges, some assistance from a MS. of Pamphilus the martyr, preserved in the Library of Cæsarea, and Tregelles suggests that it is not improbable that the stichometrical arrangement itself was a part of the Biblical labours of Pamphilus (Horne, *Introd.*, 10th ed. vol. iv. 27). The works of Euthalius were published by L. A. Zacagni in his *Collectanea Monumentorum veterum Ecclesie*, Romæ, 1698, 4to; Cave, *Hist. Lit.* i. 446; Fabric, *Bibl. Gr.* viii. 367; Rosenmüller, *Hist. Interp. Lib. Sac.* iv. 1.—S. N.

EUTHYMIUS, ZIGABENUS (more correctly Zygadenus), was one of the most eminent Byzantine theologians of the 12th century, and the last of the Greek commentators. He flourished under the reign of Alexius Comnenus, about 1118, and was monk of a convent dedicated to the Virgin, near Constantinople. His Commentary on the Psalms was published in a Latin Version at Verona in 1530, and has been often reprinted. Le Moyné added a preface and introduction to the Greek Text, which was inserted in the fourth volume of the works of Theophylact, Venice, 1754-63. His

commentary on the four Evangelists was published in Latin by Hentenius, Louvaine, 1544, and afterwards at Paris, 1547, 1560, 1602, and in the *Biblioth. Patrum*. A more complete edition, with Prolegomena, was edited by C. F. Matthæi, Lips. 1792, in 4 vols. Other exegetical works are extant in manuscript in the Vatican, on the Pauline and Catholic Epistles, also letters, a monody on the death of Eustathius of Thessalonica, and a conversation with a Saracenic Philosopher. His great polemical work was undertaken by desire of the Emperor Alexius, it is entitled *Πανοπλία δογματικὴ τῆς ὀρθοδόξου πίστεως ἥτοι ὀπλοθήκη* devoted to as many heresies and their confutation, but hitherto no complete edition of it has appeared. In the earliest edition in Latin by Zini, Venice, 1555, the 12th and 13th sections against the Pope and the Church of Rome are omitted. In the Greek edition by Tergovist in Wallachia, 1711, the 24th section against Mohammedanism is left out. The section on the Bogomiles and that against the Messalians, have been printed separately. His mistakes in reference to these sects have been pointed out by later ecclesiastical writers. (Neander, *Church History* (Bohn), vol. viii. 278, 288. Gieseler, *Lehrbuch*, Band ii., Abth. ii. p. 665; E. T. iii. 495). On the text of the Greek Testament used by Euthymius in his work on the Gospels, Mill has some remarks in his *Prolegomena*, sec. 1073-79.—J. E. R.

EUTYCHUS (Εὐτυχος), a young man of Troas, who sat in the open window of the third floor while St. Paul was preaching late in the night, and who, being overcome by sleep, fell out into the court below. He was 'taken up dead' (*ἦρθη νεκρός*); but the Apostle, going down, extended himself upon the body and embraced it, like the prophets of old (1 Kings xvii. 21; 2 Kings iv. 34); and when he felt the signs of returning life, restored him to his friends, with the assurance that 'his life was in him.' Before Paul departed in the morning the youth was brought to him alive and well. It is disputed whether Eutyclus was really dead, or only in a swoon; and hence, whether a miracle was performed or not. It is admitted that the circumstances, and the words of Paul himself, sanction the notion that the young man was not actually dead; but, on the other hand, it is contended that the words of the narrator, 'taken up dead,' are too plain to justify us in receiving them in the modified sense of 'taken up for dead,' which that interpretation requires (Acts xx. 5-12).—J. K.

EVANGELISTS (Ἐβανγγελιστοί). This term is applied in the N. T. to a certain class of Christian teachers who were not fixed to any particular spot, but travelled either independently, or under the direction of one or other of the Apostles, for the purpose of propagating the Gospel. Philip, one of the seven deacons, is termed *the Evangelist* (Acts xxi. 8). St. Paul exhorts Timothy 'to do the work of an *Evangelist*' (2 Tim. iv. 5); and though this name is not given to Titus, the injunctions addressed to him, and the services he rendered, are so similar as to render the propriety of applying it to him unquestionable. In the Epistle to the Ephesians (iv. 11) the *Ἐβανγγελιστὰς* (*Evangelists*) are expressly distinguished from the *ποιμένας καὶ διδασκάλους* (*pastors and teachers*). The chief points of difference appear to be that the former were itine-

rant, the latter stationary; the former were employed in introducing the Gospel where it was before unknown; the business of the latter was to confirm and instruct the converts steadily and permanently. Such is the representation given by Eusebius (*Hist. Eccles.* iii. 37). Referring to the state of the church in the time of Trajan, he says, 'Many of the disciples of that time, whose souls the Divine word had inspired with an ardent love of philosophy, first fulfilled our Saviour's precept by distributing their substance among the poor. Then travelling abroad they performed the work of Evangelists (ἔργον ἐπετέλουν Εὐαγγελιστῶν), being ambitious to preach Christ, and deliver the Scripture of the Divine Gospels. Having laid the foundations of the faith in foreign nations, they appointed other pastors (ποιμέναις τε καθίστάτες ἑτέροις), to whom they entrusted the cultivation of the parts they had recently occupied, while they proceeded to other countries and nations.' He elsewhere speaks of Pantænus and others as *Evangelists of the Word* (Εὐαγγελιστὰ τοῦ λόγου, *Hist. Eccles.* v. 10). In the same writer the term Evangelist is also applied, as at present, to the authors of the canonical gospels (*Hist. Eccles.* iii. 39). (Campbell's *Lectures on Ecclesiastical History*, vol. i. pp. 148-150; Neander's *History of the Planting of the Christian Church*, Eng. transl., vol. i. p. 173).—J. E. R.

EVANSON, EDWARD, was born at Warrington in Lancashire 1731, educated at Emmanuel College, Cambridge, was ordained and became curate to his uncle at Mitcham in Surrey. In 1768 he obtained the vicarage of South Mimms, which he shortly afterwards exchanged for that of Longdon in Worcestershire. He subsequently became rector of Tewkesbury, holding this living with Longdon. It was here that he began to entertain doubts on the Trinity and the Incarnation; but with his theological aberrations we cannot here occupy ourselves. He claims a place among Biblical writers solely by his work published in 1792, entitled, '*The dissonance of the four generally received Evangelists, and the evidence of their authenticity examined.*' In this he rejects the Gospels of Matthew, Mark, and John, the Epistles to the Romans, Ephesians, Colossians, Hebrews, those of James, Peter, John, and Jude, and the letters to the Seven Churches. His opinions appear to have excited considerable attention in his day, and the Bampton lectures of 1810 were directed against them; but his name is almost forgotten now. He died September 25, 1805.—S. L.

EVE (הַוָּה); Sept. Ζωή in Gen. iii. 20, elsewhere *Eḡa*, the name of the first woman. Her history is contained in that of ADAM, which see.

EVENING. [DAY.]

EVIL-MERODACH (אֵוִיל מֶרֶדַּךְ; Sept. *Εὐιαλαμαροδέκ, Οὐλαμαράδαρχα*), son and successor of Nebuchadnezzar, king of Babylon, who, on his accession to the throne (B.C. 562), released the captive king of Judah, Jehoiachin, from prison, treated him with kindness and distinction, and set his throne above the thrones of the other conquered kings who were detained at Babylon (2 Kings xxv. 27; Jer. lii. 31-34). [BABYLON; DARIUS.] A Jewish tradition (noticed by Jerome on Is. xiv. 29) ascribes this kindness to a personal friendship which

Evil-merodach had contracted with the Jewish king, when he was himself consigned to prison by Nebuchadnezzar, who, on recovering from his seven years' monomania, took offence at some part of the conduct of his son, by whom the government had in the meantime been administered. This story was probably invented to account for the fact. Evil-merodach is doubtless the same as the Ilvarodam of Ptolemy's *Canon*. The duration of his reign is made out variously by chronologers, some extending it to twenty-four years, others reducing it to two or three. Hales, who adopts the last number, identifies him with the king of Babylon who formed a powerful confederacy against the Medes, which was broken up, and the king slain by Cyrus, then acting for his uncle Cyaxares. But this rests on the authority of Xenophon's *Cyropædia*, the historical value of which he estimates far too highly. [CYRUS.]

The latter half of the name Evil-merodach is that of a Babylonian god. [MERODACH.] Two modes of explaining the former part of it have been attempted. Since אֵוִיל, as a Hebrew word, means 'foolish,' Simonis proposes to consider it the derivative of אֵוִל, in the Arabic signification of 'to be first,' affording the sense of 'prince of Merodach.' This rests on the assumption that the Babylonian language was of Syro-Arabian origin. Gesenius, on the other hand, who does not admit that origin, believes that some Indo-Germanic word, of similar sound, but reputable sense, is concealed under *evil*, and that the Hebrews made some slight perversion in its form to produce a word of contemptuous signification in Hebrew. [Fürst suggests Scr. *abhila*, terrible, as the etymon.]

EWALD (WILHELM ERNST), was born at Wachtersbach (Isenburg-Büdingen) in Germany, in 1704. He pursued his studies at Duisburg, Bremen, and Utrecht, and graduated at the University of the latter place in 1728 as D.D. He was first elected preacher at the Reformed Church of Altona, subsequently at that of Lehe, near Bremen, where he remained up to his death in 1741. His writings, chiefly consisting of Meditations and smaller dissertations on theological subjects, are rather numerous, but not of an eminent character. His principal work is—*Emblemata Sacra Miscellanæ, in quibus plurima Veteris ac Novi Testamenti loca et antiquitatibus sacris et profanis explicantur*, 3 parts, Lipsiæ et Altonaviæ, 1732-37, 4to. He also left a hitherto unpublished fragment of a commentary on the N. T. (St. Matthew, and five chapters of St. John).—E. D.

EXECUTIONER. In the margin of the A. V. of Gen. xxxvii. 36; Jer. xxxix. 9; Dan. ii. 14, the words עֹר הַטְּבָחִים or רֶב טְבָחִים, are rendered 'chief of the slaughtermen or executioners.' In the text the rendering is 'captain of the guard.' Both translations may be said to be correct, for the word טְבַח means *executioner*; and the body-guard of the king was employed not only to watch his palace and guard his person, but also to execute his (often bloody) mandates; so that the captain of the body-guard would be chief of the executioners. Another recognised rendering of the words is 'chief marshal' (2 Kings xxv. 8; Jer. xxxix. 9), which is less felicitous, for though the provost-marshal of an army sustains the office of executioner, it is not

an office like that designated by the phrase under notice. In the passages cited, the officer in question was an officer of the Egyptian or of the Chaldaean court; but an analogous officer seems to have been in the service of the kings of Israel (1 Kings ii. 25; 2 Kings x. 24. [ARMY.]) Among the modern Persians, the *Nasakshi Bashi*, and among the Turks the *Capidshi Bashi*, seem to hold similar situations.

In the N. T. the word *executioner* occurs as the translation of *σπεκουλάτωρα* in Mark vi. 27. In the Roman army the *Speculatores* were originally scouts or spies sent before to reconnoitre the ground; but under the emperors a body bearing this name existed whose special office it was to guard the emperor and execute his will (Tac. *Hist.* i. 24, 25; ii. 11; Suet. *Claud.* 35; *Galb.* 18, etc.) As these were often employed to put criminals to death (Seneca, *De Ira* i. 16; Wetstein *ad loc.*), the name they bore came to denote an executioner, and was adopted not only into Greek but also into Hebrew (ספקלִטוֹר), Lightfoot, *Hor. Heb. et Talm.*, in *loc.*)—W. L. A.

EXILE. [CAPTIVITY.]

EXODUS, THE. The intention of Jehovah to deliver the Israelites from Egyptian bondage was made known to Moses from the burning bush at Mount Horeb, while he kept the flock of Jethro, his father-in-law. Under the divine direction Moses, in conjunction with Aaron, assembled the elders of the nation, and acquainted them with the gracious design of Heaven. After this they had an interview with Pharaoh, and requested permission for the people to go, in order to hold a feast unto God in the wilderness. The result was not only refusal, but the doubling of all the burdens which the Israelites had previously had to bear. Moses hereupon, suffering reproach from his people, consults Jehovah, who assures him that he would compel Pharaoh 'to drive them out of his land.' 'I will rid you out of their bondage, and I will redeem you with a stretched-out arm and with great judgments' (Exod. iii.-vi. 6). Then ensue a series of miracles, commonly called the plagues of Egypt (Exod. vi.-xii.) [EGYPT, PLAGUES OF.] At last, overcome by the calamities sent upon him, Pharaoh yielded all that was demanded, saying, 'Rise up, and get you forth from among my people, both ye and the children of Israel; and go serve the Lord as ye have said; also take your flocks and your herds and be gone.' Thus driven out, the Israelites, to the number of about 600,000 adults, besides children, left the land, attended by a mixed multitude, with their flocks and herds, even very much cattle (Exod. xii. 31, *sq.*) Being 'thrust out' of the country, they had not time to prepare for themselves suitable provisions, and therefore they baked unleavened cakes of the dough which they brought forth out of Egypt.

On the night of the self-same day which terminated a period of 430 years, during which they had been in Egypt, were they led forth from Rameses, or Goshen [GOSHEN]. They are not said to have crossed the river Nile, whence we may infer that Goshen lay on the eastern side of the river. Their first station was at Succoth (Exod. xii. 37). The nearest way into the land of Promise was through the land of the Philistines. This route would have required them to keep on in a north-east direction.

It pleased their divine conductor, however, not to take this path, lest, being opposed by the Philistines, the Israelites should turn back at the sight of war into Egypt. If, then, Philistia was to be avoided, the course would lie nearly direct east, or south-east. Pursuing this route, 'the armies' come to Etham, their next station, 'in the edge of the wilderness' (Exod. xiii. 17, *sq.*) Here they encamped. Dispatch, however, was desirable. They journey day and night, not without divine guidance, for 'the Lord went before them by day in a pillar of a cloud, to lead them the way; and by night in a pillar of fire, to give them light; to go by day and night.' This special guidance could not well have been meant merely to shew the way through the desert; for it can hardly be supposed that in so great a multitude no persons knew the road over a country lying near to that in which they and their ancestors had dwelt, and which did not extend more than some forty miles across. The divine guides were doubtless intended to conduct the Israelites in that way and to that spot where the hand of God would be most signally displayed in their rescue and in the destruction of Pharaoh. 'I will be honoured upon Pharaoh and upon all his host, that the Egyptians may know that I am the Lord.' For this purpose Moses is directed of God to 'speak unto the children of Israel, that they turn and encamp before Pi-hahiroth, between Migdol and the sea, over against Baal-zephon; before it shall ye encamp by the sea: and they did so' (Exod. xiv. 2-4). We have already seen reason to think that the direction of the Israelites was to the east or south-east; this turning must have been in the latter direction, else they would have been carried down towards the land of the Philistines, which they were to avoid. Let the word 'turn' be marked; it is a strong term, and seems to imply that the line of the march was bent considerably towards the south, or the interior of the land. The children of Israel then are now encamped before Pi-hahiroth, between Migdol and the sea, also 'by the sea.' Their position was such that they were 'entangled in the land, the wilderness hath shut them in.'

A new scene is now laid open. News is carried to Pharaoh which leads him to see that the reason assigned (namely, a sacrifice in the wilderness) is but a pretext; that the Israelites had really fled from his yoke; and also that, through some (to him) unaccountable error, they had gone towards the south-east, had reached the sea, and were hemmed in on all sides. He summons his troops and sets out in pursuit—'all the horses and chariots of Pharaoh, and his horsemen and his army;' and he 'overtook them encamping by the sea, beside Pi-hahiroth, before Baal-zephon' (Exod. xiv. 9). The Israelites see their pursuing enemy approach, and are alarmed. Moses assures them of divine aid. A promise was given as of God that the Israelites should go on dry ground through the *midst* of the sea; and that the Egyptians, attempting the same path, should be destroyed! 'and I will get me honour upon Pharaoh and all his host, upon his chariots and his horsemen' (ver. 17). Here a very extraordinary event takes place: 'The angel of God, which went before the camp of Israel, removed and went behind them; and the pillar of the cloud went from before their face and stood behind them; and it came between the camp of the Egyptians and the camp of Israel;

and it was a cloud and darkness to them, but it gave light by night to these; so that the one came not near the other all the night' (ver. 19, 20). Then comes the division of the waters which we give in the words of the sacred historian: 'And Moses stretched out his hand over the sea, and the Lord caused the sea to go back by a strong east wind all that night, and made the sea dry land, and the waters were divided. And the children of Israel went into the midst of the sea upon the dry ground; and the waters were a wall unto them on their right hand and on their left. And the Egyptians pursued and went in after them to the *midst of the sea*, even all Pharaoh's horses, his chariots, and his horsemen.' Delays are now occasioned to the Egyptians; their chariot-wheels are supernaturally taken off, so that 'in the morning-watch they drove them heavily.' The Egyptians are troubled; they urge each other to fly from the face of Israel. 'Then Moses stretched forth his hand over the sea, and the sea returned to his strength when the morning appeared; and the Egyptians fled against it; and the Lord overthrew the Egyptians in the *midst of the sea*. And the waters returned and covered the chariots and the horsemen and all the host of Pharaoh that came into the sea after them; there remained not as much as one of them. But the children of Israel walked upon dry land in the midst of the sea, and the waters were a wall unto them on their right hand and on their left. And Israel saw the Egyptians dead upon the sea-shore; and the people feared the Lord, and believed the Lord and his servant Moses' (ver. 28-31). From the song of triumph which Moses sang upon this occasion we learn some other particulars, as that 'the depths covered Pharaoh's host, they sank to the bottom as a stone;' language which, whatever deduction may be made for its poetic character, implies that the miracle took place in deep water. 'Thou sentest forth thy wrath which consumed them as stubble, and with the blast of thy nostrils the waters were gathered together, the floods stood upright as an heap, and the depths were congealed in the heart of the sea; thou didst blow with thy wind, the sea covered them; they sank as lead in the mighty waters'—all which would be not poetry, but bombast, had not the wind been as miraculous as any other part of the event, and had not the sea been large and deep (Exod. xv. ; comp. Ps. cvi. 9, sq.)

Such is the bearing and import of the sacred narrative. If any intelligent reader, knowing nothing of the theories of learned men, were to peruse the account given in Exodus with a map before him, he would, we doubt not, be led to conclude that the route of the Israelites lay towards the south-east, up the Red Sea, and that the spot where they crossed was at a place encircled by mountains on the side of the desert, and fronted by deep and impassable waters: he would equally conclude that the writer in Exodus intended to represent the rescue as from first to last the work of God. Had the Israelites been at a place which was fordable under any natural influences, Pharaoh's undertaking was absurd. He knew that they were entangled,—mountains behind and on either hand, while the deep sea was before them. Therefore he felt sure of his prey, and set out in pursuit. Nothing but the divine interposition foiled and punished him, at the same time redeeming the Israelites. And this view, which the unlearned but

intelligent reader would be led to take, involves, in fact, all that is important in the case. But a dislike of the miraculous has had an influence, and erudition has tried to fix the precise spot: whence have arisen views and theories which are more or less discordant with the Scripture, or are concerned with comparative trifles. So far as aversion to miracle has had an influence in the hypotheses which have been given, all we shall remark is, that in a case which is so evidently represented as the sphere of miracle, there is but one alternative,—they who do not admit the miracle must reject the narrative; and far better would it be to do so frankly than to construct hypotheses which are for the most part, if not altogether, purely arbitrary. A narrative obviously miraculous (in the intention of the writer) can be explained satisfactorily on no rationalistic principles: this is not to expound but to 'wrest' the Scriptures; a position which, in our opinion, has been fully established, in relation to the Gospels, against the whole of the rationalistic school of interpretation.

The account now given must, as being derived immediately from the Scripture, be in the main correct. If the authority is denied, this can be done effectually by no other means than by disproving in general the authority of the books whence it is derived; and it may with truth be affirmed, that no view opposed to that given can possess greater claims on our credit, while any mere sceptical opinion must rest on its own intrinsic probability, contested, so far as it opposes the Scripture, by scriptural authority.

When, however, we descend from generals to particulars, and attempt to ascertain precise localities and determine details, diversity of opinion may easily arise, and varying degrees of probability only are likely to attend the investigation. For instance, the immediate spot which Moses proposed to reach, was, we know, on the Red Sea; but the precise line which he took depended of course on the place whence he set out. With difference of opinion as to the spot where the Hebrews had their rendezvous, there cannot be agreement as to the route they followed.

The position of Goshen, where the Israelites were settled, we shall endeavour to fix in another article. It is enough here to say, that it was on the eastern side of the Nile, probably in the province of Esh-Shurkiyeh. Rameses was the place of rendezvous. The direct route thence to the Red Sea was along the valley of the ancient canal. By this way the distance was about thirty-five miles. From the vicinity of Cairo, however, there runs a range of hills eastward to the Red Sea, the western extremity of which, not far from Cairo, is named *Jebel-Mokattem*; the eastern extremity is termed *Jebel-Attaka*, which, with its promontory *Ras Attaka*, runs into the Red Sea. Between the two extremes, somewhere about the middle of the range, is an opening which affords a road for caravans. Two routes offered themselves here. Supposing that the actual starting point lay nearer Cairo, the Israelites might strike in from the north of the range of hills, at the opening just mentioned, and pursue the ordinary caravan road which leads from Cairo to Suez; or they might go southward from *Mokattem*, through the *Wady el Tih*, that is, the Valley of Wandering, through which also a road, though less used, runs to Suez. According to Niebuhr they took the first, accord-

ing to ancient tradition, Father Sicard (*Ueber der Weg der Israeliten*, Paulus, *Samml. v. 211, sq.*), and others, they took the last. Sicard found traces of the Israelites in the valley. He held Rameses to be the starting point, and Rameses he placed about six miles from ancient Cairo, where Bezatin is now found. Here is a capacious sandy plain, on which Sicard thinks the Israelites assembled on the morning when they began their journey. In this vicinity a plain is still found, which the Arabs call the Jews' Cemetery, and where, from an indefinite period; the Jews have buried their dead. In the Mokatem chain is a hill, a part of which is called Mejanat Musa, 'Moses' Station.' On another hill in the vicinity, ruins are found, which the Arabs name Meravad Musa, 'Moses' Delight.' Thus several things seem to carry the mind back to the time of the Hebrew legislator. Through the valley which leads from Bezatin (the Valley of Wandering) to the Red Sea, Sicard travelled in three days. He reckons the length to be twenty-six hours, which, if we give two miles to each hour (Robinson), would make the distance fifty-two miles. This length is also assigned by Girard (*Descrip. Topograp. de la Vallée de l'Egarement*). The valley running pretty much in a plain surface would afford a convenient passage to the mixed bands of Israelites. About eighteen miles from Bezatin you meet with Gendelhy, a plain with a fountain. The name signifies a military station, and in this Sicard finds the Succoth (tents) of Exodus, the first station of Moses. The haste with which they left (were driven out) would enable them to reach this place at nightfall of their first day's march. Sicard places their second station, Etham, in the plain Ramlyeh, eighteen miles from Gendelhy and sixteen from the sea. From this plain is a pass, four miles in length, so narrow that not more than twenty men can go abreast. To avoid this, which would have caused dangerous delay, the order was given to turn (Exod. xiv. 2). Etham is said (Exod. xiii. 20) to be on the edge of the wilderness. Jablonski says the word means terminus maris, the termination or boundary of the sea. Now, in the plain where Sicard fixes Etham (not to be confounded with the Eastern Etham, through which afterwards the Israelites travelled three days, Num. xxxiii. 8), is the spot where the waters divide which run to the Nile and to the Gulf of Suez, and Etham is therefore truly *terminus maris*. Here the Israelites received command to turn and encamp (Exod. xiv. 2) before Pi-hahiroth, between Migdol and the sea, over against Baal-zephon. Pi-hahiroth (the mouth of the hiding-places), Sicard identifies with Thuarek (small caves), which is the name still given to three or four salt springs of the plain Baideah, on the south side of Mount Attaka, which last Sicard identifies with Baal-zephon, and which is the northern boundary of the plain Baideah, while Kuiabeh (Migdol) is its southern limit. The pass which leads to Suez, between Attaka and the sea, is very narrow, and could be easily stopped by the Egyptians. In this plain of Baideah, Pharaoh had the Israelites hemmed in on all sides. This then, according to all appearance, is the spot where the passage through the sea was effected. Such is the judgment of Sicard and of Raumer (*Der Zug der Israeliten*, Leipzig, 1837; for a description of the Valley of Wandering see

also Ritter, *Erdekunde*, i. 858). It cannot be denied that this route satisfies all the conditions of the case. Equally does the spot correspond with the miraculous narrative furnished by holy writ. A different route is laid down by Niebuhr (*Arab.* p. 407). Other writers, who, like him, endeavour to explain the facts without the aid of miracle, imitate his example.

It is no small corroboration of the view now given from Sicard and Raumer, that in substance it has the support of Josephus, of whose account we shall, from its importance, give an abridgment. 'The Hebrews,' he says (*Antiq.* ii. 15), 'took their journey by Latopolis, where Babylon was built afterwards when Cambyses laid Egypt waste. As they went in haste, on the third day they came to a place called Baal-zephon, on the Red Sea. Moses led them this way in order that the Egyptians might be punished should they venture in pursuit, and also because the Hebrews had a quarrel with the Philistines. When the Egyptians had overtaken the Hebrews they prepared to fight them, and by their multitude drove them into a narrow place; for the number that went in pursuit was 600 chariots, 50,000 horsemen, and 200,000 infantry, all armed. They also seized the passages, shutting the Hebrews up between inaccessible precipices and the sea; for there was on each side a ridge of mountains that terminated at the sea, which were impassable, and obstructed their flight. Moses, however, prayed to God, and smote the sea with his rod, when the waters parted, and gave the Israelites free passage. The Egyptians at first supposed them distracted; but when they saw the Israelites proceed in safety, they followed. As soon as the entire Egyptian army was in the channel, the sea closed, and the pursuers perished amid torrents of rain and the most terrific thunder and lightning.'

The opposition to the scriptural account has been of two kinds. Some writers (Wolfenb. *Fragm.* p. 64, *sq.*) have at once declared the whole fabulous; a course which appears to have been taken as early as the time of Josephus (*Antiq.* ii. 16. 5). Others have striven to explain the facts by the aid of mere natural causes; for which see Winer, *Handwörterbuch*, art. Meer Rothes. A third mode of explanation is pursued by those who do not deny miracles as such, and yet, with no small inconsistency, seek to reduce this particular miracle to the smallest dimensions. Writers who see in the deliverance of the Hebrews the hand of God and the fulfilment of the divine purposes, follow the account in Scripture implicitly, placing the passage at Ras Attaka, at the termination of the Valley of Wandering; others, who go on rationalistic principles, find the sea here too wide and too deep for their purpose, and endeavour to fix the passage a little to the south or the north of Suez.

The most recent advocate of the passage at or near Suez is the learned Dr. Robinson (*Biblical Researches in Palestine*), from whom we hesitate to differ, and should hesitate still more, did not his remarks bear obvious traces of being, however the author may be ignorant of the fact, influenced, if not dictated, by some foregone conclusion and certain rationalistic habits of mind. While, however, we pay every proper tribute of respect to Dr. Robinson's learning and diligence, we must prefer the authority of Scripture and the obvious

facts of the case to all other considerations. The route taken by Moses was, according to Robinson, from Rameses to the head of the Arabian Gulf, through Succoth, to Etham. The last place he fixes on the edge of the desert, on the eastern side of the line of the gulf. Instead of passing down the eastern side, at the top of which they were, the Israelites thence marched down the western side of the arm of the gulf, stopping in the vicinity of Suez, where the passage was effected.

This view represents Moses as having actually conducted his people first out of all danger, and then led them at once into it, by placing the gulf between them and safety. Such a proceeding ill became a prudent leader, having to do with a self-willed and stiff-necked band. But the chief objection to this representation of the route is, that it does not answer to what Scripture requires; for in Exod. xiii. 18, we are told that 'God led the people *about through the wilderness of the Red Sea.*' How, according to Robinson, did he 'lead them about,' especially '*through the wilderness of the Red Sea,*' which they must merely have touched upon?

The passage Robinson thinks took place 'across shoals adjacent to Suez on the south and south-west,' 'where the broad shoals are still left bare at the ebb, and the channel is sometimes forded,' 'a distance of three or four miles from shore to shore;' or 'it might have been effected through the arm of the gulf above Suez.' A simple reference to the language of Scripture previously cited confutes this supposition; for where, in or near this place, are the deep waters of which Moses speaks? Besides, is it for a moment to be supposed that Pharaoh was not well acquainted with the tides of a sea which lay so near his capital? and would he have been so infatuated as to remain quietly in his position (for the Scripture shews that the two armies were some time in sight of each other) until the Israelites had availed themselves of the ebb, and then, when the flood came, quietly go into the sea and be destroyed? In order to help out his hypothesis, conscious, apparently, that the body of water here was insufficient, Dr. Robinson advances a supposition (but for suppositions his view would look as groundless as it really is), namely, that with the flood-tide the wind was changed. But a perusal of his scriptural reference (Exod. xv. 8-10) shews that this alleged change is without evidence—a pure supposition: the language in the 8th verse has respect to the wind which divided the sea; and the language in the 10th verse in no way implies any change of direction whatever; the same wind, in the hand of God, could both divide and close the sea.

The great question, however, is the cause or instrument employed in securing the Israelites a passage on dry ground, and overwhelming the Egyptians. On this point we complain of a want of explicitness in Dr. Robinson. He does not deny a miracle, but blends together the miraculous and the natural, so as to confuse his own and his reader's mind. 'It (the miracle) was wrought by natural means supernaturally applied.' A north-east wind was brought of God to act on the water as the sea was ebbing, which gave a dry passage to the Israelites. We are therefore 'to look only for the natural effects arising from the operation of such a cause.' The sole causes then in the case were a north-east wind, the ebb-tide, the flood, and a change of wind to aid the

action of the flood. Of these causes, the last, the change of wind, is, as we have seen, a gratuitous assumption. From 'north-east wind' we must strike out 'north,' as being another gratuitous assumption—it is 'a strong east wind' of which Moses speaks. An east wind, however, would by no means effect the purposes needful for Dr. Robinson's hypothesis. Of his remaining causes, the ebb and flood tide, enough has already been said; and, so far as an east wind, acting *naturally*, would have an effect, it would drive the waters upon the shallows, which Dr. Robinson wants dry. But we much question whether his assumed 'north-east wind' would cause what he requires. It would, he alleges, 'have the effect to drive out the waters from the small arm of the sea which runs up by Suez, and also from the end of the gulf itself, leaving the shallower portions dry, while the more northern part of the arm, which was anciently broader and deeper than at present, would still remain covered with water. Thus the waters would be divided, and be a wall to the Israelites on the right hand and on the left.' We desire the reader to consult the map appended to Dr. Robinson's first volume. While considering the hypothesis in question, he must remember that the action of ebb and flood tide rests on no better ground than an assumption; the Scripture says nothing thereof. Now a wind setting in at the head of the gulf would commence its influence of course at the end of the arm which runs up to the east of Suez, and would, so far as it acted, bear down the waters from the top towards the very place which the hypothesis requires to be dry, namely, the head of the gulf, thus covering the shallows. But if, to avoid this difficulty, Dr. Robinson fixes the passage in the arm itself, then how could a wind, acting on the waters in the arm, 'divide' them? Drive them out, scatter them to some extent, it might, but surely not divide them. Nor does Dr. Robinson secure by his other supposition, namely, the passage over the shallows, such a division as the Scripture requires. Supposing the effect which he contemplates to be produced, then there would be on the north side of the shallows so much of the sea as the wind had left in the arm, and so much of the sea as lingered under its driving impulse on the south side of the shallows. With this in his mind let the reader peruse the scriptural account, 'the waters were a wall to them on the right hand and on the left.' By Dr. Robinson's account there was no wall at all, but such a state of the sea and land as would render the choice of the language employed by Moses most inappropriate. In truth, however, the east wind of which Moses speaks was precisely the influence to bring about the effect which he alleges to have taken place. Acting on the sea at a right angle it would literally divide the waters, causing the mid-way to be dry, and a wall to stand on either side. Such obviously is the view which Moses intended to give. In endeavouring to define and estimate the action of this east wind, however, it must be borne in mind that the Scripture represents the entire affair as miraculous. It was from first to last 'the hand of the Lord,'—the east wind and its action, as much as the collapse of the sea. The east wind, indeed, is also termed 'the blast of thy nostrils;' and so 'thou didst blow with thy wind, the sea covered them.'

The miraculous character of the transaction, as affirmed in Scripture, takes all point from the question of time, which Dr. Robinson says is fatal to the alternative hypothesis, namely, that the Israelites crossed from Wady Tawarik; since there is no occasion, in order to sustain the narrative of Moses, to calculate whether the interval between the ebb and the flow of the tide afforded sufficient time for the Israelites to cross the bed of the sea, a distance of twelve geographical miles. The passage did not depend on ebb or flow. It was not a question of mere time. The right hand of the Lord was at work.

It appears then very clear, by comparing Dr. Robinson with Moses and with facts, that his 'extraordinary ebb, brought about by natural means,' could not have produced such a state of things as he supposes, still less such a state of things as the miracle requires. The only resource is to deny the miracle, and disown the entire account. If this bold course is declined, then the passage at Suez or across the arm must be given up in favour of one lying far more to the south.

These strictures on Dr. Robinson's hypothesis are in no way prompted by any previous leaning to a preference in favour of the passage at Ras Attaka, for they were penned exclusively under the influence of the scriptural narrative. And if authority is needed as against one who has been on the spot, what has already been given from Sicard might be deemed sufficient, especially when it so obviously agrees with the tenor of the accounts found in Exodus and in Josephus. But other witnesses are not wanting. Mr. Blumhardt, in his missionary visit to Abyssinia, passed through Suez (Oct. 1836, see *Church Missionary Record*, No. 1, Jan. 1838), and furnishes some remarks on the subject. 'The Red Sea at Suez is exceedingly narrow, and in my opinion it cannot be that the Israelites here experienced the power and love of God in their passage through the Red Sea. The breadth of the sea is at present scarcely a quarter of an hour by Suez. Now if this be the part which they crossed, how is it possible that all the army of Pharaoh, with his chariots, could have been drowned? I am rather inclined to believe that the Israelites experienced that wonderful deliverance about thirty miles lower down. This opinion is also strengthened by most of the Eastern churches, and the Arabs, who believe that the Israelites reached the opposite shore at a place called Gebel Pharaon, which on that account has received this name. If we accept this opinion, it agrees very well with the Scripture.' Still more important is the evidence of Dr. Olin (*Travels in the East*, New York, 1843). Many of his remarks we have anticipated in our observations on Robinson. Dr. Olin, however, agrees with Robinson in fixing Etham 'on the border of the wilderness which stretches along the eastern shore of the arm of the sea which runs up above Suez.' At this point he says the Hebrews were commanded to turn. They turned directly southward and marched to an exposed position, hemmed in completely by the sea, the desert, and Mount Attaka. A false confidence was thus excited in Pharaoh, and the deliverance was made the more signal and the more impressive alike to the Israelites and to Egypt. Admitting the possibility that the sea at Suez may have been wider and deeper than it is now, Olin remarks, 'it must still have been very difficult, if not impossible,

for the army of Israel, encumbered with infants and aged people, as well as with flocks, to pass over (near Suez) in the face of their enemies' (i. 346). Besides, the peculiarities of the place must have had a tendency to disguise the character and impair the effect of the miracle. The passage made at the intervention of Moses was kept open all night. The Egyptians followed the Hebrews *to the midst of the sea*, when the sea engulfed them. 'The entire night seems to have been consumed in the passage. It is hardly credible that so much time should have been consumed in crossing near Suez, to accomplish which one or two hours would have been sufficient.' 'Nor is it conceivable that the large army of the Egyptians should have been at once within the banks of so narrow a channel. The more advanced troops would have reached the opposite shore before the rear had entered the sea; and yet we know that all Pharaoh's chariots and horsemen followed to the *midst* of the sea, and, together with all the host that came in after them, were covered with the returning waves' (i. 348). Preferring the position at Ras Attaka, Olin states that the gulf is here ten or twelve miles wide. 'The valley expands into a considerable plain, bounded by lofty precipitous mountains on the right and left, and by the sea in front, and is sufficiently ample to accommodate the vast number of human beings who composed the two armies.' 'An east wind would act almost directly across the gulf. It would be unable to co-operate with an ebb tide in removing the waters—no objection certainly if we admit the exercise of God's miraculous agency; but a very great impediment in the way of any rationalistic hypothesis. 'The channel is wide enough to allow of the movements described by Moses, and the time, which embraced an entire night, was sufficient for the convenient march of a large army over such a distance.' 'The opinion which fixes the point of transit in the valley or wady south of Mount Attaka derives confirmation from the names still attached to the principal objects in this locality. Upon this point I acknowledge my obligations to the Rev. Mr. Leider, of Cairo, who has spent more than ten years in Egypt, is familiar with the Arabic language, and has devoted much attention to this vexed question. He recently spent several days in this neighbourhood in making investigations and inquiries in reference to the passage of the Israelites. Jebel Attaka, according to Mr. Leider, who only confirms the statements of former travellers, means in the language of the Arabs 'the Mount of Deliverance.' Baideah or Bedeah, the name of this part of the valley, means 'the Miraculous,' while Wady el Tih means 'the Valley of Wanderings.' Pi-hahiroth, where Moses was commanded to encamp, is rendered by scholars 'the mouth of Hahiroth,' which answers well to the deep gorge south of Attaka, but not at all to the broad plain about Suez' (i. 350).

Other parts of the line of march pursued by the Israelites will be found treated of under the heads MANNA, SINAI, WANDERING.—J. R. B.

EXODUS (Gr. Ἐξόδος, in the Hebrew canon מִצְרַיִם וְאֶרֶץ מִצְרַיִם), the second book of Moses, so called from the principal event recorded in it, namely, the departure of the Israelites from Egypt. With this book begins the proper history of that people,

continuing it until their arrival at Sinai, and the erection of the sanctuary there. It transports us in the first instance to Egypt, and the quarter in which the Israelites were domiciled in that country. We do not find in the Pentateuch a real history of the people of Israel during this period. Such a history, in the more strict acceptation of the term, has no place in an historical sketch of the kingdom of God, where the mere description of the situation and condition of the people is all that is requisite. From that description we learn satisfactorily how the people of the Lord were negatively prepared for the great object which God had decreed with regard to them. This is the important theme of the history of the Pentateuch during the whole long period of four hundred years. Exodus is very circumstantial in its account of the life of Moses, which, instead of partaking of the character of usual biography, manifests in all its details a decided aim of evincing how, by the miraculous dispensation of the Lord, Moses had been even from his earliest years prepared and reared to become the chosen instrument of God. In this book is developed, with particular clearness, the summons of Moses to his sacred office, which concludes the first important section of his life (Exod. i.-vi.) No human choice and no self-will, but an immediate call from Jehovah alone, could decide in so important an affair. Jehovah reveals himself to him by his covenant-name (יהוה), and vouchsafes him the power to work miracles such as no man before him had ever wrought. It was not the natural disposition and bent of his mind that induced Moses to accept the office, but solely his submission to the express will of God, his OBEDIENCE alone, that influenced him, the LAWGIVER, to undertake the mission. The external relation of Moses to his people is also clearly defined (comp. *et. gr.* Exod. vi. 14, *sq.*) This furnishes the firm basis on which is founded his own as well as Aaron's personal authority, and the respect for his permanent regulations. A new section (vii.-xv.) then gives a very detailed account of the manner in which the Lord glorified himself in Israel, and released the people from the land of bondage. This forms a turning-point in the narrative—with it begins the real history of the people of God. Every day affords here an eternal demonstration of divine grace, justice, and majesty. The relation of the theocracy to heathenism, the representative of which is Egypt, is here illustrated by facts. The history contained in Exodus may very fairly be described as the history of the triumph of Israel, or rather of Israel's God, over the heathen power, which appears here in its innermost spirit of revolt against God. The world is conquered progressively and with increased force; and the passover manifests on the one hand the annihilation of worldly power, while on the other hand it is the celebration of the birth-day of the people of God. This section of the history then concludes with a triumphal song, celebrating the victory of Israel. In ch. xvi.-xviii. we find the introduction to the second principal part of this book, in which is sketched the manifestation of God in the midst of Israel, as well as the promulgation of the law itself, in its original and fundamental features. This preparatory section thus furnishes us with additional proof of the special care of God for his people; how he provided their food and water, and how he protected them from the assaults of their foes. In ch. xv. 22, *sq.*, not

all, but only the remarkable resting-places are mentioned, where Jehovah took special care of his people. In the account (xviii.) of the civil regulations framed by the advice of Jethro, a strong line of demarcation is drawn between the changeable institutions of man and the divine legislation which began then to be established, and which thenceforth claims by far the greatest part of the work. At the commencement of the legislation is a brief summary of the laws, with the decalogue at their head (xix.-xxiii.) The decalogue is the true fundamental law, bearing within itself the germ of the entire legislation. The other legal definitions are only further developments of the decalogue. These definitions manifest the power and extent of the law itself, shewing what an abundance of new regulations result from the simple and few words of the decalogue. Upon this basis the covenant is concluded with the Israelites, in which God reveals himself in agreement with the understanding and the exigencies of the people. Not until this covenant was completed did it become possible for the Israelites to enter into a communion with God, confirmed and consecrated by laws and offerings, and thereby to receive further revelations from him (ch. xxiv.) Whatsoever after this, in the twenty-fifth and in the following chapters, is communicated to the people, concerns the dwelling of God in the midst of Israel. By this dwelling of God among Israel it is intended to shew, that the communion is permanent on the part of God, and that on the part of the people it is possible to persevere in communion with God. Consequently there follows the description of the sanctuary, the character of which is symbolical. The sacred symbols are, however, not so much expressed in formal declarations, as contained in the whole tenor of the descriptions. The symbolics begin with the central point, the holy of holies, which unites in itself the impeaching law and the redeeming symbol of divine mercy, and thus sets forth the reconciliation of God with the people. This is followed by the description of the sanctuary, representing those blessings which through the holy of holies were communicated to the subjects of the theocracy, and serving as a perpetual monument of Israel's exalted destiny, pointing at the same time to the means of attaining it. Last comes the description of the fore-court, symbolising the participation of the people in those blessings, and their sanctified approach to the Lord. The description then proceeds from the sanctuary to the persons officiating in it, the priests, characterized both by their various costumes (xxviii.), and the manner of their inauguration (xxix.) Then follows, as a matter of course, the description of the service in that sanctuary and by those priests, but merely in its fundamental features, confining itself simply to the burnt and incense offerings, indicating by the former the preparatory inferior service, and by the latter the complete and higher office of the sacerdotal function. But, by contributing to the means of establishing public worship, the whole nation shares in it; and therefore the description of the officiating persons very properly concludes with the people (xxx.) As a suitable sequel to the former follows the description of the use and nature of the implements requisite for the service of the priests, such as the brass laver for sacred ablutions, the preparation of the perfume and anointing oil (xxx. 17-38). These regulations being made, men endowed with the Spirit of God were also to be

appointed for making the sacred tabernacle and all its furniture (xxxi. 1-11). The description of the sanctuary, priesthood, and mode of worship, is next followed by that of the sacred times and periods (xxxi. 12, *sq.*) Of the sacred times there is here only appointed the Sabbath, in which the other regulations are contained as in their germ. God having delivered to Moses the tables of the law, the construction and arrangement of the tabernacle might thus at once have been begun, had its further progress not been interrupted by an act of idolatry on the part of the people, and their punishment for that offence, which form the subject of the narrative in ch. xxxii.-xxxiv. Contrary and in opposition to all that had been done by Jehovah for and in the presence of Israel, the subjective formidable apostasy of the latter manifests itself in a most melancholy manner, as an ominously significant prophetic fact, which is incessantly repeated in the history of subsequent generations. The narrative of it is therefore closely connected with the foregoing accounts—Jehovah's mercy and gracious faithfulness on the one hand, and Israel's barefaced ingratitude on the other, being intimately connected. This connection forms the leading idea of the whole history of the theocracy. It is not till after the narrative of this momentous event that the account of the construction and completion of the tabernacle can proceed (xxxv.-xl.), which account becomes more circumstantial in proportion as the subject itself is of greater importance. Above all, it is faithfully shewn that all was done according to the commands of Jehovah.

In the descriptive history of Exodus a fixed plan, in conformity with the principles above stated, is consistently and visibly carried through the whole of the book, thus giving us the surest guarantee for the unity of both the book and its author. In vain have several modern critics attempted to discover here also sundry sources and manifold original documents, or even fragments, but loosely connected with each other (comp. *ex. gr.* De Wette, *Introd. to the O. T.*, sec. 151). Such an assumption proves in this case in particular to be nothing more than a last resource of argument against the Mosaic composition of the book. De Wette has of late been induced, in favour of this hypothesis, to declare that in some portions of Exodus the source is uncertain, and that there took place a mixture of both sources, the Mosaic and the non-Mosaic (comp. PENTATEUCH). Nor are other modern critics more successful in their attempts to shew in this book traces of a post-Mosaic origin. Among the passages quoted in support of that assertion is xxiii. 9, the law contained in which seems to imply a later state of the people during their settled abode in Palestine. Regulations about strangers were, however, of importance during their abode in the desert, especially since a number of Egyptians had joined the Israelites, and stood to them in the relation of strangers. Chap. xvi. 36, also, is quoted in favour of the above opinion, because the *omer* is designated therein as the tenth part of an *ephah*, implying that changes had in later times been made in the Hebrew measures. But they forget that the Hebrew word עמר does not at all indicate a definite measure, but merely a vessel, the size of which it was therefore necessary to specify by giving its exact measurement. In vi. 26, 27, also, they think they recognise the hand of a later author, who refers to Moses and Aaron,

and describes their character. The least attention, however, to the preceding genealogy, and the descriptive style of the Pentateuch in general, must soon convince them that even a contemporary writer might have spoken in the way which Moses does in these passages.

For neological criticism it was of the utmost importance to stamp this book as a later production, the miracles contained in its first part but too manifestly clashing with the principles in which that criticism takes its starting-point. Its votaries therefore have endeavoured to shew that those miracles were but mythological fictions which had been gradually developed in process of time, so that the very composition of the book itself must necessarily have been of a later date. Neither do we wonder at such attempts and efforts, since the very essence and central point of the accounts of the miracles given in that book are altogether at variance with the principles of rationalism and its criticism, which can by no means admit the rise and formation of a people under such miraculous circumstances, such peculiar belief, and, in a religious point of view, such an independent existence, at the side of all the other nations of antiquity. Indeed, the spiritual substance of the whole, the divine idea which pervades and combines all its details, is in itself such a miracle, such a peculiar and wondrous phenomenon, as to lend natural support and undeniable confirmation to the isolated and physical wonders themselves; so that it is impossible to deny the latter without creating a second and new wonder, an unnatural course in the Jewish history. Nor is that part of the book which contains the miracles deficient in numerous historical proofs in verification of them. As the events of this history are laid in Egypt and Arabia, we have ample opportunity of testing the accuracy of the Mosaic accounts, and surely we find nowhere the least transgression against Egyptian institutions and customs; on the contrary, it is most evident that the author had a thorough knowledge of the Egyptian institutions and the spirit that pervaded them. Exodus contains a mass of incidents and detailed descriptions which have gained new force from the modern discoveries and researches in the field of Egyptian antiquities (comp. Hengstenberg, *Die Buches Mosis und Aegypten*, Berlin, 1841). The description of the passage of the Israelites through the desert also evinces such a thorough familiarity with the localities as to excite the utmost respect of scrupulous and scientific travellers of our own time for the authenticity of the Pentateuch (comp. *ex. gr.* Raumer, *Der Zug der Israeliten aus Aegypten nach Canaan*, Leipz. 1837). Nor is the passover-festival, its rise and nature, less confirmatory of the incidents connected with it, if we have not recourse to the desperate expedient—as rationalistic criticism really does—of ascribing to that festival a quite different signification originally, namely, a purely physical one, an opinion which brings its advocates in conflict with the whole of the Israelitish history. The arrangements of the tabernacle, described in the second part of Exodus, likewise throw a favourable light on the historical authenticity of the preceding events; and the least tenable of all the objections against it are, that the architectural arrangements of the tabernacle were too artificial, and the materials and richness too costly and precious for the condition and position of the Jews at that early period, etc. But the

critics seem to have overlooked the fact that the Israelites of that period were a people who had come out from Egypt, a people possessing wealth, Egyptian culture and arts, which we admire even now in the works which have descended to us from ancient Egypt; so that it cannot seem strange to see the Hebrews in possession of the materials or artistic knowledge requisite for the construction of the tabernacle. Moreover, the establishment of a TENT as a sanctuary for the Hebrews can only be explained from their abode in the desert, being in perfect unison with their then roving and nomadic life; and it is therefore a decided mistake in those critics who give to the sacred tent a later date than the Mosaic; while other critics (such as De Wette, Von Bohlen, Vatke) proceed much more consistently with their views, by considering the narrative of the construction of a sacred tabernacle to be a mere fiction in Exodus, introduced for the purpose of ascribing to the temple of Solomon a higher antiquity and authority. However, independently of the circumstance that the temple necessarily presupposes the existence of a far older analogous sanctuary, the whole process of such a forced hypothesis is but calculated to strike out a portion from the Jewish history on purely arbitrary grounds. The extremely simple and sober style and views throughout the whole narrative afford a sure guarantee for its authenticity and originality. Not a vestige of a poetical hand can be discovered in Exod. xviii.; not even the most sceptical critics can deny that we read here on purely historical ground. The same may fairly be maintained of ch. xx.-xxiii. How is it then possible that one and the same book should contain so strange a mixture of truth and fiction as its opponents assert to be found in it? The most striking proofs against such an assumption are, in particular, the accounts, such as in Exod. xxxii. *sq.*, where the most vehement complaints are made against the Israelites, where the high-priest of the covenant-people participates most shamefully in the idolatry of his people. All these incidents are described in plain and clear terms, without the least vestige of later embellishments and false extolling of former ages. The whole representation indicates the strictest impartiality and truth. On the literature of Exodus, see PENTATEUCH.—H. A. C. H.

EXORCIST (ἔξορκιστής, Acts ix. 13). The belief in demoniacal possessions, which may be traced in almost every nation, has always been attended by the professed ability, on the part of some individuals, to release the unhappy victims from their calamity. In Greece men of no less distinction than both Epicurus (Diog. Laer. x. 4) and Æschines, were sons of women who lived by this art; and both were bitterly reproached, the one by the Stoics, and the other by his great rival orator Demosthenes (*De Cor.*, sec. 79), for having assisted their parents in these practices. The allusions to the practice of exorcism among the Jews, contained both in their own authors and in the N. T., are too well known to render quotations necessary. In some instances this power was considered as a divine gift; in others it was thought to be acquired by investigations into the nature of demons and the qualities of natural productions, as herbs, stones, etc., and of drugs compounded of them; by the use of certain forms of adjurations, invo-

ocations, ceremonies, and other observances. Indeed, the various forms of exorcism, alluded to in authors of all nations, are innumerable, varying from the bloody human sacrifice down to the fumes of brimstone, etc. etc. The power of expelling demons Josephus places among the endowments of Solomon, and relates that he *left behind him* the manner of using exorcisms by which they drive away demons (for the pretended fragments of these books see Fabric. *Cod. Pseud. Vet. Test.* p. 1054). He declares that he had seen a man, named Eleazar, releasing people that were demoniacal, in the presence of Vespasian, his sons, captains, and the whole multitude of his soldiers. He describes the manner of cure thus: 'He put a ring that had a *root* of one of those sorts mentioned by Solomon to the nostrils of the demoniac; after which he drew out the demon through his nostrils, and when the man fell down he adjured him to return no more, making still mention of Solomon and reciting the incantations he composed.' He further adds, that when Eleazar would persuade and demonstrate to the spectators that he had such a power, he set a cup or basin full of water a little way off, and commanded the demon as he went out of the man to overturn it, and thereby to let the spectators know he had left the man (*Antiq.* viii. 2. 5). He also describes the mode of obtaining the root Baaras, which, he says, 'if it be only brought to sick persons, it quickly drives away the demons,' under circumstances which, for their strangeness, may vie with any prescription in the whole science of exorcism (*De Bell. Jud.* vii. 6. 3). Among all the references to exorcism, as practised by the Jews, in the N. T. (Matt. xii. 27; Mark ix. 38; Luke ix. 49, 50), we find only one instance which affords any clue to the means employed (Acts ix. 13); from which passage it appears that certain professed exorcists took upon them to call over a demoniac the name of the Lord Jesus, saying, 'We adjure you by Jesus whom Paul preacheth.' Their proceeding seems to have been in conformity with the well-known opinions of the Jews in those days, that miracles might be wrought by invoking the names of the Deity, or angels, or patriarchs, etc., as we learn from Justin Martyr, Irenæus, Origen, etc., and Lucian (*Frag.* p. 141). The epithet applied to these exorcists (περιερχόμενοι, *Vulg. de circumventibus Judæis*) indicates that they were travelling mountebanks, who, beside skill in medicine, pretended to the knowledge of magic. It is evident that the opinion we form of exorcism will be materially affected by our views of demoniacal possessions [DEMON]. The *neutral course* we have pursued in regard to both these subjects will be completed upon observing, that the office of the exorcist is not mentioned by Paul in his enumeration of the miraculous gifts (1 Cor. xii. 9), though it was a power which he possessed himself, and which the Saviour had promised (Mark xvi. 17; Matt. x. 8). Mosheim says that the particular order of exorcists did not exist till the close of the third century, and he ascribes its introduction to the prevalent fancies of the Gnostics (*Cen.* iii. 11, c. 4). Fairness also induces us to notice Jahn's remark upon the *silence* of *St. John* himself, in his Gospel, on the subject of possessions, although he introduces the *Jew* as speaking in the customary way respecting demons and demoniacal possessions, and although he often

speaks of the sick who were healed by the Saviour; coupled with the fact that John wrote his Gospel in Asia Minor, where *medical science* was very flourishing, and where it was generally known that the diseases attributed to demons were merely natural diseases (Jahn, *Archäol.*, large German ed. pt. 1. vol. ii. 232, pp. 477-480; see also Lomeierus, *De Vel. Gent. Lustra.*; Bekker, *Le Monde enchanté*; Whitby's note on Matt. xii. 27).—J. F. D.

EXPIATION. [ATONEMENT; SACRIFICE.]

EXPIATION, DAY OF. [ATONEMENT, DAY OF.]

EYE (עַיַן). In most languages this important organ is used by figurative application, as the symbol of a large number of objects and ideas. In the East such applications of the word 'eye' have always been uncommonly numerous; and they were so among the Hebrews. It may be serviceable to distinguish the following uses of the word, few of which are common in this country, unless so far as they have become so through the translation of the Bible.

1. *A fountain.* This use of the word has already been indicated [AIN]. It probably originated from the eye being regarded as the fountain of tears.

2. *Colour,* as in the phrase 'and the eye (colour) of the manna was as the eye (colour) of bdellium' (Num. xi. 7). This originated perhaps in the eye being the part of the body which exhibits different colours in different persons.

3. *The surface,* as 'the surface (eye) of the land' (Exod. x. 5, 15; Num. xxii. 5, 11): the last is the passage which affords most sanction to the notion that עַיַן *ain* means in some places 'face.' This is the sense which our own and other versions give to 'eye to eye' (Num. xiv. 14, etc.), translated 'face to face.' The phrases are indeed equivalent in meaning; but we are not thence to conclude that the Hebrews meant 'face' when they said 'eye,' but that they chose the opposition of the eyes, instead of that of the faces, to express the general meaning. Hence, therefore, we may object to the extension of the signification in such passages as I Sam. xvi. 12, where 'beautiful eyes,' יְפֵה עֵינָיִם, is rendered 'beautiful countenance.'

4. It is also alleged that 'between (or about) the eyes' means the forehead, in Exod. xiii. 9, 16, and the forepart of the head, in Deut. vi. 8; but the passages are sufficiently intelligible, if understood, to denote what they literally express; and with reference to the last it may be remarked that there is hair about the eyes as well as on the head, the removal of which might as well be interdicted as an act of lamentation.

5. In Cant. iv. 9, 'eye' seems to be used poetically for 'look,' as is usual in most languages; 'Thou hast stolen my heart with one of thy looks' (eyes).

6. In Prov. xxiii. 31, the term 'eye' is applied to the beads or bubbles of wine, when poured out, but our version preserves the sense of 'colour.'

To these some other phrases, requiring notice and explanation, may be added:

'Before the eyes' of any one, meaning in his presence; or, as we should say, 'before his face' (Gen. xxiii. 11, 18; Exod. iv. 30).

'In the eyes' of any one, means what appears

to be so or so in his individual judgment or opinion; and is equivalent to 'seeming' or 'appearing' (Gen. xix. 8; xxix. 20; 2 Sam. x. 3).

'To set the eyes' upon any one, is usually to regard him with favour (Gen. xlv. 21; Job xxiv. 23; Jer. xxxix. 12); but it occurs in a bad sense, as of looking with anger, in Amos ix. 8. But anger is more usually expressed by the contrary action of turning the eyes away.

As many of the passions, such as envy, pride, pity, desire, are expressed by the eye; so, in the Scriptural style, they are often ascribed to that organ. Hence such phrases as 'evil eye' (Matt. xx. 15); 'bountiful eye' (Prov. xxii. 9); 'haughty eyes' (Prov. vi. 17); 'wanton eyes' (Is. iii. 16); 'eyes full of adultery' (2 Pet. ii. 14); 'the lust of the eyes' (1 John ii. 16). This last phrase is applied by some to lasciviousness, by others to covetousness; but it is best to take the expression in the most extensive sense, as denoting a craving for the gay vanities of this life (comp. Ezek. xxiv. 25). In the same chapter of Ezekiel (ver. 16), 'the desire of thy eyes' is put not for the prophet's wife directly, as often understood, but whatever is one's greatest solace and delight; which in this case was the prophet's wife—but which in another case might have been something else.

In Zech. iv. 10, the angels of the Lord are called 'his eyes,' as being the executioners of his judgments, and watching and attending for his glory. From some such association of ideas, the favourite ministers of state in the Persian monarchy were called 'the king's eyes.' So, in Num. x. 31, 'to be instead of eyes' is equivalent to being a prince, to rule and guide the people. This occurs also in the Greek poets, as in Pindar (*Olymp.* ii. 10), where 'the eye of Sicilia' is given as a title to some of the chief men in Sicily, shewing his power. In like manner, in the same poet, 'the eye of the army' stands for a good commander (*Olymp.* vi. 16).

The expression in Psalm cxxiii. 2, 'As the eyes of servants look unto the hand of their masters,' has suggested a number of curious illustrations from Oriental history and customs, tending to shew that masters, especially when in the presence of others, are in the habit of communicating to their servants orders and intimations by certain motions of their hands, which, although scarcely noticeable by other persons present, are clearly understood and promptly acted upon by the attendants. This custom keeps them with their attention bent upon the hand of their master, watching its slightest motions.

The celebrated passage, 'Why beholdest thou the mote that is in thy brother's eye, and considerest not the beam that is in thine own eye?' (Matt. vii. 3), has occasioned much waste of explanation. It seems much better to understand it as a hyperbolic proverbial expression, than to contend that as *δοκός* cannot literally mean 'a beam,' it must here signify something else, a disease, a thorn, etc. (see Doddridge and Campbell, *in loc.*) As a proverbial phrase, parallels have been produced abundantly from the Rabbins, from the fathers, and from the classics.

Respecting blinding the eyes as a punishment, or political disqualification, see PUNISHMENT.

'PAINTING THE EYES,' or rather the eyelids, is more than once alluded to in Scripture, although this scarcely appears in the A. V., as our trans.

lators, unaware of the custom, usually render 'eye' by 'face,' although 'eye' is still preserved in the margin, 'So Jezebel 'painted her eyes,' literally, 'put her eyes in paint,' before she shewed herself publicly (2 Kings ix. 30). This action is forcibly expressed by Jeremiah (iv. 30), 'though thou retest thine eyes with painting.' Ezekiel (xxiii. 40) also represents this as a part of high dress—'For whom thou didst wash thyself, *paintest thy eyes*, and deckedst thyself with ornaments.' The custom is also, very possibly, alluded to in Prov. vi. 25—'Lust not after her beauty in thine heart, neither let her take thee *with her eyelids*.' It certainly is the general impression in Western Asia that this embellishment adds much to the languishing expression and seducement of the eyes, although Europeans find some difficulty in appreciating the beauty which the Orientals find in this adornment.

238.

The following description of the process is from Mr. Lane's excellent work on the *Modern Egyptians* (i. 41-43): 'The eyes, with very few exceptions, are black, large, and of a long almond form, with long and beautiful lashes and an exquisitely soft, bewitching expression: eyes more beautiful can hardly be conceived; their charming effect is much heightened by the concealment of the other features (however pleasing the latter may be), and is rendered still more striking by a practice universal among the females of the higher and middle classes, and very common among those of the lower orders, which is that of blackening the edge of the eyelids, both above and below the eyes, with a black powder called *kohl*. This is a collyrium, commonly composed of the smoke-black which is produced by burning a kind of *libam*—an aromatic resin—a species of frankincense, used, I am told, in preference to the better kind of frankincense, as being cheaper, and equally good for the purpose. Kohl is also prepared of the smoke-black produced from burning the shells of almonds. These two kinds, though believed to be beneficial to the eyes, are used merely for ornament; but there are several kinds used for their real or supposed medical properties; particularly the powder of several kinds of lead ore; to which are often added sarcocolla, long pepper, sugar-candy, fine dust of a Venetian sequin, and sometimes powdered pearls. Antimony, it is said, was formerly used for painting the edges of the eyelids. The kohl is applied with a small probe, of wood, ivory, or silver, tapering towards the end, but blunt; this is moistened, sometimes with rose-water, then dipped in the powder, and drawn along the edges of the eyelids; it is called *mir'wad*; and the glass vessel in which the kohl is kept, *mook'hhoh'ah*. The

custom of thus ornamenting the eyes prevailed among both sexes in Egypt in very ancient times; this is shewn by the sculptures and paintings in the temples and tombs of this country; and kohl-vessels, with the probes, and even with the remains of the black powder, have often been found in the ancient tombs. I have two in my possession. But, in many cases, the ancient mode of ornamenting with the kohl was a little different from the modern. I have, however, seen this ancient mode practised in the present day in the neighbourhood of Cairo; though I only remember to have noticed it in two instances. The same custom existed among the Greek ladies, and among the Jewish women in early times.'

Sir J. G. Wilkinson alludes to this passage in Mr. Lane's book, and admits that the lengthened form of the ancient Egyptian eye, represented in the paintings, was probably produced by this means. 'Such (he adds) is the effect described by Juvenal (*Sat.* ii. 93), Pliny (*Ep.* vi. 2), and other writers who notice the custom among the Romans. At Rome it was considered disgraceful for men to adopt it, as at present in the East, except medicinally,* but if we may judge from the similarity of the eyes of men and women in the paintings at Thebes, it appears to have been used by both sexes among the ancient Egyptians. Many of the kohl-bottles have been found in the tombs, together with the bodkin used for applying the moistened powder. They are of various materials, usually of stone, wood, or pottery; sometimes composed of two, sometimes of three or four separate cells, apparently containing each a mixture, differing slightly in its quality and hue from the other three. Many were simple round tubes, vases, or small boxes; some were ornamented with the figure of an ape or monster, supposed to assist in holding the bottle between his arms, while the lady dipped into it the pin with which she painted her eyes; and others were in imitation of a column made of stone, or rich porcelain of the choicest manufacture' (*Ancient Egyptians*, iii. 382).—J. K.

EZ (עז). This word is generally said to denote the *she-goat*; and in several passages it is undoubtedly so used (comp. Gen. xxxi. 38; xxxii. 14; Num. xv. 27); but it is equally certain that it is used

239. Syrian Goat.

also to denote the *he-goat* (comp. Exod. xii. 5; Lev. iv. 23; Num. xxviii. 15; 2 Chron. xxix. 21; Dan. viii. 5, 8, etc.) In most of the passages in

* This is not altogether correct. In Persia it is as common among the men as the women.—J. K.

which it occurs, it may denote either the male or the female animal. It is used also to designate a *kid* (Gen. xv. 9). From this we are led to conclude that properly it is the generic designation of the animal in its domestic state, a conclusion which seems to be fully established by such usages as עֵזְבֹן, *a kid of the goats*, עֵזְבֹן, *the goat, i.e., any of the goat species* (Gen. xxvii. 9; Deut. xiv. 4). Bochart (*Hieroz*, bk. ii. c. 51) derives the word עֵזְבֹן from עָז *strength, might*; Gesenius and Fürst prefer tracing it to עָזַז, *to strengthen or become strong*; in either case the ground-idea is the superior strength of the goat as compared with the sheep; Syr. عَزَز; Arab. عَزَز, where the ا represents the rejected ־ of עָזַז; Phoen. *Oz*, of which *Ozza* or *Azza* is the feminine form. Whether there is any affinity between this and the Sansc. *aga*, fem. *agā*, Gr. *αἴξ*, *áγ-ís*, Goth. *gaitan*, and our *goat*, may be doubted. In the LXX., עָז is usually represented by *αἴξ*, in a few instances by *ερίφος*; when עֵזְבֹן is used to denote *goat's hair* (as in Exod. xxvi. 7; xxxvi. 14; Num. xxxi. 20) the LXX. use *σκύτρωος, τριχύωος, or αἰγίωος*, in I Sam. xiv. 13 they give the strange rendering ἡπαρ τῶν αἰγῶν, reading כִּבְרֵי כִבְרֵי (comp. Joseph. *Antiq.* vi. 11. 4).

EZBON (עֵזְבֹן); Sept. Θεσοβάν, Ἐσεβών Ἀσεβών. 1. One of the sons of Gad (Gen. xlv. 16). In the genealogy in Num. xxvi. 15-18, for this name there stands Ozni, from whom came the clan of the Oznites. The LXX. here read Ἀξενί, so that the alteration, if it is one, is of ancient date. Which is the correct reading, or how the one came to be substituted for the other, it is now impossible to say. The attempt has been made to shew how עֵזְבֹן might pass into עֵזְבֹן, so that the latter is simply a later mode of spelling the former; but this is quite improbable.

2. Son of Bela in the genealogy of the Benjamites, I Chron. vii. 7. [BECHER.]—W. L. A.

EZEKIAS. [HEZEKIAH.]

EZEKIEL (יְחִזְקִאל = יְחִזְקָאֵל, [*whom*] *God will strengthen*, Gesen. *Thes.*, or יְחִזְקָאֵל, *God will prevail*, Rosenm. *Schol.*; Sept. Ἰεζεκιήλ), one of the greater prophets, whose writings, both in the Hebrew and Alexandrian canons, are placed next to those of Jeremiah. He was the son of Busi the priest (ch. i. 3), and, according to tradition, was a native of Sarera (ἐκ γῆς Σαρραπά, Carpov, *Introd.*, pt. iii. p. 200). Of his early history we have no authentic information. We first find him in the country of Mesopotamia, 'by the river Chebar' (ch. i. 1), now *Khabár*, a stream of considerable length flowing into the Euphrates, near Circesium, *Kirkesia* (Rosenmüller's *Bibl. Geog. of Central Asia in Bibl. Cabinet*, vol. ii. p. 180). On this river Nebuchadnezzar founded a Jewish colony from the captives whom he brought from Jerusalem when he besieged it in the eighth year of his reign (2 Kings xxiv. 12). This colony (or at least a part of it) was settled at a place called Tel-Abib, which has been thought by some to answer to the Thallaba of D'Anville (Rosenm., *Bibl. Geog.*, vol. ii. p. 188); and it seems to have been here that the prophet fixed his

residence. Josephus (*Antiq.* x. 6. 3) states that he was a youth (παῖς ὄν) when carried away captive; but, as Hävernick (*Commentar über Ezechiel*, Erlangen, 1843, p. viii.) justly remarks, the matured character of a priest which appears in his writings, and his intimate acquaintance with the temple service, render such a supposition highly improbable. He received his commission as a prophet in the fifth year of his captivity (B.C. 594). Many critics suppose (from ch. i. 1) that this event took place in the 30th year of his age. Thus Carpov (p. 201) understands the expression. There is, however, little reason to think that this is the epoch intended. The more probable opinion seems to be that the reckoning is from the commencement of the reign of Nabopolassar, the father of Nebuchadnezzar (Scaliger, *De Emendatione Temporum*, Lug. Bat. 1598, p. 374; Rosenm. *Schol. in Ezech.*; Eichhorn, *Einleitung in d. A. T.*, vol. iii. p. 188, 3d edit.; Winer, *Bibl. Realwörterbuch*, art. 'Ezech.') Others (as Ussher, Hävernick, pp. 12, 13) take the era to be that of the finding the book of the law in the 18th year of Josiah, which is nearly synchronous with the former. The question is not of much importance in a chronological point of view, since the date is sufficiently fixed by the reference he makes to the year of captivity. Ezekiel is remarkably silent respecting his personal history; the only event which he records (and that merely in its connection with his prophetic office) is the death of his wife in the ninth year of the captivity (ch. xxiv. 18). He continued to exercise the prophetic office during a period of at least twenty-two years, that is, to the 27th year of the captivity (ch. xxix. 17); and it appears probable that he remained with the captives by the river Chebar during the whole of his life. That he exercised a very commanding influence over the people is manifest from the numerous intimations we have of the elders coming to inquire of him what message God had sent through him (ch. viii. 1; xiv. 1; xx. 1; xxxiii. 31, 32, etc.) Carpov (pp. 203-4) relates several traditions respecting his death and sepulchre, principally from the treatise *De Vitis Prophet.*, falsely attributed to Epiphanius. It is there said that he was killed at Babylon by the chief of the people (ὁ ἡγουμενος τοῦ λαοῦ) on account of his having reproved him for idolatry; that he was buried in the field of Maur (ἐν ἀγρῷ Μαοῦρ) in the tomb of Shem and Arphaxad, and that his sepulchre was still in existence. Such traditions are obviously of very little value.

Ezekiel was contemporary with Jeremiah and Daniel. The former had sustained the prophetic office during a period of thirty-four years before Ezekiel's first predictions, and continued to prophesy for six or seven years after. It appears probable that the call of Ezekiel to the prophetic office was connected with the communication of Jeremiah's predictions to Babylon (Jer. li. 59), which took place the year preceding the first revelation to Ezekiel (Hävernick, p. ix.) The greater part of Daniel's predictions are of a later date than those of Ezekiel; but it appears that his piety and wisdom had become proverbial even in the early part of Ezekiel's ministry (ch. xiv. 14, 16; xxviii. 3).

Most critics have remarked the vigour and surpassing energy which are manifest in the character of Ezekiel. The whole of his writings shew how admirably he was fitted, as well by natural disposi-

tion as by spiritual endowment, to oppose the 'rebellious house,' the 'people of stubborn front and hard heart,' to whom he was sent. The figurative representations which abound throughout his writings, whether drawn out into lengthened allegory, or expressing matters of fact by means of symbols, or clothing truths in the garb of enigma, all testify by their definiteness the vigour of his conceptions. Things seen in vision are described with all the minuteness of detail and sharpness of outline which belong to real existences. But this characteristic is shewn most remarkably in the entire subordination of his whole life to the great work to which he was called. We never meet with him as an ordinary man; he always acts and thinks and feels as a prophet. This energy of mind developed in the one direction of the prophetic office is strikingly displayed in the account he gives of the death of his wife (ch. xxiv. 15-18). It is the only memorable event of his personal history which he records, and it is mentioned merely in reference to his soul-absorbing work. There is something inexpressibly touching as well as characteristic in this brief narrative—the 'desire of his eyes' taken away with a stroke—the command not to mourn—and the simple statement, 'so I spake unto the people in the morning, and at even my wife died; and I did in the morning as I was commanded.' That he possessed the common sympathies and affections of humanity is manifest from the beautiful touch of tenderness with which the narrative is introduced. We may even judge that a mind so earnest as his would be more than usually alive to the feelings of affection when once they had obtained a place in his heart. He then, who could thus completely subordinate the strongest interests of his individual life to the great work of his prophetic office, may well command our admiration and be looked upon as (to use Hävernick's expression) 'a truly gigantic phenomenon.' It is interesting to contrast Ezekiel in this respect with his contemporary Jeremiah, whose personal history is continually presented to us in the course of his writings; and the contrast serves to shew that the peculiarity we are noticing in Ezekiel belongs to his individual character, and was not necessarily connected with the gift of prophecy.

That Ezekiel was a poet of no mean order is acknowledged by almost all critics. Lowth (*De sacra Poesi Hebræorum*, ed. J. D. Michaelis, Götting, 1770, p. 431) thus sums up his account of him: 'In cæteris a plerisque vatibus fortasse superatus; sed in eo genere ad quod unice videtur a natura comparatus, nimirum vi, impetu, pondere, granditate, nemo ex omni scriptorum numero eum unquam æquavit.' Michaelis and Dathe are the only critics of any eminence (as far as we know) who think slightly of his poetical genius. The former (to whom Dathe assents) remarks, 'Mihi in Ezekiele non sublimitas laudanda, nedum Isaiana, videtur, ut potius in exornandis amplificandisque imaginibus plus artis et luxurie eum habere dixerim, quam cum impetu et sublimitate poematis consistere potest. Perpetuus aliqua ex parte imitator est, et tamen novus ac suus, non grandis, sed ingeniosus' (*Id.* p. 427). The question is altogether one of taste, and has, we imagine, been decided by common consent against Michaelis. He remarks more truly that Ezekiel lived at a period when the Hebrew language was declining in purity, when the *silver* age was succeeding to

the *golden* one. It is, indeed, to the matter rather than the language of Ezekiel that we are to look for evidence of poetic genius. His style is often simply didactic, and he abounds in peculiarities of expression, Aramaisms, and grammatical anomalies, which, while they give individuality to his writings, plainly evince the decline of the language in which he wrote. An extended account of such peculiarities is given by Eichhorn (*Einleitung in das A. T.*, vol. iii. p. 196) and Gesenius (*Geschichte der Heb. Sprache u. Schrift*, p. 35).

The genuineness of the writings of Ezekiel has been the subject of very little dispute. According to Jewish tradition doubts were entertained as to the canonicity of the book on the ground of its containing some apparent contradictions to the law, as well as because of the obscurity of many of its visions. These, however, were removed, it is said, by Rabbi Hananias, who wrote a commentary on the book, in which all these difficulties were satisfactorily solved (*Mischna*, ed. Surenhusius, *Prof. ad. Parl.* iv. מוסכת עריות; Carpov, *Introd.* pt. iii. p. 215); but still, on account of their obscurity, the visions at the beginning and close of the book were forbidden to be read by those who were under thirty years of age (Carpov, p. 212). Some continental critics of the last century have impugned the canonicity of the last nine chapters, and have attributed them to some Samaritan or Hebrew who had returned in later times to the land of Judæa (Oeder, *Freye Untersuchung über einige Bücher des A. T.*, Hal. Sax. 1771; Vogel, in his remarks on the above; and Corrodi, *Beleuchtung des Jüdisch. und Christl. Bibelkanons*, pt. i. p. 105, quoted by Rosenmüller, *Schol. in Ez.* ad. c. xl.) These objections have been fully answered by Eichhorn (*Einleitung*, vol. iii. p. 203), Jahn (*Introd. in Lib. Sac. V. F.*, p. 356), and others. Jahn has also taken notice of and answered some objections raised by an anonymous writer in the *Monthly Magazine*, 1798, to the canonicity of c. xxv.-xxxii., xxxv., xxxvi., xxxviii., xxxix. A translation of Jahn's arguments will be found in Horne's *Introd.* vol. iv. p. 222. These and similar objections have so little weight or probability that we shall content ourselves with quoting the general remark of Gesenius in reference to the whole of Ezekiel's writings: 'This book belongs to that not very numerous class which, from beginning to end maintains by means of favourite expressions and peculiar phrases such a oneness of tone as by that circumstance alone to prevent any suspicion that separate portions of it are not genuine' (*Geschichte der Heb. Spr.*, p. 35). The canonicity of the book of Ezekiel in general is satisfactorily established by Jewish and Christian authorities. There is, indeed, no explicit reference to it, or quotation from it, in the N. T. Eichhorn (*Einleit.* p. 218) mentions the following passages as having apparently a reference to this book: Rom. ii. 24; comp. Ezek. xxxvi. 21; Rom. x. 5; Gal. iii. 12; comp. Ezek. xx. 11; 2 Pet. iii. iv; comp. Ezek. xii. 22; but none of these are quotations. The closing visions of Ezekiel are clearly referred to, though not quoted, in the last chapters of the Apocalypse. The prophet Ezekiel is distinctly referred to by the son of Sirach, Ἰεζεκιήλ ὃς εἶδεν ὄρασην δόξης, ἣν ὑπέδειξεν αὐτῷ ἐπὶ ἀρμάρω χειρῶν βίβλῃ (Ecclus. xlix. 8), and by Josephus (*Antiq.* x. 5. 1; 6. 3; 7. 2; 8. 2). The book of Ezekiel is also mentioned as forming part of the

canon in the catalogues of Melito (Eusebius, *Hist. Eccles.* iv. 26), Origen (apud Euseb. *l. c.* vi. 25), Jerome (*Prologus Galeatus*), and the Talmud (Eichhorn, vol. iii. p. 218; vol. i. pp. 126-137). One of the passages of Josephus to which we have referred has occasioned much controversy and many conjectures, because he seems to affirm that Ezekiel had written two books of prophecies. Having spoken of Jeremiah and his predictions of the Babylonian captivity, Josephus adds, *ὁ μόνον δὲ οὗτος προέθεσε ταῦτα τοῖς ἔχλοις, ἀλλὰ καὶ ὁ προφήτης Ἐζεκιῆλος* [ὁ] *πρῶτος περὶ τούτων δύο βιβλία γράψας κατέλιπεν* (*Antiq.* x. 5. 1). According to the ordinary and, indeed, as it would seem, necessary interpretation of this passage, Ezekiel was the first who wrote two books respecting the Babylonian captivity. The question then arises, Has one of his books been lost, or are the two now joined into one? The former supposition has been maintained by some in order to account for certain professed quotations from the prophet Ezekiel of passages which are not found in his writings at present. Thus Clemens Romanus (1 *Ep. ad Cor.* c. 8) refers to such a passage, which is given more at length by Clemens Alexand. (*Pedagog.* i. 10). Thus, again, Tertullian (*De carne Christi*, c. 23, p. 394, ed. Semler) says, 'Legimus apud Ezechielem de vacca illa quæ peperit et non peperit.' Other instances may be seen in Fabricius (*Codex Pseudepigraphus V. T.* ed. 2da, p. 1118), and quoted from him by Carpzov (*Introd.* pt. iii. p. 208). Both these critics, however, agree that the most probable explanation of such references is that they were derived from Jewish tradition. The latter hypothesis, that our present book was originally two, the second containing the last nine chapters, has received the support of very many critics (see Le Moine, *Varia Sacra*, t. ii. p. 332; Carpzov, *Introd.* p. 208). This view, however, is not without serious difficulties. There is no evidence that the book, as at present existing, was ever considered two; and the testimony of Josephus himself, that only twenty-two books were received as sacred (*Contr. Apion*, i. 8), appears quite opposed to such a supposition, since in whatever way the division of the O. T. into twenty-two books is made, there cannot be two out of the number left for Ezekiel. Eichhorn (*Einleitung*, vol. iii. p. 146) maintains that it is Jeremiah of whom Josephus speaks, a position to which we should at once assent if we could with him consider the words *ὁ πρῶτος* as equivalent to *ὁ δὲ πρῶτος*. If this is what Josephus meant, we must suppose some corruption of his text. [Bekker omits *ὁς*.]

The central point of Ezekiel's predictions is the destruction of Jerusalem. Previously to this catastrophe his chief object is to call to repentance those who were living in careless security; to warn them against indulging in blind confidence, that by the help of the Egyptians (Ezek. xvii. 15-17; comp. Jer. xxxvii. 7) the Babylonian yoke would be shaken off; and to assure them that the destruction of their city and temple was inevitable and fast approaching. After this event his principal care is to console the captives by promises of future deliverance and return to their own land, and to encourage them by assurances of future blessings. His predictions against foreign nations stand between these two great divisions, and were for the most part uttered during the interval of

suspense between the divine intimation that Nebuchadnezzar was besieging Jerusalem (ch. xxiv. 2), and the arrival of the news that he had taken it (ch. xxxiii. 21). The predictions are evidently arranged on a plan corresponding with these the chief subjects of them, and the time of their utterance is so frequently noted that there is little difficulty in ascertaining their chronological order. This order is followed throughout, except in the middle portion relating to foreign nations, where it is in some instances departed from to secure greater unity of subject (e. g. ch. xxix. 17). The want of exact chronological order in this portion of the book, has led to various hypotheses respecting the manner in which the collection of the separate predictions was originally made. Jahn (*Introd.* p. 356) supposes that the predictions against foreign nations were placed in their present position by some transcriber in the order in which they happened to come into his hands, and that he through forgetfulness omitted chaps. xxv., xxxviii., and xxxix. Eichhorn (*Einleit.* vol. iii. p. 193) thinks it probable that the predictions were written on several greater or smaller rolls, which were put together in their present form without sufficient regard to chronological accuracy. Bertholdt (*Einleit.* vol. iv. p. 1487, quoted by Hävernick) supposes that the collector of the whole book found two smaller collections already in existence (ch. xxv. -xxxii. and xxxiii. 21-xxxix.), and that he arranged the other predictions chronologically. All such hypotheses belong, as Hävernick remarks, to a former age of criticism.

The arrangement, by whomsoever made, is very evidently designed, and it seems on many accounts most probable that it was made by Ezekiel himself. This is maintained by Hävernick on the following grounds: 1. The arrangement proceeds throughout on a plan corresponding with the subjects of the predictions. In those against foreign nations chronological is united with material order, whilst in those which relate to Israel the order of time is strictly followed. 2. The predictions stand in such connection with each other that every part has reference to what has preceded it. 3. Historical notices are occasionally appended to the predictions, which would scarcely be done by a transcriber. e. g., the notice respecting himself in chaps. xi., xxiv., xxv., and the close of chap. xix., which Hävernick translates, 'This is a lamentation and was for a lamentation.' The whole book is divided by Hävernick into nine sections, as follows:—

1. Ezekiel's call to the prophetic office (ch. i. -iii. 15).
2. Series of symbolical representations and particular predictions foretelling the approaching destruction of Judah and Jerusalem (ch. iii. 16-vii.).
3. Series of visions presented to the prophet a year and two months later than the former, in which he is shewn the temple polluted by the worship of Adonis—the consequent judgment on the inhabitants of Jerusalem and on the priests,—and closing with promises of happier times and a purer worship (ch. viii. -xi.).
4. A series of reproofs and warnings directed especially against the particular errors and prejudices then prevalent amongst his contemporaries (ch. xii. -xix.).
5. Another series of warnings delivered about a year later, announcing the coming judgments to be yet nearer (ch. xx. -xxxiii.).

6. Predictions uttered two years and five months later, when Jerusalem was besieged, announcing to the captives that every day as the commencement of the siege (comp. 2 Kings xxv. 1), and assuring them of its complete overthrow (ch. xxiv.)

7. Predictions against foreign nations (ch. xxv.-xxxii.)

8. After the destruction of Jerusalem a prophetic representation of the triumph of Israel and of the kingdom of God on earth (ch. xxxiii.-xxxix.)

9. Symbolic representation of Messianic times and of the establishment and prosperity of the kingdom of God (ch. xl.-xlviii.)

The latter part of the book has always been regarded as very obscure. It will be seen by the brief notices of the contents of the sections which we have given above, that Hävernick considers the whole to relate to Messianic times. The predictions respecting Gog (ch. xxxviii., xxxix.) have been referred by some to Antiochus Epiphanes; by others to Cambyses, to the Chaldæans, the Scythians, the Turks, etc. Mr. Granville Penn has interpreted them of Napoleon and the French (*The Prophecy of Ezekiel concerning Gogoe*, etc., 1815). The description of the temple (ch. xl.-xlviii.) has been thought by many to contain an account of what Solomon's temple was; by others, of what the second temple should be. The difficulties of all these hypotheses seem to be insuperable. We have only space to say that we fully accord with the view of Hävernick, to whom we are greatly indebted for the materials of the present article.—F. W. G.

EZEL. [EBEN-EZEL.]

EZIONGEBER (עִזְיוֹן גְּבֵר) ; Sept. *Ἐσιων Γάβερ*; and Vulg. *Asiongeber*), a very ancient city lying not far from Elath, on the eastern arm of the Red Sea. It is first mentioned in Num. xxxiii. 35 as one of the stations where the Hebrews halted in their journeyings through the desert (Deut. ii. 8). From its harbour it was that Solomon (1 Kings ix. 26) sent the fleet which he had there built to the land of Ophir, whence they fetched four hundred and twenty talents of gold. Here, also, Jehoshaphat (1 Kings xxii. 48; 2 Chron. xx. 36) built a fleet 'to go to Ophir,' but because he had joined himself with Ahaziah, 'king of Israel, who did wickedly,' 'the ships were broken that they were not able to go to Tarshish.' Josephus (*Antiq.* viii. 6. 4) says that Eziongeber lay not far from Ailath, which was also called Berenice. It is probably the same with the once populous city Assyan (Burckhardt, ii. 831). Robinson (*Biblical Researches*, i. 250) says, 'no trace of Eziongeber seems now to remain, unless it be

in the name of a small wady with brackish water, el-Ghudyān opening into el-Arabah from the western mountain, some distance north of Akabah. However different the names el-Ghudyān and Ezion may be in appearance, yet the letters in Arabic and Hebrew all correspond.' [ELATH.]—J. R. B.

EZNITE, THE (הַעֲנִי; K'ri, הַעֲנִי; Sept. Ἀσωναίος; Alex. Ἀσῶνας). In 2 Sam. xxiii. 8, this epithet is applied to Adino, who is also described as the Tachmonite, the chief of that portion of David's army which was known as the *Shalishi corps*, perhaps the *elite* of the *elite* of the army. In 1 Chron. xi. 11 he is called 'Jashobeam, the son of Hachmoni,' and this probably supplies the correct reading; that in Samuel יֵשֶׁב בְּשֵׁבֶת תַּחְמוֹנִי ('The Tachmonite that sat in the chair,' A. V.) having, as Kennicott suggests, probably arisen from the transcriber's eye having caught the שֵׁבֶת of the preceding verse, as he was writing the name of the hero, and so incorporated it with the name. Josephus also gives the name Ἰέσσαμος, υἱὸς Ἀχελαιῶτος (*Antiq.* vii. 12. 4). The LXX., however, read Ὁ Χαναταῖος, the Canaanite; and this, some think, suggests the true reading. In 1 Chron. xi. 11 also, for עֲדִינו הַעֲנִי, 'Adino the Eznite,' the reading is עוֹרֵר אֶת הַנִּיחִי, 'he lifted up (brandished) his spear.' This is regarded by some also as supplying the original reading; but it seems better to integrate both passages from each other, and to regard the original reading as, 'This is Adino the Eznite who brandished his spear,' etc. So the A. V., after the LXX., reads the passage in Samuel; and so it must be read to make sense. To reject the words הַעֲנִי עֲדִינו altogether as spurious would be to do violence to critical authority; these words are in all the MSS., and must have been in the text used by the LXX. Jerome taking the *Ez* in Eznite for עֵץ wood, renders 'quasi tenerimus ligni vermiculus.'—W. L. A.

EZOBH (אֵזוֹב; Sept. and N. T. ὕσσωμος). A great variety of opinions have been entertained respecting the plant called *ezobh*, translated 'hyssop' in the A. V. both of the O. and N. T.; but as yet no satisfactory investigation has been made, so as to enable us to fix with certainty on the plant intended. The difficulty appears to have arisen from the similarity of the Greek name ὕσσωμος to the Hebrew *ezobh*, whence the former seems, from an early period, to have been considered synonymous with the latter, and used for it in referring to the passages of the O. T. where it is mentioned. As the ὕσσωμος of Greek authors is generally acknowledged to be the common hyssop (*Hyssopus officinalis* of botanists), it has been inferred that it must also be the plant of the O. T., as well as that referred to in the N. T. This inference has not, however, been universally acquiesced in; for Celsius enumerates, under no less than eighteen heads, the different plants which have been adduced by various authors as the hyssop of Scripture. Before mentioning these, it is desirable to refer to the passages of the O. and N. T. where the plant is mentioned. The first notice of it occurs in Exod. xii. 22; it is next mentioned in Lev. xiv. 4, 6, 52; and again in Num. xix. 6, 18. To these passages the apostle alludes in Heb. ix. 19, and from this we learn that the Greek name ὕσσωμος was considered synonymous with the He-

brew *ezobh*; and from the preceding passages that the plant must have been leafy, and large enough to serve for the purposes of sprinkling, and that it must have been found in Lower Egypt, as well as in the country towards Mount Sinai, and onwards to Palestine. In 1 Kings iv. 33 it is classed with *trees*; and from Ps. li. 7, it would appear to have possessed some cleansing quality, though here it is considered by some commentators that hyssop is used in a figurative sense. It ought, at all events, to be found growing upon walls, and in Palestine. In the account of the crucifixion of our Saviour, the Apostle John says (John xix. 29), 'Now there was set a vessel full of vinegar, and they filled a sponge with vinegar, and put it upon *hyssop*, and put it to his mouth.' In the parallel passages of Matthew (xxvii. 48) and Mark (xv. 36), it is stated that the sponge filled with vinegar was put upon a reed or stick. To reconcile these statements, some commentators have supposed that both the sponge and the hyssop were tied to a stick, and that one apostle mentions only the hyssop, because he considered it as the most important; while, for the same reason, the other two mention only the stick; but the simplest mode of explaining the apparent discrepancy is to consider the hyssop and the stick to be the same thing—in other words, that the sponge was affixed to a stick of hyssop.

A great variety of plants have been adduced by different authors as that alluded to in the above passages. Of these some belong to the class of ferns, as *Capillus Veneris*, maiden-hair, and *Ruta Muraria*, or wall-rue, because they will grow upon walls; as also do the *Polytrichum*, or hair-moss, the *Kloster hyssops*, or pearlwort, and *Sagina procumbens* are suggested by others, because from their growing on rocks or walls they will answer to the passage in 1 Kings iv. 33, and from their smallness contrast well with the cedar of Lebanon, and are a proof of the minute knowledge of Solomon. Some again contend for species of wormwood, as being, from their bitterness, most likely to have been added to the vinegar in the sponge, that it might be more distasteful to our Saviour. The majority, however, have selected different kinds of fragrant plants belonging to the natural family of *Labiata*, several of which are found in dry and barren situations in Palestine, and also in some parts of the Desert. Of these may be mentioned the rosemary, species of lavender, of mint, of marjoram, of thyme, of savory, of thymbra, and others of the same tribe, resembling each other much in characters as well as in properties: but it does not appear that any of them grow on walls, or are possessed of cleansing properties; and, with the exception of the rosemary, they are not capable of yielding a stick, nor are they found in all the required situations. If we look to the most recent authors, we find some other plants adduced, though the generality adhere to the common hyssop. Sprengel (*Hist. Rei Herb.* i. 14) seems to entertain no doubt that the *Thymbra spicata*, found by Hasselquist on the ruins about Jerusalem, is the hyssop of Solomon; though Hasselquist himself thought that the moss called *Gymnostomum truncatum* was the plant. Lady Calcott asks, 'Whether the hyssop upon which St. John says the sponge steeped in vinegar was put, to be held to the lips of Christ upon the cross, might not be the hyssop attached to its staff of cedar-wood, for the purposes of sprinkling the people, lest they should contract de-

filament on the eve of the Sabbath, which was a high-day, by being in the field of execution' (*Scripture Herbal*, p. 208). Rosenmüller, again, thinks that the Hebrew word *ezobh* does not denote our hyssop, but an aromatic plant resembling it, the wild marjoram, which the Germans call *Dosten*, or *Wohlgenuth*, the Arabs *Zatar*, and the Greeks *Origanum*. In the *Pictorial Bible* (i. 161), Mr. Kitto suggests it as probable, that 'the hyssop was a species of *Phytolacca*, as combining length of stem with cleansing properties, from the quantity of pot-ash which is yielded by the ashes of the American species, *P. decandra*, of this genus.' *P. Abyssinica* grows to the size of a shrub in Abyssinia. Winer (*Bibl. Realwörterbuch*, ii. 819, s. v. Ysop) gives a description of the common hyssop, but says that it must not be concealed that the Talmudists distinguish the hyssop of the Greeks and Romans from that mentioned in the law. He then adduces the *Origanum*, mentioned in the quotation from Rosenmüller, as the *ezobh* of the Hebrews; but concludes by observing that a more accurate examination is required of the hyssops and *Origana* of that part of Asia, before the meaning of the Hebrew *ezobh* can be considered as satisfactorily determined. After careful enquiry we are led to fix on the *caper plant* as the *ezobh* of Scripture. This plant has an Arabic name, *asuf*, similar to the Hebrew *esob* or *esof*, as it is found in Lower Egypt, in the deserts of Sinai, and in New Jerusalem. It grows upon rocks and walls, was always supposed to be possessed of cleansing qualities, is large enough to yield a stick, and its different parts used to be preserved in vinegar, as its buds now are.—J. F. R.

EZRA (עֶזְרָא) *help*; Sept. Ἐσδρας. The form of the name is Chaldaic or Aramaic; and it is equivalent in meaning to the Hebrew name עֹזֵר, from the root עָזַר; Arab. عَزَّر, *he surrounded, protected, helped*. 1. A priest who went up with Zerubbabel (Neh. xii. 1. 33). 2. One of the heads of families in Judah (1 Chron. iv. 17). 3. The celebrated Jewish scribe (סֹפֵר) and priest (כֹּהֵן), who, about the year B.C. 458, led the second expedition of Jews back from the Babylonian exile into Palestine.

Ezra was a lineal descendant from Phinehas, the son of Aaron. He is stated in Scripture to be the son of Seraiah, the son of Azariah; which Seraiah was slain at Riblah by order of Nebuchadnezzar, having been brought thither a captive by Nebuzardan. But, as 130 years elapsed between the death of Seraiah and the departure of Ezra from Babylon, and we read that a grandson of Seraiah was the high-priest who accompanied Zerubbabel on the first return to Jerusalem, seventy years before Ezra returned thither, we may suppose that by the term *son* here, as in some other places, the relationship of grandson, or of a still more remote direct descendant, is intended. In addition to the information given in the books of Ezra and Nehemiah, that Ezra was a 'scribe,' a 'ready scribe of the law of Moses,' 'a scribe of the words of the Commandments of the Lord and of his statutes to Israel,' 'a scribe of the law of the God of Heaven,' and 'a priest,' we are told by Josephus that he was high-priest of the Jews who were left in Babylon; that he was particularly conversant with the laws of Moses, and was held in uni-

versal esteem on account of his righteousness and virtue (*Antiq.* xi. 5. 1).

In the year B.C. 457 Ezra was sent by 'Artaxerxes Longimanus and his counsellors to inquire concerning Judah and Jerusalem, according to the law of his God which was in his hand; and to carry the silver and gold which the king and his counsellors freely offered unto the God of Israel.' Permission was also granted to him to take with him all the silver and the gold which he could find in all the province of Babylon, together with the free-will offerings which the people and priests offered for the house of God at Jerusalem. Of this treasure he was directed to employ as much as was requisite in the purchase of offerings according to the law of Moses, and the surplus he was to lay out according to his discretion for the maintenance of the externals of religion. Ezra was also charged to convey vessels for the house of God in Jerusalem; and, lest these gifts should be insufficient, he was empowered to take from the king's treasure-house as much as should be wanted to supply everything needful for the house of the Lord. At the same time that this commission was given to Ezra, Artaxerxes Longimanus issued a decree to the keepers of the king's treasure beyond the river, to assist Ezra in everything in which he needed help, and to supply him liberally with money, corn, wine, oil, and salt. It was further enacted that it should not be lawful to impose tribute upon any priest, Levite, or other person concerned in ministration in the house of God. Ezra was commissioned to appoint 'according to the wisdom of God which was in his hand,' magistrates and judges to judge all the people beyond the river, that knew the laws of his God; and was enjoined to teach them to those who knew them not. The reason of the interest for the worship of God at this time evinced by Artaxerxes, appears to have been a fear of the divine displeasure, for we read in the conclusion of the decree to the treasurers beyond the river, 'Whatsoever is commanded by the God of Heaven, let it be diligently done for the house of the God of Heaven; FOR WHY SHOULD THERE BE WRATH AGAINST THE REALM OF THE KING AND HIS SONS?'

Of the manner in which Ezra acquitted himself of the trust thus reposed in him, a detailed account is given in the book bearing his name (viii.-x.). It is probable that he returned after accomplishing his commission to the king, as we hear nothing more of him till in Neh. viii. we read that, on the occasion of the celebration of the feast of the seventh month, subsequently to Nehemiah's numbering the people, Ezra was requested to bring the book of the law of Moses; and that he read therein standing upon a pulpit of wood, which raised him above all the people. Josephus relates the affecting scene which occurred on the reading of the law by Ezra (*Antiq.* xi. 5. 5). The account given by Josephus agrees with that of Nehemiah in all leading particulars, except that Josephus places the date and occasion twelve years afterwards.

Josephus tells us that Ezra died soon after this celebration of the Feast of Tabernacles, and was buried at Jerusalem with great magnificence. According to some Jewish chroniclers he died in the year in which Alexander came to Jerusalem, on the tenth day of the month Tebeth (that is, the lunation in December), in the same year in which

took place the death of the prophets Haggai, Zechariah, and Malachi, and in which prophecy became extinct. According to other traditions Ezra returned to Babylon and died there at the age of 120 years. The Talmudic statement is that he died at Zamzumu, a town on the Tigris, while on his road from Jerusalem to Susa, whither he was going to converse with Artaxerxes about the affairs of the Jews. A tomb said to be his is shewn on the Tigris, about twenty miles above its junction with the Euphrates. An interesting description of this tomb is subjoined to the notes on the book of Ezra in the 'Pictorial Bible.'

240. Tomb of Ezra.

Some traditions assert that Ezra was, about A.M.

3113, the president of the **בנסת הגדולה**, *Synagoga Magna*, and the father of all Mishnic doctors. In piety and meekness he was like unto Moses (*Tuchasin*, p. 13. See *Zemach David*). When he went from Babylon to Jerusalem, he took with him all persons whose descent was either illegitimate or unknown; so that the Jews left in Babylon should be **נקי בסולה**, *pure like flour* (*Kiddushin*, c. 4, 1, *Gem.*) Ezra is said to have introduced the present square Hebrew character, and, in conjunction with some other elders, to have made the masora, the punctuation, and accentuation of the whole Bible (Abarbanel, *Prasfat. ad Nachalath Avoth*; Elias, *Prasf. 3 Masor.*)

Ezra is also said to have vigorously resisted the sect of the Sadducees, which sprang up in his days; and therefore to have put the words **מן העולם**, *à saculo in saculum*, at the head of all prayers, as a symbol by which the orthodox could be distinguished (*Bab. Berachoth*, fol. 54).

Since the people, during the Babylonian captivity or exile, had become accustomed to the Aramaic language, and scarcely understood Hebrew, Ezra established the office of turgoman, **תורגמן**, *dragoman*, or interpreter, who stood near the public reader in the synagogue, and translated every verse after it was read (*Megillah*, fol. 74).

Ezra ordained that the year of jubilee should be reckoned from the seventh year after the rebuilding of the temple (Maimon. *Hal. Fobel.* cap. 10).

Ezra is considered to be the author of the canon, and worthy to have been the lawgiver,

if Moses had not preceded him (*Bab. Sanhed. c. ii. f. 21*; compare the article CANON). He is even said to have re-written the whole of the O. T. from memory, the copies of which had perished by neglect. But we must abstain from recounting all the traditional amplifications of the doings of Ezra, since, if all were to be received, it would be difficult to say what he did not do, so strong has been the inclination to connect important facts with the person of Ezra (comp. 2 Esdras xiv.; Irenæus, *Adv. Hæres.* iii. 25; Clem. Alex. *Strom.* i. p. 142; Augustin. *De Mirabil. Script.* ii. 23; Hieron. *ad Halrid.* p. 212; Buxtorf, *Tiberias*, p. 88, *sgg.*; Bertholdt, *Einleit.* i. 69, *sgg.*; De Wette, *Einleit.* p. 17, *sg.*; Sauer, *Diss. canonem Vet. Test.* etc. Altorf, 1792, 4to; *Sanhedrin*, fol. xxi. 1; Rau, *De Synag. Magna*, pp. 31, 89; Hartmann, *Verbindung des Alten und Neuen Testaments*, pp. 114, *sgg.* Arabian fables about Ezra are mentioned in Hottinger's *Thes. Philol.* p. 113, and in Herbelot, *Bibl. Orientale*, p. 697, etc.)—C. H. F. B.

EZRA, BOOK OF The present book of Ezra consists of two parts, viz., i.-vi. and vii.-x; the first containing a history of the company of exiles who returned under Zerubbabel and Joshua, from the first year of Cyrus till the completion of the temple in the sixth year of Darius Hystaspis; the second, communicating particulars relative to the return of the second caravan under Ezra, and his proceedings in Jerusalem.

The first chapter begins with the closing words of the Chronicles, as far as the middle of the third verse, which belong, therefore, to the Chronicler; and the whole chapter proceeds from one person. The edict of Cyrus, given in the 2d, 3d, and 4th verses, must be a Judaizing paraphrase of the original, else Cyrus could not speak of himself in such language as, 'The Lord God of heaven hath given me all the kingdoms of the earth;' which does not harmonise with his treatment of Cyaxares. This is corroborated by the fact that the decree is not the same here as in the 6th chapter; though it should be identical in words, if accurately given. The language and style of the chapter resemble those of the Chronist. Whether the narrative be an extract from Ezra v. 13-16, vi. 3-5, as Zunz supposes, is doubtful.

The second chapter was found as an original document, and inserted by the Chronicler.

The third chapter belongs to the Chronist, as the manner and language shews. From iv. 6 to 24 is an interpolation, apparently put in the wrong place by the redactor; for it belongs to *Nehemiah's*, not *Ezra's* time. It relates wholly to the building of the city, not the temple. It is impossible to say where it should be placed. The 6th verse passes suddenly to Xerxes (called Ahasuerus); and then Artaxerxes appears in the 7th. The 24th verse is the redactor's, resuming the narrative which had been interrupted by the interpolated piece. In consequence, however, of the word *בְּהַיָּתָן* then, which, in its place at the commencement of the verse can only refer to what immediately precedes, the redactor makes the narrative state what is incorrect, by transferring to the building of the temple what relates merely to the rebuilding of the city, and so putting Artaxerxes before Darius Hystaspis. The first five verses of chap. iv. belong to Ezra himself, as Zunz has

rightly perceived, though he is wrong in including the 6th verse.

We assume that the name Artachschascht must be Artaxerxes Longimanus, not Smerdis as some have thought; which agrees with the letter sent to him, given in iv. 11-16, and the king's answer, 17-23; for we know from Nehemiah that the building of the walls was thought of under Artaxerxes; and the passages in question refer only to the rebuilding of the city. If they referred to the rebuilding of the temple, the case would be otherwise. But there is not a word of that. The language in iv. 12, 'the Jews which come up from thee to us are come unto Jerusalem,' can only refer to the colony that came under Ezra in the time of Artaxerxes, not to that under Nehemiah in the same reign, because of iv. 23, which does not agree with the record of the building under Nehemiah; and it would have been meaningless to write to Smerdis in that strain, understanding the caravan under Zerubbabel in the time of Cyrus. Besides, the adversaries write to the king to have search made 'in the book of the record of thy fathers;' whereas, at the time of Smerdis, they had been no more than fifteen years under the Persian dominion. Thus Artachschashta cannot mean Smerdis, with whom the name does not agree, but Artaxerxes. The writers of the letter carefully abstain from mentioning the previous building of the temple, the more effectually to prejudice the king's mind against the rebuilding of the city. Nothing is plainer than that iv. 11-16, 17-23, relate to the rebuilding of the walls, not the temple; and therefore Artaxerxes is meant. At iv. 8 the Chaldee language begins; v. 1-vi. 18 is another Chaldee document which existed before the compiler's time. But in vi. 14 the last clause is the redactor's work, viz., 'and Artaxerxes king of Persia,' to make the passage agree with his insertion of iv. 6-24. Here the name Artaxerxes occurs again in connection with the completion of the temple, and could not therefore have come from him that wrote v. 1-vi. 18. The name is a later insertion, as Hävernick perceived; though we cannot believe with him that Ezra added it, because he must have known that Artaxerxes did not promote the building of the temple, and would not even have appended his name out of gratitude for the great gifts that monarch made to the temple, nor because he favoured the Jews generally, since, by putting Artaxerxes along with Cyrus and Darius in this connection, Ezra would have misled the reader. Artaxerxes is here the addition of a later hand than that of the Chaldee author of the fragment presented in v. 1-vi. 18, because it clashes with what he had just written. To ascribe it to Ezra is to make him employ an unsuitable expression.

In v. 4 we read—'Then said we unto them after this manner, What are the names of the men that make this building?' whence Movers infers that the writer was an eye-witness and contemporary. The example of Joshua, v. 6, is adduced as confirmatory. But this passage is not a valid proof.

To the compiler belongs vi. 19-22. It describes the celebration of a passover, whose attendant circumstances in honour of the Levites resemble the celebration of the passover under King Hezekiah, as related in Chronicles (2 Chron. xxx. 15-25). In the 22d verse the king of Persia is termed *king of Assyria*; which reminds one of 2 Chron.

xxxiii. 11. The same redactor continues in vii. 1-11. Here he begins with a genealogy of Ezra, which nearly agrees with 1 Chron. vi. 35-38. The way in which Ezra is spoken of in ver. 6, 10, 11, shews that he himself could not have so written. He is termed 'a ready scribe in the law of Moses;' it is said that 'he had prepared his heart to seek the law of the Lord, and to do it;' and an explanation of סֵפֶר is given in the 11th verse, which is incorrect. The only objection to attributing vii. 1-11 to the compiler or Chronist is, that he here shews an acquaintance with the fact of Artaxerxes living *after* Darius, while in iv. 7 he places him *before* Darius; but the Chronist was not careful to remove contradictions of this kind; he transcribed his sources without much elaboration or change.

In vii. 12-26 we have a Chaldee piece, giving Artaxerxes's written commission to Ezra to return with his countrymen to Judæa. This is an authentic document.

From vii. 27, ix. 15, Ezra himself is the writer. He employs the first person. But there is reason for excepting the 35th and 36th verses of the 8th chapter; both because the first person plural is suddenly changed for the third, and also on account of the want of connection between the 34th and 35th verses, a circumstance unlike Ezra's. They belong to the compiler.

In x. 1-17 the Chronist reappears. Six times is Ezra cited in these verses. It is also said that he went into the chamber of Johanan, the son of Eliashib—of the high-priest Eliashib who lived after Nehemiah (See Neh. xii. 22, 23), shewing that Ezra himself was not the writer. It is rather hypercritical in Hävernick to assert, that because Eliashib is not called *high-priest* in this book, he may not have been till afterwards, and hence that Ezra and Eliashib may have lived together. In compiling the piece, it is probable that the Chronist used accounts written by Ezra.

From x. 18 to the end of the chapter was written by Ezra, and inserted here by the compiler. It does not bear the impress of the Chronist himself.

Our analysis shews that the book of Ezra in its present form did not proceed from the scribe himself. Some pieces of his are in it, but another put them there. The Chronicle-writer is the author or compiler, who made it up from pieces partly written by Ezra and others, and in part by himself.

Keil, after the example of Hävernick, is anxious to uphold the unity and integrity of the book, claiming it all for Ezra himself, with the exception of the Chaldee section in iv. 8-vi. 18, which the latter took, without alteration, into the body of the work. How little ground there is for this view may be inferred from the preceding analysis, which shews that the work is incompact and artificial. In speaking of Ezra, the writer sometimes uses the first person, sometimes the third; different parts are composed in different languages; two pieces are in Chaldee, which were not written by the same person; the style varies in various places, and there is an apparent chasm in the history of more than half a century at the end of the 6th chapter—a real chasm in the opinion of such as make Artaxerxes in vii. 1, 11, etc., a different person from the Artaxerxes of iv. 7.

In opposition to all these phenomena it is useless to appeal to the interchange of the first and third persons in the prophets, *e. g.*, Is. vii. 1-16, comp. with viii. 1, etc.; Jer. xx. 1-6, comp. with ver. 7, etc., xxviii. 1, etc., comp. with ver. 5, etc.; Ezek. i. 1-3; vi. 1; vii. 1, 8; Jer. xxxii. 1-8; Hosea 1, 2, 3; iii. 1. The cases are not parallel, prophetic writing being very different from historical prose. There is no *necessity*, as Keil alleges, for Ezra to speak of himself in the third person in the first seven verses of the 7th chapter. All the unity belonging to the book is that arising from its being the compilation of the Chronist, who put materials together relating to the times of Zerubbabel and Ezra, written by Ezra and others, interspersing his own here and there. In consequence of the one redactor there is considerable similarity of expression throughout; though certainly not enough to prevent the critic from separating pieces of different writers incorporated into the work.

The independence of the book cannot be maintained. The identity of the termination of Chronicles with the commencement of Ezra shews one writer; and in connection with the abruptness of the former, that both at first were parts of the same work. It is likely that Ezra (with Nehemiah) was first put to the collection of sacred historical books; and that the portion now called the Chronicles was appended to it as the last part, some time afterwards. This agrees with the position of Chronicles in the Hagiographa as the closing book. When the Chronicles were thus disposed in the canonical list, the last two verses now in 2 Chron. xxxvi, which stood already at the beginning of Ezra, were repeated, for the purpose of reminding the reader that the continuation of the narrative was to be found elsewhere. At the time of the LXX. the separation already existed, because the book of Ezra has a distinct title in their version. The beginning of the apocryphal Ezra or Esdras favours this view; the writer passing at once from the history in 2 Chron. xxxvi. 21 to Ezra i., using the now separated books as one. The same conclusion is confirmed by the prevailing belief of the Jews that Ezra wrote both. The Talmud asserts in one place that Ezra wrote the work bearing his name, and the genealogies (in the

Chronicles) as far as the word לו (2 Chron. xxi. 2), but that Nehemiah completed the book of Ezra. In another place this is contradicted, and the whole ascribed to Nehemiah.

Some, perhaps, will object to the statement that the Artaxerxes in iv. 7 and vii. 1-11 were the same, and allege that the compiler thought them different, by giving the names a somewhat different orthography. It is observable that ארתחששתא is twice spelled with ש in iv. 7; while in vii. 1, 11 it has ס instead of ש; the compiler finding it so written in the Chaldee pieces respectively. This, however, seems too small a point to insist upon. If it be of any weight, it makes no difference in our argument; for in any case the redactor was mistaken. There was no Artaxerxes before Darius, as well-attested history shews; or, to speak more correctly, none called ארתחששתא.

In Ezra i. 7-11, the sacred vessels which Nebuchadnezzar had carried away at several times from the temple are enumerated, as—30 chargers of gold, 1000 of silver, 29 knives, 30 cups of gold.

410 silver double cups, and 1000 other vessels. The whole number is stated to be 5400, whereas the sum of those specified is only 2499. The Pseudo-Ezra mentions 1000 cups of gold, and 1000 of silver, 29 silver knives, 30 chargers of gold, and 2410 chargers of silver, with 1000 other vessels, making together 5469. Josephus, again, makes up the number 5400. Both the apocryphal Ezra and Josephus arbitrarily alter the Hebrew.

There are three lists of the number of returned exiles, viz., in Ezra ii. 1-67; in the apocryphal Esdras v. 7-43; and Neh. vii. 6-69. The three vary here and there in relation to single names and the sum total. In Ezra the aggregate of the numbers is 29,818, in Nehemiah, 31,089. In the Septuagint Ezra it is 29,627, and in the Septuagint Nehemiah 31,199. In Esdras of the *κοινή* it is 30,043, of the Alexandrian codex 33,932, of the Aldine, 33,949. But none of these, even the highest, reaches the given total, viz., 42,360. Josephus reckons the priests without a family register, 525, but their number is not in the O. T. Doubtless the three lists are imperfect; both names and numbers being deficient in all. It is impossible to tell which is, on the whole, the most accurate.

The number of men who returned under Zerubbabel or Sheshbazzar is 42,360. Including their families, the sum total probably amounted to 200,000 persons, provided the statement in 1 Esdras v. 41 be incorrect in placing all boys above twelve years of age among the men; for if that writer be correct, the sum total would not exceed 170,000. Of the whole, 4289 were priests belonging to four great races or families, and a number of priests who, not being able to adduce their registers, were excluded from office on that account (525, according to Josephus). The Levites among them were but few, 360 or 341. There were 392 nethinim. The people brought with them upwards of 7500 slaves of both sexes, and a number of horses, mules, camels, and asses, amounting to upwards of 7000. The number of returning exiles belonged almost entirely to the tribes of Judah, Benjamin, and Levi. According to Ezra ii. 1, and Neh. vii. 6, they returned 'every one unto his city,' a statement which hardly allows of the conjecture that a great many Israelites of the Assyrian exile joined the Jews. Comparatively few joined their brethren. In the course of 200 years their attachment to heathen customs and manners had been confirmed; and had they come back in great numbers they would have settled again in their old abodes in Israel, a fact unknown to history. It is an unfortunate conjecture of Prideaux's that 12,000 of the returning exiles belonged to Israel; and it is still more incorrect to infer that the whole of such as preferred to remain in Assyria, was six times the number of those who returned, because four courses only of the priests returned out of the twenty-four. If we reckon that nearly the half returned, we shall not be far from the truth (See the *Introductions* of Hävernick, Keil, De Wette, and Bleek; Davidson's *Introduction to the Old Testament*, vol. ii.; Keil's *Apologetischer Versuch ueber die Bücher Chronik*, u. s. w. 1833; Kleinert in the *Dorpat Beiträge*, u. s. w., vol. i., p. 1, *et seqq.*, 1832; Ewald's *Geschichte des Volkes Israel*, vols. i. and iv.; Zunz's *Die Gottesdienstlichen Vorträge der Juden*, 1832; Herzfeld's *Geschichte des Volkes Israel*, vol. i., 1847;

Mover's *Kritische Untersuchungen ueber die Biblische Chronik*, 1834.—S. D.

EZRACH (עֲרַח). This word occurs only once in Scripture, namely, in Ps. xxxvii. 35, where it is rendered *bay-tree*. Commentators and translators have differed respecting it; some supposing it to indicate a specific tree, as the laurel; others, supported by the Septuagint and Vulgate, the cedar of Lebanon; others, an evergreen tree; others, a green tree that grows in its native soil, or that has not suffered by transplanting, as such a tree spreads itself luxuriously; while others again, as the unknown author of the sixth Greek edition, who is quoted by Celsius (i. p. 194), consider the word as referring to the 'indigenous man,' 'Vidi impium et impudentem, in ferocia sua gloriantem, et dicentem: sum instar indigenæ, ambulanti in iustitia;' and this opinion is adopted by Celsius himself.

Celsius states that recent interpreters have adopted the laurel or bay-tree for no other reason than because

—— viret semper laurus, nec fronde caduca
Carpitur.

Sir Thomas Browne, indeed, says, 'as the sense of the text is sufficiently answered by this, we are unwilling to exclude that noble plant from the honour of having its name in Scripture.'

The cause why the laurel is not more frequently mentioned in Scripture, is, probably, because it was never very common in Palestine; as otherwise, from its pleasing appearance, grateful shade, and the agreeable odour of its leaves, it could hardly have failed to attract attention. Though Celsius and others have remarked that, if *ezrach* does indeed signify a tree, it must be some one distinct from the laurel, and one 'quæ in Judæa frequens fuerit, et altitudine, frondiumque umbra, atque amœnitæ præcelluerit cæteris,' yet no evidence is adduced by any of the above authors in behalf of the bay-tree, as that intended in the passage referred to. It appears to us that the Hebrew word

must have been derived from the Arabic عَشْرَق *ashruk*, which is described in Arabic works on *Materia Medica* as a tree having leaves like the *ghar*, that is, the bay-tree or *laurus nobilis* of botanists. If *ezrach*, therefore, was originally the same word as *ashruk*, then it would indicate some tree resembling the bay-tree, rather than the bay-tree itself; but, until that can be discovered, the latter is, upon the whole, well suited to stand as its representative.

The laurel or bay-tree, *laurus nobilis* of botanists, is well known to the Asiatics by its Arabic name of حَار *ghar*, under which it is mentioned by

Serapion and Avicenna, who quote chiefly Dioscorides and Galen, thus indicating that they had not much original information of their own respecting a tree which is probably not indigenous in the countries in which they wrote. The leaves and berries of the laurel, as well as the bark and the root, were employed in medicine: the berries continue, even in the present day, to be exported to India, where we found them in the bazaars, under the name of *hubal-ghar* (*Illustr. Him. Bot.*, p. 326), being still esteemed as a stimulant medicinal, though not possessed of any properties superior to

those of the laurels of more southern latitudes. The Arabs give *zafnee* and *zaknee* as the Greek names of the *ghar*-tree. These are corruptions, no doubt, of *δάφνη*, the name by which the bay-tree was known to the Greeks. It does not appear to occur in Palestine, as travellers, such as Rauwolf and Belon, do not mention it. Hasselquist expressly states that he had not met with it in Judæa or Galilee, but had rested himself very comfortably under its shade near the mountains beyond White Cape, on the road from Acre to Sidon. In the neighbourhood of Antioch bay-trees were formerly very abundant, especially at the village and grove of Daphne, famous for the temple of Apollo and its licentious rites. Though the cypress-grove and the consecrated bay-trees have disappeared from the immediate vicinity of Antioch, Dr. Pococke states that they are in great abundance at some little distance. Capts. Irby and Mangles describe the beauty of the scenery on the banks of the Orontes as surpassing anything they expected to see in Syria, and the luxuriant variety of the foliage as prodigious. The laurel, laurestinus, bay-tree, fig-tree, wild vine, plane-tree, English sycamore, arbutus, both common and *Andrachne*, dwarf oak, etc., were scattered in all directions. Capt. M. Kinneir describes a delightful spot, called Babyle, about seven miles from Antioch, which he was disposed to consider the ancient Daphne. A number of fountains boil up from amongst the rocks, and flow in different channels through a meadow, shaded with luxuriant bay-trees, walnut-trees, and groves of myrtle. The bay-tree is well known to be common in the south of Europe, as in Spain, Italy, Greece, and the Levant. It is usually from 20 to 30 feet in height, often having a bushy appearance, from throwing up so many suckers; but in England it has attained a height of 60 feet, which is not unusual in warmer climates. It is unnecessary to allude further to the celebrity which it attained

among the ancients—a celebrity which has not yet passed away, the laurel-wreath being still the symbolical crown as well of warriors as of poets. Its ever green grateful appearance, its thick shade, and the agreeable spicy odour of its leaves, point it out as that which was most likely in the eye of the Psalmist.—J. F. R.

EZRAHITE (עֲזָרָהִי; Sept. *Zaplrης*), a designation applied to Ethan, a man famous for his wisdom (1 Kings v. 11 [A. V. iv. 31]); but of whom nothing further is known. In the inscription of Ps. lxxxix., Ethan the Ezrahite is named as its author; and in the inscription of Ps. lxxxviii., the same is said in respect of it of Heman the Ezrahite. This has led some to identify the Ethan and Heman of 1 Kings with the Levites Ethan and Heman, who were chief among the singers appointed by David (1 Chron. xv. 19). But we have no reason to believe that, whatever skill these men had in music, they were famed for surpassing wisdom; and the inscription on the Psalms is probably due to the mistake of some one in whose mind the passage in Kings had got mixed up with 1 Chron. ii. 6, where Ethan and Heman appear among the sons of Zerach of the tribe of Judah. As עֲזָרָהִי is the same as עֲזָרָהִי with the prosthetic א, it is not improbable that in this last passage it is the Ethan of Kings that is referred to; but we cannot with certainty pronounce this, as there is a want of accordance between the statement of the chronicler and that in Kings respecting the parentage of the other persons mentioned. It is not improbable, however, that the names 'Heman, Calcol, and Dara,' have been interpolated in the text of Chronicles from the passage in Kings; especially as the writer goes on to state only the descendants of Carmi or Zimri and Ethan (ver. 7, 8). In this case Ethan, the son of Zerach, may be Ethan the Ezrahite; but there is no Heman the Ezrahite.—W. L. A.

SUPPLEMENT TO VOL. I.

ARTICLES ON CREATION AND DELUGE

By THE REV. BADEN POWELL, M.A. F.R.S.

LATE SAVILIAN PROFESSOR OF GEOMETRY IN THE UNIVERSITY OF OXFORD.

CREATION. In the ideas implied by this term a subject of vast extent and most profound interest is suggested; at the same time, one in reference to which but little can be said to be so certainly known or distinctly understood, as to afford adequate satisfaction to that curiosity which is so naturally excited in the human mind with respect to it, and which has evinced itself in all ages by the discussions, whether of a theological or of a philosophical nature, which have so largely occupied the attention both of religious and scientific writers.

In the present article, on a point of so much importance in Biblical literature, we shall endeavour to give as comprehensive a sketch of existing views as our limits will permit; and to do this the more satisfactorily we must, in the first instance, observe the due distinction between the several branches of the inquiry, and the attainable sources of knowledge on the subject. These are, of course, comprised under the two main heads of *reason* and *revelation*. We shall, in the first instance, offer some elucidations of the views derived from each of these sources *separately*, and then advert to the degree in which they bear *upon each other*, and to the connection and degree of accordance or discordance between them, real or apparent; and though, in so doing, we must necessarily touch upon some points on which considerable and even violent controversy has been called forth, yet we shall endeavour most strictly to avoid all discussion in a polemical spirit, and to confine ourselves to the dispassionate statement of what appear to be the best established views of the actual facts.

In the first place, then, the doctrine of revelation on this point, in the most general view, is chiefly founded on the simple ascription of the original formation of all things to divine power, and on the title of the 'Creator' applied to the Deity. This is the constant language of all parts of Scripture, both of the Old and New Testaments; and in the meaning of the term 'create' we must seek the origin of those views which constitute the theological and revealed belief respecting the mode in which the world had its beginning.

The meaning of this word has been commonly associated with the idea of 'making out of nothing.' But when we come to inquire more precisely into the subject, we can of course satisfy ourselves as to the meaning only from an examination of the original phrases.

Now, in the Hebrew Scriptures three distinct verbs are in different places employed with reference to the same divine act,—viz. ברא *create*, עשה *make*, יצר *form or fashion*; now, though each of these has its shade of distinction, yet the best critics understand them as so nearly synonymous that, at least in regard to the idea of making out of nothing, little or no foundation for that doctrine can be obtained from the use of the first of these words. They are used *indifferently* and *interchangeably* in many passages; as *e.g.* in Isa. xliii. 7, where they all three occur applied to the same divine act.

The Septuagint renders ברא indifferently by ποιεῖν and κτίζειν. But especially in the account of the Creation in Gen. i. the verbs are used irrespectively in verses 7, 16, 21 25, etc.; and, comparing Gen. i. 27 and ii. 7, man is said to have been *created*, yet he is also said to have been *formed out of the ground*. Again, in the Decalogue (Exod. xx. 11) the verb is עשה, *made*, not *created*. In Gen. i. the Septuagint has ἐποίησεν throughout.

On such a point much weight will be ascribed to the opinion of Dr. Pusey, professor of Hebrew at Oxford, who has distinctly stated his view that the word ברא implies neither positively, on the one hand, a formation out of nothing, nor, on the other, positively a formation out of existing materials, but that it is absolutely indefinite and neutral as to either of these conditions (Buckland's *Bridge-water Treatise*, note, p. 22). Thus he observes that the original expression 'let there be light' (Gen. i. 3) by no means necessarily implies that light had never before existed (*ibid.* note, 26). Upon the whole, he considers the only difference between the three verbs to lie in the *degree of force* in the expression; ברא, *create*, being simply the stronger and more emphatic word to express more forcibly the absolute power of the Creator.

In the New Testament we have a similar indifferency of the words κτίζειν and ποιεῖν in a great number of passages. The former is applied to the origin of the world in Mark xiii. 19, and to the formation of man in 1 Cor. xi. 9, and in some other places; but most remarkably in Col. i. 16. The same word is also applied in a spiritual sense in Eph. ii. 10 and other passages, in which the figure clearly involves formation out of what existed before; as also in Eph. iv. 24, Col. iii. 10, etc. It manifestly implies previous materials in Heb. ix. 11, as in the Septuagint version of the corresponding passage in Lev. xvi. 16. But, more particularly in Rom. i. 20, the expression τὰ γὰρ ἀόρατα αὐτοῦ ἀπὸ κτίσεως κόσμου τοῖς ποιήμασι νοούμενα places in synonym the substantives corresponding to the verbs 'create' and 'fashion,' or 'form.' This appears to be nearly the whole substance of what we can collect from the Scriptures, whether Jewish or Christian, as to the *force of the verbal expressions* and the idea implied by the term 'Creation.'

If from the subject of the *general idea* of creation we turn to that of the particular *mode* in which the 'formation' of existing things (whether the crude material existed previously or not) is represented to have taken place, we find more extensive and express declarations in various parts of the Bible. It is not our purpose to furnish a concordance of texts, nor to introduce quotations of all that bear upon the subject, any more than our readers probably would look for it. It will suffice to observe that we have many *general* statements of the kind, and one or two very *circumstantial* representations. Of the former kind we may remark that

almost all refer to the *attributes and perfections* of the Deity evinced in the work of creation, rather than to any precise explanation of *how* it was accomplished. The sacred writers also refer largely to the divine *will* and the announcement of that will by his *word* as the immediate agent, as in Ps. xxxiii. 6, 9, and cxlviii. 5; Rev. iv. 11, and many other places; and this reference to the divine *word* is considered by many to be in effect the same with the more direct ascription of the work of creation to the divine *λόγος* in John i. 3; which again is explicitly referred to the Son of God in Eph. iii. 9, and Heb. i. 2, 3; and again, Col. i. 16. It would lead us too far from our immediate object here to discuss more minutely the precise doctrinal bearing of the passages last referred to, and others of similar import; and our readers will find full information on these topics under other more appropriate heads. We will merely observe further, that these *general* representations of the creation all agree in speaking of it in terms of the most unbounded extent and *universality* of operation; this is observable in the last-cited texts, and not less pointedly in Acts xiv. 15, and xvii. 24; Rev. x. 6; besides many others; but it is to be observed, it is not expressed that this universal act took place *at one and the same time*, nor whether it was *instantaneous or gradual*.

We come next to those Scriptural representations of the creation, which are more precise and circumstantial. Of these the earliest in order of time is that stated to have been announced by the divine voice from Mount Sinai, in the delivery of the law to the Israelites (Exod. xx. 11), where the entire and complete work of creation is described as carried on and ended in six days. The description pointedly applies to the *whole* universe; and the great work was succeeded by a seventh day, of rest or cessation, implying, that is, the *final* perfection of the process.

When the books of the Old Testament were afterwards written, the Mosaic history naturally opened with a general statement to the same effect. It is well known to be the opinion of some of the most learned critics, that the book of Genesis, in its existing form, is properly a compilation of more than one ancient document, portions of each being mixed in different parts of the narrative. Thus the short account of the creation in Gen. ii. 4 is considered to have been the commencement of the most ancient record, while the more expanded account in Gen. i. and ii. 1-3, was prefixed from a later document. [Bauer's *Theology of the Old Test.* p. 11, Eng. Tr. 1838.] A deeper meaning, however, is given to the Elohist and Jehovistic distinctions of Genesis, and one consistent with the uniform composition of the book, by many scholars, particularly by Hengstenberg (*Dissertations on the Genuineness of the Pentateuch*, Eng. Tr., Edin. 1847).

The points most important to be noticed are the following—The first sentence is taken by many to stand distinct from what follows, as a first general announcement, or title, as it were; then, after a break, the account of the six days' work is supposed to begin. The description in the second verse (commonly conveyed by the term Chaos) is supposed by some connected with the first verse; by others, with the subsequent. Either way it positively expresses a state of universal ruin, disorder, and darkness. Out of this chaos the divine word evokes light, and, by degrees, order and organisation; but by several successive and beautifully appropriate stages, divided into periods called nights and days; in which first the grander distribution of the inert materials of the universe into their respective places occurs, and then, progressively, the stages of organised existence from the lower up to the higher forms: until at length the whole is crowned by the introduction of man, who is constituted lord of the inferior world, and the spirit of life breathed into him—when the majestic scene closes with the final cessation put to the work in the Divine rest on the seventh day, and the pronouncing of a peculiar benediction and sanctification of it.

On the sublime and unapproachable magnificence of this description it is not to our present purpose to dilate; but there is a peculiar character of unity of design and subordination, and connection of parts observable throughout it, which, in any human composition, we should instantly refer to the most exalted poetical genius, and recognise as marking the most profound skill in the composition and invention of the narrative, the disposition, as it were, of the whole machinery of the great drama.

Very different is the view which some modern commentators have been induced to take of it. It will neither be necessary nor pleasing to enter into detailed descriptions of them. But the following very brief sketch of some of them is necessary:—Some do *not* make the separation of the first verse before alluded to, but, taking the whole to refer to one single creative process, stretch that process out to a vast, and, in fact, unlimited length of time, by interpreting each of the six days (though most expressly described as alternations of day and night) as meaning periods of thousands or millions of years; and alleging, as their authority, that in certain parts of the prophetic writings, the term 'day' is used for an indefinitely long period, and that it is said with God 'a thousand years are as one day! When, however, they come to the seventh day at the close (which is, nevertheless, obviously spoken of in the very same terms), they then go back to the ordinary sense of a natural day.

Others suppose the first verse, or the first two, to refer to an original formation of all things, the time, manner, and circumstances of which are left wholly undetermined. Then, after an indefinitely long interval, this original universe was totally overwhelmed and destroyed; and then, in six natural days, the whole existing world called into being in its place, in accordance with the literal terms of the remainder of the narrative.

A different class of interpreters contend that the whole account is to be taken together, as in the *first* of the instances just stated, but the days understood literally; the whole, however, is to be interpreted as referring to a more remote period than is commonly imagined, and as not intended to describe the *existing* species of plants and animals, but various other species, now extinct, which have been, by *subsequent* convulsions of nature, destroyed, while others have been successively, by fresh acts of creation, introduced in their place.

We will allude only to one other interpretation, the most recent which has been proposed, and which possesses every claim to attention which can be commanded by piety, learning, and devotedness to the sole cause of truth on the part of its author, Dr. J. Pye Smith, whose volume on the *Relations of Scripture to Geology, etc.*, we earnestly recommend to the attentive perusal of all who wish to acquire a comprehensive knowledge of the whole subject, as well as to be enlightened by the philosophical views and scriptural eloquence of the venerable and excellent writer.

His interpretation is briefly of this kind: the separation of the first verse he adopts as above: this refers to the original universal creation: and in the vast undefined interval, an almost unlimited series of changes in the structure and products of the earth may have taken place. After this, at a comparatively recent epoch, a *small portion* of the earth's surface was brought into a state of disorder, ruin, and obscurity; out of which the creation of the existing species of things, with the recall of light and the restored presence of the heavenly bodies, took place literally, according to the Mosaic narrative, in six natural days. All this is supported by profound critical distinctions as to the sense of the original words. The brevity of this sketch we trust will be productive of no misconception, as we hope all our readers will satisfy themselves out of the original work.

In this cursory review of different interpretations we have made a passing allusion to geology, and the changes which it indicates as having taken place at remote periods on the

earth's surface. We shall presently recur particularly to this subject. But it will be evident to most of our readers that some consideration of these scientific conclusions has been the main motive which suggested the various interpretations, some few of which we have mentioned. Our present concern with them is, however, on purely critical and philological grounds. And in this point of view, with the utmost respect for the several authors, without going into any details of controversy, we would wish simply to put all such interpretations, on their own intrinsic merits, to the judgment of any perfectly unbiassed inquirer. Yet for ourselves (without wishing to press any decision), we must confess they all appear to suggest senses which are of a very different nature from any which the plain tenor of the narrative would seem almost unavoidably to convey. We cannot here go into details of verbal criticism; but we are fully disposed to grant all that may be urged as to the precise signification of some of the terms; which may doubtless, by long-established custom and association, have been commonly received in senses which a more exact knowledge of the original language may not warrant. At the same time we do not think anything of this kind can materially affect the broad view of the subject. We are disposed to look at the narrative *as a whole*—and even allowing the greatest latitude as to the precise shades of meaning in its particular features, to ask whether the *general* impression of its design can be rationally conceived to fall in with these views of it? Whether, rather, any such signification imposed upon it does not seem to do palpable violence to its integrity, its distinctness, its majestic sublimity, its special purport, bearing, and manifest object?

We will, however, add one general remark applicable to all such interpretations in a philological point of view. In attempting to ascertain the true sense of a passage in any ancient book, we ought surely to decide in our own minds distinctly *what* it is at which we aim, whether to find some sense, to our apprehensions consistent, and such as the terms of the passage in question *may be made to bear*,—or to seek, as well as we can, what meaning it was the probable *intention of the writer* to convey. These two considerations, it should be observed, though really very distinct, are too often confounded together; or rather, the latter is almost wholly lost sight of.

In the case before us, we cannot help thinking, there has been generally a great want of attention to this distinction. Some of the commentators, indeed, appear to allow that Moses himself may have individually intended to convey only that meaning which, they seem to confess, appears upon the face of his narrative, but at the same time they conceive there was a *hidden sense* really designed, accordant with the views they suggest, and which has not really been developed till the present day. The probability of such a doctrine in general it would be beyond our limits to discuss. But in reference to the immediate subject, we must confess, it appears to us yet more involved in complexity than the difficulties it is called in to solve.

Lastly, others have thought that the whole description must be taken literally as it stands; but yet, *if* found contradicted by facts, may, without violence to its obvious design and construction, be regarded as rather intended for a mythic poetical composition, or religious apologue, than for a matter-of-fact history.

To these points we shall recur; meanwhile, to follow the order of our discussion, we must here advert to another question.

The idea of 'creation,' as meaning absolutely 'making out of nothing,' or calling into existence that which did not exist before, in the strictest sense of the terms (as we have seen), is *not* a doctrine of *Scripture*, but it has been held by many on the grounds of *natural theology*, as enhancing the ideas we form of the divine power, and more especially since the contrary must imply the belief in the *eternity and self-existence of matter*. It has hence been a point largely

discussed by those who have gone into the metaphysical arguments in support of the existence and attributes of the Deity. To maintain the eternity of matter is held to be the basis of materialism: and the sole self-existence of God has been upheld as essential to our idea of divinity, and the belief in a similar quality in matter strenuously objected to is either investing matter with the attributes of Deity, and thus involving us in Pantheism, or else derogatory from the divine perfections so entirely, as to leave us in a state of opinion differing little from atheism. Thus Dr. S. Clarke has argued at length against the self-existence of matter, on the ground that self-existence implies necessary existence; and this again implies that it would be contradictory to suppose the world not to exist; which it does not, since we can conceive the possibility of its non-existence (see *Demonstration of the Being and Attrib. etc.*, prop. iii.) In general, we would observe that the abstract belief in a creation, as a calling into existence of the material world out of nothing, according to the definition of the schoolmen, 'Dicitur aliquid esse factum de nihil cum intelligimus esse quidem factum, sed non esse aliquid unde sit factum' (Anselm, *Monol.* c. 8), must be regarded as an opinion which rests wholly upon arguments of a metaphysical kind. It must, on the one hand, be distinguished clearly from the creation spoken of in the Bible, and on the other, from the process by which the present order of physical existence was introduced, so far as it may be disclosed to us by the evidence of physical science. The metaphysical arguments will of course possess different degrees of weight to different minds; at all events they should be most carefully examined. And though Scripture and nature do not absolutely assert this view of the matter, yet they offer nothing at variance with it.

The *creation*, or *origin*, of the world, in a philosophical sense, is a subject which, as might be expected, has engaged the attention of philosophers of all classes and sects from the earliest times. To attempt to give any correct account of the innumerable theories and speculations which have been started on this subject would be beyond our design: but some few remarks by way of illustration may be desirable.

In general, we may observe that of these theories, many which have passed current as philosophical speculations have been framed *not* on *purely* philosophic grounds, but on a mixture of philosophical with legendary and fabulous systems among the heathen writers of antiquity;—and, among the moderns, with an attempt to combine the deductions of physical science with the real or supposed statements of revelation. All such speculations appear to us essentially faulty. In all such inquiries we should preserve a distinct idea of the ground on which we are proceeding. In the attempt to mix up considerations of so very different a nature in one view we shall pervert and injure both. Let the inductive conclusions stand on their own ground, and revelation on its proper evidence, then both will obtain their proper and distinct authority.

Those theories in earlier times, which were professedly based on purely philosophical grounds, were most frequently of an extremely hypothetical character. Such were the speculations of most of the ancient philosophical sects; they rather sought to make out some plausible system couched in the technical language of their schools, than fairly to trace what was really the order of nature, and follow by the humble but sure path of induction, the actual laws by which she is regulated, and which, when diligently studied, never fail to lead us on from one step of generalisation to another, until we arrive at the surest conviction of that universal order and profoundly-regulated unity and harmony of physical causes, which form the irresistible evidence of the all-pervading influence of the one great moral cause of the universe. We will, however, just mention one or two illustrative instances:—

Among the ancient philosophers, Plato distinctly ascribed the formation of all things to a supreme being, but seems

also to have held the independent existence of matter; that is, he maintained three principles—God, matter, idea: the idea being an incorporeal archetype existent in the divine mind, according to which matter was moulded and fashioned (Plutarch, *De Placitis*, i. 3.) This doctrine, indeed, seems to be nearly the same with that of Thales and Pythagoras, from whom it was probably borrowed. Cicero expressly tells us that 'Thales held water to be the principle of all things; and God, that mind which fashioned all things out of water' (*De Nat. Deor.* i.) Aristotle held the pre-existence of matter; and observes, 'It is the common opinion of naturalists that nothing can be made out of nothing;' and that it is impossible that it should be otherwise (*Phys.* i. 4. 8.) And further: 'neither can everything be made out of everything, but out of some subject fitted thereto; as animals and plants out of their seed' (*l. c.* 9). Here, indeed, he seems to be approaching the argument of simple physical induction, the legitimate result of which ought to be to remind us of the proper boundaries of all physical argument, and to show that the question of the original constitution of matter is one which no such induction can ever solve. And though probably they did not view the subject in this philosophical light, yet some of the fathers of the Christian Church, in their discussions of these speculative questions, have expressed the truth in terms exactly harmonising with the most rigid modern philosophy. 'It is impossible,' says St. Chrysostom, 'for man's nature by curious inquiry to penetrate into the workmanship of God' (*In Gen. Gen. l. β.*); and Lactantius observes, 'His works are seen with the eyes, but how he made them, the mind itself cannot see' (§ 2). There are those who condemn all such speculations as evincing but the empty presumption of human reason: but they do not perceive that the real fault lies, not in the use of reason, but in the *perversion* of it; not in trusting to its guidance, but in refusing its cautions, and arrogantly imagining that we can penetrate regions where the only safe path of induction is manifestly closed to us.

In modern times there have not been wanting those who have pursued cosmogonical speculations on what they considered purely philosophical grounds; though to the adherents of strict inductive science their philosophical character will appear to stand on no better ground than the reveries of the ancients. For the sake of those readers who may feel interested in such theories, we may just name some of the most celebrated of these authors:—Buffon, in his *Histoire Naturelle*; Wolfe, in his *Cosmologia*; Holbach, in his *Système de la Nature* (incorrectly ascribed to Mirabaud or to Lagrange); and the disciples of Kant, as Hegel, Oken, and others, among whom the most prominent is J. Müller. As a specimen of the kind of speculation pursued, we may briefly state that his work, *Ueber die Entschung der Welt aus Nichts*, is founded on the old maxim, 'ex nihilo nihil fit;' from whence he deduces the existence of an original governing power possessing omnipresence and omniscience. But the production of a world could only take place in one of two ways, 'either in a pantheistical or a spiritual mode;' that is, the original power might create a world of which he, or an emanation from him, is the all-pervading soul, or might part with portions of his own intelligence, which might animate portions of the creation. Müller adopts the second of these, and contends that this distribution of the divine intelligence is what produces duration or time: the continued existence of time is the evidence of the continuance of divine power. This power (if we have the least idea of the author's meaning), by indefinite continuance alone, becomes concentrated, as it were, in some kind of effect, which produces, or at least brings together, a sort of original matter or ether, which subsequently undergoes changes owing to three principal forces or forms of power—attraction, repulsion, and inertia; after which, rotation being communicated, worlds and systems may result. But as we cannot pretend to say that from any statements we have seen we can render the

subject at all more intelligible, we must hope this specimen may suffice.

If we turn to the more strict and proper investigation of physical science, it will be important to inquire what amount of testimony with respect to the origin of the world they may be able to supply.

The science of *astronomy* has sometimes been appealed to as having reference to the probable origin and antiquity of the solar system; but on a closer examination the degree of evidence which it furnishes will be found little more than conjectural.

The most recent and complete investigations of the theory of gravitation have totally excluded all idea of the action of adventitious causes in sustaining or disturbing the system. Its apparent irregularities have been all analysed and reduced to calculation, to system, and order, and shown to be, in fact, but portions of the exact regularity by which the whole fabric is sustained, and which recur in a perfectly determinate cycle through determinate periods, though some of them are of immense length.

All this does not, however, prove that the universe *has existed* through those immensely long periods; astronomical science *does not show* us any commencement; but there is no evidence whatever at variance with it.

Observations on the motions of Encke's comet have disclosed the *high probability* of the existence of a certain extremely rare medium through the celestial space, which offers a certain resistance to that small comet, itself composed of extremely rarified matter. This medium, or ether, must therefore oppose *some* resistance, however inexpressibly small, to the solid planets; and the result must be, in an inconceivably long period of time, that they will approach, and finally fall into the sun.

Astronomy, then, may point to the *termination* of the present order of things. It has been argued, as a sort of analogous presumption, that that which will have an end had also a beginning; but this, considered in the light of evidence of creation, is surely far too slight and inconclusive to be of much value. Another argument has been sometimes dwelt on to which we must refer rather more particularly. This is what is termed 'the Nebular Hypothesis,' which may be thus very briefly explained: La Place suggested it (purely as a *hypothesis*), which might give a plausible representation from analogy of the origin of the *motions* of the solar system. In all parts of the heavens powerful telescopes show us star-like objects which are not, like the other stars, brilliant luminous points, but extended bodies of comparatively little lustre. These are called *nebulae*, and manifestly appear to be in various stages of *condensation*, from great diffuseness up to actual stars, and many of them having within them points of greater brightness. La Place perceived an analogy between these and the solar system: he conceived that our whole system was once in the state of a nebula; that it has undergone gradual condensation, the sun being the central star; and that in this process each of the planets also formed a distinct centre of condensation, while in and by the process their respective motions were communicated to them, supposing the whole mass to have had originally impressed upon it a general rotatory motion, without which, and the centrifugal force resulting, all its particles must at once have been attracted together into one central mass. Thus other planetary masses would be found revolving round that centre at different distances. As the cooling and consequent condensation advanced, similar effects on a smaller scale would take place in each of those planetary masses, until they formed solid planets accompanied by rings or satellites. The resulting motions would be orbits not much differing from circles, and in planes not greatly inclined to each other, which accords generally well enough with the actual constitution of the solar system.

All this was (as we have said) thrown out merely as a *mechanical hypothesis*: it does *not* (as has been sometimes

represented) account for the *creation* of the solar system ; but merely shows how, on mechanical suppositions, we may explain its possible formation, in conformity with more general pre-existent laws. So far then as the evidence of creation is concerned, it amounts to this, that the same evidence which we have of infinite power and wisdom in the actual adjustment of the *existing* system, by certain fixed laws of inimitable unity and simplicity, is by *probability* carried a step further back into past time ; and the sufficiency of the same unvarying principles not only to the *preservation* but to the original arrangement of the system, may yet more widely extend and enlarge our notions of the same sublime inferences, which the contemplation of the system, in its existing relations, is so transcendently calculated to teach.

While speaking of astronomical evidence we must not omit to notice an idea, which often prevails, of some connection between astronomical epochs and events on our globe ; or, at least, a disposition to attach importance to coincidences of this kind. Thus some have dwelt upon the circumstance that by calculation of the motion of apses of the earth's orbit, La Place found that the major axis of the orbit coincided with the line of the equinoxes in the year 4004 B.C. [*Mec. Cel.* iii. 113], which, according to Archbishop Usher's system, is the date assigned to the Mosaic creation. But it is difficult to see any physical reason why the globe should be more likely to be brought into its present state, or man placed upon it, under that particular combination of circumstances rather than any other.

There is, however, another branch of science from which information of a more positive kind may be extracted.

In referring to the evidence which GEOLOGY may give on the subject of the *origin* of the world, we must premise, 1st. That the *object* of this science is not that of attempting any such discovery : the testimony which it may afford is but incidental. 2d. The science itself is but of very modern origin, and its researches have as yet been carried but a little way, compared with what we must reasonably expect they will be : yet to that small extent its foundations have been laid in absolutely determined facts, and general results, which are real, settled, inductive truths, which no subsequent investigations can overthrow ; which, in fact, can only be called in question on grounds which, if true, must overthrow not only geology, but all inductive science whatever, that is the whole extent of human knowledge, and render our reasoning faculties useless, and all philosophy a mere illusion. 3d. The evidence to which alone we can look on such a question as the present must be restricted to those portions of the subject which are of this strictly inductive character, and we must not mix up with them those conjectural hypotheses (however just and valuable for their proper purposes) in which geologists of all schools occasionally indulge.

In very briefly stating the general results of this evidence, which, little as it is, is yet undeniably certain, we shall, of course, not attempt anything like *geological discussion*, or elementary explanation ; we shall presume that the reader is either moderately acquainted with the elements of the science, or at least can have recourse to the works of the most eminent geologists, in which he will find ample proof of the assertions we bring forward, which in our narrow limits, of course, pretend to be no more than a recapitulation or summary of the evidence. For our facts then we simply refer the reader to Mr. Lyell's *Principles of Geology*, 4 vols. ; his *Elements of Geology*, 1 vol. ; Professor Phillips' *Treatise on Geology* (extracted from the *Encyclopædia Britannica*) ; Sir H. de la Beche's *Geological Manual* ; Dr. Buckland's *Bridgewater Treatise* ; and, for more general discussion, to Dr. J. Pye Smith's work before named, and to Professor Powell's *Connexion of Natural and Divine Truth*.

The pursuit of geological inquiry discloses the evidence and monuments of successive changes which have occurred in the state of the earth's surface (including under that term the solid portion extending to some depth below). In the attempt to trace these to their causes, sound induction

recognises the one grand principle of referring to those which are both 'true' and 'sufficient' to explain the phenomena. We cannot find true causes except such as are really proved to exist, and are found by experience to be in operation. The action of the waters on the land (whether the continual action of the rivers and the ocean, or the occasional force of inundations and torrents), the subterranean force of earthquakes, and the external operations of volcanoes ; the contractions and expansions which must accompany changes in the temperature of any considerable thickness of the earth's crust ; the fractures, flexures, and varieties of form which must arise from subterranean upheaving forces ;—these and the like are the *real* causes to which alone the sound geologist refers.

The accumulation of soil at the bottom of the waters, the imbedding of animal and vegetable remains in those depositions, the elevations of portions of the land out of the sea, are operations really and continually going on. When therefore we find fossil remains of organised beings imbedded in rocks, bearing also marks of a similar mode of deposition, we refer to such operations as those just mentioned as true causes to explain the phenomena ; and numerous series and successions of such depositions, containing the remains of species now extinct, and successively, in the order of deposition, containing fewer of recent and more of extinct kinds, even to whole general classes and orders of being, call for the like reference to the continued action of similar causes through periods of countless duration.

Numerous large districts of the earth contain immense deposits of marine shells, which must therefore once have formed the bed of the ocean above which they are now elevated ; and as they exhibit an unbroken level, we infer that they were gradually elevated without disturbance by similar slowly-acting subterranean causes, such as have been shown to produce elevating forces now gradually raising parts of existing continents.

Again ; in other districts we trace the marks of sudden and violent local inundations at remote epochs : precisely such inundations have been known to be produced by submarine volcanic action. Such effects may clearly be supposed to have taken place upon a larger scale where the phenomena indicate it, but we are still not departing from just analogies.

All the changes of which we have evidence in past epochs have been manifestly *local* ; just as the operation of existing causes is confined to a series of the like partial and local alterations. Thus no sound inductive geologist at the present day can admit anything like a universal simultaneous formation, or sudden action, applying at once to the entire surface of the present dry land. One small portion after another has been successively deposited, elevated, peopled with animal and vegetable life, again in the course of profoundly-adjusted changes to be obliterated and overwhelmed, while another has been in progressive advance.

Just and sober inductive science, applied to the examination of the actual structure of the earth's crust, enables us with satisfaction and certainty to trace the changes which have taken place on the surface of a globe possessing the same general nature as the existing earth, and in the structure and habits of organised beings *analogous* to those now inhabiting the world. It investigates the alterations which have been effected by physical agents resembling those now in operation, and in accordance with general laws the same as those now recognised in the economy of nature. But it does not and cannot rise to the disclosure of what might have occurred under a different state of things, or owing to the action of causes of a different order from those now discovered by physical research. It cannot show a *chaos*, or trace the evolution of a world out of it. It cannot reason upon a supposed state of universal confusion and ruin, and the immediate reduction of it into order and arrangement. It can investigate the changes of things, but not their origin. In a word, *sound geology will never aspire*

to the character of *cosmogony*. Yet geology is peculiarly distinguished from other branches of physical science, in this, that, while they teach us only the *existing* order of nature, it carries us back in time, and shows a period when the present races of organised beings did *not* exist, and by consequence establishes the *fact of their having in some way received a commencement of being*, and in truth the occurrence of *many such events*; and these not brought about at any one marked period, or extending to all animated nature at once, but by the slow and gradual introduction of each new species while yet the older partially remained; and each in turn thus progressively yielding its place to be filled up with fresh forms of organisation. All that geology establishes in respect to organised life is the *fact of the gradual origination of new species*, but by no means the *particular method or process* by which it was brought about.

It is true there have not been wanting theories to explain these processes on supposed natural principles; yet these have not been altogether satisfactory or free from material objections. Physical research, indeed, in its nature, cannot bring us to any distinct conception of what we term an act of creation. If we consider the simple case of the introduction of a single species, or even an individual of a new species, there is an obvious limit imposed on our speculations. On the other hand, it is certainly quite open to the physiological inquirer to trace, as closely as he can, the secondary means, if any, as far as the nature of the case admits, by which it is conceivable that such changes may have been brought about or modified. Such inquiries may produce no satisfactory results, but certainly it is the *only legitimate channel* open to the inductive inquirer, to examine carefully all the possible effects which different combinations of natural conditions, as temperature, domestication, crossing of breeds, and the like, may produce. Theories, indeed, of this kind have been proposed and carried out by some to a most singular and preposterous extent, and a series of transmutations of species imagined which seem more like the hallucinations of insanity than the sober deductions of science. Yet the broad question respecting the immutability of species, and the abstract possibility of a transition from one into another, of the modifications of intermediate races being perpetuated, of new species being thus eventually introduced, have fairly formed subjects of debate among physiologists. At all events, if natural science ever should be able to conduct us to any satisfactory knowledge on such a subject, it can only be by some such route as this. But in comparing what may have occurred in remote epochs with the analogous facts of modern observation on the modifications of species, there is one point most carefully to be remembered—the *limited time* during which existing operations have been contemplated—from which it would be unsafe to argue what may have taken place in the vast and almost unlimited periods of past duration.

In those rocks, of whatever date, which are of igneous origin, or show marks of having undergone fusion, if organic remains ever existed, it is clear they must have been destroyed, so that we can argue nothing from their non-appearance.

With reference to the present question, it will be readily apparent that our knowledge of the subject can go no higher than the evidence of fossil remains carries us.

In the earliest rock in which any organic remains have *yet been found*, these remains are *not* those of *plants*, but of *animals*, and these not absolutely of the *lowest* kind; and from this first *observed* origin of organic life there is no break in the vast chain of organic development till we reach the existing order of things—no one geological period, long or short—no one series of stratified rocks everywhere devoid of traces of life: the world, once inhabited, has apparently never, for any ascertainable period, been totally despoiled of its living wonders; but there have been many changes in individual forms, great alterations in generic assemblages,

entire revolutions in the relative number and development of the several classes. The systems of life have been varied from time to time, to suit the altered condition of the globe, but never extinguished.

The proportionate *number of species* has gone on increasing in the successive generations up to the multitudes of existing species. The change in organic *structure* also has been in some degree proportioned to the time elapsed; but we cannot lay down any distinct principle as to the law by which its progression, its greater or less complexity or perfection in the scale of existence, can be decided; though *generally* we may say that the higher forms of life are not found till we come to the more recent strata.

Throughout the whole we trace one unbroken continuity of plan and design; different races of animals and plants have successively arisen as others disappeared, the disappearance of the one and the introduction of the other being each coincident with changes in the state of the globe.

The existing forms of life *resemble* those of times gone by, as the general aspect of the physical conditions of the world has always been analogous; and they *differ* from them as the co-relations of life and physical conditions are strict and necessary: so that all the variations of these conditions are represented in the phases of organic structure, while all their general agreements are also represented by the conformity of the great principles of structure in the creatures of every geological age, and the often-repeated analogies and parallelisms of series of forms between different geological periods, which we find as a law of nature, when comparing the most distant regions with each other. We are not then in a *different* system of nature, properly so called, from those which have been created and have been suffered to pass away before the origin of the human race; but in an *advanced part of the same* system, whose law of progression is fixed, though from time to time the signification of the term varies. The full and complete system of organic life now on the globe includes all the effects of sea and land, warmth and cold, divided regions, and all other things which are the diversifying causes of nature; and it is no wonder if, before the present land was raised from the deep, and the present distinction of natural regions was produced, there was not the same extreme variety of natural productions which we now witness, and which is not without its end in rendering the globe a more fitting residence for intellectual beings.

Looking to the very latest periods to which geology refers, we find detached portions of the surface composed of beds containing remains of species nearly the same as those now existing; and every indication presented by the nature, form, structure, and obvious mode of formation, deposition, and elevation of these beds, is precisely similar to what is now found actually going on, and especially to the results of exactly similar modes of action which we trace in operations which have gone on within the period of the existing order of things. The imbedding of existing races of animals and plants in ancient peat-bogs, in dried-up lakes, in new-formed deltas, and shoals, and the destruction of other portions of the actual surface and its productions, by the action of the sea, landslips, and submergencies; as well as, above all, the exact identity of the action of modern earthquakes and volcanoes with those of old formations—all attest the unbroken uniformity of the chain of causation which unites the present state of things with all those varying conditions which we trace in earlier epochs, and which have only appeared to some to present so much more strongly-marked vicissitudes, because we are apt to crowd those events together in the perspective, and measure them too much according to our narrow ideas of duration. Thus, whether we look at these changes in time or in space, we find in the one no definite assignable period at which we can fix any one grand revolution or distinct era—no one portion of the earth's surface which we can say was all produced, with its organised inhabitants, at one time. All the epochs of change

were gradual; the different orders of things passed by insensible gradations from one into another; all parts of the globe were brought into their present state by small local instalments.

In the tertiary strata (and to some extent in the older also) it must be borne in mind that the precise line of demarcation is by no means so absolute as is often imagined. The broad classification into different periods, according as a majority or a minority of existing species may appear in the several beds, is, in a great degree, conventional: *e.g.*, we cannot positively fix on any one epoch when the miocene period ended and the pleiocene began; and as those changes or modes of physical action which produced the tertiary beds were manifestly of exactly the same nature as those now going on upon the earth's surface, and as those changes were at least the accompanying conditions of the extinction of some species and the introduction or creation of others, so we can by no means infer that we have now arrived at a stationary or permanent condition, whether of unorganised or of organised existence.

The more the details of the *latest* geological phenomena are studied, the less shall we be able to imagine that there has been, at any comparatively recent period, a *clearly defined epoch*: at which what we call the present order of things was completely and at once established, and a *cessation of all change* has occurred; or that further examples of creative power may not again take place by the same slow and gradual process by which they probably were carried on in past eras. The more the examination of the most superficial parts of the earth's surface is extended, the more evidence is accumulated of partial and local changes exactly similar to those which distinguish the tertiary formations, going on uninterruptedly up to the present time; and it is clearly contradictory to all principles of inductive analogy to assert that in the progress of these changes new modifications of local temperature, moisture and other physical conditions, will not occur, and that their occurrence will not be accompanied by the extinction of races of beings to which the localities will then be unsuited, and that fresh instances of providential adaptation, in the creation of new species, fitted to supply their places, will not be displayed. With regard to the most material point, *the origin of the human race*, the evidence is *chiefly negative*. It is *positive* only thus far: that in the earlier formation the physical conditions of the globe, and the nature of the animals which did exist on it, concur in showing that it would have been impossible for the human race to have been sustained in life or well-being. In the later stages of things there is no such reason why man might not have existed. But the fact is, no human remains *have been found*. In the tertiary strata the nearest approach has been the distinct discovery of remains of the monkey tribe. It is clearly impossible, then, on geological grounds, to affirm that human remains may not be discovered in the latest tertiary beds, or to place any such positive limit of antiquity to the *possible* existence of the human species. It can only be asserted *at present*, that, *as far as research has yet gone* (1855), *it has detected no human remains confessedly older than those deposits which are probably within the period of history*.

As bearing, then, on the subject of *creation*, or the origin of life and organised structures, the whole evidence which geology furnishes is certainly irreconcilable with the idea of *one simultaneous general development* of organised existence. It points, indeed, to a *commencement* of organised life; but shows that as successive forms and species of organisation from time to time disappeared, *new forms* and *new species* were produced to supply their places: that these changes corresponded to others in the physical conditions of the globe; but that none of them were at once universal in extent and simultaneous in time; lastly, that the human race (*probably*) did not come into existence till the period to which the present state of things belongs.

In offering this imperfect summary of the general results

derivable from *geology* which bear upon the subject of *creation*, we conceive enough may have been stated to enable the discerning reader at once to perceive the nature and extent of the discrepancy which exists between the changes, thus incontestably disclosed to us by the existing monuments of past ages of terrestrial existence, and the entire character and scope of the descriptive narrative of the creation in the Hebrew Scriptures. We referred to certain interpretations of that narrative which have, in truth, been framed expressly with the view of attempting to reconcile the contradiction. After all we have before said, we shall not think it necessary here to press the matter much further on the notice of our readers: they have before them the materials for forming their own judgment. We will merely say for our own parts that we fail to perceive how those interpretations can be supported on any rational basis so as really to explain the discrepancy, or effectually to defend the cause to whose aid they are summoned, since the main points of the discrepancy still remain untouched, viz. that there are no traces of any such catastrophe as must be supposed, even over a limited portion of the earth's surface, subsequent to the latest tertiary formation; and any of the other interpretations are absolutely contradicted by the whole tenor of the facts in reference to the suddenness and universality implied in the description, if natural days are maintained, and in long periods the total want of correspondence between those periods and any order of succession which can be made out from geological evidence.

With regard to the nature and extent of the discrepancy thus disclosed, we would observe, that it is not a case merely involving the question of the literal acceptance of a word or a phrase—it is *not* a parallel case (*e.g.*) with that of the incidental scriptural expressions, implying, in their letter, the motion of the sun, or the existence of a solid firmament—nor is the difficulty of the same nature with any sceptical objections to a supernatural narration: but it is the contradiction of existing monuments of past events with the *obvious* sense of what is recorded as a part of divine revelation, in the form of a circumstantial narrative of the same events. And the discrepancy is not one with any theory, or partial discovery of science, which is not yet thoroughly made out, and which future investigations may modify or set aside; but with broad primary facts which involve nothing hypothetical, and which are in reality identified with the first principles of all inductive truth. It is also a circumstance which, taken any way, involves a train of consequences. It is not an isolated difficulty like that attaching to some single detached point, which we can pass over and not allow to weigh against the evidence preponderating on the other side; but it essentially involves a broad principle, and must affect, in its consequences, the entire view we take of the authority and application of the Old Testament.

That the existence of a discrepancy or difficulty of this kind, especially at the first announcement of those discoveries which disclosed it, should have been viewed by many with astonishment and alarm, is no more than might have been expected. That in the first instance the whole weight of censure should have been directed against the science of geology, is what numerous and somewhat parallel cases in former times would have led us to anticipate. It would be improper in this place to advert even remotely to topics of dispute or irritation. We shall merely observe that, at the present day, a happier spirit seems beginning to prevail. There are few now who venture upon open expressions of hostility; and this is no doubt from the simple cause that earnest attention and diligent examination have been called forth; the subject is beginning to be generally understood; misconception and acrimony, alarm and suspicion, have been gradually set to rest; and those who feel most forcibly the amount and nature of the contradiction are most ready to confess the unsatisfactory character of those solutions of it to which we have adverted, and which rather gloss over and

elude the real difficulty than fairly meet it. The main source of objection and offence has doubtless been the prevalence of certain views of the tenor and design of the Old Testament, which have by long custom passed current, among certain classes of Christians more especially, and in virtue of which the particular points involved in the narrative of the creation have come to bear a meaning and application connected directly with the existing institutions of religion. On the other hand, a more careful view of the actual design of the Hebrew Scriptures may do much towards removing this source of embarrassment.

In speaking of the Scripture narrative we have already remarked its striking characteristics as a *composition*—this of course applies in detail to the narrative in Genesis; but the brief statement in the Decalogue preserves also, as far as it goes, the same features. No reader of the Scriptures, especially of the Old Testament, can be otherwise than aware of the entire system which pervades all its representations, more or less, of *adaptation* in the manner of expression, form of imagery, and the like, to the apprehensions, the prejudices, and previous belief of the Jewish people; nay, the whole dispensation, in all its parts and institutions, is but one grand exemplification of the same thing. And this character in it we find expressly recognised and dwelt upon by our Lord and his apostles, in addressing that people, as the very ground of argument for introducing to those who were then living under the law a better and more spiritual religion: 'Moses, because of the hardness of your hearts,' gave you this precept (Matt. xix. 8); 'The law was a schoolmaster to bring them to Christ' (Gal. iii. 24)—a scheme of instruction and education (as it were) suited to their capacities and accommodated to their apprehensions. And not to dwell on instances which can only be accounted for as *adaptations* of this kind, such as the various sanguinary enactments, the visitation of sin on the posterity of the offender, the toleration of polygamy, the extreme facility of divorce, and the like, we cannot but recognise a similar object, as well in the general anthropopathism of the Old Testament, as in more special instances of many parts of those compositions in which poetic imagery, parable, and apologue were employed; and it is therefore nothing at variance with the nature or design of that revelation, but rather eminently conformable to it, to suppose that in other instances similar forms of narrative may have been adopted in like manner as the vehicles of religious instruction; still less to admit that they may have long been mistaken for historical matter-of-fact statements.

In the present instance the adaptation to the people of Israel was manifestly of the greatest importance, in order to secure their attention to points of vital moment in connection with the worship of the one true God, and their renunciation of idolatrous superstition. With this end, the first great truth with which they were to be impressed was the unity, omnipotence, and beneficence of the Creator; but these great doctrines were not put before them as abstract philosophical propositions, which their narrow and uncultivated minds would have been wholly incapable of comprehending; they were therefore embodied and illustrated in a narrative, proceeding step by step, in a minute detail, to assert, in each individual instance, the power and goodness which they were thus led to recognise in every familiar detail of the natural world, and which could thus alone be effectually impressed upon their minds.

Another very material object was to remind them, in like manner, that those very beings, the animals which formed the objects of the idolatry of the Egyptians, to which they were so prone, were in truth but the creatures of the true God: hence the importance of dwelling, with minute particularity, on their creation and subordination to man; as well as the express prohibition of worshipping even the images of them, or so much as making such images. In all this we cannot but trace the same wise system of exact accommodation to the peculiar capacity and condition of this

people, so little advanced at that time in moral or intellectual cultivation, and even exhibiting at all times a considerable national and constitutional incapacity for higher views, as the tenor of their after-history abundantly testifies. To this 'hard-hearted and stiff-necked generation,' then, so necessary was the utmost condescension and adaptation of all institutions (especially of a religious nature), and of the language and illustrations in which the communication of religious truths and precepts was to be made, that we find a reference to this principle perpetually pressed upon us to interpret much which otherwise seems singular in their sacred books, and which, unless so considered, is almost inevitably liable to be greatly misunderstood; and which, from want of attention to this distinction, has been, and continually is, misapplied, and even made a ground of sceptical objection.

These remarks refer yet more directly to what doubtless was the third and chief object in this representation of the creation—the institution of the Sabbath. This remarkable observance—the peculiar badge of the chosen people, to distinguish them from all other nations (Exod. xxxi. 13; Ezek. xx. 12)—was appointed them before the delivery of the rest of the law (Exod. xvi. 25); and as the work of creation, with reference to the different classes of beings, was associated in their minds with each of the six days, so the Seventh was identified, in the order of the narrative, with the entire completion of the work, the divine rest and cessation from it, and the solemn sanctification of it pronounced, to consist in a precise abstinence from any kind of labour by themselves, their household, and even cattle. They were thus led to adhere to this duty by reflections connected with the highest truths impressed under the most awful sanctions; and the wisdom of the injunction, not less than the means thus taken to promote and secure its fulfilment, cannot but be the more fully appear the more we examine the character and genius of this singular people, for whom it was ordained, and to whose peculiar condition it was every way so remarkably adapted.

The narrative, then, of six periods of creation, followed by a seventh similar period of rest and blessing, was clearly designed, by adaptation to their conceptions, to enforce upon the Israelites the institution of the Sabbath; and in whatever way its details may be interpreted, it clearly cannot be regarded as an *historical* statement of a *primeval* institution of a sabbath: a supposition which is, indeed, on other grounds, sufficiently improbable, though often adopted. But on this subject we refer the reader to our article 'SABBATH.'

If then, we would avoid the alternative (otherwise inevitable) of being compelled to admit what must amount to impugning the truth of these portions, at least, of the Old Testament, we surely are bound to give fair consideration to the only suggestion which can set us entirely free from all the difficulties arising from the geological contradiction which does and must exist against any conceivable interpretation which retains the assertion of the *historical* character of the details of the narrative, as referring to the distinct transactions of each of the seven periods.

The one grand fact, couched in the general assertion that all things were created by the sole power of one Supreme Being, is the whole of the representation to which an historical character can be assigned. As to the particular form in which the descriptive narrative is conveyed, we merely affirm that it is the language of poetry, and not of history.

But there is one consideration further, to which we must advert in connection with this topic—viz. that in the repetition which Moses gives of the Decalogue (Deut. v. 14, 15), the latter part of the fourth commandment relative to the creation is omitted, and a different reason for the observance of the sabbath inserted. This has led some commentators to suppose that in *neither* case is that latter clause to be considered as having really formed a portion of

the commandment as delivered from Mount Sinai; but that it was in both cases added as a sort of comment by Moses himself. This, if it be so, will manifestly, on reflection, be seen to remove some portion of the difficulty of conceiving the *poetical* nature of the description. The divine command may have been given *simply* to the Israelites; and Moses may have been authorised to recommend and impress it further by the addition of such topics as would best coincide with the preconceptions of popular belief, where it was not at variance with any real truth of religion.

In regard both to this and many other difficulties of the Old Testament, there has been too great a proneness to overlook the consideration of its original exclusive design of adaptation to the purposes of a limited dispensation addressed to one people only. When we bear this more distinctly in mind, many of those difficulties are in a very great degree removed. And this is surely the true view to be taken of it by *Gentile* Christians, to whom it is *only* a guide and instructor *second and subordinate* to the *New Testament*—a dead letter without it; but 'able to make us wise unto salvation' 'ONLY' through faith which is in Christ Jesus' (2 Tim. iii. 15).

Another objection of a very different kind has been started with reference to this subject, which it certainly would not have occurred to us to notice, had it not really been entertained as a serious difficulty by many; and so much so as to have called forth a printed discourse from so distinguished a person as Dr. Buckland—the alleged objection, that the existence of *death* in the animal world (of which certainly the whole series of organic remains furnishes uninterrupted evidence through all epochs) is at variance with the Scripture doctrine that death was first introduced as the penalty attached to sin in the instance of Adam's transgression. We can only say that to us it was a new idea that the inferior animals were in any way involved in the consequences of man's obedience or disobedience. To those who really feel any degree of difficulty on the subject we can only recommend a perusal of what Dr. Pye Smith has remarked upon it in his work before referred to (p. 286, etc.).

We must also add a brief remark on one further point which has sometimes formed a topic of controversy, closely connected with the subject of *Creation*—the origin of the human race from a single primeval pair.

Viewed as a question of natural history simply, all the different races of men are but *varieties* of one *species*; since the physiological distinction of a *species* is that any of its *varieties* are capable of producing a *mixed* offspring which shall be itself *prolific*: with the mixture of *species* it is not so. A *species*, therefore, however widely spread, and however distinct its subordinate varieties, may in *theory* have originated from a single pair. Physiology, then, thus far shows nothing at variance with the belief that the human species *did* thus derive its origin.

There may, however, obviously be questions of another kind, such as the existence of local obstacles, the probable rate of increase, and the like, which must influence our belief as to the *fact*. These apparent difficulties, such as the peopling of America, and of the multitudes of islands especially in the midst of the Pacific Ocean, together with the length of time necessary for the spread and growth of such immense populations as even at very remote epochs must have inhabited many large districts, where we trace remains of high civilisation of unknown antiquity, have induced many to adopt the idea that there must have been original creations of man in many different parts of the globe; and this, too, subsequently to the Mosaic deluge, if we are to understand it in a strictly universal sense [DELUGE].

It has also been alleged by those who are in favour of this hypothesis, that according to the Scripture narrative the existence of other races besides the family of Adam seems to be almost unavoidably implied in several particulars of that narrative. Thus in Gen. iv. 14, Cain complains that

when he wanders forth on the earth, 'every one that findeth me shall slay me,' and accordingly a mark is set upon him, 'lest any finding him should kill him.' Again (ver. 17), Cain, going forth with his wife and child only, built a *city*, which at least must imply some collected number of persons. When Cain's wife is mentioned (ver. 17), it is without the slightest allusion to her origin; and the extraordinary nature of the vulgar belief on that subject ought certainly (on all grounds) to be fairly balanced along with the alleged religious necessity for imagining only one descent for the human race. To these may be added the consideration of the very obscure passage (Gen. vi. 2, 4) respecting the progeny of 'the sons of God' and 'the daughters of men.'

These and other topics, though we can do no more than thus briefly allude to them, must nevertheless be carefully taken into consideration in whatever opinion we form on the subject. It is doubtless a question of great difficulty, in whatever light we view it; but more particularly so from the connection which it holds in the minds of many with the doctrine of original sin as connected with the fall of Adam. But for a discussion of so very wide and important a point we must refer the reader to other heads. [On the geological question, see Dr. Hitchcock's *Religion of Geology and its connected sciences*; on the question of the unity of the human race, Dr. Prichard's *Natural History of Man*, and some papers in the *Journal of Sacred Literature* for January and July 1855.]—B. P.

DELUGE. The narrative of a flood, given in the book of Genesis (vii. and viii.), by which, according to the literal sense of the description, the whole world was overwhelmed, and every terrestrial creature destroyed, with the exception of one human family and the representatives of each species of animal, supernaturally preserved in an ark, constructed by divine appointment for the purpose, need not here be followed in detail. The account furnished by the sacred historian is circumstantially distinct; and the whole is expressly ascribed to divine agency; but, in several of the lesser particulars, secondary causes, as rain, 'the opening of the windows of Heaven' (vii. 11), and the 'breaking up of the fountains of the great deep,' are mentioned, and, again, the effect of wind in drying up the waters (viii. 1). It is chiefly to be remarked that the whole event is represented as both commencing and terminating in the most gradual and quiet manner, without anything at all resembling the catastrophes and convulsions often pictured in vulgar imagination as accompanying it. When the waters subsided, so little was the surface of the earth changed that the *vegetation* continued *uninjured*, the olive-trees remained from which the dove brought its token.

We allude particularly to these circumstances in the narrative as being those which bear most upon the probable *nature* and extent of the event, which it is our main object in the present article to examine, according to the tenor of what little evidence can be collected on the subject, whether from the terms of the narrative or from other sources of information which may be opened to us by the researches of science.

Much, indeed, might be said on the subject in other points of view; and especially in a more properly theological sense it may be dwelt upon as a part of the great series of divine interpositions and dispensations which the sacred history discloses. But our present object, as well as limits, will restrict us from enlarging on these topics, or, again, upon the various ideas which have prevailed on the subject apart from Scripture on the one hand, or science on the other. Thus we need merely allude to the fact that in almost all nations, from the remotest periods, there have prevailed certain mythological narratives and legendary tales of similar catastrophes. Such narratives have formed a part of the rude belief of the Egyptians, Chaldeans, Greeks, Scythians, and Celtic tribes. They have also been discovered among the Peruvians and Mexicans, and the South Sea

Islanders. For details on these points we refer our readers to the work of Bryant (*Ancient Mythology*), and more especially to the treatise of the Rev. L. V. Harcourt on the Deluge, who appears to have collected everything of this kind bearing on the subject.

With reference to our present design, the most material question is that of the existence of those traces which it might be supposed would be discovered of the action of such a deluge on the existing surface of the globe; and the consequent views which we must adopt according to the degree of accordance or discordance which such evidences may offer, as compared with the written narrative. Even in this point of view much speculation of a very vague and unsatisfactory nature has been occasionally indulged in; indeed, the most purely gratuitous speculations were for a long time the only attempts towards any inquiry into the subject, nor can we say that the spirit of following them is even yet extinct.

It will, however, be little to our purpose to enlarge upon the crude conceptions and over-hasty generalisations of the earlier cosmogonists and geologists, as, besides the visionary character attaching to the theories of the former, several of the most eminent of the latter class have, with the ingenuousness of true philosophers, candidly acknowledged the errors into which they had once been led, at periods when the correct nature of inductive reasoning in geology was less attended to than it has been of late; when the science having settled into a more firm and compact structure, and a more rigid scrutiny having been applied to all its defective parts, its real conclusions have been fixed upon an enduring foundation, and visionary speculation from henceforth banished from its precincts.

The evidence which geology may disclose, and which can in any degree bear on our present subject, must, from the nature of the case, be confined to indications of superficial action attributable to the agency of water, subsequent to the latest period of the regular geological formations, and corresponding in character to a temporary inundation of a quiet and tranquil nature, of a depth sufficient to cover the highest mountains, and, lastly (as indeed this condition implies), extending over the whole globe; or if these conditions should not be fulfilled, then, indications of at least something approaching to this, or with which the terms of the description may be fairly understood and interpreted to correspond.

Our object, then, will be to present, in as brief a summary as possible, what and how much of evidence of the kind here described geological research does really put before us, and then to offer some remarks on the reference it may bear to the terms in which the sacred narrative is conveyed.

Of those geological facts which seem to bear at all upon such an inquiry, the first, perhaps, which strikes us is the occurrence of what was formerly all included under the common name of *diluvium*, but which more modern research has separated into many distinct classes. The general term may, however, not inaptly describe superficial accumulations, whether of soil, sand, gravel, or loose aggregations of larger blocks, which are found to prevail over large tracts of the earth's surface, and are manifestly superinduced over the deposits of different ages, with which they have no connection.

An examination of the contents of this accumulated detritus soon showed the diversified nature of the fragments of which it is composed in different localities. Investigations were made by comparing the transported fragments with the nearest rocks from which they could have been derived. Hence was inferred the *direction* of the current which transported them, and the degree of force necessary for such transport, according to their size and nature, and the character of the intervening ground. Hence the conclusion was inevitable that many such currents in different directions, and acting with different degrees of force, must have occurred to produce the observed results. It was soon found from the like infallible indications that these different instances of diluvial action were of very *different ages*, and none of more

than *local* extent, though some must have acted over considerable tracts of country. In some instances the most palpable evidence has been furnished in one such stratum crossing and overlying another.

In other instances (perhaps the greater number) there is equal evidence of the operation having gone on at the bottom of deep water, as it does at present, by currents, eddies, tides, etc. Again, in some cases, masses of what had once formed a diluvium have themselves been cleared off by some new current, and heaped up, leaving the substratum bare. In a word, with reference to cases of this kind, the most recent researches simply point to a continuation of the same great series of long-sustained natural action in the deposition of detritus, and the gradual elevation of coasts, covered with the ordinary accumulations of mud, sand, and shingle, which have been referred to as the analogous causes of the earlier formations.

Geologists have collected numerous instances in which such currents are shown to have acted on the surface of many parts of Europe in different directions; and other results, such as the transportation of blocks over intervening high ridges, have been referred to the floating of ice, while other similar results have been traced up to the action of glaciers in many instances, whatever may be the probability of such action in others.

We will very briefly allude to another branch of the evidence. The extinct volcanoes in the south of France show no indications of having been active at any period of which we can obtain an idea from the surrounding state of things. In several instances rivers have cut their channels through the solid masses of lava of 100 feet in thickness, the time requisite for this is hardly calculable. Other portions of these mountains consist of light pumice and aggregations of cinders, which have nevertheless remained wholly undisturbed. The arguments for the antiquity of Etna are of the same kind; the succession of eruptions which have contributed to form the flanks of the mountain by accumulations of lava must have been carried on through an almost immeasurable antiquity. The different numerous extinct craters on its sides present masses of loose scoriae and ashes. Precisely the same description is found to apply to extinct volcanoes in Asia Minor and other regions. For authorities and details we refer our readers generally to Mr. Lyell's *Principles of Geology*, and the abstracts of Proceedings of the Geological Society, especially those relating to the researches of Messrs. Hamilton and Strickland in Asia Minor, also to Sir H. de la Beche's *Geological Manual* (especially p. 172, 3d edition).

The general result, as bearing on our present subject, is obviously this: the traces of currents, and the like, which the surface of the earth does exhibit, and which *might* be ascribed to diluvial action of some kind, are certainly not the results of *one universal* simultaneous submergence, but of *many distinct*, local, aqueous forces, for the most part continued in action for long periods, and of a kind precisely analogous to such agency as is now at work. While, further, many parts of the existing surface show no traces of such operations; and the phenomena of the volcanic districts prove distinctly that during the enormous periods which have elapsed since the craters were active no deluge could possibly have passed over them without removing all those lighter portions of their exuvie which have evidently remained wholly untouched since they were ejected.

Upon the whole it is thus apparent, that we have no evidence whatever of any great aqueous revolution at any comparatively recent period having affected the earth's surface over any considerable tract; changes, doubtless, may have been produced on a small scale in isolated districts. The phenomena presented by caves containing bones, as at Kirkdale and other localities, are not of a kind forming any breach in the continuity of the analogies by which all the changes in the surface are more and more seen to have been carried on. But a recent simultaneous influx of water,

covering the globe, and ascending above the level of the mountains, must have left indisputable traces of its influence, which not only is *not* the case, but *against* which we have seen *positive* facts standing out. Apart from the testimonies of geology, there are other sciences which must be interrogated on such a subject. These are, chiefly, terrestrial physics, to assign the possibility of a supply of water to stand all over the globe five miles in depth *above* the level of the ordinary sea—natural history, to count the myriads of species of living creatures to be preserved and continued in the ark; mechanics to construct such a vessel; with some others not less necessary to the case. But we have no disposition to enter more minutely on such points; the reader will find them most clearly and candidly stated in Dr. Pye Smith's *Geology and Scripture*, etc., p. 130, 2d ed.

Let us now glance at the nature and possible solutions of the difficulty thus presented. We believe only two main solutions have been attempted. One is that proposed by Dr. Pye Smith (ib. p. 294), who expressly contends that there is no real contradiction between these facts and the description in the Mosaic record, *when the latter is correctly interpreted*. This more correct interpretation then refers, in the first instance, to the proper import of the Scripture terms commonly taken to imply the *universality* of the deluge. These the author shows, by a large comparison of similar passages, are only to be understood as expressing a *great extent*; often, indeed, the very same phrase is applied to a very limited region or country, as in Gen. xli. 56; Deut. ii. 25; Acts ii. 5, etc. Thus, so far as these expressions are concerned, the description may apply to a local deluge.

Next, the destruction of the whole existing human race does not by any means imply this universality, since, by ingenious considerations as to the multiplication of mankind at the alleged era of the deluge, the author has shown that they probably had not extended beyond a comparatively limited district of the East.

A local destruction of animal life would also allow of such a reduction of the numbers to be included in the ark as might obviate objections on that score; and here again the Oriental idiom may save the necessity of the *literal* supposition of every actual species being included.

Again, certain peculiar difficulties connected with the resting of the ark on Mount Ararat are combated by supposing the name incorrectly applied to the mountain now so designated, and really to belong to one of much lower elevation.

Lastly, this author suggests considerations tending to fix the region which may have been the scene of the actual inundation described by Moses in about that part of Western Asia where there is a large district now considerably depressed below the level of the sea; this might have been submerged by the joint action of rain, and an elevation of the bed of the Persian and Indian Seas. And, finally, he quotes the opinions of several approved divines in confirmation of such a view, especially as bearing upon all the essential religious instruction which the narrative is calculated to convey.

Other attempts have been made with more or less probability to assign particular localities as the scene of the Mosaic deluge, if understood to have been partial. Some diluvial beds posterior to the tertiary formations have been occasionally pointed out as offering some probability of such an origin. Thus, *e.g.*, Mr. W. J. Hamilton, secretary to the Geological Society, in his *Tour in Asia Minor* (vol. ii. p. 386), found in the plains of Armenia, especially in some localities near Khorassan and on the banks of the Arpachai or Araxes, a remarkable thin bed of marl containing shells of tertiary (*qu. recent?*) species: these he attributes to a local deluge occurring (as the position of the bed indicates) after the cessation of the volcanic action which has taken place in that district. He expressly adds that he regards this deluge as probably coincident with the Mosaic; understanding the latter in a restricted or partial sense, and

imagining it explained by physical causes which might have followed the volcanic action.

How far this or any such phenomenon is reconcilable with the terms of the Mosaic narrative, we leave our readers to decide for themselves; for our own part, we can see but little probability in such suppositions.

Again, with respect to any hypothesis of *local* action, we may observe that the Scripture narrative dwells emphatically on the destruction of the *whole existing human race*. Wherever, therefore, we look for the evidences of a *local* deluge, it must be shown to extend to all the then inhabited part of the world. This might, certainly, be of contracted extent: but the more contracted it might be, in proportion the more full *must* it have been, of *human remains*. Now it is quite notorious that no bed attributable to diluvial action has ever been found containing a single bone or tooth of the human species. We must therefore contend that *no evidence has yet been adduced* of any deposit which can be identified with the Noachian deluge.

The only other mode of viewing the subject is that which, accepting the letter of the Scriptural narrative, makes the deluge strictly universal; and allowing (as they *must* be allowed) all the difficulties, not to say contradictions, in a natural sense, involved in it, accounts for them all by *supernatural* agency. In fact, the terms of the narrative, strictly taken, may perhaps be understood throughout as representing the whole event, from beginning to end, as entirely of a miraculous nature. If so, it may be said, there is an end to all difficulties or question, since there are no limits to omnipotence; and one miracle is not greater than another. Thus, Mr. Lyell (*Principles of Geol.* iv. 219, 4th ed.), after ably recapitulating the main points of evidence, as far as physical causes are concerned, remarks, 'If we believe the flood to have been a temporary suspension of the ordinary laws of the natural world, requiring a miraculous intervention of the divine power, then it is evident that the credibility of such an event cannot be enhanced by any series of inundations, however analogous, of which the geologist may imagine he has discovered the proofs. For my own part, I have always considered the flood, when its universality, in the strictest sense of the term, is insisted on, as a preternatural event far beyond the reach of philosophical inquiry, whether as to the causes employed to produce it, or the effects most likely to result from it.'

In a word, if we suppose the flood to have been miraculously produced, and all the difficulties thus overcome, we must also suppose that it was not only miraculously terminated also, but every trace and mark of it supernaturally effaced and destroyed.

Now, considering the immense amount of supernatural agency thus rendered necessary, this hypothesis has appeared to some quite untenable. Dr. Pye Smith, in particular (whom no one will suspect of any leaning to scepticism), enlarges on the difficulty (p. 157, and note), and offers some excellent remarks on the general question of miracles (pp. 84-89); and there can be no doubt that, however plausible may be the assertion that all miracles are alike, yet the idea of supernatural agency to so enormous an amount as in the present instance, is, to many minds at least, very staggering, if not wholly inadmissible. In fact, in stretching the argument to such an extent, it must be borne in mind, that we may be trenching upon difficulties in another quarter, and not sufficiently regarding the force of the evidence on which *any* miracles are supported [MIRACLE].

In any such discussion with regard to the deluge, we cannot avoid taking into account its bearing upon the early history of mankind, the propagation of the race, and the progress of arts and civilisation, coupled with the comparatively recent date commonly assigned to this event, viz. about 2400 B.C. On such a subject we can only be guided by the testimony of universal history and experience

as to the rapidity of the spread of population, and the probable causes which could lead to advance in civilisation among some tribes, and the deterioration or even total loss of it (as originally possessed by Noah) among others. If, then, we are to date from the Noachian deluge, it is evident that such considerations with regard to the antiquity of the human race must at least claim our serious attention, in connection with the Scripture narrative.

As to the *date* simply, the great discrepancy in the chronology of the patriarchs, between the existing Hebrew, the Samaritan, and the Septuagint versions, has, with many, tended to throw doubts upon all the computations alike, as more or less corrupted or interpolated.

Again there are circumstances connected with the early history of several nations, which have appeared to some writers to demand a still greater extension of the time. The Jesuit missionaries in China were so strongly impressed with the proofs of high antiquity evinced in the records of that people, that they applied to the Pope for a dispensation to adopt the Septuagint chronology instead of that of the Vulgate; and even confessed that this would not be sufficiently consistent with the antiquity they felt obliged to assign to the Chinese history. The Jesuit Mailla enters most into detail on the subject, especially as connected with their early inventions in the arts (see *Mélanges Asiatiques*, tom. i.)

Other writers have dwelt upon the various remains indicating a spread of population and a degree of civilisation at periods too early to be consistent with *any received* chronology among the Egyptians, Mexicans, Hindoos, and other nations; and the probability of many of those arts, of which they exhibit traces, having been originally derived from a still more ancient, widely spread, and highly civilised people in Central Asia. Some interesting remarks on this subject will be found in a paper 'On the History of Magnetical Discovery, by T. S. Davies, Esq., F.R.S.' inserted in the British Annual for 1827, p. 246. This able writer argues much from the unequal progress made in civilisation and the arts of life under different conditions of national existence, and contends that, in the earlier stages, that progress must have been incalculably slow, and the chronology, consequently, must be almost indefinitely enlarged. Indeed, in a more general point of view, to such an extent is this the case, if we follow it out in imagination to the circumstances of the lowest state of savage life, that others have felt obliged to adopt the supposition of a direct divine interposition to communicate certain first elements of civilisation, without which no race ever rises above the savage condition (see Archbp. Whately's *Political Economy*, lect. v. p. 133).

Upon the whole, the discerning inquirer will, on such a subject as the present, more especially, admit the reasonableness of an increasing attention to that important branch of criticism which teaches us to view the composition of the different portions of the sacred writings as of a kind specially adapted to the wants and ideas of the ages to which they respectively belong; and not to overstretch the literal

interpretation of them to meet the conceptions of other ages and other stages of the intellectual and moral advancement of mankind: or, in the judicious language of the learned Semler—'Jam si argumentum atque ingenium librorum V. T. intueamur propius, facile patebit hoc, genti Israelitarum præcipue istos libros fuisse destinatos, et ad æra tempora varia et varios status maxime respicere; minime autem librorum istorum cunctas partes hominibus omnium temporum idem atque eque præstare beneficium' (*Instit. Brev.* § xxxii.)

In any point of view, it must be admitted that the subject involves difficulties of no inconsiderable amount; and if, after due consideration of the suggestions offered for their solution, we should still feel it necessary to retain a cautious suspense of judgment on the subject, it may be also borne in mind that such hesitation will not involve the dereliction of any material religious doctrine.

If we look to the actual tenor of the whole narrative as delivered by Moses (Gen. viii. and ix.), we shall observe that the manifest *immediate* purport of it is the same as that of the rest of the early portion of his history—viz. as forming part of the *introduction* TO THE LAW. Thus we find, in the first instance, the narrative dwelling on the distinction of clean and unclean beasts (vii. 2); afterwards on the covenant with Noah; the promise of future enjoyment of the earth and its fruits; the prohibition of eating blood; the punishment of murder (ix. 4, etc.); all constituting, in fact, some of the *rudiments* out of which the Mosaic law was framed, and which were thus brought before the Israelites as forming an anticipatory sanction for it.

If we look to any further applications of the narrative, we must, of course, be guided by the express representations of the sacred writers in regard to the tenor of such references as they may make to it. Now the only such applications are purely of a practical nature, in which certain points in the narrative are introduced by way of *adaptation* to the subject in hand, as belonging to a history familiarly known, and thus made to furnish topics of argument or admonition to those who had always acknowledged it. Regarded in a Christian light, the narrative is important solely in respect to the applications made of it in the New Testament, and these are only of the following kind: it is referred to as a warning of Christ's coming (Matt. xxiv. 38, Luke xvii. 27); as an assurance of judgment on sin (2 Pet. ii. 5); and of God's long-suffering; while the ark is made a type of baptism and Christian salvation (1 Pet. iii. 20); and lastly, Noah is set forth as an example of faith (Heb. xi. 7).

In these applications no reference is made to the physical nature of the event, nor even to its literal universality. They are all allusions, not to the event abstractedly, but only in the way of *argument with the parties addressed*, in support of *other* truths: an appeal to the Old Testament addressed to those who already believed in it—in the first of the instances cited to the Jews—in the others to *Jewish* converts to Christianity (compare 1 Pet. i. 1 and 2 Pet. iii. 1.)—B. P.

ADDITIONS TO ARTICLES.

ADAM, THOMAS, a Puritan divine of the 17th century. He was (probably as vicar) at Wingrave, in Buckinghamshire, from 1614; in 1618 he held the preachship of St. Gregory's, under St. Paul's Cathedral, and was chaplain to Sir H. Montague, Lord Chief-Justice of England; in 1630 he was vicar of St. Bennet's, Paul's Wharf, London; and in 1653 he was 'passing a necessitous and decrepit old age' in London, having been sequestered from his living. He died some time before the Restoration. He was the author of several works, of which his *Commentary on the Second Epistle of St. Peter* is the one entitling him to mention here. This work, first published in 1633, has been twice republished

in our own day, edited by the Rev. J. Sherman, Lond. 1839, Edin. 1862. It is one of the richest specimens of Puritan exposition extant, copious to a fault, but full of the happiest thoughts, redolent of learning, and breathing throughout the spirit of a lofty piety.—W. L. A.

BA'SHA (בִּשְׂמֵן). This term occurs Job xxxi. 40, where it is rendered by *cockle* in the A. V. It was a noxious weed of some kind, but of what kind is very uncertain. Some have thought it may be the *στῆδινος* of the N. T., but that it was probably a product resembling wheat [ZIZANION],

whereas the Ba'sha, from its name, from שֶׁבַשׁ, *to stink*, was more probably a weed of a herbaceous kind, emitting a disagreeable odour.—W. L. A.

BLEEK, FRIEDRICH, was born at Ahrensbock in Holstein, 4th July 1793. He received his education at Lübeck, Kiel, and Berlin. In 1817 he commenced his career as a theological teacher in the university of Berlin, and in 1823 became one of the professors. In 1829 he removed to Bonn, where the rest of his life was spent, and where he died 27th Feb. 1859. Bleek was distinguished for his exact and copious scholarship, his power of lucid exposition, and the calm impartiality of his judgments. These qualities give value to his writings, the chief of which are *Der Brief an die Hebräer erläutert*, 3 parts, Berl. 1828-40; *Einleit. in d. A. T.*, Berl. 1860; *Einleit. in d. N. T.*, 1862; *Synoptisch Erklär. der Drei ersten Evangelien*, Leipz. 1862; *Vorlesungen üb. d. Apocalypse*, Berl. 1862; *Vorles. über die Briefe an d. Epheser, Colosser, und Philemon*, Berl. 1866; all except the first posthumous publications. Bleek wrote besides numerous articles for Journals, and several academic programmes.—W. L. A.

CRITICISM, BIBLICAL (vol. i. p. 588).

Tischendorf has commenced to issue the eighth edition of his *Greek Testament* on the same plan as the seventh, and in the same form. Only two parts are issued as yet. Compared with its immediate predecessor, it is much improved.

DESHÈ (שֶׁשׁ), young tender grass, as distinguished from *chatsir*, ripe grass ready for mowing (Prov. xxvii. 25). It is described as springing up after rain (Deut. xxxii. 2; 2 Sam. xxiii. 4); and is mentioned as provender relished by cattle (Job vi. 5). It is also used as a figure of transitoriness (Ps. xxxvii. 2).—W. L. A.

EKDACH (קֶדַח), a kind of precious stone of which the gates of the New Jerusalem are poetically represented as being composed (Is. liv. 12). The A. V. translates it 'carbuncles;' but all that can be said is, that it was probably a stone of a red colour and fiery lustre, the name being derived from a root, קָדַח, to kindle; Ar. قَدَح, *gadach*, to strike fire.—W. L. A.
